Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document contains an electronic copy of the ANSI-C code for DSR Extended Advanced Front-end. The ANSI-C code is necessary for a bit exact implementation of DSR Extended Advanced Front-end.

4 C code structure

This clause gives an overview of the structure of the bit-exact C code and provides an overview of the contents and organization of the C code attached to this document.

The C code has been verified on the following systems:

- Sun Microsystems workstations and GNU gcc compiler
- IBM PC compatible computers with Linux operating system and GNU gcc compiler.

ANSI-C was selected as the programming language because portability was desirable.

4.1 Contents of the C source code

The distributed files with suffix "c" contain the source code and the files with suffix "h" are the header files.

Makefiles are provided for the platforms in which the C code has been verified (listed above).

4.2 Program execution

There are separate executables for the FrontEnd and Vector Quantization, with and without Extensions. The command line options are described below.

- indicates parameters for the given option for running the executable

() – indicates default parameter.

FrontEnd w/ Extension:

USAGE: bin/ExtAdvFrontEnd infile HTK_outfile pitch_outfile class_outfile [options] OPTIONS:

-q Quiet Mode (FALSE)

-F format Input file format *<NIST,HTK,RAW>* (NIST)
-fs freq Sampling frequency in kHz *<8,16>* (8)
-swap Change input byte ordering (Native)
-noh No HTK header to output file (FALSE)

-noc0 No c0 coefficient to output feature vector (FALSE)
 -nologE No logE component to output feature vector (FALSE)
 -skip_header_bytes n - Skip header, first n bytes (Only for -F RAW)

-noh, -noc0, -nologE and -skip_header_bytes are not used and should not be changed.

FrontEnd w/o Extension:

USAGE: bin/AdvFrontEnd infile HTK outfile [options]

OPTIONS: - Same as FrontEnd w/ Extension

Vector Quantization w/ Extension:

Usage: extcoder htk_file_in pitch_file_in class_file_in bitstream_file_out pitch_file_out txt_file_out -freq x -

VAD/No_VAD

pitch_file_in Input pitch period file.
class_file_in Input classification file.
bit_file_out Output binary bitstream.

pitch_file_out Output quantised pitch period file.

txt_file_out Vector quantiser output in text format.
-freq x Sampling frequency in kHz (8 or 16).

-VAD Use voice activity detector data. Voice activity input file must have same name as htk_file, but

extension .vad

-No_VAD Do not incorporate voice activity detector information in output bitstream.

Vector Quantization w/o Extension:

Usage: coder htk_file_in bitstream_file_out txt_file_out -freq x -VAD/No_VAD htk file in Input mel-frequency cepstral coefficient file in HTK MFCC format.

bit_file_out Binary output bitstream.

txt_file_out Vector quantiser output in text format.
-freq x Sampling frequency in kHz (8 or 16).

-VAD Use voice activity detector data. Voice activity input file must have same name as htk file, but

extension .vad

-No_VAD Do not incorporate voice activity detector information in output bitstream.

File extension descriptions as generated by the sample script:

.cep – Binary file containing cepstral features in HTK format. Output from the FrontEnd, input to the vector quantizer. .pitch – Binary file containing pitch information. Output from the FrontEnd, input to the vector quantizer. Only used for Extension.

.class – Ascii file containing class information. Output from the FrontEnd, input to the vector quantizer. Only used for Extension.

.bs – Binary file containing the bitstream. Output from the vector quantizer.

.log – Log files from the different executables.

4.3 Code hierarchy

Tables 1 to 3 are call graphs that show the functions used for AFE (table 1), VQ (table 2), and Extension (table 3).

Each column represents a call level and each cell a function. The functions contain calls to the functions in rightwards neighboring cells. The time order in the call graphs is from the top downwards as the processing of a frame advances. All standard C functions: printf(), fwrite(), etc. have been omitted. Also, no basic operations (add(), L_add(), mac(), etc.) or double precision extended operations (e.g. L_Extract()) appear in the graphs.

The basic operations are not counted as extending the depth, therefore the deepest level in this software is level 7.

Table 1: AFE call structure

Table 2: VQ call structure

Table 3: Extension call structure

^{*} qsort_be() is a recursive function

4.5 Variables, constants and tables

The data types of variables and tables used in the fixed point implementation are signed integers in 2's complement representation, defined by:

- Word16 16 bit variable;
- Word32 32 bit variable.

4.5.1 Description of constants used in the C-code

Table 5a: Global constants for AFE

NS SPEC ORDER	65	Noise suppression array length (8khz)
NS_BUFFER_SIZE	180	Noise suppression past frame size
NS FRAME SHIFT	80	Noise suppression input frame shift
NS HALF FILTER LENGTH	8	Noise suppression filter half size
NS_NB_FRAME_THRESHOLD_LTE	10	Noise suppression long term energy forgetting factor threshold (in frames)
NS NB FRAME THRESHOLD NSE	100	Noise suppression spectrum estimate forgetting factor threshold (in frames)
NS MIN FRAME	10	Number of frame threshold to update average energy for Nosie suppression VAD
NS FFT LENGTH	256	FFT length for noise suppression
WF_MEL_ORDER	25	Noise suppression Wiener filter order
SHFT NOISE	14	shift applied to noise spectrum estimate
SHFT FACT MUL	14	shift applied to gain coefficient (nosie suppression gain factoriization)
DCT ORDER	25	Noise suppression idct order
NS BETA	0.98	Noiseless signal suppression factor
NS RSB MIN	0.079432823	Minimum a priori SNR
NS LAMBDA NSE	0.99	Forgetting factor for noise spectrum estimate
NS LOG SPEC FLOOR	-10.0	average energy minimum threshold
NS_SNR_THRESHOLD_VAD	15	SNR threshold for noise suppression VAD
NS_SNR_THRESHOLD_UPD_LTE	20	Long term energy update threshold for noise suppression VAD
NS_ENERGY_FLOOR	80	Energy Minimum threshold for noise suppression VAD
MaxPos	10	Maximum number of maxima in waveprocessing
WP EPS	0.2	weigthing value added or substracted for waveprocessing

5 File formats

This section describes the file formats used by the AFE, VQ & Extension programs.

5.1 Speech file

Speech files read by the X-AFE and written by the Extension consist of 16-bit words. The byte order depends on the host architecture (e.g. MSByte first on SUN workstations, LSByte first on PCs etc)
