Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project: Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

32.601:	"Configuration Management (CM); Basic CM Integration Reference Point (IRP); Requirements"
32.602:	"Configuration Management (CM); Basic CM Integration Reference Point (IRP); Information Service (IS)"
32.603:	"Configuration Management (CM); Basic CM Integration Reference Point (IRP); Common Object Request Broker Architecture (CORBA) Solution Set (SS)"

Configuration Management (CM), in general, provides the operator with the ability to assure correct and effective operation of the 3G network as it evolves. CM actions have the objective to control and monitor the actual configuration on the Network Elements (NEs) and Network Resources (NRs), and they may be initiated by the operator or by functions in the Operations Systems (OSs) or NEs.

CM actions may be requested as part of an implementation programme (e.g. additions and deletions), as part of an optimisation programme (e.g. modifications), and to maintain the overall Quality of Service (QoS). The CM actions are initiated either as single actions on single NEs of the 3G network, or as part of a complex procedure involving actions on many resources/objects in one or several NEs.

1 Scope

The purpose of this *Basic Configuration Management (CM) IRP: CORBA Solution Set* is to define the mapping of the Basic CM IRP: IS (see 3GPP TS 32.602 [4]) to the protocol specific details necessary for implementation of this IRP in a CORBA/IDL environment.

This document defines NRM independent data types and methods.

This Solution Set specification is related to 3G TS 32.602 V8.1.X.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For terms and definitions please refer to 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.600 [3] and 3GPP TS 32.602 [4].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA Common Object Request Broker Architecture
DN Distinguished Name
IS Information Service
IDL Interface Definition Language (OMG)
IRP Integration Reference Point
MO Managed Object

MOC Managed Object Class
NRM Network Resource Model
OMG Object Management Group

SS Solution Set

4 IRP document version number string

The IRP document version number (sometimes called "IRPVersion" or "SS version number") string is used to identify this specification. The string is derived using a rule described in 3GPP TS 32.312: [10].

This string (or sequence of strings, if more than one version is supported) is returned in getBasicCmIRPVersion method.

5 Architectural features

The overall architectural feature of Basic Configuration Management IRP is specified in 3GPP TS 32.602 [4]. This clause specifies features that are specific to the CORBA SS.

5.1 Filter language

The filter language used in the SS is the Extended Trader Constraint Language (see OMG Notification Service [6]). IRPAgents may throw a FilterComplexityLimit exception when a given filter is too complex. However, for 3GPP Release 99 an "empty filter" shall be used i.e. a filter that satisfies all MOs of a scoped search (this does not affect the filter for notifications as defined in the Notification IRP – see 3GPP TS 32.303 [9]).

5.2 Syntax for Distinguished Names and Versions

The format of a Distinguished Name is defined in 3GPP TS 32.300 [5].

The version of this IRP is represented as a string (see also clause 4).

6 Mapping

6.1 General mappings

The IS parameter name managedObjectInstance is mapped into DN.

Attributes modelling associations as defined in the NRM (here also called "reference attributes") are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as an MOReference. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type MOReferenceSet, which contains a sequence of MO references.

If a reference attribute is changed, an Attribute Value Change notification (see TS 32.663 [11]) is emitted.

6.2 Operation mapping

The Basic CM IRP: IS (see 3GPP TS 32.602 [4]) defines semantics of operation visible across the Basic Configuration Management IRP. Table 1 indicates mapping of these operations to their equivalents defined in this SS.

IS Operation (3GPP TS 32.602 [4])	SS Method	Qualifier
getMoAttributes	BasicCmIrpOperations::find_managed_objects BasicCmInformationIterator::next_basic_cm_informations	M
getContainment	BasicCmIrpOperations::find_managed_objects BasicCmInformationIterator::next_basic_cm_informations	0
cancelOperation	BasicCmInformationIterator::destroy	0
createMo	BasicCmIrpOperations::create_managed_object	0
deleteMo	BasicCmIrpOperations::delete_managed_objects DeleteResultIterator::next_basic_cm_informations DeleteResultIterator::next_delete_errors	0
setMoAttributes	BasicCmIrpOperations::modify_managed_objects ModifyResultIterator::next_basic_cm_informations ModifyResultIterator::next_modification_errors	0

Table 1: Mapping from IS Operation to SS equivalents

6.3 Operation parameter mapping

The Basic CM IRP: IS (see 3GPP TS 32.602 [4]) defines semantics of parameters carried in operations across the Basic Configuration Management IRP. Tables 2 through 8 indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

The SS operation find_managed_objects is equivalent to the IS operation getMoAttributes when called with ResultContents set to NAMES_AND_ATTRIBUTES. Iterating the BasicCmInformationIterator is used to fetch the result.

Table 2: Mapping from IS getMoAttributes parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
invokeldentifier	- (No equivalence)	-
invokeldentifierOut	Return value of type BasicCmInformationIterator	M
baseObjectInstance	GenericIRPManagementConstDefs::DN base_object	M
scope	SearchControl search_control (SearchControl.type and SearchControl.level)	М
filter	SearchControl search_control (SearchControl.filter)	M
attributeListIn	AttributeNameSet requested_attributes	M
managedObjectClass managedObjectInstance attributeListOut	Return value of type BasicCmInformationIterator - parameter out ResultSet fetched_elements of method next_basic_cm_informations	М
status	Exceptions: FindManagedObjects, GenericIRPManagementSystem::InvalidParameter, UndefinedMOException, IllegalDNFormatException, UndefinedScopeException, IllegalScopeTypeException, IllegalScopeLevelException, IllegalFilterFormatException, FilterComplexityLimit	M

The SS operation find_managed_objects is equivalent to the IS operation getContainment when called with ResultContents set to NAMES. Iterating the BasicCmInformationIterator is used to fetch the result.

Table 3: Mapping from IS getContainment parameters to SS equivalents

IS Operation parameter	SS Method parameter				
invokeldentifier	- (No equivalence)				
invokeldentifierOut	Return value of type BasicCmInformationIterator	М			
baseObjectInstance	GenericIRPManagementConstDefs::DN base_object	М			
scope	SearchControl search_control (SearchControl.type and SearchControl.level)	0			
Not specified in IS	SearchControl search_control (SearchControl.filter)	М			
containment	Return value of type BasicCmInformationIterator - parameter out ResultSet fetched_elements of method next_basic_cm_informations	М			
status	Exceptions: FindManagedObjects, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, UndefinedMOException, IllegaIDNFormatException, UndefinedScopeException, IllegaIScopeTypeException, IllegaIScopeLeveIException, IllegaIFilterFormatException, FilterComplexityLimit	М			

Table 4: Void

Table 5: Mapping from IS cancelOperation parameters to SS equivalents

IS Operation parameter	SS Method parameter		
invokeldentifier	- (Not applicable, the BasicCmInformationIterator instance identifies the ongoing		
	pperation)		
status	Exceptions:		
	GenericIRPManagementSystem::OperationNotSupported,		
	DestroyException		

Table 6: Mapping from IS createMo parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
managedObjectClass managedObjectInstance	GenericIRPManagementConstDefs::DN object_name	M
referenceObjectInstance	GenericIRPManagementConstDefs::DN reference_object	0
attributeListIn attributeListOut	GenericIRPManagementConstDefs::MoAttributeSet attributes	М
status	AttributeErrorSeq attribute_errors Exceptions: CreateManagedObject, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, UndefinedMOException, IllegalDNFormatException, DuplicateMO, CreateNotAllowed, ObjectClassMismatch, NoSuchObjectClass, ParentObjectDoesNotExist	М

Table 7: Mapping from IS deleteMo parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
baseObjectInstance	GenericIRPManagementConstDefs::DN base_object	М
scope	SearchControl search_control (SearchControl.type and SearchControl.level)	М
filter	SearchControl search_control (SearchControl.filter)	М
deletionList	Return value of type DeleteResultIterator - parameter out ResultSet fetched_elements of method next_basic_cm_informations	М
status	Return value of type DeleteResultIterator - parameter out DeleteErrorSeq fetched_delete_errors of method next_delete_errors Exceptions: DeleteManagedObjects, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::InvalidParameter, UndefinedMoException, IllegalDNFormatException, UndefinedScopeException, IllegalScopeTypeException, IllegalScopeLeveIException, IllegalFilterFormatException, FilterComplexityLimit	М

Table 8: Mapping from IS setMoAttributes parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier			
baseObjectInstance	GenericIRPManagementConstDefs::DN base_object				
scope	SearchControl search_control (SearchControl.type and SearchControl.level)	М			
filter	SearchControl search_control (SearchControl.filter)	M			
modificationList	AttributeModificationSet modifications	M			
modificationListOut	Return value of type ModifyResultIterator - parameter out ResultSet fetched_elements of method next_basic_cm_informations	М			
status	Return value of type ModifyResultIterator - parameter out ModifyAttributeErrorsSeq fetched_modify_errors of method next_modify_errors Exceptions: ModifyManagedObjects, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::InvalidParameter, UndefinedMoException, IllegalDNFormatException, UndefinedScopeException, IllegalScopeTypeException, IllegalScopeLeveIException, IllegalFilterFormatException, FilterComplexityLimit	М

// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"
/* ## Module: BasicCMIRPConstDefs
This module contains commonly used definitions for BasicCMIRP.
______
*/
module BasicCMIRPConstDefs
   * Defines the name of a Managed Object Class
  typedef string MOClass;
   /**
   \star In this version the only allowed filter value is "TRUE" i.e. a filter that
   * matches everything.
   typedef string Filter;
   * ResultContents is used to tell how much information to get back
   * from the find managed objects operation.
   * NAMES: Used to get only Distinguished Name
            for MOs.
            The name contains both the MO class
            and the names of all superior objects in the naming
            tree.
   * NAMES_AND_ATTRIBUTES: Used to get both NAMES plus
        MO attributes (all or selected).
   enum ResultContents
     NAMES AND ATTRIBUTES
   };
   * ScopeType defines the kind of scope to use in a search
   \star together with SearchControl.level, in a SearchControl value.
   * SearchControl.level is always >= 0. If a level is bigger than the
   * depth of the tree there will be no exceptions thrown.
   enum ScopeType
     BASE ONLY,
     BASE NTH LEVEL,
     BASE SUBTREE,
     BASE_ALL
```

```
* SearchControl controls the find_managed_object search,
 * and contains:
 * the type of scope ("type" field),
* the level of scope ("level" field), level 0 means the "baseObject",
     level 1 means baseobject including its sub-ordinates etc..
* the filter ("filter" field),
* the result type ("contents" field).
 * The type, level and contents fields are all mandatory.
* The filter field contains the filter expression.
* The string "TRUE" indicates "no filter", 
* i.e. a filter that matches everything.
struct SearchControl
  ScopeType type;
  unsigned long level;
  Filter filter_;
  ResultContents contents;
struct Result
   GenericIRPManagementConstDefs::DN mo;
  GenericIRPManagementConstDefs::MOAttributeSet attributes;
typedef sequence <Result> ResultSet;
* AttributeErrorCategory defines the categories of errors, related to
* attributes, that can occur during creation or modification of MOs.
\star NO_SUCH_ATTRIBUTE: The specified attribute does not exist.
\star INVALID_ATTRIBUTE_VALUE: The specified attribute value is not valid.
* MISSING ATTRIBUTE VALUE: An attribute value is required but none was
    provided and no default value is defined for the attribute.
 * INVALID MODIFY OPERATOR: The specified modify operator is not valid
   (e.g. operator ADD_VALUES applied to a non multi-valued attribute
   or operator SET_TO_DEFAULT applied where no default value is defined).
* MODIFY NOT ALLOWED: The modification of the attribute is not allowed.
 * MODIFY FAILED: The modification failed because of an unspecified reason.
enum AttributeErrorCategory
  NO SUCH ATTRIBUTE,

   exception GetBasicCmIRPVersion { string reason; };
   exception GetBasicCmIRPOperationProfile { string reason; };
   exception GetBasicCmIRPNotificationProfile { string reason; };
   exception FindManagedObjects { string reason; };
   exception CreateManagedObject { string reason; };
   exception DeleteManagedObjects { string reason; };
exception ModifyManagedObjects { string reason; };
   The {\tt BasicCmInformationIterator} is used to iterate through a snapshot of
   Managed Object Information when IRPManager invokes find managed objects.
   IRPManager uses it to pace the return of Managed Object Information.
   IRPAgent controls the life-cycle of the iterator. However, a destroy
```

```
operation is provided to handle the case where IRPManager wants to stop
the iteration procedure before reaching the last iteration.
interface BasicCmInformationIterator
{
  This method returns between 1 and "how_many" Managed Object information. The IRPAgent may return less than "how_many" items even if there are
  more items to return. "how_many" must be non-zero. Return TRUE if there
   may be more Managed Object information to return. Return FALSE if there
   are no more Managed Object information to be returned.
   If FALSE is returned, the IRPAgent will automatically destroy the
   @parm how many how many elements to return in the "fetched elements" out
   parameter.
   @parm fetched elements the elements.
   @returns A boolean indicating if any elements are returned.
    "fetched_elements" is empty when the BasicCmInformationIterator is
    empty.
   boolean next basic cm informations (
      in unsigned short how many,
      out BasicCMIRPConstDefs::ResultSet fetched_elements
   raises (
      NextBasicCmInformations,
      GenericIRPManagementSystem::InvalidParameter,
      GenericIRPManagementSystem::OperationNotSupported);
   /**
   This method destroys the iterator.
   void destroy ()
   raises (
      DestroyException,
      GenericIRPManagementSystem::OperationNotSupported);
}; // end of BasicCmInformationIterator
/**
The DeleteResultIterator is used to iterate through the list of deleted MOs
when IRPManager invokes method "delete_managed_objects".
IRPManager uses it to pace the return of Managed Object Information.
IRPAgent controls the life-cycle of the iterator. However, a destroy
operation is provided to handle the case where IRPManager wants to stop
the iteration procedure before reaching the last iteration.
interface DeleteResultIterator : BasicCmInformationIterator
   Inherited method "next basic cm informations" has the same behaviour as
   for interface {\tt BasicCmInformationIterator}, except that:
   - The Managed Object information returned in parameter
     "fetched_elements" contains only the DNs of the deleted MOs
     (no attributes are returned).
   - If FALSE is returned, the IRPAgent will not automatically destroy the
    iterator.
   */
   This method returns between 0 and "how_many" deletion errors. The
   IRPAgent may return less than "how many" items even if there are more
   items to return. "how_many" must be non-zero. Return TRUE if there are
   more deletion errors to return. Return FALSE if there are no more
   deletion errors to be returned.
   If FALSE is returned and last call to inherited method
   "next basic cm informations" also returned FALSE (i.e. no more Managed
   Object information to be returned), the IRPAgent will automatically
   destroy the iterator.
   @parm how many: how many deletion errors to return in the
    "fetched delete errors" out parameter.
   @parm fetched_delete_errors: the deletion errors.
```

```
@returns: a boolean indicating if any deletion errors are returned.
   boolean next_delete_errors (
      in unsigned short how many,
      out BasicCMIRPConstDefs::DeleteErrorSeq fetched delete errors
   raises (
      NextDeleteErrors,
      GenericIRPManagementSystem::InvalidParameter);
}; // end of DeleteResultIterator
The ModifyResultIterator is used to iterate through the list of modified
MOs when IRPManager invokes method "modify managed objects".
IRPManager uses it to pace the return of Managed Object Information.
IRPAgent controls the life-cycle of the iterator. However, a destroy
operation is provided to handle the case where IRPManager wants to stop
the iteration procedure before reaching the last iteration.
interface \ {\tt ModifyResultIterator} \ : \ {\tt BasicCmInformationIterator}
   Inherited method "next basic cm informations" has the same behaviour as
   for interface BasicCmInformationIterator, except that:
   - The Managed Object information returned in parameter
     "fetched elements" contains DNs and attributes of the modified MOs.
   - If FALSE is returned, the IRPAgent will not automatically destroy the
     iterator.
   This method returns between 0 and "how_many" modification errors. The
   IRPAgent may return less than "how many" items even if there are more
   items to return. "how many" must be non-zero. Return TRUE if there are
   more modification errors to return. Return FALSE if there are no more
   modification errors to be returned.
   If FALSE is returned and last call to inherited method
   "next basic cm informations" also returned FALSE (i.e. no more Managed
   Object information to be returned), the IRPAgent will automatically
   destroy the iterator.
   @parm how_many: how many modification errors to return in the "fetched_modify_errors" out parameter.
   \verb"@parm fetched_modify_errors: the modification errors."
   @returns: a boolean indicating if any modification errors are returned.
   */

Annex B (informative): Change history

Change history								
Date	TSG#	TSG Doc.	CR	Rev	Subject/Comment	Cat	Old	New
Jun 2001	S_12	SP-010283			Approved at TSG SA #12 and placed under Change Control		2.0.0	4.0.0
Sep 2001	S_13	SP-010476	0001		Correction of invokeldentifier usage	F	4.0.0	4.1.0
Mar 2002	S_15	SP-020019	0002		Correction of erroneous CORBA module names and mapping tables	F	4.1.0	4.2.0
Mar 2002	S_15	SP-020019	0003		Corrections to Basic CM IRP CORBA Solution Set IDLs	F	4.1.0	4.2.0
Mar 2002	S_15	SP-020038	0004		Addition of missing CORBA exception "ManagedGenericIRPSystem::ValueNotSupported" onto CORBA method	F	4.1.0	4.2.0
					"find_managed_objects"			
Jun 2002	S_16	SP-020294	0005		Correcting IDL definitions of notification structured event Name Value pair names	F	4.2.0	4.3.0
Jul 2002					Updated the Version number (420->431) and the Date on the cover page		4.3.0	4.3.1
Sep 2002	S 17	SP-020483	0006		Add Active Basic CM feature - CORBA Solution Set	В	4.3.1	5.0.0
Mar 2003	S_19	SP-030139	0007		Add CORBA equivalents to IS operations "get{Operation Notification}Profile" - alignment with 32.602 & 32.312	F	5.0.0	5.1.0
Mar 2003	S 19	SP-030139	0008		Correction of IDL errors	F	5.0.0	5.1.0
Mar 2003	S_19	SP-030144	0009		Add description for notifications of each activeCM operation and one exception for createMO - alignment with 32.602, Information Service	F	5.0.0	5.1.0
Jun 2003	S_20	SP-030279	0010		Alignment with Basic CM IRP information service (32.602) - add one exception for the operation createMO	F	5.1.0	5.2.0
Mar 2004	S 23	SP-040105			Automatic upgrade to Rel-6 (no CR)		5.2.0	6.0.0
Sep 2004	_		0012		Removal of Rules for NRM extensions - Align with 32.622 (Generic NRM IS)	Α		6.1.0
Sep 2004	S_25	SP-040566	0014		Removal of unused/duplicate definition of types MOReference and MOReferenceSet	Α	6.0.0	6.1.0
Dec 2004	S_26	SP-040806	0015		Align the IDL style in the CORBA SS with the IDL Style Guide in 32.150	F	6.1.0	6.2.0
Mar 2005	S_27	SP-050044	0016		IDL incompliant to the style guide	F	6.2.0	6.3.0
Mar 2005	S_27	SP-050044	0017		Generic System Context, update of reference to IS specification	F	6.2.0	6.3.0
Apr 2005					Changed back TS Title from Bulk (v630) to Basic (620); erroneously changed with corrupted TS cover.		6.3.0	6.3.1
Sep 2005	SA_29	SP-050461	0018		Align the CORBA SS IDL with TS 32.150 Style Guide	F	6.3.1	6.4.0
Jun 2007	SA_36				Automatic upgrade to Rel-7 (no CR) at freeze of Rel-7. Deleted reference to CMIP SS, discontinued from R7 onwards.		6.1.0	7.0.0
Dec 2008	SA_42				Upgrade to Release 8		7.0.0	8.0.0
Dec 2009			0020		Increase the linked IS version by the CR for IS to clarify scope parameters for getMoAttributes operation	F		8.1.0
Dec 2009	SA_46	SP-090719	0019		Use the inherited ManagedGenericIRP methods	F	8.1.0	9.0.0
Sep 2010	SA_49	SP-100488	0021		Correct the data type "MOAttributeName" in IDL specification	F		9.1.0
