## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

#### **Foreword**

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <a href="http://webapp.etsi.org/key/queryform.asp">http://webapp.etsi.org/key/queryform.asp</a>.

## Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

#### where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

## 1 Scope

The present document describes the protocol to be used on the Media Gateway Control Function (MGCF) – IM Media Gateway (IM-MGW) interface. This interface provides the Media Gateway Control for interworking between the IP Multimedia Subsystem (IMS) and CS domain (ISUP, BICC and SIP-I). The basis for this protocol is the H.248 protocol as specified in ITU-T. The IMS architecture is described in 23.228. The interaction of the MGCF-IM MGW interface signalling procedures in relation to the SIP, and BICC/ISUP signalling at the MGCF are described in 3GPP TS 29.163[4].

The interaction of the MGCF-IM MGW interface signalling procedures in relation to the IMS SIP and SIP-I on Nc at the MGCF are described in 3GPP TS 29.235[47].

This specification describes the application of H.248 on the Mn interface. Required extensions use the H.248 standard extension mechanism. In addition certain aspects of the base protocol H.248 are not needed for this interface and thus excluded by this profile.

In addition this profile provides support for PSTN/ISDN Emulation as required by ETSI TISPAN.

The specification contains a normative Annex defining the H.248.1 Profile in accordance with ITU-T recommendations for H.248.1 applications. Where there exists any contradiction between the normative Annex A and the rest of the specification, the Nornative Annex shall take precidence. The main body of the specification provides an introduction to the use of the profile for the Mn interface and introduces any specific functionality (e.g. new packages) associated to the Mn.

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

#### 3.1 Definitions

For the purposes of the present document, the [following] terms and definitions [given in ... and the following] apply.

**Context (H.248):** A context is an association between a number of Terminations. The context describes the topology (who hears/sees whom) and the media mixing and/or switching parameters if more than two terminations are involved in the association.

**Package (H.248):** Different types of gateways may implement terminations which have differing characteristics. Variations in terminations are accommodated in the protocol by allowing terminations to have optional properties. Such options are grouped into packages, and a termination may realise a set of such packages.

**Termination** (H.248): A termination is a logical entity on an MGW which is the source and/or sink of media and/or control streams. A termination is described by a number of characterising properties, which are grouped in a set of descriptors which are included in commands. Each termination has a unique identity (TerminationID).

**Termination Property (H.248):** Termination properties are used to describe terminations. Related properties are grouped into descriptors. Each termination property has a unique identity (PropertyID).

## 3.2 Symbols

For the purposes of the present document, the following symbols apply:

Mn Interface between the media gateway control function and the IMS media gateway.

#### 3.3 Abbreviations

For the purposes of the present document, the following abbreviations given in TR 21.905 [40] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [40].

AMR Adaptive MultiRate

BICC Bearer Independent Call Control

CN Core Network
CS Circuit-Switched

DTMF Dual Tone Multi Frequency

FFS For further study

GSM Global System for Mobile communications

IETF Internet Engineering Task Force

IM IP Multimedia

IM-MGW IP Multimedia Media Gateway IMS IP Multimedia Subsystem

## 4 UMTS capability set

## 4.1 Capability set

The support of the Mn interface capability set shall be identified by the Mn profile and support of this profile shall be indicated in ServiceChange procedure.

The mandatory parts of this capability set shall be used in their entirety whenever it is used within the H.248 profile. Failure to do so will result in a non-standard implementation.

ITU-T Recommendation H.248.1 (05/02) [9] is the basis for this Capability Set. The compatibility rules for packages, signals, events, properties and statistics and the H.248 protocol are defined in ITU-T Recommendation H.248.1 [9]. Their use or exclusion for this interface is clarified in clause 12.

## 5 Naming conventions

## 5.1 MGCF/IM-MGW naming conventions

The MGCF shall be named according to the naming structure of the underlying transport protocol which carries the H.248 protocol.

For further definition of the Termination Names see Annex A.6.

#### 5.2 Void

## 6 Topology descriptor

No special behaviour, for definition of use see Annex A. 5.

## 7 Transaction timers

No special behaviour, for definition of timers see Annex A.10.

## 8 Transport

Each implementation of the Mn interface should provide SCTP (as defined in IETF RFC2960 [15] and as updated by RFC3309 [43]), however other options are permitted within the profile. For further definition see Annex A12.

## 9 Multiple Virtual MG.

The support of multiple virtual MGW outlined in the subclause "Multiple virtual MGW" in ITU-T Recommendation H.248.1 [9] is optional.

## 10 Formats and codes

## 10.1 Signalling Objects

Table 10.1 shows the parameters which are required.

The coding rules applied in ITU-T Recommendation H.248.1 [9] for the applicable coding technique shall be followed for the UMTS capability set.

Table 10.1: required parameters

| Signalling Object                 | H.248 Descriptor                         | Coding  |
|-----------------------------------|--|---|
| Codec List                        | Local Descriptor or<br>Remote Descriptor | <fmt list=""> in a single SDP m-line. For a static RTP payload type, the codec type should be implied by the RTP payload type, if not then each codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s). See Clause 10.2. For a dynamic RTP payload type, for each codec information on the codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s). See Clause 10.2.</fmt> |
| Bearer Service<br>Characteristics | Local Descriptor or<br>Remote Descriptor | As per Q.1950 [14]. For TMR, only values "3.1 kHz audio" or "speech" are required.  |
| Context ID                        | NA                                       | Binary Encoding: As per ITU-T Recommendation H.248.1 [9] Annex A.  Textual Encoding: As per ITU-T Recommendation H.248.1 [9] Annex B.   |
| IP Address                        | Local Descriptor or<br>Remote Descriptor | <pre><connection address=""> in SDP "c-line"</connection></pre>   |
| Port                              | Local Descriptor or<br>Remote Descriptor | <port> in SDP m-line. <transport> in SDP m-line shall be set to value "RTP/AVP" for voice or video service, and set to value "UDPTL" or "TCPTL"for T.38 service.</transport></port>   |
| mediatype                         | Local Descriptor or<br>Remote Descriptor | <media> in sdp m-line "audio" for voice service, "video" for video service and "image" for T.38 service.</media>  |
| Reserve_Value                     | Local Control                            | ITU-T Recommendation H.248.1 [9] Mode property. Binary Encoding: Encoding as per ITU-T Recommendation H.248.1 Annex A "reserveValue"  Textual Encoding: Encoding as per ITU-T Recommendation H.248.1 Annex B "reservedValueMode".   |
| RtcpbwRS                          | Local Descriptor or<br>Remote Descriptor |   |
| RtcpbwRR                          | Local Descriptor or<br>Remote Descriptor | <bandwidth> in SDP "b:RR"-line as per IETF RFC 3556 [39].</bandwidth>   |
| RTCP Filter                       | Event descriptor                         | As for the EventDescriptor parameter in subclause 8.2.1.1.1/H.248.71[49] "Feedback Message Type ".  |
| RTPpayload                        | Local Descriptor or<br>Remote Descriptor | <fmt list=""> in SDP m-line</fmt>   |
| Termination ID                    | NA                                       | Binary Encoding: As per ITU-T Recommendation H.248.1 [9] Annex A. Textual Encoding: As per ITU-T Recommendation H.248.1 [9] Annex B.  |
| Transaction ID                    | NA                                       | Binary Encoding: As per ITU-T Recommendation H.248.1 [9] Annex A.   |
| Stream ID                         | Stream Descriptor                        | Textual Encoding: As per ITU-T Recommendation H.248.1 [9] Annex B.  Binary Encoding: As per ITU-T Recommendation H.248.1 [9]  |
| Stream ID                         | Stream Descriptor                        | Annex A.  Textual Encoding:  As per 170-1 Recommendation 11.248.1 [9]  Annex B.   |
| Muxdescriptor                     | Multiplex<br>Descriptor                  | Binary Encoding:  As per ITU-T Recommendation H.248.1 [9]  Annex A.  Textual Encoding:  As per ITU-T Recommendation H.248.1 [9]  Annex B.   |
| Highest Multiplex Level           | Termination state                        | As for property "Highest multiplexing Level" in subclause 4.1.2/H.248.12 [41]   |
| Remote H223 capability            | Local Control                            | As for property "Remote H.223 capability" in subclause 4.1.4/H.248.12 [41]  |
| Incoming Multiplex table          | Local Control                            | As for property "Incoming Multiplex Table" in subclause 4.1.5/H.248.12 [41]   |
| Outgoing multiplex table          | Local Control                            | As for property "Outgoing Multiplex Table" in subclause 4.1.6/H.248.12 [41]   |
| Incoming H245 message             | Event descriptor                         | As for the EventDescriptor in subclause A.8.2.1/H.248.12a2 [42]<br>"Incoming H.245 message"   |

| H245 message content                 | ObservedEvent descriptor | As for the ObservedEventDescriptor in subclause A.8.2.1.2/H.248.12a2 [42] "Contents of H.245 message".                   |
|--------------------------------------|--------------------------|--|
| Outgoing H245 message                | Signal descriptor        | As for the signal "Outgoing H.245 Message " in subclause A.8.3.1/H.248.12a2 [42]   |
| Outgoing H245 message content        | Signal descriptor        | As for the additional parameter of the signal "Outgoing H.245 Message " in subclause A.8.3.1.1/H.248.12a2 [42]           |
| IP realm identifier                  | Local control            | As for the property "IP realm identifier " in subclause 5.1.1/H.248.41[44]   |

| Legacy Interworking<br>Detected      | Event descriptor         | As for the EventDescriptor in H.248. 72 [46] subclause 7.2.3 "Legac Detected"  |
| Forward media in MPC                 | Signal descriptor        | As for the signal "Forward Media in Preconfigured Channel" in H.248.72 [46] subclause 7.3.2                              |
| MPC MUX Code                         | Signal descriptor        | As for the additional parameter of the signal "Forward Media in Preconfigure Channel" in H.248.72 [46] subclause 7.3.2.1 |
| MaxBitRate_Event                     | ObservedEvent descriptor | As for the EventDescriptor parameter "Max Bitrate"in subclause 8.2.1.2.2/H.248.71[49].                                   |
| MaxBitRate_Signal                    | Signal descriptor        | As for the SignalDescriptor parameter "Max Bitrate" in subclause 8.3.1.1.2/H.248.71[49].                                 |
| UpdatePicture_Event                  | ObservedEvent descriptor | As for the EventDescriptor parameter in subclause 8.2.1.2.1/H.248.71[49] "Update Picture ".                              |
| UpdatePicture_Signal                 | Signal descriptor        | As for the SignalDescriptor parameter "Update Picture " in subclaus 8.3.1.1.1/H.248.71[49].                              |
| IP interface                         | Local control            | As for the property "IP interface type" in subclause 15.2.11.1 in 3GPP TS 29.232 [5]                                     |

NOTE: For binary encoding, the SDP equivalents "SDP\_V", "SDP\_M", "SDP\_C", "SDP\_A", and SDP\_B" in ITU-T Recommendation H.248.1 [9], Annex C.11, shall be used to encode the corresponding SDP lines. Other SDP equivalents may be used, for details see Annex A. The SDP equivalents shall be used in the order specified for the corresponding SDP lines in IETF RFC 2327 [17]. Rules for the usage of SDP in ITU-T Recommendation H.248.1 [9] shall also be applied to the SDP equivalents. SDP description types (v=, m=, a= etc.) are not encoded. CR/LF are not encoded.

#### 10.2 Codec Parameters

#### 10.2.1 AMR and AMR-WB Codecs

On IMS terminations, the AMR and AMR-WB codecs are transported according to the IETF AMR RTP profile, IETF RFC 4867 [16], 3GPP TS 26.236 [20] selects options applicable within 3GPP.

IETF RFC 4867 [16] contains the MIME registration of the IETF AMR RTP profile with media type "audio" and media subtype of "AMR" and "AMR-WB". The AMR and AMR-WB codecs shall be signaled accordingly in the SDP "a=rtpmap"-line and a dynamic RTP payload type shall be used.

The selected options are expressed as MIME parameters in SDP "a=fmtp"-line. The following MIME parameters shall be supported on the Mn interface:

- "mode-set"
- "mode-change-period"

In addition the following MIME parameters may be supported on the Mn interface:

- "octet-align"
- "mode-change-neighbor" (for IMS this parameter shall be included and set to 1)
- "maxptime"
- "ptime"

For compatibility with GSM peers, the IM-MGW shall perform mode changes only in every second sent package.

Example of encoding of AMR codec

#### ABNF:

```
Local {
    v=0
    c=IN IP4 $
    m=audio $ RTP/AVP 96
    a=rtpmap:96 AMR/8000
    a=fmtp:96 mode-set=0,2,5,7;mode-change-period=2;mode-change-neighbor=1
a=maxptime:20
}
```

#### ASN.1:

```
LocalDescriptor{
  PropertyParams{
        PkgdName=0x000B001
                                          /*SDP_V */
           value= "0"
        PkgdName=0x000B008
                                          /*SDP C * /
           value= "IN IP4 $"
        PkgdName=0x000B00F
                                          /*SDP M * /
           value= "audio $ RTP/AVP 96"
        PkgdName=0x000B00C
                                          /*SDP_A * /
           value= "rtpmap:96 AMR/8000"
        PkgdName=0x000B00C
                                          /*SDP A * /
           value= "fmtp:96 mode-set=0,2,5,7;mode-change-period=2;mode-change-neighbor=1"
                                          /*SDP_A * /
        PkgdName=0x000B00C
           value= "maxptime:20"
                }}
```

NOTE: The c-line may be provided after m-line.

On RTP-CN (SIP-I) terminations speech codecs are supported according to 3GPP TS 29.232 [5] subclause 10.2.1.

#### 10.2.2 DTMF Payload Type

On IMS and RTP-CN (SIP-I) terminations, DTMF is transported according to the IETF RFC 2833 [18] "telephone event" format.

IETF RFC 2833[18] contains the MIME registration with media type "audio" and media subtype "telephone-event". DTMF shall be signaled accordingly in the SDP "a=rtpmap"-line and a dynamic RTP payload type shall be used.

An IM-MGW supporting DTMF shall support the default options of the IETF RFC 2833 [18] "telephone event" format. Therefore, a support of optional MIME parameters of "telephone-event" is not required at the Mn interface.

#### 10.2.3 Other Codecs

On IMS terminations, other codecs such as ITU-T codecs are transported according to the RTP payload formats in IETF RFC 3555[32]. 3GPP TS 29.163[4], clause B.2.5.4, specifies the options applicable within 3GPP.

IETF RFC 3555[32] contains the MIME registration with media type "audio" and corresponding media subtype.

For dynamic payload type being used the ITU-T codecs shall be signaled accordingly in the SDP "a=rtpmap"-line, where the selected options are expressed as MIME parameters in SDP "a=fmtp"-line.

For static payloads type being used ITU-T codecs shall be allowed to be signaled accordingly in the SDP "a=rtpmap"-line, when the selected options are expressed as MIME parameters in SDP "a=fmtp"-line. Otherwise the codec type is implied by the RTP payload type.

#### 10.2.3.1 G.711 Codec

On IMS and RTP-CN (SIP-I) terminations, G.711 codec is transported according to IETF RFC 3551[33].

#### 10.2.3.2 Clearmode

The procedures for use of Clearmode payload type are specified in ETSI ES 283 012 [34].

On IMS and RTP-CN (SIP-I) terminations, Clearmode codec is transported according to IETF RFC 4040[35].

When the MGC determines that a 64 kbit/s unrestricted bearer service is requested, the clearmode codec shall be used. A Dynamic Payload type with CLEARMODE as encoding name shall be included in both the local and remote descriptor.

The behaviour of the MGW shall then conform to IETF RFC 4040[35]. All voice and signal processing functions such as silence suppression, comfort noise insertion and gain adjustment shall be automatically turned off. The MGW shall inherit the same QoS objectives as the ISDN bearer service.

#### 10.2.3.3 Silence suppression and comfort noise

On RTP-CN (SIP-I) terminations silence suppression and comfort noise are supported according to 3GPP TS 29.232 [5] subclause 10.2.3.4.For IMS terminations the following text applies.

The procedures for use of Silence suppression and comfort noise are specified in ETSI ES 283 012 [34].

Silence Suppression (SS) mode is direction-independent and shall be supported call/bearer individually. Silence suppression mode must be explicitly enabled and disabled. Default shall be a disabled SS mode.

If a codec has built-in support for silence suppression and comfort noise insertion, and an a=line has been defined in IETF RFC3551[33] or IETF RFC 3555 [32] to activate or de-activate these features, the activation or deactivation of these features shall be indicated using the a= line according to IETF RFC 3551[33] and IETF RFC 3555[32]. If the selected codec does not have built in support for silence suppression and comfort noise (CN) insertion, the CN payload code defined in RFC 3389[36] may be included in the media description.

E.g (for ITU-T Recommendation G.711 A-law codec):

```
v=0
c=IN <address type> <connection address>
m=audio <port number> RTP/AVP 8 13
a=ptime: 10
```

If the CN payload is included in the Local Descriptor, the MGW shall be prepared to receive CN packets during silence periods. This action corresponds to an implicit enabling of the SS mode in receiving direction.

If the CN payload is included in the Remote Descriptor, the MGW shall send CN packets during silence periods. This action corresponds to an implicit enabling of the SS mode in sending direction.

Comfort noise generation, voice activity detection and discontinuous transmission algorithms are outside the scope of the present document.

#### 10.2.3.4 VBD codec

The procedures for use of Voiceband data are specified in ETSI ES 283 012 [34].

Voiceband data refers to traffic from facsimile, modem or text telephony applications.

On IMS terminations, voiceband data traffic is transported according to ITU-T Recommendation V.152 [37] and its Corrigendum 1. ITU-T Recommendation G.711 must be used as VBD codec. The RTP Payload Type (PT) codepoint, "0" or "8" or a value from the dynamic PT range, is used in the MG.

NOTE 1: Use of "0" or "8" is indicating to the MG that only inband-based VBD stimuli must be detected. Both peering MGs are consequently not directly synchronized in their state transitions between "voice" and "VBD" modes.

NOTE 2: Use of "a value from the dynamic PT range" is indicating a VBD RTP packet according to ITU-T Recommendation V.152 [37]. The MGW may offer then an enhanced VBD service.

Upon detection of voiceband data traffic, the Media Gateway shall autonomously switch from Audio mode to VBD mode with VBD codec.

Transitioning between Audio mode and VBD mode is possible in both directions. The procedures for transitioning between these two operation modes are described in ITU-T Recommendation V.152 clause 10/V.152 [37]. Any state transition requires the detection of a "VBD stimuli" (see ITU-T Recommendation V.152 clause 9/V.152 [37]).

## 11 Mandatory Support of SDP and H.248 Annex C information elements

See Annex A.15.

## 12 General on packages and Transactions

The use of "Overspecified" (e.g. range of values) and "Underspecified" (e.g. "?") parameter specification shall not be permitted except where explicitly indicated in or referenced by the Mn interface specification.

Commands on ROOT Termination shall only use the NULL Context.

#### 12.1 Profile Details

VOID.

NOTE: Profile now defined in normative Annex A.

## 13 Void

## 14 Call independent H.248 transactions

See section A.17.1

## 15 Transactions towards IM CN Subsystem

15.1 Procedures related to a termination towards IM CN SubsystemFor Transactions towards IM CN Subsystem see A.17.2.

## 15.2 IMS packages

None

## 16 Transactions towards ISUP

## 16.1 Procedures relating to a termination towards ISUP

See section A.17.3.

## 16.2 ISUP packages

None

## 17 Transactions towards BICC

## 17.1 Procedures related to a termination towards BICC

See section A.17.4

## 17.2 BICC packages

This Clause is only applicable for terminations towards BICC Networks. The support of terminations towards BICC networks is optional.

No new packages for terminations towards BICC Networks are defined in the present specification. See Clause 12.1.14 for reused packages from other specifications.

If the Nb framing protocol (see 3GPP TS 29.415 [21]) is applied at the termination towards the BICC network, the following package shall be applied:

3GUP package (see subclause 15.1.1 of 3GPP TS 29.232 [5]);To enable bearer modification at OoBTC capable networks on Nb interface (see 3GPP TS 23.153 [22]) at the termination towards the BICC network, the following package shall be applied:

Modification of Link Characteristics Bearer Capability (see subclause 15.1.5 of 3GPP TS 29.232 [5]);

## Annex A (normative): Profile Description

#### A.1 Profile Identification

Table A.1/1: Profile version

| Profile name: | threegimscsiw |
|---------------|---------------|
| Version:      | 3             |

## A.2 Summary

This Profile describes the minimum mandatory settings and procedures required to fulfil the Media Gateway control requirements for a) the interworking scenario between 3GPP IMS and 3GPP CS or PSTN/ISDN and b) the interworking scenario between NGN and PSTN/ISDN (i.e ETSI IMS-PSTN/ISDN, ETSI PES-PSTN/ISDN).

In addition optional settings and procedures are described which fulfil optional features and where supported, the minimum mandatory settings within the optional procedures and packages are identified that must be supported in order to support that feature.

"Optional" or "O" means that it is optional for either the sender or the receiver to implement an element. If the receiving entity receives an optional element that it has not implemented it should send an Error Code (e.g. 445 "Unsupported or Unknown Property", 501"Not Implemented", etc.). "Mandatory" or "M" means that it is mandatory for the receiver to implement an element. Whether it is mandatory for the sender to implement depends on specific functions; detail of whether elements of the core protocol are manadatory to be sent are defined in the stage 2 procedures, stage 3 procedures and/or the descriptions of individual packages.

The setting or modification of elements described in the profile under the heading "Used in Command" has the meaning that the property can be set/modified with that command. The property may be present in other commands (in order to preserve its value in accordance with ITU-T H.248.1[9]) when those commands are used for other procedures that affect the same descriptor.A.3 Gateway Control Protocol Version

## A.3 Gateway Control Protocol Version

ITU Recommendation H.248.1 Version 2 [9] shall be the version supported.

#### A.4 Connection Model

**Table A.4/1: Connection Model** 

| Maximum number of contexts:                         | No restriction |
|---|----------------|
| Maximum number of terminations per context:         | 2 (NOTE 1)     |
|   | 32 (NOTE 2)    |
| Allowed terminations type combinations in a Context | All (NOTE 3)   |

NOTE 1: Support of 2 terminations per context is required for TISPAN. Support of more than two terminations per context (e.g. for monitoring) is optional.

NOTE 2: Support of 32 termination per context is required for 3GPP

NOTE 3: For TISPAN NGN R2 only the following is required:

- Context[a](IMS, TDM),
- Context[b](TDM, TDM),
- Context [c] (TDM),
- Context [d] (IMS).

#### A.5 Context Attributes

Table A.5/1: Context attributes

| Context Attribute  | Supported | Values Supported |
|--|-----------|------------------|
| Topology   | Optional  | All              |
| Priority Indicator   | Optional  | 0-15             |
| Emergency Indicator  | Yes       | Not Applicable   |
| NOTE: The "Topology" attribute is optional for example support of monitoring. If requested and not |           |                  |
| supported error code 444 shall be returned   |           |                  |

#### A.6 Terminations

#### A.6.1 Termination Names

#### A.6.1.1 General

The Termination ID structure is provisioned in the MGC and MG and is known by the MG and the MGC at or before start up.

With ephemeral ATM/AAL2 and IP endpoint bearer types the internal structure of Termination ID is irrelevant for MGW and MGC and therefore Termination ID is only a numeric identifier for the termination. When bearer type is a physical timeslot within TDM circuit the Termination ID structure shall follow the Termination naming convention for TDM circuit bearer.

Ephemeral terminations are further denoted in the profile by the following:

- BICC (meaning applies to terminations towards BICC)
- BICC ATM (meaning applies to terminations towards BICC with ATM transport)
- BICC IP (meaning applies to terminations towards BICC with IP transport)
- IMS (meaning applies to terminations toward IMS)
- Multiplex (meaning applies to terminations performing multiplexing)
- RTP-CN (meaning applies to terminations towards SIP-I on Nc)

#### A.6.1.2 ASN.1 Encoding

#### A.6.1.2.1 General Structure

The following general structure of TerminationID shall be used:

4 octets shall be used for the termination ID. The following defines the general structure for the termination ID:

| Termination |   |
|-------------|---|
| type        | X |

Termination type:

Length 3 bits

Values:

000 Reserved

001 Ephemeral termination

010 TDM termination

011 - 110 Reserved

111 Reserved for ROOT termination Id (ROOT Termination Id = 0xFFFFFFFF)

X:

Length 29 bits.

Usage dependent on Termination type. TDM terminations specified below in subclause 5.2.2. Other usage unspecified.

The use of wildcarding for the Termination Id shall be performed using 1 octet only.

#### A.6.1.2.2 Termination naming convention for TDM terminations

#### Table C.6.1.2.2/1 ASN.1 coding

| Termination | PCM system | Individual |
|-------------|------------|------------|
| type (=010) |            |            |

#### PCM system:

Length 24 bits

Usage unspecified. Uniquely identifies PCM interface in MGW

Individual:

Length: 5 bits

Max. of 32 individuals (timeslots) per PCM system (max. 24 for a 24 channel system)

#### A.6.1.3 ABNF coding:

#### A.6.1.3.1 General Structure

The following general structure of termination ID shall be used:

TerminationID = "ROOT" / pathName / "\$" / "\*"; according to ITU-T H.248.1 [9] Annex B.

#### A.6.1.3.2 Termination Naming Convention for TDM Terminations

#### A.6.1.3.1.1 Naming Structure

A hierarchical naming structure is recommended for physical Terminations.

The PCMsystem is recommended to follow the following physical and digital signal hierarchy:

```
PCMsytem = <unit-type1>_<unit #>/<unit-type2>_<unit #>/...
```

The <unit-type> identifies the particular hierarchy level.

Some example values of <unit-type> are:

"s", "su", "stm4", "stm1", "oc3", "ds3", "e3", "ds2", "e2", "ds1", "e1" where "s" indicates a slot number and "su" indicates a sub-unit within a slot.

Leading zeroes MUST NOT be used in any of the numbers ("#") above.

The <unit #> is a decimal number which is used to reference a particular instance of a <unit-type> at that level of the hierarchy. Value ranges always starting with one.

The number of levels and naming of those levels is based on the physical hierarchy within the Media Gateway.

Here are some examples of the Termination structure:

- TDM Terminations at SDH STM-1 ports: tdm/s\_<Card ID>/stm1\_<STM1 ID>/e1\_<E1 ID>/<channel #> e.g., tdm/s 2/stm1 3/e1 17/25
- 2. TDM Terminations at PDH E1 ports (e.g., for "PCM system" only applications): tdm/s\_<Card ID>/e1\_<E1 ID>/<channel #>

```
e.g., tdm/s_2/e1_17/25
```

NOTE 1: This Termination naming convention may be used to align with ASN.1 TDM Termination names as defined in A.6.1.2.2. The alignment must take into account the numbering scheme of "<E1 ID>" with the "PCM system" field, and the upper level(s) are regarded as prefix ("tdm/s-<Card ID>" versus "3-bit codepoint for 'TDM' ").

NOTE 2: See also clause 3/H.248.33 concerning "PCM system" definition.

3. TDM Terminations at SONET OC-3 ports: tdm/s\_<Card ID>/oc3\_<OC3 ID>/ds1\_<DS1 ID>/<channel #> e.g., tdm/s\_2/oc3\_3/ds1\_17/22

#### A.6.1.3.1.2 Syntactical Specification

The syntax specification may be used for the population of valid TDM TerminationID structures for.

```
ABNF (IETF RFC 4234) is used for the syntax specification.
```

```
pathName = TDMToken SLASH (PCMsystem / "*")
```

TDMToken = "tdm"

PCMsystem = 0\*(HierarchyLevelHIGHToken SLASH) HierarchyLevelLOWToken

HierarchyLevelHIGHToken = (UnitTypeToken "\_" UnitNumber)

 $Hierarchy Level LOW Token \ = (Unit Type Token \ "\_" \ Wildcard) \ / \ Channel \ / \ Wildcard$ 

UnitTypeToken = "ChassisToken" / "SDHToken" / "SONETToken" / "PDHToken"

ChassisToken = "s" / "su" ; slot, sub-unit within slot

SDHToken = "stm4" / "stm1" ; relevant is capacity, but not electrical or optical interface type

SONETToken = "oc12" / "oc3"

PDHToken = "ds3" / "e3" / "ds2" / "e2" / "ds1" / "e1"; ANSI & ETSI

UnitNumber = 1\*DIGIT

Channel = % d0-31 / % d0-23; value range E1/T1 system

Wildcard = "\*"

#### A.6.1.3.1.3 Wildcarding

Wildcarding (CHOOSE, ALL) is allowed for number fields ("<unit #>").

Examples for wildcarding:

1. TDM Terminations at SDH STM-1 ports:

```
e.g., wildcarding on top level: tdm/*
```

e.g., wildcarding on slot level: tdm/s 3/\*

e.g., wildcarding on STM-1 level: tdm/s 3/stm1 4/\*

e.g., wildcarding on E1 level: tdm/s\_2/stm1\_4/e1\_49/\*

2. TDM Terminations at PDH E1 ports:

e.g., wildcarding on E1 level: tdm/s 1/e1 2/\*

#### A.6.1.3.1.4 Heterogeneous TDM Port Configurations

An homogeneous TDM port configuration relates to a MGW with a single port type for physical Terminations. There is therefore a single TDM Termination name structure in use.

Heterogeneous TDM configurations means different port types, either by different signal hierarchies, like SDH/STM-1 and SDH/STM-4, and/or a mix of SDH and PDH interfaces. The number of port types in use is determining the number of TDM Termination name structures. With heterogeneous configurations the TDM Termination name structure may be aligned, for instance, by using the "highest common digital signal hierarchy" as highest Termination name hierarchical level. There is consequently a single TDM Termination name structure with a "flattened" hierarchy.

#### Example:

MGW with SDH/STM-1 and PDH/E1 ports. Common denominator is "e1", a selected TDM Termination name might be therefore a common two-level structure with "tdm/e1\_<E1 ID>/<channel #>". The unit types "s", "su" or "stm1" are not used here.

NOTE: This concept is followed in A.6.1.2.2, ASN.1 for TDM Terminations.

#### A.6.1.3.2 Termination Naming Convention for Ephemeral Terminations

#### A.6.1.3.2.1 Naming Structure

An alphanumeric pathname structure is recommended for Ephemeral terminations:

ephemeral/<string of alphanumeric characters or "/">

e.g., Ephemeral/1/0/40000

#### A.6.1.3.2.2 Syntactical Specification

The syntax rules may be used for the population of valid ephemeral TerminationID structures for. ABNF (IETF RFC 4234) is used for the syntax specification.

ABNF coding:

pathName = EphToken SLASH EPHsystem

EphToken = "Ephemeral"; so called prefix

; The maximum length of 'pathname' is defined in Annex B.2/H.248.1.

 $EPH system = 0*(Hierarchy Level HIGHT oken SLASH) \ Hierarchy Level LOW Token$ 

Hierarchy Level HIGHToken = 1\*alphanum

 $Hierarchy Level LOW Token \ = Individual \ / \ Wildcard$ 

alphanum = ALPHA / DIGIT

Individual = 1\*DIGIT

Wildcard = "\$" / "\*"

## A.6.2 Multiplexed terminations

#### Table A.6.2/1: Multiplexed terminations

|       | MultiplexTerminations Supported Yes (NOTE)                           |  |
|-------|--|--|
| NOTE: | IOTE: Yes for multimedia interworking and No for voice interworking. |  |

#### Table A.6.2/2: Multiplex Types Supported

| Multiplex types supported:  |   | H.223      |
|---|---|------------|
| Maximum number of terminations connected to TBD (NOTE) multiplex: |   | TBD (NOTE) |
| NOTE:   | TE: It is not clear what is the exact purpose of this parameter; further clarification within H.248.1 core protocol is required before this property shall be used. |            |

## A.7 Descriptors

## A.7.1 Stream Descriptor

#### Table A.7.1/1: Stream descriptors

| Maximum number of streams per termination type                                | 2 (NOTE) |
|---|----------|
| NOTE: Value 2 for multimedia interworking and value 1 for voice interworking. |          |

#### A.7.1.1 Local Control Descriptor

#### Table A.7.1.1/1: Local Control Descriptor

|   |              | Termination Type                   | Stream Type    |
|---|--------------|------------------------------------|----------------|
| Reserve group used:   | No           |                                    |                |
| Reserve value used:   | Yes (NOTE 1) | Terminations Toward IMS and RTP-CN | Not Applicable |
| NOTE 1: The "Reserve value" parameter is inter alia required for penotiation of multiple payload types in ITU-T Rec |              |                                    |                |

NOTE 1: The "Reserve value" parameter is, inter alia, required for negotiation of multiple payload types, ie ITU-T Rec. G.711, comfort noise (according ITU-T Rec. G.711 Appendix II), DTMF tone relay (see RFC2833 [18]).

Table A.7.1.1/2: Allowed Stream Modes

| Termination Type   | Stream Type           | Allowed StreamMode Values                 |
|--------------------|-----------------------|---|
| TDM                | Not Applicable        | SendOnly, RecvOnly, SendRecv, Inactive    |
| IMS                | Audio, Video (NOTE 1) | SendOnly, RecvOnly, SendRecv, Inactive    |
| BICC IP, RTP-CN    | Not Applicable        | SendOnly, RecvOnly, SendRecv,<br>Inactive |
| BICC ATM           | Not Applicable        | SendOnly, RecvOnly, SendRecv,<br>Inactive |
| Multiplex (NOTE 2) | Audio, Video          | SendOnly, RecvOnly, SendRecv,<br>Inactive |

NOTE 2: Specific for multimedia interworking.

## A.7.2 Events Descriptor

Table A.7.2/1: Events Descriptor

| Events settable on termination types and stream types: |  | Yes   |   |
|--|--|---|---|
| otroum typos.  | Event ID   | Termination Type                                    | Stream Type                                       |
|  | Detect_Digit(Digit) (d0 to dd, inclusive)  | ALL except ROOT                                     | Not Applicable                                    |
|  | BNC Established  | Terminations towards BICC network                   | Not Applicable                                    |
|  | BNC Modification Failed  | Terminations towards BICC network                   | Not Applicable                                    |
|  | BNC Modified   | Terminations towards BICC network                   | Not Applicable                                    |
|  | Tunnel   | Terminations towards BICC network with IP transport | Not Applicable                                    |
|  | g/cause  | ALL except ROOT                                     | Not Applicable                                    |
|  | g/sc   | ALL except ROOT                                     | Not Applicable                                    |

|        |   | (monapref/Legdet,                       |           |                |
|        |   | 0x00f8/0x0003)                          |           |                |
|        |   | MPC reception                           | Multiplex | Not Applicable |
|        |   | (monapref/mpcrec,                       |           |                |
|        |   | 0x00f8/0x0004)                          |           |                |
|        |   | RTCP Feedback Message IP Not Applicable |           | Not Applicable |
|        | Detection (rtcpfb/det,  |   |           |                |
|        | 0x00f6/0x0001)  |   |           |                |
| NOTE:  | Events for Terminations towards BICC network dependent on option to support such interworking, e.g. not |   |           |                |
|        | required for TISPAN NGN R2 TMGW.  |   |           |                |
| NOTE1: | BNC Release event is defined in formats and codes table 10.1 and refers to the g/cause event.           |   |           |                |

#### Table A.7.2/2: Event Buffer Control

| Event Buffer Control used: | No |
|----------------------------|----|

#### Table A.7.2/3: Keep active

| Keepactive used on events:                                     | Conditional (NOTE 1) |
|--|----------------------|
| NOTE 1: Required for 3GPP, not required by TISPAN NGN R2 TMGW. |                      |

#### Table A.7.2/4: Embedded events

| Embedded events in an event descriptor: No |
|--|
|--|

#### Table A.7.2/5: Embedded signals

| E   | mbedded signals in an event descriptor: | Yes |
|---|---|-----|
| NOTE: Used if MONA procedures are supported in the Add Multiplex Termination procedure. |   |     |

## A.7.3 EventBuffer Descriptor

#### Table A.7.3/1: Event Buffer Descriptor

| Event Buffer descriptor used: | No |
|-------------------------------|----|

## A.7.4 Signals Descriptor

#### Table A.7.4/1: Signals Descriptor

| Signals settable depend | dant on termination or streams |   | Yes                      |
|-------------------------|--------------------------------|---|--------------------------|
| types:                  |                                | NOTE: "Yes" means any signal not listed below |                          |
|                         |                                |   | ed on any termination or |
|                         |                                |   | ept Signals on ROOT      |
|                         |                                | termination s                                 | shall not be supported.  |
| If yes                  | Signal ID                      | Termination Type                              | Stream Type / ID         |
|                         | ct/*                           | TDM   | Not Applicable           |
|                         | gb/*                           | BICC  | Not Applicable           |
|                         | bt/*                           | BICC IP                                       | Not Applicable           |

| (rtcpfb/fbmesssend,            |           |                |
| 0x00f6/0x0001)                 |           |                |

#### Table A.7.4/2: Signal Lists

| Signals Lists supported:   |  | Conditional (NOTE 1) |                         |
|--|--|----------------------|-------------------------|
| If yes   | Termination Type Supporting Lists:                     |                      | ALL except ROOT         |
|  | Stream Type Supporting lists:                          |                      | ALL                     |
|  | Maximum number of signals to a FFS <integer></integer> |                      | FFS <integer></integer> |
|  | signal list:   |                      |                         |
|  | Intersignal delay pa                                   | rameter              | No                      |
|  | supported:   |                      |                         |
| NOTE 1: Required for 3GPP, not required for TISPAN NGN R2 TMGW.        |  |                      |                         |
| NOTE 2: This field requires at least version 3 of the H.248.1 protocol |  |                      |                         |

#### Table A.7.4/3: Overriding Signal type and duration

| Signal type and duration supported:        | Optional |
|--|----------|
| NOTE: Not required for TISPAN NGN R2 TMGW. |          |

#### Table A.7.4/4: Notify completion

|       | Notify completion   | supported:          |           | Yes                          |
|-------|---|---------------------|-----------|------------------------------|
|       | If yes  | SignalID            |           | Type of completion supported |
|       |   | All Tones and Annou | ıncements | TO, EV, SD and NC            |
| Requ  | uestID Parameter  | NO                  |           |                              |
|       | Supported:  |                     |           |                              |
| NOTE: | NOTE: This field requires at least version 3 of the H.248.1 protocol. |                     |           |                              |

#### Table A.7.4/5: Signals played simultaneously

| Signals played simultaneously: | No |
|--------------------------------|----|

#### Table A.7.6/6: Keep active

| Keepactive used on signals:                                     | Conditional (NOTE 1) |
|---|----------------------|
| NOTE 1: Required for 3GPP, not required for TISPAN NGN R2 TMGW. |                      |

## A.7.5 DigitMap Descriptor

#### Table A.7.5/1: DigitMap Descriptor

| Digit Maps supported: | No |
|-----------------------|----|
|-----------------------|----|

## A.7.6 Statistics Descriptor

#### Table A.7.6/1: Statistics Descriptor

| Statistics reported on subtract:                | No (for TDM Terminations)                    |
|---|--|
|   | Optional For Ephemeral Terminations (NOTE 1) |
| NOTE 1: This is required for TISPAN NGN R2 TMGW |  |

## A.7.7 ObservedEvents Descriptor

#### Table A.7.7/1: Observed Events Descriptor

| Event detection time supported: | No |
|---------------------------------|----|

## A.7.8 Topology Descriptor

#### Table A.7.8/1: Topology Descriptor

| Allowe  | d triples: | Optional (NOTE 1):                                   |
|---|------------|--|
|   |            | (T1, T2, isolate) (T1, T2, oneway) (T1, T2, bothway) |
| NOTE 1: If not supported then error code 444 shall be returned. |            |  |

## A.7.9 Error Descriptor

#### Table A.7.9/1: Error Codes Sent by MGCF

| Supported H.248.8 Error Codes:             | FFS < list of individual numbers>                      |
|--|--|
| Supported Error Codes defined in packages: | All error codes defined in supported packages shall be |
|  | supported.   |

#### Table A.7.9/2: Error Codes Sent by MGW:

| Supported H.248.8 Error Codes:             | FFS< list of individual numbers>                       |
|--|--|
| Supported Error Codes defined in packages: | All error codes defined in supported packages shall be |
|  | supported.   |

## A.7.10 TerminationState Descriptor

#### Table A.7.10/1: TerminationState Descriptor

| TerminationState: ServiceStates:      | InService/OutofService |
|---------------------------------------|------------------------|
| TerminationState: EventBufferControl: | OFF                    |

## A.8 Command API

## A.8.1 Add

Table A.8.1/1: Descriptors used by Command Add Request

| Descriptors | used by Add Request: | Events, Signals, Media (LocalControl, Local And Remote), |
|-------------|----------------------|--|
|             |                      | Audit  |
|             |                      |  |
|             |                      |  |

#### Table A.8.1/2: Descriptors used by Command Add Reply

| Descriptors used by Add Reply: | Events, Signals, Media (LocalControl, Local And Remote),<br>Error, Audit  |
|--------------------------------|---|
|                                | When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are:  - The Error Descriptor  - SDP properties returned in "Reserve IMS Connection Point" and "Reserve IMS Connection Point and Configure Remote Resources" procedures, as specified in A.17.2.2 and A.17.2.4 |

## A.8.2 Modify

#### Table A.8.2/1: Descriptors used by Command Modify Request

| Descriptors used by Modify Request: | Events, Signals, Media (LocalControl, Local And Remote), |
|-------------------------------------|--|
|                                     | Audit  |
|                                     |  |

#### Table A.8.2/2: Descriptors used by Command Modify Reply

| Descriptors used by Modify Reply: | Events, Signals, Media (LocalControl, Local And Remote), Error, Audit   |
|-----------------------------------|---|
|                                   | When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command reques. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are:  - The Error Descriptor - SDP properties returned in "Configure IMS |
|                                   | Resources" procedure as specified in A.17.2.3.  |

### A.8.3 Subtract

Table A.8.3/1: Descriptor used by Command Subtract Request

| Descriptors used by Subtract Request: | AUDIT (empty) or NONE |
|---------------------------------------|-----------------------|
|                                       | 1 1 27                |

#### Table A.8.3/2: Descriptor used by Command Subtract Reply

| Descriptors used by Subtract Reply: | None or Statistics  |
|-------------------------------------|---|
|                                     | When command request contains "Audit(empty)", then no statistics are returned. Otherwise, connection statistics are returned in the Subtract reply dependent on the supported packages (see clause A.14). |

### A.8.4 Move

#### Table A.8.4/1: Command Move

|   | Move command used: | Optional(NOTE) |
|---|--------------------|----------------|
| NOTE: If not supported then error code 443 shall be returned. |                    |                |

#### Table A.8.4/2: Descriptors used by Move Request

| Descriptors used by Move Request: | Events, Signals, Media (LocalControl, Local And |
|-----------------------------------|---|
|                                   | Remote). Audit                                  |

#### Table A.8.4/3: Descriptors used by Move Reply

| Descriptors used by Move Reply | Events, Signals, Media (LocalControl, Local And          |
|--------------------------------|--|
|                                | Remote), Error, Audit.                                   |
|                                | When command request excludes an Audit Descriptor,       |
|                                | the MGW response shall only include descriptors which    |
|                                | contained underspecified or overspecified properties in  |
|                                | the command request, with the exception of the Error     |
|                                | Descriptor. Furthermore, only those properties that were |
|                                | underspecified or overspecified in the request shall be  |
|                                | sent in the reply.                                       |

#### A.8.5 Auditvalue

Table A.8.5/1: Auditvalue

| Audited Properties:        | Property Name and Identity   | Descriptor                  |
|----------------------------|--|-----------------------------|
| Termination ID             | TerminationState: - TDM: ALL (indicating 1 TDM group NOTE3), individual termination (NOTE 4) - ATM/IP: individual termination - Root (MGW Audit) | TerminationState Descriptor |
| Termination ID             | MGC information (mgcinfo) TDM: Individual Termination  | LocalControl Descriptor     |
| Termination ID             | For Packages: - Root - TDM/ATM/IP: individual termination (NOTE1)  | Packages Descriptor (NOTE2) |
| Termination ID             | None (MGW Audit) :<br>- Root   | Audit (empty) Descriptor    |
| Audited Statistics:        | None   |                             |
| Audited Signals:           | None   |                             |
| Audited Events:            | None   |                             |
| Packages Audit<br>Possible | Yes  |                             |

NOTE1: The purpose to audit an individual Termination is to retrieve MGC Information if supported.

NOTE2: Support of this capability is optional.

NOTE3: TDM Group equates to an E1 or T1 PCM System.

NOTE 4: Auditing a single termination of a TDM group is an alternative to the wildcarded audit (TDM: ALL) to derive the

service state of the TDM group. All the terminations of the TDM group share the same service state.

## A.8.6 Auditcapability

Table A.8.6/1: Auditcapability

| Audited Properties:  | Property Name and Identity | Descriptor |
|--|----------------------------|------------|
|  | FFS                        | FFS        |
| Audited Statistics:  | None                       |            |
| Audited Signals:   | None                       |            |
| Audited Events: None   |                            |            |
| NOTE: AuditCapability command is not supported by the ETSI TISPAN profile. |                            |            |

## A.8.7 Notify

Table A.8.7/1: Descriptors Used Notify

| Des   | scriptors used by Notify Request or Reply: | ObservedEvents, Error |
|---|--|-----------------------|
| NOTE: The Error Descriptor shall not be used in Notify Request. |  |                       |

#### Service Change 8.8.A

Table A.8.8/1: Service Change Methods and Reasons Sent By MGCF

| ServiceChange Reasons supported:   |  |
|--|--|
| "901 Cold Boot" (Optional)   |  |
| "902 Warm Boot" (Optional)   |  |
| "903 MGC Directed Change" (Mandatory)  |  |
| "905 Termination Taken Out Of Service" (Optional)  |  |
| "905 Termination Taken Out Of Service" (Optional)  |  |
|  |  |
| NOTE: When a Service Change command on the Root termination with a method other than Graceful is sent, the command shall always be sent as the only command in a message. The sending node shall always wait for the reply to a Service Change command on the Root termination with a method other than Graceful before sending further command requests. A Service Change command on the Root termination with method Graceful may be combined with other commands in a single message. |  |
|  |  |

NOTE 1: ROOT Only.

NOTE 2: Not involving more than 1 MGCF. No support of handoff relates to a network deployment scenario with "primary H.248 systems only", which translates to no geographic redundancy of the MGCF.

Table A.8.8/2: Service Change Methods and Reasons Sent By MGW

| ServiceChange Methods supported:  | ServiceChange Reasons supported:                                       |
|---|--|
| Restart   | "900 Service Restored" (Mandatory)                                     |
|   | "901 Cold Boot" (Mandatory) (NOTE1)                                    |
|   | "902 Warm Boot" (Mandatory) (NOTE1)                                    |
|   | "910 Media Capability Failure " ALL except ROOT                        |
|   | (Optional)   |
|   | "913 Signal Capability Failure " ALL except ROOT                       |
|   | (Optional)   |
|   | "914 Event Capability Failure " ALL except ROOT                        |
|   | (Optional)"916 Packages Change (Optional)                              |
|   | "917 Capability Change (Optional)                                      |
| Graceful  | "904 Termination Malfunction" ,ALL except ROOT, (Mandatory)            |
|   | "905 Termination Taken Out Of Service",(Mandatory)                     |
|   | "906 Loss Of Lower Layer Connectivity", ALL except ROOT,(Mandatory)    |
|   | "907 Transmission Failure" ALL except ROOT,(Mandatory)                 |
|   | "908 MG Impending Failure" ROOT only (Mandatory)                       |
| Forced  | "904 Termination Malfunction" ,ALL except ROOT, (Mandatory)            |
|   | "905 Termination Taken Out Of Service" (Mandatory)                     |
|   | "906 Loss Of Lower Layer Connectivity" ALL except ROOT, (Mandatory)    |
|   | "907 Transmission Failure" ALL except ROOT, (Mandatory)                |
|   | "908 MG Impending Failure" ROOT only (Mandatory)                       |
| Handoff (NOTE1, NOTE 2)   | "903 MGC Directed Change" (Mandatory)                                  |
| Disconnected (NOTE1)  | "900 Service Restored" (Mandatory)                                     |
|   | "916 Packages Change (Optional)  |
|   | "917 Capability Change (Optional)                                      |
|   |  |
|   | on the Root termination with a method other than Graceful is sent, the |
| command shall always be sent as the only command in a message. The sending node shall always wait for   |  |
| the reply to a Service Change command on the Root termination with a method other than Graceful before sending further command requests. A Service Change command on the Root termination with method Graceful may be combined with other commands in a single message. |  |
|   |  |
| NOTE 1: ROOT Only.  | Demister   |
| NOTE 2: In response to a MGC Ordered Re-  | Kegister.  |

#### Table A.8.8/3: Service Change Address

| ServiceChangeAddress used: | No |
|----------------------------|----|

#### Table A.8.8/4: Service Change Delay

| ServiceChangeDelay used: | No |
|--------------------------|----|

#### Table A.8.8/5: Service Change Incomplete Flag

|       | ServiceChange Incomplete Flag used:                   | No        |
|-------|---|-----------|
| NOTE: | This field requires at least version 3 of the H.248.1 | protocol. |

#### Table A.8.8/6: Service Change Version

| Version used in ServiceChangeVersion: | 2 |
|---------------------------------------|---|
|                                       |   |

#### Table A.8.8/6: Service Change Profile

| ServiceChangeProfile mandatory: | Yes |
|---------------------------------|-----|

#### Table A.8.8/8: H.248.18 Profile negotiation

| Profile negotiation as per H.248.18: | No |
|--------------------------------------|----|

#### A.8.9 Manipulating and auditing context attributes

#### Table A.8.9/1: Manipulating and auditing context attributes

| Context Attributes Manipulated: | Topology (Optional), Emergency, Priority |
|---------------------------------|--|
| Context Attributes Audited:     | None                                     |

## A.9 Generic command syntax and encoding

#### Table A.9/1: Encodings

| Supported Encodings:                              | Binary (optional) (NOTE 1)  |
|---|-----------------------------|
|   | Text (optional) (NOTE 2):   |
|   | The receiver shall support: |
|   | Short Token Notation        |
|   | Long Token Notation         |
| If binary encoding, is indefinite length encoding | Yes (NOTE3)                 |
| supported:  |                             |

- NOTE 1: For 3GPP Mn interface binary encoding is strongly recommended if only one encoding is selected to ensure interoperability.
- NOTE 2: Text encoding is required by TISPAN NGN R2 TMGW. For implementations providing both 3GPP Mn and TISPAN functionality text encoding is required as a minimum.
- NOTE3: The binary encoding rules which are applicable to the defined Abstract Syntaxes are the Basic Encoding Rules for Abstract Syntax Notation One, defined in ITU-T Recommendation X.690 [41]. Specifically in accordance with ITU-T Recommendation X.690 [41] section 7.3, alternative encodings based on the definite and indefinite form of length are permitted by the basic encoding rules as a sender's option. Receivers shall support both alternatives.

### A.10 Transactions

#### Table A.10/1: Transactions per Message

| Maximum number of TransactionRequests / TransactionReplies / TransResponseAcks / Segment Replies per message: | 2(NOTE 1)<br>10(NOTE 2) |
|---|-------------------------|
| NOTE 1: Maximum required by TISPAN NGN R2<br>NOTE 2: Maximum required by 3GPP                                 |                         |

#### Table A.10/2: Commands per Transaction Requests

| Maximum number of commands per Transaction | 2(NOTE 1)           |
|--|---------------------|
| request:                                   | Unspecified(NOTE 2) |
| NOTE 1: Maximum required by TISPAN NGN R2  |                     |
| NOTE 2: Not specified by 3GPP              |                     |

#### Table A.10/3: Commands per Transaction Reply

| Maximum number of commands per Transaction repl   | y: 2 (NOTE 1)        |
|---|----------------------|
|   | Unspecified (NOTE 2) |
| NOTE 1: Maximum required by TISPAN NGN R2   |                      |
| NOTE 2: Not specified by 3GPP however for auditing with wildcarded requests (e.g TDM E1) then the reply may include |                      |
| up to 32 commands to indicate the termination state.  |                      |

#### Table A.10/4: Commands for Wildcarded Responses

| Wildcarded responses may be requested for: | Modify, Subtract, AuditValue |
|--|------------------------------|
|--|------------------------------|

#### Table A.10/5: Procedures for Wildcarded Responses

| Proced | lures that make use of wildcarded responses:  | Release Bearer, Release Termination, Audit Value, |
|--------|---|---|
|        |   | Release IMS Termination, Release TDM Termination  |
| NOTE:  | NOTE: Used when multiple terminations are released with one command and in audit responses where multiple |   |
|        | terminations are implied by the audit request.  |   |

#### **Table A.10/6: Optional Commands**

| Commands able to be marked "Optional": | ALL |
|--|-----|

#### **Table A.10/7: Transaction Timers**

| Transaction Timer:               | Value       |
|----------------------------------|-------------|
| normalMGExecutionTime            | Provisioned |
| normalMGCExecutionTime           | Provisioned |
| MGOriginatedPendingLimit         | Provisioned |
| MGCOriginatedPendingLimit        | Provisioned |
| MGProvisionalResponseTimerValue  | Provisioned |
| MGCProvisionalResponseTimerValue | Provisioned |

## A.11 Messages

The MGC/MGW may be named according to the naming structure of the underlying transport protocol which carries the H.248 protocol.

It is however recommended that MGC and MG names are in the form of fully qualified domain names. For example the domain name of the MGC may be of the form mgc1.whatever.net and the name of the MG may be of the form mg1.whatever.net.

The "Message Identifier" in the H.248 messages may be used by the MGC and MG to identify the originator of the message.

## A.12 Transport

#### Table A.12/1: Transport

| Supported Transports: |  | <ul> <li>SCTP(recommended) (NOTE1).</li> </ul>                |
|-----------------------|--|---|
|                       |  | <ul> <li>SCTP/M3UA(optional) optional – as defined</li> </ul> |
|                       |  | in IETF RFC 3332 [24] with options detailed                   |
|                       |  | in 3GPP TS 29.202 [25] (NOTE2).                               |
|                       |  | UDP(optional).  |
| NOTE:                 | If using SCTP as defined in IETF RFC 2960 [15] the MGW shall always be the node to perform the "Initiation". |   |
| NOTE1                 | H.248 is "SCTP user" in this case of H.248/SCTP/IP based transport according ITU-T Rec. H.248.4 [38]. The    |   |
|                       | number of used SCTP Streams for traffic of the H.248 Control Association must be defined, see § 8/H.248.4    |   |
|                       | [38]. A single SCTP Stream is the default assumption ("Single-Stream Mode") in this Profile.                 |   |
| NOTE2                 | This is slightly different with regards to SCTP encapsulation. H.248 is "M3UA user" in this case of          |   |
|                       | H.248/M3UA/SCTP/IP based transport. H.248 Messages are corresponding to M3UA user protocol data units.       |   |
|                       | "SCTP multistreaming" may be also applied (see § 1.4.7/RFC 3332). If not then the complete M3UA traffic is   |   |
|                       | mapped on a single SCTP Stream, i.e., the Single-Stream Mode.  |   |
| NOTE3                 | Checksum calculation for SCTP shall be supported as specified in RFC 3309 [43] instead of the method         |   |
|                       | specified in RFC 2960 [12].  |   |

#### Table A.12/2: Segmentation

|       | Segmentation Supported:                               | No        |
|-------|---|-----------|
| NOTE: | This field requires at least version 3 of the H.248.1 | protocol. |

#### Table A.12/3: Support of Control Association Monitoring

| Control Association Monitoring Supported: | Monitoring mechanism is dependent on used H.248 transport (see Table A.12/1): |
|---|---|
|   | SCTP: inherent capability of SCTP (NOTE 1)                                    |
|   | SCTP/M3UA: inherent capability of SCTP  |
|   | UDP:  |
| OTE 1: Use of H.248.14 for this is FFS    |   |

## A.13 Security

Table A.13/1: Security

| Supported Security: | None |
|---------------------|------|

# A.14 Packages

Table A.14/1: Mandatory packages

| Package Name  | Package ID        | Version |
|---|-------------------|---------|
| Generic (see ITU-T Recommendation H.248.1 [9] Annex E.1);                       | g, (0x0001)       | v1      |
| Base Root Package (see ITU-T Recommendation H.248.1 [9] Annex E.2);             | root, (0x0002)    | v2      |
| Basic Continuity Package (see ITU-T Recommendation H.248.1 [9] Annex E.10);     | ct, (0x000a)      | v1      |
| TDM Circuit Package (see ITU-T Recommendation H.248.1 [9] Annex E.13);          | tdmc, (0x000d)    | v1      |
| Hanging Termination Detection package (see ITU-T Recommendation H.248.36 [27]). | hangterm (0x0098) | v1      |

Table A.14/2: Optional packages

| Package Name   | Package ID  | Version | Support dependent on:   |
|--|---|---------|---|
| Tone Detection Package (see ITU-T Recommendation H.248.1 [9] Annex E.4);                                   | tonedet, (0x0004) This package is "extension only". It must be supported if extended but shall not be published over the protocol. It is here for information only. | v1      | Mandatory for 3GPP  |
| Basic DTMF Generator Package (see ITU-T Recommendation H.248.1 [9] Annex E.5);                             | dg, (0x0005)  | v1      | Mandatory for 3GPP  |
| DTMF Detection Package (see ITU-T Recommendation H.248.1 [9] Annex E.6);                                   | dd, (0x0006)  | v1      | Mandatory for 3GPP  |
| Media Gateway Resource Congestion Handling Package (see ITU-T Recommendation H.248.10 [12]).               | chp, (0x0029)   | v1      | Mandatory for 3GPP  |
| Generic Announcement Package (see ITU-T<br>Recommendation H.248.7 [28]). Only Fixed Part is<br>required.   | an(0x001d)  | v1      | 3GPP applications   |
| Bearer Characteristics Package (see ITU-T Recommendation Q.1950 [23] annex A3).                            | bcp (0x001e   | V2      | Terminations Towards BICC   |
| Generic Bearer Connection Package (see ITU-T Recommendation Q.1950 [23] annex A.6).                        | Gb, (0x0021)  | v1      | Interworking with BICC  |
| Tone Generator Package (see ITU-T<br>Recommendation H.248.1 [9] Annex E.3);                                | tongen, (0x0003)  | v1      | This package is "extension only". It must be supported if extended but shall not be published over the protocol. It is here for information only. |
| Call Progress Tones Generator Package (see ITU-T Recommendation H.248.1 [10] annex E.7).                   | Cg, (0x0007)  | v1      |   |
| Basic Call Progress Tones Generator with Directionality, (see ITU-T Recommendation Q.1950 [23] annex A.8). | bcg, (0x0023)   | v1      | Services provided by network  |
| Expanded Call Progress tones Generator Package (see ITU-T Recommendation Q.1950 [23] annex A.9).           | xcg, (0x0024  | v1      | Services provided by network  |
| Basic Services Tones Generation Package, (see ITU-T Recommendation Q.1950 [23] annex A.10).                | srvtn, (0x0025)   | v1      | Services provided by network  |
| Bearer Control Tunnelling Package (see ITU-T Recommendation Q.1950 [23] annex A.7).                        | Bt, (0x0022)  | v1      | Interworking with BICC and IP transport   |
| Expanded Services Tones Generation Package (see ITU-T Recommendation Q.1950 [23] annex A.11).              | xsrvtn, (0x0026)  | v1      | Services provided by network  |
| Intrusion Tones Generation Package (see ITU-T Recommendation Q.1950 [23] annex A.12).                      | Int, (0x0027)   | v1      | Services provided by network  |
| 3GUP package (see subclause 15.1.1 of 3GPP TS 29.232 [5])  | threegup, (0x002f)  | v1      | Interworking with BICN PLMN   |
| Modification of Link Characteristics Bearer Capability (see subclause 15.1.5 of 3GPP TS 29.232 [5])        | threegmlc,<br>(0x0046)  | v1      | Interworking with BICN PLMN with Codec Modification   |
| Inactivity (see ITU-T Recommendation. H248.14 [29])  | it, (0x0045)  | v1      | Only applicable for UDP transport.  |
| TFO package (see subclause 15.2.2 of 3GPP TS 29.232 [5])   | threegtfoc,<br>(0x0031)   | v2      |   |
| Media Gateway Overload Control Package (see ITU-T Recommendation H.248.11 [28]).                           | ocp, (0x0051)   | v1      |   |

| MGC Information Package (see ITU-T<br>Recommendation H.248.45 [30])   | mgcinfo,<br>(0x00a0) | v1 | This package may be supported as an operator option. For this Profile the information string shall be limited to 32 octets in length.                   |
|---|----------------------|----|---|
| RTP (ITU-T Recommendation H248.1 [9] Annex E.12) (NOTE 1)   | rtp, (0x000c)        | V1 | Used for connection statistics  |
| H324 package (see ITU-T Recommendation H.248.12 [41])   | h324,(0x002c)        | V1 | Multimedia calls  |
| H.245 Transport Package (see ITU-T<br>Recommendation H.248.12a2 [42])   | h245tp, (0x00b4)     | V1 | Multimedia calls  |
| IP Domain connection package (see ITU-T Recommendation H.248.41 [44])   | ipdc, (0x009d)       | V1 | Multiple IP realms supported  |
| H.245 Transport Package for SPC use (see H.248.72 [46] subclause 6)   | h245tpspc, (0x00f7)  | V1 | Multimedia calls with MONA  |
| MONA preference package (see H.248. 72 [46] subclause 7)  | monapref, (0x00 f8)  | V1 | Multimedia calls with MONA  |
| 3G Interface Type package (see subclause 15.2.11 of 3GPP TS 29.232 [5])   | threegint (0x00e3)   | v1 |   |
| RTCP Feedback Message package (see H.248.71 [49] subclause 8)  NOTE 1: support of RTP Package does not require su | rtcpfb, (0x00f6)     | V1 | Multimedia interworking between the H.245 messages in 3G-324M at the CS side and the corresponding RTCP messages used by MTSI terminals at the IMS side |

**Table A.14/3: Package Provisioning Information** 

| Package Name                      | Property, Parameter, Signal, Event ID | Provisioned Value: |
|-----------------------------------|---------------------------------------|--------------------|
| Generic Announcement (H.248.7)    | Fixed Announcement Play, AV           | Provisioned        |
| NOTE: This may not be required by | y TISPAN NGN R2 TMGW.                 |                    |

#### A.14.1 Generic Package

Table A.14.1/1: Package Usage Information For Generic Package

| Properties      | Mandatory/<br>Optional      | Used in command:       | Supported Values: | Provisioned Value:          |
|-----------------|-----------------------------|------------------------|-------------------|-----------------------------|
| None            | -                           | -                      | -                 | -                           |
| Signals         | Mandatory/<br>Optional      | Used in command:       |                   | Duration Provisioned Value: |
| None            | -                           |                        | -                 | -                           |
|                 | Signal Parameters           | Mandatory/             | Supported         | Duration Provisioned        |
|                 | _                           | Optional               | Values:           | Value:                      |
|                 | -                           | -                      | -                 | -                           |
| Events          | Mandatory/                  |                        | Used in command:  | •                           |
|                 | Optional                    |                        |                   |                             |
| Cause (g/cause. | M                           |                        | ADD, MOD, NOTIFY  | 1                           |
| 0x0001/0x0001)  | Event                       | Mandatory/             | Supported         | Provisioned Value:          |

NOTE: This event may also be used to report temporary errors in the MGW for both IMS, BICC and TDM connections where the termination is not out of service and thus sending a Service Change is inappropriate. On receipt of this event, the MGC is expected to release the connection in the MGW and force release the associated call. An example of such an error could be loss of RTP on an IMS termination.

NOTE 1: The package does not define any new signal. The defined signal parameter can be used in the Outgoing H.245 Message signal (h245tpspc/h245msgout, 0x00f7/0x0001) defined in the base package (H.245 Transport package).

NOTE 2: The package does not define any new event. The defined event and observed event parameters can be used in the Incoming H.245 Message event (h245tpspc/h245msgin, 0x00f7/0x0001) defined in the base package (H.245 Transport package).

# A.15 Mandatory support of SDP and H.248 Annex C information elements

Table A.15/1: Supported Annex C and SDP information elements

| Information Element | Annex C Support | SDP Support  |
|---------------------|-----------------|--|
| v-line              | "SDP_V"         | The value must always be equal to zero: v=0.   |
| m-line              | "SDP_M "        | <port> <transport> and <fmt-list> are required. Both static and dynamic payload types shall be supported. The MGC may underspecify the <fmt-list> subfield in place of a single dynamic payload type. In this case the mapping between the underspecified payload type and the <encoding name="">/<clock rate=""> shall be provided in the rtpmap attribute.</clock></encoding></fmt-list></fmt-list></transport></port>   |
| c-line              | "SDP_C "        | <nettype> <addrtype> and <connection address=""> are required The network type shall be set to "IN". The address type may be IPv4 or IPv6. The MGC may apply parameter underspecification to the <address type=""> subfield. (NOTE 2)</address></connection></addrtype></nettype>  |
| a-line              | "SDP_A "        | For a dynamic RTP payload type, for each codec information on the codec type shall be provided in a separate SDP "a=rtpmap "-line and possibly additional SDP "a=fmtp "-line(s). See Clause 10.2.  |
| b-line              | "SDP_B "        | (NOTE1).  B:RS and b:RR bandwidth modifiers required Bandwidth information shall be supplied by the MGC if the required bandwidth cannot be immediately derived from the information contained in the m= line. If the MGC is using parameter underspecification, the MG shall assume a reasonable default bandwidth value for well-known codecs and shall provide this value in the response sent to the MGC. The Modifier field shall be set to "AS". The Bandwidth Value field shall be set to the maximum bandwidth requirement of the media stream in kbit/s and shall take into account all headers down to the IP layer.  The MGC may also supply additional RTCP bandwidth modifiers (i.e. RR and RS, see IETF RFC 3556 [39]). If the RTCP modifiers are not supplied, the bandwidth value for the AS modifier shall take into account an extra 5% bandwidth for RTCP packets.  |
| o-line              | "SDP_O"         | The origin line consists of 6 fields:  o= <user name=""> <session id=""> <version> <network type=""> <address type=""> <address type=""> <address>.  The MGC is not required to supply this line but shall accept it.  The MG shall return the value received from the MGC or if there is no o-line sent by the MGC, the MG shall populate this line as follows:  - <user name=""> should contain an hyphen - <session id=""> and <version> should contain one or mode digits as described in RFC 4566 [17] - <network type=""> shall be set to IN - <address type=""> shall be set to IP4 or IP6 The Address Type shall be set to "IP4" or "IP6" depending on the addressing scheme used by the network to which the MG is connected <address> should contain the fully qualified domain name or IP address of the gateway.</address></address></network></version></session></user></address></address></address></network></version></session></user> |

|  |  | _   |
|--|--|---|
| s-line   | "SDP_S"  | The session name (s=) line contains a single field: s= <session-name>.</session-name>   |
|  |  | The MGC is not required to supply a session name but shall accept one. This line may be used to convey correlation information for use in CDRs.   |
|  |  | The MG shall return the value received from the MGC or if there is no s-line sent by the MGC, the MG shall populate this line as follows: - "s=-"   |
| t-line   | "SDP_T"  | The time (t=) line consists of two fields: t= <start-time> <stop-time>.</stop-time></start-time>  |
|  |  | The MGC is not required to supply a time description but shall accept one.  |
|  |  | The MG shall return the value received from the MGC or if there is no t-line sent by the MGC, the MG shall populate this line as follows: - "t=0 0"   |
|  |  |   |
| NOTE b: For BICC termi<br>with the subcla<br>Recommendati<br>X.213 [33] shal<br>The BIR length | nations, mandatory su<br>use "Mandatory Suppo<br>on Q.1950 [14]. For IF<br>I be used. | Inactivity Timeout - Activate                     | Inactivity Timeout - Activate                 | Optional  |   |
| Inactivity Timeout - Indication                   | Inactivity Timeout - Indication               | Optional  |   |

#### A.17.1.2 Profile registration

The following description is based on H.248.1 profile registration procedure with some clarifications. The reply to the ServiceChange Request containing the SCP parameter indicates if the MGCF supports the requested profile or if it does not support it and wants to propose an alternative profile. The profile (name and version) is only returned in the reply if the MGCF cannot support the specified profile in the ServiceChangeRequest. The returned reply shall indicate the profile and version supported. Upon reception of a profile in the reply, if the IM-MGW supports the indicated profile, it shall issue a new ServiceChange Request with the agreed profile to explicitly confirm the acceptance of the profile to the MGCF; otherwise, if the IM-MGW does not support the indicated profile, it may continue the registration or reregistration procedure by issuing a new ServiceChange Request with an alternative profile; until such procedure is successfully completed the IM-MGW shall remain out of service. If the profile is not returned the MGCF shall use the capabilities specified by the Profile indicated in the service change request.

NOTE: It should be observed that the profile registration is not a "cold calling" negotiation; it is expected that the operator will have configured the network to support certain profiles and so the profile registration within the Mn interface permits network upgrade scenarios but otherwise is simply a means to confirm the connection of the profile to be used over the Mn interface between MGCF and IM-MGW.

#### A.17.2 IMS Terminations Procedures

#### A.17.2.1 Summary of Procedures related to a termination towards IM CN Subsystem

Table 1 shows the relationship between each call-related procedure in ITU-T Recommendation Q.1950 [14] (see 3GPP TS 29.205 [3]) or TS 29.232 [5] and the corresponding stage 2 procedure defined in 3GPP TS 29.163 [4].

Table A.17.2.1/1: Correspondence between ITU-T Recommendation Q.1950 [13] or 29.232 [5] call-related transactions and 3GPP TS 29.163 [4] procedures

| Procedure defined in 3GPP TS 29.163 [4]                     | Transaction<br>used in<br>Q.1950 [14] | Transaction used in TS 29.232 [5]     | Supported | Comment   |
|---|---------------------------------------|---------------------------------------|-----------|---|
| Reserve IMS Connection point                                | Not defined                           | Not Defined                           | Mandatory | See A.17.2. 2   |
| Configure IMS Resources                                     | Not Defined                           | Not Defined                           | Mandatory | See A.17.2. 3   |
| Reserve IMS Connection Point and configure remote resources | Not defined                           | Not Defined                           | Mandatory | See A.17.2. 4   |
| Release IMS termination                                     | n. a. for reuse                       | Release<br>Termination                | Mandatory | See A.17.2. 5   |
| Change IMS ThroughConnection                                | n. a. for reuse                       | Change<br>Through<br>Connection       | Mandatory | only the Explicit (MGC Controlled Cut-<br>Through) procedure is supported   |

|         |  |  |  |

#### A.17.2.2 Reserve IMS Connection Point

When the procedure "Reserve IMS Connection Point" is required the following procedure is initiated:

The MGCF sends an Add.req command with the following information.

1 Add.req (Reserve IMS Connection Point) MGCF to IM-MGW

Table A.17.2.2/1: Reserve IMS Connection Point Request

| Address Information | Control information                     | Bearer information |
|---------------------|---|--------------------|
| Stream ID           | Transaction ID = z                      | Stream ID          |
| Local Descriptor {  | Termination ID = ?                      | Local Descriptor { |
| Port = ?            | If Context Requested:                   | Codec List         |
| IP Address = ?      | Context ID = ?                          | RTP Payloads       |
| }                   | If Context Provided:                    | RtcpbwRS           |
|                     | Context ID = c1                         | RtcpbwRR           |
|                     | If IP Interface Type:                   | }                  |
|                     | IP interface = "IP interface type"      |                    |
|                     | If Resources for multiple Codecs        |                    |
|                     | shall be reserved:                      |                    |
|                     | Reserve_Value                           |                    |
|                     | NotificationRequested (Event ID = $x$ , |                    |
|                     | "termination heartbeat")                |                    |
|                     | If indication on Bearer Released        |                    |
|                     | requested:                              |                    |
|                     | NotificationRequested (Event ID = $x$ , |                    |
|                     | "BNC Release (Cause)") – as             |                    |
|                     | defined in ITU-T                        |                    |
|                     | Recommendation Q.1950                   |                    |
|                     | If multiple IP realms: IP realm         |                    |
|                     | Identifier = required IP realm          |                    |
|                     | identifier                              |                    |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

#### 2 Add.resp (Reserve IMS Connection Point Ack)

Table A.17.2.2/2: Reserve IMS Connection Point Acknowledge

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| Stream ID           | Transaction ID      | Stream ID          |
| Local Descriptor {  | Termination ID      | Local Descriptor { |
| Port                | Context ID          | Codec List         |
| IP Address          |                     | RTP Payloads       |
| }                   |                     | RtcpbwRS           |
|                     |                     | RtcpbwRR           |
|                     |                     | }                  |

#### A.17.2.3 Configure IMS Resources

When the procedure "Configure IMS Resources" is required the following procedure is initiated:

The MGCF sends an Mod.req command with the following information.

1 Mod.req (Configure IMS Resources) MGCF to IM-MGW

Table A.17.2.3/1: Configure IMS Resources Request

| Address Information  | Control information              | Bearer information                |
|--|----------------------------------|-----------------------------------|
| If local resources are modified:   | Transaction ID                   | If local resources are modified:  |
| Stream ID  | Termination ID                   | Stream ID                         |
| Local Descriptor {   | Context ID                       | Local Descriptor {                |
| Port   | If IP Interface Type:            | Codec List                        |
| IP Address   | IP interface = "IP interface     | RTP Payloads                      |
| }  | type"(NOTE)                      | RtcpbwRS                          |
| If remote resources are modified:  | If Resources for multiple Codecs | RtcpbwRR                          |
| Remote Descriptor {  | shall be reserved:               | }                                 |
| Port   | Reserve_Value                    | If remote resources are modified: |
| IP Address   |                                  | Remote Descriptor {               |
| }  |                                  | Codec List                        |
|  |                                  | RTP Payloads                      |
|  |                                  | RtcpbwRS                          |
|  |                                  | RtcpbwRR                          |
|  |                                  | }                                 |
| NOTE: If this property is included within the "Reserve IMS Connection Point" procedure or the "Reserve IMS |                                  |                                   |
| Connection Point and configure remote resource" procedure then it shall not be modified by this            |                                  |                                   |
| procedure.   |                                  |                                   |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

2 Mod.resp (Configure IMS Resources Ack)

Table A.17.2.3/2: Configure IMS Resources Acknowledge

| Address Information                  | Control information | Bearer information                   |
|--------------------------------------|---------------------|--------------------------------------|
| If local resources were provided in  | Transaction ID      | If local resources were provided in  |
| request:                             | Context ID          | request:                             |

| IP Address                           |                     | Remote Descriptor {                  |
| }                                    |                     | Codec List                           |
|                                      |                     | RTP Payloads                         |
|                                      |                     | RtcpbwRS                             |
|                                      |                     | RtcpbwRR                             |
|                                      |                     | }                                    |

#### A.17.2.4 Reserve IMS Connection Point and configure remote resources

When the procedure "Reserve IMS Connection Point and configure remote resources" is required the following procedure is initiated:

The MGCF sends a Add.req command with the following information.

1 Add.req (Reserve IMS Connection Point and configure remote resources) MGCF to IM-MGW

Table A.17.2.4/1: Reserve IMS Connection Point and configure remote resources Request

| Address Information | Control information                     | Bearer information  |
|---------------------|---|---------------------|
| Stream ID           | Transaction ID                          | Stream ID           |
| Local Descriptor {  | Termination ID = ?                      | Local Descriptor {  |
| Port = ?            | If Context Requested:                   | Codec List          |
| IP Address = ?      | Context ID = ?                          | RTP Payloads        |
| }                   | If Context Provided:                    | RtcpbwRS            |
| Remote Descriptor { | Context ID = c1                         | RtcpbwRR            |
| Port                | If IP Interface Type:                   | }                   |
| IP Address          | IP interface = "IP interface type"      | Remote Descriptor { |
| }                   | If Resources for multiple Codecs        | Codec List          |
|                     | shall be reserved:                      | RTP Payloads        |
|                     | Reserve_Value                           | RtcpbwRS            |
|                     | NotificationRequested (Event ID = $x$ , | RtcpbwRR            |
|                     | "termination heartbeat")                | }                   |
|                     | If indication on Bearer Released        |                     |
|                     | requested:                              |                     |
|                     | NotificationRequested (Event ID = $x$ , |                     |
|                     | "BNC Release (Cause)") – as             |                     |
|                     | defined in ITU-T                        |                     |
|                     | Recommendation Q.1950                   |                     |
|                     | If multiple IP realms: IP realm         |                     |
|                     | Identifier = required IP realm          |                     |
|                     | identifier                              |                     |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

2 Add.resp (Reserve IMS Connection Point and configure remote resources Ack)

Table A.17.2.4/2: Reserve IMS Connection Point and configure remote resources Acknowledge

| Address Information | Control information | Bearer information  |
|---------------------|---------------------|---------------------|
| Stream ID           | Transaction ID      | Stream ID           |
| Local Descriptor {  | Termination ID      | Local Descriptor {  |
| Port                | Context ID          | Codec List          |
| IP Address          |                     | RTP Payloads        |
| }                   |                     | RtcpbwRS            |
| Remote Descriptor { |                     | RtcpbwRR            |
| Port                |                     | }                   |
| IP Address          |                     | Remote Descriptor { |
| }                   |                     | Codec List          |
|                     |                     | RTP Payloads        |
|                     |                     | RtcpbwRS            |
|                     |                     | RtcpbwRR            |
|                     |                     | }                   |

#### A.17.2.5 VOID

#### A.17.2.6 Termination heartbeat indication

When the procedure "Termination heartbeat indication" is required the following procedure is initiated: the MGW sends a NOT.req command with the following information.

Table A.17.2.6/1: NOT.req (Termination heartbeat) MGW to MGC

| Address Information | Control information        | Bearer information |
|---------------------|----------------------------|--------------------|
|                     | Transaction ID = z         |                    |
|                     | Context ID = c1            |                    |
|                     | Termination ID = bearer1   |                    |
|                     |                            |                    |
|                     | Event_ID (Event ID = $x$ , |                    |
|                     | "termination heartbeat")   |                    |

When the processing of command is complete, the MGC initiates the following procedure.

Table A.17.2.6/2: NOT.resp (Termination heartbeat) MGC to MGW

| Address Information | Control information      | Bearer information |
|---------------------|--------------------------|--------------------|
|                     | Transaction ID = z       |                    |
|                     | Context ID = c1          |                    |
|                     | Termination ID = bearer1 |                    |

The heartbeat timer shall be configured to a value much greater than the mean call holding time.

The MGCF is in charge of correcting any detected mismatch, by substracting hanging terminations or clearing hanging contexts as specified for the hanging termination detection procedure in 3GPP TS 29.163 [4].

#### A.17.2.7 Request RTCP-Interworking

When the procedure "Request RTCP-Interworking" is required the following procedure is initiated:

the MGCF sends a Mod.req command with the following information.

Table A.17.2.7/1: Request RTCP-Interworking Request

| Address Information | Control information  | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = bearer1                      |                    |
|                     | NotificationRequested (Event ID = x, "Incoming RTCP Interworking (RTCP Filter)") |                    |

When the processing of command is complete, the IM-MGW initiates the following procedure.

Table A.17.2.7/2: Request RTCP-Interworking Acknowledge

| Address Information | Control information      | Bearer information |
|---------------------|--------------------------|--------------------|
|                     | Transaction ID = z       |                    |
|                     | Context ID = c1          |                    |
|                     | Termination ID = bearer1 |                    |

#### A.17.2.8 Notify RTCP-Interworking

When the procedure "Notify RTCP-Interworking" is required the following procedure is initiated:

the IM-MGW sends a NOT.req command with the following information.

Table A.17.2.8/1: Notify RTCP-Interworking Request

| Address Information | Control information  | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z   |                    |
|                     | Context ID = c1  |                    |
|                     | Termination ID = bearer1   |                    |
|                     | if RTCP PLI message received and the interworking required: Update Picture = UpdatePicture_Event |                    |
|                     | if RTCP TMMBR message received and the interworking required: Max BitRate = MaxBitRate Event     |                    |

When the processing of command is complete, the MGCF initiates the following procedure.

Table A.17.2.8/2: Notify RTCP-Interworking Acknowledge

| Address Information | Control information      | Bearer information |
|---------------------|--------------------------|--------------------|
|                     | Transaction ID = z       |                    |
|                     | Context ID = c1          |                    |
|                     | Termination ID = bearer1 |                    |

The MGCF is in charge of sending the corresponding H.245 message to the CS side to request for the media adaption. as specified for the "Interworking between RTCP messages and H.245 messages" in 3GPP TS 29.163 [4].

## A.17.2.9 Signal H.245-Interworking

When the procedure "Signal H.245-Interworking" is required the following procedure is initiated:

the MGCF sends a Mod.req command with the following information.

Table A.17.2.9/1: Signal H.245-Interworking Request

| Address Information | Control information   | Bearer information |
|---------------------|---|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = bearer1   |                    |
|                     | if H.245 VideoFastUpdatePicture<br>message received and the<br>interworking required:<br>Interwork H.245-RTCP<br>(UpdatePicture_Signal) |                    |
|                     | if H.245 Flow Control Command<br>received and the interworking<br>required:<br>Interwork H.245-RTCP<br>(MaxBitRate_Signal)              |                    |

When the processing of command is complete, the IM-MGW initiates the following procedure.

Table A.17.2.9/2: Signal H.245-Interworking Acknowledge

| Address Information | Control information      | Bearer information |
|---------------------|--------------------------|--------------------|
|                     | Transaction ID = z       |                    |
|                     | Context ID = c1          |                    |
|                     | Termination ID = bearer1 |                    |

The IM-MGW is in charge of constructing and sending the corresponding RTCP message to the IMS side to request for the media adaption as specified for the "Interworking between RTCP messages and H.245 messages" in 3GPP TS 29.163 [4].

#### A.17.3 TDM Terminations Procedures

## A.17.3.1 Summary Procedures related to a termination towards ISUP

Table A.17.3.1/1: Correspondence between ITU-T Recommendation Q.1950 [13] or 29.232 [5] callrelated transactions and 3GPP TS 29.163 [4] procedures related to a termination towards an ISUP network

| Procedure defined in 3GPP TS 29.163 [4]    | Transaction<br>used in ITU-T<br>Q.1950 [14] | Transaction used in TS 29.232 [5]     | Support              | Comment   |
|--|---|---------------------------------------|----------------------|---|
| Reserve TDM Circuit                        | n. a. for reuse                             | n. a. for reuse,<br>(NOTE2)           | Optional<br>(NOTE 4) | See Clause A.17.3.2   |
| Change TDM Through-<br>connection          | n. a. for reuse                             | Change Through-<br>connection         | Optional<br>(NOTE 4) | only the Explicit (MGC Controlled<br>Cut-Through) procedure is<br>supported   |
| Activate TDM voice-<br>processing function | n. a. for reuse                             | Activate Voice<br>Processing Function | Optional<br>(NOTE 4) |   |
| Send TDM Tone                              | n. a. for reuse                             | Send Tone                             | Optional<br>(NOTE 4) |   |
| Stop TDM Tone                              | n. a. for reuse                             | Stop Tone                             | Optional<br>(NOTE 4) |   |
| TDM Tone Completed                         | n. a. for reuse                             | Tone Completed                        | Optional<br>(NOTE 4) |   |
| Play TDM<br>Announcement                   | n. a. for reuse                             | Play Announcement                     | Optional<br>(NOTE 4) |   |
| TDM Announcement<br>Completed              | n. a. for reuse                             | Announcement Completed                | Optional<br>(NOTE 4) |   |
| Stop TDM<br>Announcement                   | n. a. for reuse                             | Stop Announcement                     | Optional<br>(NOTE 4) |   |
| Continuity Check                           | Continuity Check<br>Tone                    | n. a. for reuse                       | Optional<br>(NOTE 4) | The addition to "Prepare BNC Notify" defined in Annex B.7.1.1 of Q.1950 [10] shall be applied instead to "Reserve TDM Circuit", as defined in Clause A.17.3.2 |

| Termination heartbeat Event                | Not defined                                 | Termination heartbeat Indication      | Optional             | See Clause A.17.3.4   |
| Not defined                                | Not defined                                 | TFO Activation                        | Optional             | See Clause A.14.21  |
| Not defined                                | Not defined                                 | Codec Modify                          | Optional             | See Clause A.14.21  |
| Not defined                                | Not defined                                 | Optimal Codec and Distant List_Notify | Optional             | See Clause A.14.21  |
| Not defined                                | Not defined                                 | Distant Codec List                    | Optional             | See Clause A.14.21  |
| Not defined                                | Not defined                                 | TFO status Notify                     | Optional             | See Clause A.14.21  |
| Not defined                                | Not defined                                 | TFO status                            | Optional             | See Clause A.14.21  |
| Bearer Released                            | n. a. for reuse                             | Bearer Released                       | Optional<br>(NOTE 4) |   |

NOTE 1: A procedure defined in table 13.2.2 can be combined with another procedure in the same table. This means that they can share the same contextID and termination ID(s) and that they can be combined in the same H.248 command.

NOTE 3: VOID

NOTE 4: Required for TDM terminations towards an ISUP based network

NOTE 2: The reserve circuit procedure of 29.232 is not to be used only a reduced set of the parameters is required for reserve TDM circuit.

#### A.17.3.2 Reserve TDM Circuit

When the procedure "Reserve TDM Circuit" is required the following procedure is initiated:

The MGCF sends an Add.req command with the following information.

Table A.17.3.2/1: Add.req (Reserve TDM Circuit) MGCF to IM-MGW

| Address Information | Control information                     | Bearer information             |
|---------------------|---|--------------------------------|
|                     | Transaction ID                          | Bearer Service Characteristics |
|                     | Termination ID                          |                                |

|                     | Context ID = ?                          |                                |
|                     | If Context Provided:                    |                                |
|                     | Context ID = c1                         |                                |
|                     | If detection of hanging termination is  |                                |
|                     | requested:                              |                                |
|                     | NotificationRequested (Event ID = $x$ , |                                |
|                     | "termination heartbeat")                |                                |
|                     | If indication on Bearer Released        |                                |
|                     | requested:                              |                                |
|                     | NotificationRequested (Event ID = $x$ , |                                |
|                     | "BNC Release (Cause)") – as             |                                |
|                     | defined in ITU-T                        |                                |
|                     | Recommendation Q.1950                   |                                |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

Table A.17.3.2/2: Add.resp (Reserve TDM Circuit) IM-MGW to MGCF

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
|                     | Transaction ID      |                    |
|                     | Termination ID      |                    |
|                     | Context ID          |                    |

#### A.17.3.3 Release TDM Termination

When the procedure "Release TDM Termination" is required the following procedure is initiated:

The MGCF sends an Sub.req command with the following information.

Table A.17.3.3/1: Sub.req (Release TDM Termination) MGCF to IM-MGW

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
|                     | Transaction ID      |                    |
|                     | Termination ID      |                    |
|                     | Context ID          |                    |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

Table A.17.3.3/2: Sub.resp (Release TDM Termination) IM-MGW to MGCF

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
|                     | Transaction ID      |                    |
|                     | Termination ID      |                    |
|                     | Context ID          |                    |

#### A.17.3.4 Termination heartbeat indication

When the procedure "Termination heartbeat indication" is required the following procedure is initiated: the MGW sends a NOT.req command with the following information.

Table A.17.3.4/1: NOT.req (Termination heartbeat) MGW to MGC

| Address Information | Control information   | Bearer information |
|---------------------|---|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = bearer1 |                    |
|                     | Event_ID (Event ID = x,<br>"termination heartbeat")         |                    |

When the processing of command is complete, the MGC initiates the following procedure.

Table A.17.3.4/2: NOT.resp (Termination heartbeat) MGC to MGW

| Address Information | Control information      | Bearer information |
|---------------------|--------------------------|--------------------|
|                     | Transaction ID = z       |                    |
|                     | Context ID = c1          |                    |
|                     | Termination ID = bearer1 |                    |

The heartbeat timer shall be configured to a value much greater than the mean call holding time.

The MGCF is in charge of correcting any detected mismatch, by substracting hanging terminations or clearing hanging contexts as specified for the hanging termination detection procedure in 3GPP TS 29.163 [4].

# A.17.4 BICC Terminations Procedures

#### A.17.4.1 Procedures related to a termination towards BICC

Table A.17.4.1/1: Correspondence between ITU-T Recommendation Q.1950 [13] or 3GPP TS 29.232 [5] call-related transactions and 3GPP TS 29.163 [4] procedures related to a termination towards a BICC network

| Procedure<br>defined in 3GPP<br>TS 29.163 [4] | Transaction used in Q.1950 [14] | Transaction used in TS 29.232 [5]        | Support              | Comment   |
|---|---------------------------------|--|----------------------|---|
| Establish Bearer                              | Establish_BNC_Notify +(tunnel)  | Establish Bearer (NOTE 1)                | Optional<br>(NOTE 5) |   |
| Prepare Bearer                                | Prepare_BNC_Notify +(tunnel)    | Prepare Bearer (NOTE 1), (NOTE 2)        | Optional (NOTE 5)    |   |
| Change Through-<br>Connection                 | n. a. for reuse                 | Change Through-Connection                | Optional<br>(NOTE 5) | only the Explicit (MGC<br>Controlled Cut-Through)<br>procedure is supported                     |
| Release Bearer                                | n. a. for reuse                 | Release Bearer                           | Optional (NOTE 5)    | (NOTE 3)  |

#### A.17.5.2 Add Multiplex Termination

When the procedure "Add Multiplex Termination" is required the following procedure is initiated:

The MGCF sends an Add.req command with the following information.

# 1 Add.req (Add Multiplex Termination) MGCF to IM-MGW

Table A.17.5.2/1: Add Multiplex Termination Request

| Address Information | Control information   | Bearer information |
|---------------------|---|--------------------|
|                     | Transaction ID = z  |                    |
|                     | Context ID = c1   |                    |
|                     | Termination ID = ?  |                    |
|                     | Muxdescriptor   |                    |
|                     | If MONA procedures not supported: NotificationRequested (Event ID   |                    |
|                     | = x,<br>"Incoming H245 message")  |                    |
|                     | f MONA procedures supported:  |                    |
|                     | NotificationRequested (Event ID = x,  |                    |
|                     | "Incoming H245 message<br>(SPC=Both)")  |                    |
|                     | NotificationRequested (Event ID = x, "termination heartbeat")   |                    |
|                     | If indication on Bearer Released requested: NotificationRequested (Event ID = x, "BNC Release (Cause)") – as      |                    |
|                     | defined in ITU-T Recommendation Q.1950  |                    |
|                     | If MONA procedures supported:   |                    |
|                     | Signal = Outgoing MONA preferences (Outgoing MONA preference content) (NOTE) NotificationRequested (Event ID = X, |                    |
|                     | "MONA Preference recv")   |                    |
|                     | NotificationRequested (Event ID = x, "MONA Preference completed")   |                    |
|                     | NotificationRequested (Event ID   |                    |
|                     | = x, "Legacy Interworking Detected" (Signal = Outgoing H245   |                    |
|                     | message<br>(Outgoing H.245 message content)<br>))   |                    |
|                     | NotificationRequested (Event ID = x, "Mona Preference Channel reception")   |                    |
|                     | Signal = Forward media in MPC<br>(MPC MUX Code)   |                    |
|                     | Incoming Multiplex Table  |                    |
|                     | ns of MONA preference messages requ   |                    |

The frequent retransmissions of MONA preference messages required by MONA procedures are to be performed by the IM-MGW autonomously to avoid unnecessary load at the Mn interface and the MGCF.

On receipt of this procedure, and the setting of the muxdescriptor, the IM-MGW shall initiate the H.324 negotiation, with connection mode H.324M and predefined Highest Multiplexing Level.

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

2 Add.resp (Add Multiplex Termination Ack)

Table A.17.5.2/2: Add Multiplex Termination Acknowledge

| Address Information | Control information                                      | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1 |                    |

#### A.17.5.3 Configure Multiplex Termination

When the procedure "Configure Multiplex Termination" is required the following procedure is initiated:

The MGCF sends an Mod.req command with the following information.

1 Mod.req (Configure Multiplex Termination) MGCF to IM-MGW

Table A.17.5.3/1: Configure Multiplex Termination Request

| Control information  | Bearer information   |
|--|--|
| Transaction ID = z   |  |
| Context ID = c1  |  |
| Termination ID = mux1  |  |
| If MONA completed or MONA not  |  |
| 1  |  |
|  |  |
|  |  |
| Outgoing Multiplex table   |  |
| If MONA MPC sending is requested:<br>Signal = Forward media in MPC<br>(MPC MUX Code) |  |
|  | Transaction ID = z Context ID = c1 Termination ID = mux1  If MONA completed or MONA not supported: Remote H223 Capability Incoming Multiplex table Outgoing Multiplex table  If MONA MPC sending is requested: Signal = Forward media in MPC |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

2 Mod.resp (Configure Multiplex Termination Ack)

Table A.17.5.3/2: Configure Multiplex Termination Acknowledge

| Address Information | Control information   | Bearer information |
|---------------------|-----------------------|--------------------|
|                     | Transaction ID = z    |                    |
|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |
|                     |                       |                    |

#### A.17.5.4 Signal H245 Message

When the procedure "Signal H245 Message" is required the following procedure is initiated:

The MGCF sends an Mod.req command with the following information.

1 Mod.req (Signal H245 Message) MGCF to IM-MGW

Table A.17.5.4/1: Signal H245 Message Request

| Address Information | Control information  | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1           |                    |
|                     | Signal = Outgoing H245 message<br>(Outgoing H.245 message content) |                    |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

2 Mod.resp (Signal H245 Message Ack)

Table A.17.5.4/2: Signal H245 Message Acknowledge

| Address Information | Control information                                      | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1 |                    |

# A.17.5.5 Notify H.245 Message

When the procedure "Notify H.245 message" is required the following procedure is initiated: the IM-MGW sends a NOT.req command with the following information.

1 Not.req (Notify H245 Message) IM-MGW to MGCF

Table A.17.5.5/1: Notify H245 Message Request

| Address Information | Control information      | Bearer information |
|---------------------|--------------------------|--------------------|
|                     | Transaction ID = z       |                    |
|                     | Context ID = c1          |                    |
|                     | Termination ID = mux1    |                    |
|                     | Event_ID (Event ID = x,  |                    |
|                     | "Incoming H245 message   |                    |
|                     | (H245 message content)") |                    |
|                     |                          |                    |

When the processing of command is complete, the MGCF initiates the following procedure.

2 Not.resp (Notify H245 Message Ack) MGCF to IM-MGW

Table A.17.5.5/2: Notify H245 Message Acknowledge

| Address Information | Control information   | Bearer information |
|---------------------|-----------------------|--------------------|
|                     | Transaction ID = z    |                    |
|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |

#### A.17.5.6 Notify MONA Preference Reception

When the procedure "Notify MONA Preference Reception" is required the following procedure is initiated: the IM-MGW sends a NOT.req command with the following information.

1 Not.req (Notify MONA Preference Reception) IM-MGW to MGCF

Table A.17.5.6/1: Notify MONA Preference Reception Request

| Address Information | Control information        | Bearer information |
|---------------------|----------------------------|--------------------|
|                     | Transaction ID = z         |                    |
|                     | Context ID = c1            |                    |
|                     | Termination ID = mux1      |                    |
|                     | Event_ID (Event ID = $x$ , |                    |
|                     | "MONA Preference recv      |                    |
|                     | (MONA preference message   |                    |
|                     | content)")                 |                    |
|                     |                            |                    |

When the processing of command is complete, the MGCF initiates the following procedure.

2 Not.resp (Notify MONA Preference Reception) MGCF to IM-MGW

Table A.17.5.6/2: Notify MONA Preference Reception Acknowledge

| Address Information | Control information   | Bearer information |
|---------------------|-----------------------|--------------------|
|                     | Transaction ID = z    |                    |
|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |

# A.17.5.7 Notify MONA Preference Completed

When the procedure "Notify MONA Preference Completed" is required the following procedure is initiated: the IM-MGW sends a NOT.req command with the following information.

1 Not.req (Notify MONA Preference Completed) IM-MGW to MGCF

Table A.17.5.7/1: Notify MONA Preference Completed Request

| Address Information | Control information        | Bearer information |
|---------------------|----------------------------|--------------------|
|                     | Transaction ID = z         |                    |
|                     | Context ID = c1            |                    |
|                     | Termination ID = mux1      |                    |
|                     | Event_ID (Event ID = $x$ , |                    |
|                     | "MONA Preference           |                    |
|                     | completed ")               |                    |
|                     | . ,                        |                    |

When the processing of command is complete, the MGCF initiates the following procedure.

2 Not.resp (Notify MONA Preference Completed) MGCF to IM-MGW

Table A.17.5.7/2: Notify MONA Preference Completed Acknowledge

| Address Information | Control information   | Bearer information |
|---------------------|-----------------------|--------------------|
|                     | Transaction ID = z    |                    |
|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |

#### A.17.5.8 Signal SPC

When the procedure "Signal SPC" is required the following procedure is initiated:

The MGCF sends an Mod.req command with the following information.

1 Mod.req (Signal SPC) MGCF to IM-MGW

Table A.17.5.8/1: Signal SPC Request

| Address Information | Control information   | Bearer information |
|---------------------|---|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1                          |                    |
|                     | Signal = Outgoing H245 message<br>(Outgoing H.245 message content,<br>SPC Out=ON) |                    |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

#### 2 Mod.resp (Signal SPC Ack)

Table A.17.5.8/2: Signal SPC Acknowledge

| Address Information | Control information                                      | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1 |                    |
|                     | Terrimation ID = Max1                                    |                    |

#### A.17.5.9 Notify SPC

When the procedure "Notify SPC" is required the following procedure is initiated: the IM-MGW sends a NOT.req command with the following information.

#### 1 Not.req (Notify SPC) IM-MGW to MGCF

Table A.17.5.9/1: Notify SPC Request

| Address Information | Control information        | Bearer information |
|---------------------|----------------------------|--------------------|
|                     | Transaction ID = z         |                    |
|                     | Context ID = c1            |                    |
|                     | Termination ID = mux1      |                    |
|                     | Event_ID (Event ID = x,    |                    |
|                     | "(Incoming H245 message    |                    |
|                     | (H245 message content, SPC |                    |
|                     | In=ON)")                   |                    |
|                     | , ,                        |                    |

When the processing of command is complete, the MGCF initiates the following procedure.

# 2 Not.resp (Notify SPC Ack) MGCF to IM-MGW

Table A.17.5.9/2: Notify SPC Acknowledge

| Address Information | Control information   | Bearer information |
|---------------------|-----------------------|--------------------|
|                     | Transaction ID = z    |                    |
|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |

#### A.17.5.10 Notify MPC

When the procedure "Notify MPC" is required the following procedure is initiated: the IM-MGW sends a NOT.req command with the following information.

1 Not.req (Notify MPC) IM-MGW to MGCF

Table A.17.5.10/1: Notify MPC Request

| Address Information | Control information  | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1 Event_ID (Event ID = x, |                    |

When the processing of command is complete, the MGCF initiates the following procedure.

2 Not.resp (Notify MPC Ack) MGCF to IM-MGW

Table A.17.5.10/2: Notify MPC Acknowledge

| Address Information | Control information   | Bearer information |
|---------------------|-----------------------|--------------------|
|                     | Transaction ID = z    |                    |
|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |

## A.17.5.11 Notify Detection of Legacy Interworking

When the procedure "Notify Detection of Legacy Interworking" is required the following procedure is initiated: the IM-MGW sends a NOT.req command with the following information.

1 Not.req (Notify Detection of Legacy Interworking) IM-MGW to MGCF

Table A.17.5.11/1: Notify Detection of Legacy Interworking Request

| Control information   | Bearer information  |
|---|---|
| Transaction ID = z Context ID = c1 Termination ID = mux1 Event_ID (Event ID = x, "Legacy Interworking Detected ") |   |
|   | Transaction ID = z  Context ID = c1  Termination ID = mux1  Event_ID (Event ID = x,  "Legacy Interworking |

When the processing of command is complete, the MGCF initiates the following procedure.

2 Not.resp (Notify Detection of Legacy Interworking ) MGCF to IM-MGW

Table A.17.5.11/2: Notify Detection of Legacy Interworking Acknowledge

| Address Information | Control information   | Bearer information |
|---------------------|-----------------------|--------------------|
|                     | Transaction ID = z    |                    |
|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |

#### A.17.5.12 Stop MPC

When the procedure "Stop MPC" is required the following procedure is initiated:

The MGCF sends an Mod.req command with the following information.

1 Mod.req (Stop MPC) MGCF to IM-MGW

#### Table A.17.5.12/1: Stop MPC Request

| Address Information   | Control information                     | Bearer information |  |
|---|---|--------------------|--|
|   | Transaction ID = z                      |                    |  |
|   | Context ID = c1                         |                    |  |
|   | Termination $ID = mux1$                 |                    |  |
|   |   |                    |  |
|   | Signal = x, NOTE 1                      |                    |  |
|   |   |                    |  |
|   | NotificationRequested (Event ID = $x$ , |                    |  |
|   | NOTE 2)                                 |                    |  |
|   |   |                    |  |
| NOTE 1: The signal descriptor shall not include the "Forward media in MPC" signal.            |   |                    |  |
| NOTE 2: The event descriptor shall not include the "Mona Preference Channel reception" event. |   |                    |  |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

# 2 Mod.resp (Stop MPC Ack)

Table A.17.5.12/2: Stop MPC Acknowledge

| Address Information | Control information                                      | Bearer information |

|                                     | (SPC=H245)") NOTE 3  |                    |  |  |  |  |
|                                     | (, , ,   |                    |  |  |  |  |
|                                     | If legacy H.245 or accelerated H.245   |                    |  |  |  |  |
|                                     | not required:  |                    |  |  |  |  |
|                                     | Signal = x, NOTE 1   |                    |  |  |  |  |
|                                     | N. 1/5   |                    |  |  |  |  |
|                                     | NotificationRequested (Event ID =  |                    |  |  |  |  |
|                                     | X,   |                    |  |  |  |  |
|                                     | NOTE 2)  |                    |  |  |  |  |
| NOTE 1: The signal descriptor shall | NOTE 1: The signal descriptor shall not include the "Outgoing H.245 message" signal. |                    |  |  |  |  |
|                                     | not include the "Incoming H.245 message  |                    |  |  |  |  |
|                                     | nitted, as SPC=H245 is the default value.  |                    |  |  |  |  |

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

# 2 Mod.resp (Stop SPC Ack)

Table A.17.5.13/2: Stop SPC Acknowledge

| Address Information | Control information                                      | Bearer information |
|---------------------|--|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1 |                    |

# A.17.5.14 Stop MONA Negotiation

When the procedure "Stop MONA negotiation" is required the following procedure is initiated:

The MGCF sends a Mod.req command with the following information.

1 Mod.req (Stop MONA Negotiation) MGCF to IM-MGW

Table A.17.5.14/1: Stop MONA Negotiation Request

| Address Information | Control information   | Bearer information |
|---------------------|---|--------------------|
|                     | Transaction ID = z Context ID = c1 Termination ID = mux1  |                    |
|                     | Signal = x, NOTE 1  |                    |
|                     | NotificationRequested (Event ID = x, NOTE 2)  |                    |
|                     | If legacy H.245 or accelerated H.245 required: Signal = Outgoing H245 message (Outgoing H.245 message content, SPC Out=OFF) |                    |
|                     | NotificationRequested (Event ID = x, "Incoming H245 message (SPC=H245)") NOTE 3   |                    |

NOTE 1: The signal descriptor shall not include any of the signals "Outgoing MONA preferences" and "Forward media in MPC". If legacy H.245 or accelerated H.245 is not required the signal descriptor shall also not include the "Outgoing H.245 message" signal.

NOTE 3: SPC parameter may be omitted, as SPC=H245 is the default value.

When the processing of command (1) is complete, the IM-MGW initiates the following procedure.

#### 2 Mod.resp (Stop MONA Negotiation Ack)

|                     | Context ID = c1       |                    |
|                     | Termination ID = mux1 |                    |
|                     |                       |                    |

# A.17.6 SIP-I on Nc Terminations Procedures

# A.17.6.1 Summary of Procedures related to a termination towards SIP-I on Nc CN Subsystem

The interworking between IMS domain and SIP-I on Nc is specified by 3GPP TS 29.235 [47] which requires the procedures for SIP-I on Nc as specified in 3GPP TS 23.231 [48] Clause 15.2.

Table A.17.6.1/1 shows the relationship between each call-related procedure in ITU-T Recommendation Q.1950 [14] (see 3GPP TS 29.205 [3]) or TS 29.232 [5] and the corresponding stage 2 procedure defined in 3GPP TS 23.231 [48].

NOTE 2: The event descriptor shall not include any of the events "MONA Preference recv", "MONA Preference completed" and "Mona Preference Channel reception". If legacy H.245 or accelerated H.245 is not required the event descriptor shall also not include the "Incoming H.245 message" event.

Table A.17.6.1/1: Correspondence between ITU-T Recommendation Q.1950 [13] or 29.232 [5] call-related transactions and 3GPP TS 29.231 [48] procedures

| Procedure defined in 3GPP TS<br>23.231 [48]    | Transaction used in Q.1950 [14] | Transaction<br>used in TS<br>29.232 [5]                     | Supported            | Comment   |
