# Intellectual Property Rights

#### **Essential patents**

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

#### **Trademarks**

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

# **Legal Notice**

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

# Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

# **Foreword**

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- Y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- Z the third digit is incremented when editorial only changes have been incorporated in the document.

# Introduction

The present document is 3<sup>rd</sup> part of a multi-part conformance test specification for UE and is *valid for 3GPP Release 5* and above. The specification contains a TTCN design frame work and the detailed test specifications in TTCN for the UE conformance at the Gm reference point.

3GPP TS 34.229-1 [5] contains a conformance test description in prose.

3GPP TS 34.229-2 [6] contains a pro-forma for the UE Implementation Conformance Statement (ICS).

3GPP TS 34.229-3 the present document.

# 1 Scope

The present document specifies the protocol conformance testing in TTCN for the 3GPP User Equipment (UE) at the Gm interface.

The present document is the 3<sup>rd</sup> part of a multi-part test specification, 3GPP TS 34.229. The following TTCN test specification and design considerations can be found in the present document:

- the overall test suite structure;
- the testing architecture;
- the test methods and PCO definitions;
- the test configurations;
- the design principles, assumptions, and used interfaces to the TTCN tester (System Simulator);
- TTCN styles and conventions;
- the partial PIXIT proforma;
- the TTCN files for the mentioned protocols tests.

The Abstract Test Suites designed in the document are based on the test cases specified in prose (3GPP TS 34.229-1 [5]).

The present document is valid for UE implemented according 3GPP Releases starting from Release 5 up to the Release indicated on the cover page of the present document.

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document unless the context in which the reference is made suggests a different Release is relevant (information on the applicable release in a particular context can be found in e.g. test case title, description or applicability, message description or content).

### 3 Definitions and abbreviations

#### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and 3GPP TS 34.229-1 [5] apply.

#### 3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and 3GPP TS 34.229-1 [5] apply.

# 4 Requirements on the TTCN development

A number of requirements are identified for the development and production of TTCN specification for 3GPP UE at the Gm reference point.

- 1. Top-down design, following 3GPP 34.229-1 [5], 3GPP TS 34.123-1 [2], 3GPP TS 34.108 [7].
- 2. A unique testing architecture and test method for testing all protocol layers of UE.
- 3. Uniform TTCN style and naming conventions.
- 4. Improve TTCN readability.
- 5. Using TTCN-3 (ES 201 873-1 [12]).
- 6. TTCN specification feasible, implementable and compilable.
- 7. Test cases shall be designed in a way for easily adaptable, upwards compatible with the evolution of the 3GPP core specifications and the future Releases.
- 8. The test declarations, data structures and data values shall be largely reusable.
- 9. Modularity and modular working method.
- 10. Minimizing the requirements of intelligence on the emulators of the lower testers.
- 11. Giving enough design freedom to the test equipment manufacturers.
- 12. Maximizing reuse of RFC BNF definitions from the relevant IETF core specifications.

In order to fulfil these requirements and to ensure the investment of the test equipment manufacturers having a stable testing architecture for a relatively long period, a unique testing architecture and test method are applied to the 3GPP UE protocol tests.

# 5 Test method and test model

#### 5.1 Test method

#### 5.2 IMS CC test model

The test model over E - UTRA is shown in Figure 5.2-1a, the test model over UTRAN is shown in figure 5.2-1b, the test model over WLAN is shown in figure 5.2-1c, and the test model over fixed access is shown in figure 5.2-1d (NOTE: the IPsec is not used by this model).

The IMS CC test cases are executed on top of the multi-testers test model according to TS 36.523-3[30] for E- UTRA and TS 34.123-3[4] clause 6A for UTRAN.

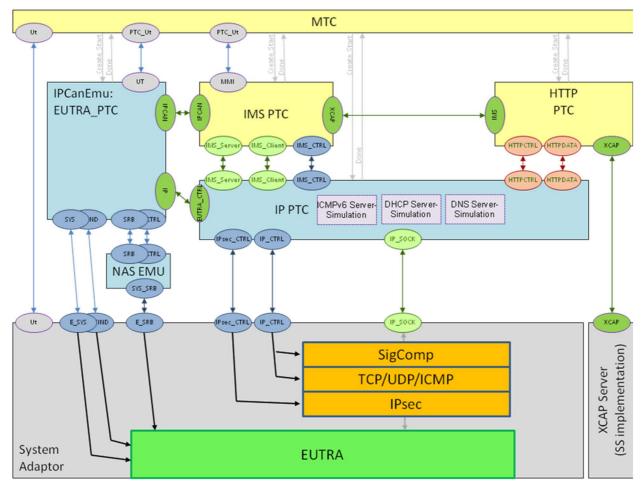

Figure 5.2-1a: Multi-TestersTest Model to support E-UTRA SS interface

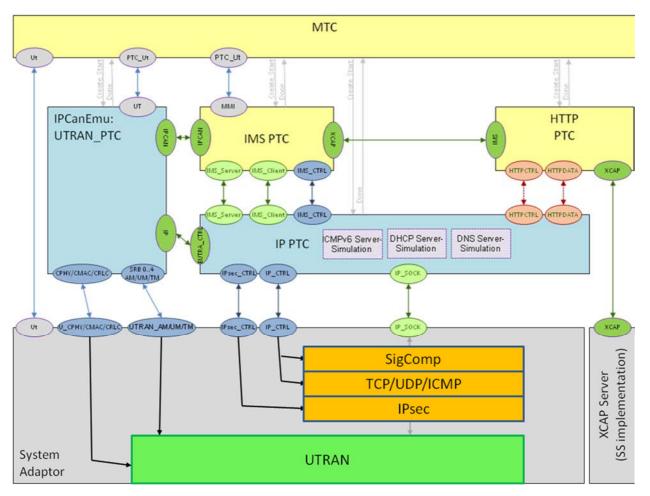

Figure 5.2-1b: Multi-Testers Test Model to support UTRAN SS interface

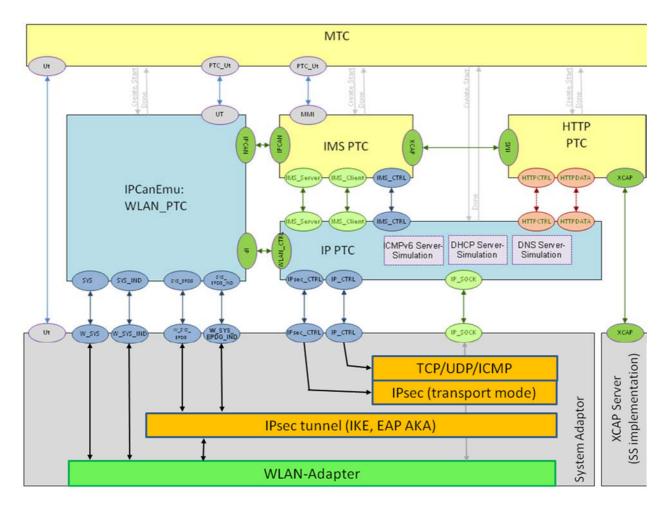

Figure 5.2-1c: Multi-Testers Test Model to support WLAN SS interface

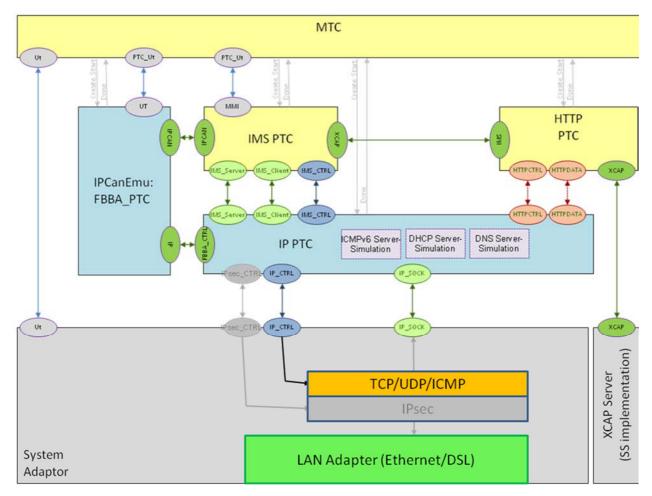

Figure 5.2-1d: Multi-Testers Test Model to support fixed access SS interface

The IMS CC test cases run on the IMS-PTC which controls the IPCanEmu and the IP-PTC. IPCanEmu is responsible for cell setup and DRB/RAB establishment and the IP-PTC controls the IP related configurations. IPCanEmu and IP-PTC interface to the SS according to TS 36.523-3[30] or TS 34.123-3 [4].

Clauses 4.2.4, 4.2.5 and 4.4.1.1 of TS 36.523-3 [30] describe the common handling of IP data in the multi-testers model regarding IMS signalling. In addition to support HTTP over TLS a TCP server may be established with additional parameters for TLS which may be required for XCAP (depending on the authentication mechanism to be applied for XCAP test case).

The test model extensions for support of XCAP are shown in Figure 5.2-2. Clause 5.5 provides further information regarding support of XCAP.

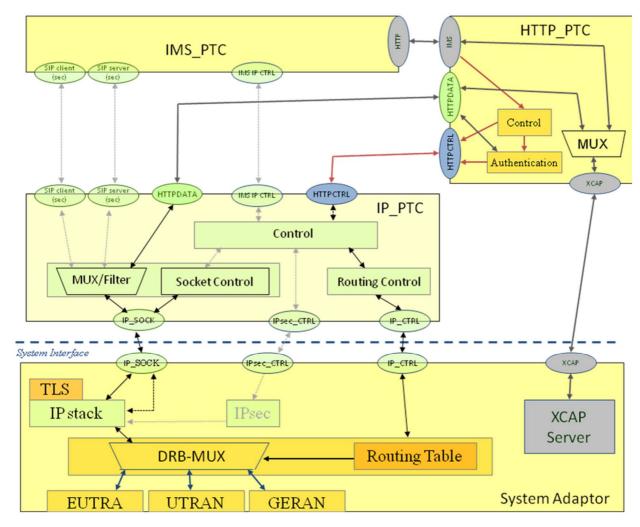

Figure 5.2-2: Extended IP model to handle HTTP/XCAP data

NOTE: Figure 5.2-2 is just an example; further details are SS implementation dependent.

## 5.2.1 Transport protocol

For SIP requests originated by the UE, the transport protocol in UL is selected by the UE. This information is extracted in the TTCN-3 and used in subsequent responses sent by the SS.

For SIP requests originated by the SS in DL UDP is used as transport protocol at the test. For the purpose of test coverage, TCP is used in the specific test cases as specified.

NOTE: According to RFC 3261 [16] clause 18.1.1 the server side (UE) has to be able to cope with a maximum datagram size of 65,535 bytes (independent of any guideline to restrict the maximum size of UDP packets at the client side).

#### 5.2.2 IMS CC test cases over IP-CAN test model

The "Enabler for IP multimedia applications testing" is described in TS 34.229-4 [50]. In general IMS CC test cases can be run on this test model too as test case implementation - in general - is independent of the test model. The TTCN code for IMS and HTTP PTC is the same for TS 34.229-3 and TS 34.229-4 implementations whereas the MTC implementation is model specific. The implementation of the MTC, the IP-CAN/IP adaptor and the MMI system interface is part of TS 34.229-4 and out of scope for this document. Common interfaces are documented in annex H of this document.

# 5.3 Upper Tester (UT)

The upper tester interface is the same as defined in TS 36.523-3 [30] clause 5 for E - UTRA or TS 34.123-3[4] clause 6A.4 for UTRAN, with additional, IMS-specific AT commands as specified in clause 8.4 and IMS-specific MMI commands as specified in annex B.2.

#### 5.4 TTCN-3

TTCN is used as specification language. ES 201 873 [12] (TTCN-3) is applied to the notation.

# 5.5 Support of XCAP

MTSI supplementary services (TS 24.173[25]) like communication barring (CB) and communication diversion (CDIV) require the XCAP protocol (RFC 4825[26]) for transporting and manipulating XML documents in the network describing these services. Test cases for these services are specified in TS 34.229-1 [5] clause 15. As shown in figure 5.2-2 the SS shall provide an XCAP server to support XCAP test cases; the TTCN interface to this server is specified in clause 6.5.

#### 5.5.1 XCAP Server

Supplementary services are managed by the XCAP server in the simservs documents according to TS 24.623 [36]. Test cases manipulating data related to supplementary services are specified in TS 34.229-1 [5] clause 15. For simplification of the TTCN implementation, the XCAP server functionality shall be provided by the SS i.e. it is not implemented in the TTCN. Access to the XCAP server can be distinguished into:

- HTTP based transaction between the UE and the XCAP server
- Initialisation and validation of the simservs document according to the test cases

In addition the UE may exchange HTTP messages for authentication (depending on the UE's security capabilities); see figure 5.5.1-1.

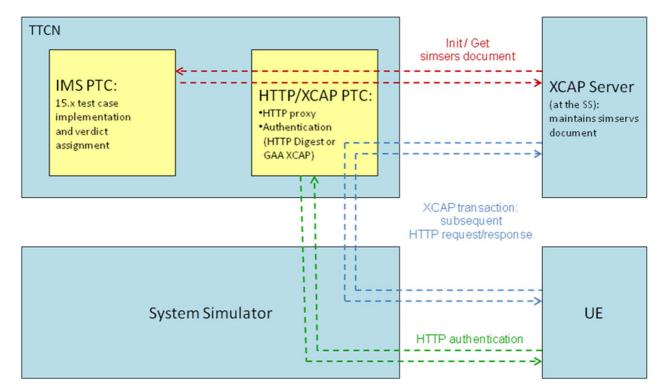

Figure 5.5.1-1: IMS CC test model

NOTE: In accordance to RFC 4825 clause 6.3 [26], the UE may use complex XPATH expressions to modify the simservs document but this shall be handled by the XCAP server; in the TTCN these expressions are not explicitly checked. Furthermore test case implementation itself does not use complex XPATH expressions to access the simservs document, but always considers the whole document.

### 5.5.2 HTTP Signalling

RFC 4825 [26] specifies the protocol for accessing user data in the XCAP server via HTTP requests. An HTTP request for an XCAP operation contains basically three components:

- Request line method, i.e. PUT, GET or DELETE
- Request line uri The XCAP expression to be evaluated to access the XCAP document. The XCAP expression
  consists of the document selector followed by the separator "~~" followed by the node selector pointing to the
  user data to accessed or evaluated
- body Describing the value (an xml fragment) referenced by the XCAP expression

#### Example 1

In order to set terminating-identity-presentation for user sip:ob.stf160@etsi.org, the UE sends following HTTP request:

```
PUT http://XCAP- Server/simservs.ngn.etsi.org/users/sip%3Aob.stf160%40etsi.org/simservs.xml/~~/simservs/terminating-identity-presentation/%40active
Body: true

If successful, the XCAP server responds with

HTTP/1.1 200 OK
```

#### Example 2

To get the value of terminating-identity-presentation for user sip:ob.stf160@etsi.org, the UE sends following HTTP request:

```
GET /simservs/terminating-identity-presentation/%40active If successful, the XCAP server responds with HTTP/1.1 200 OK Body: true
```

#### In this example

```
//XCAP-server/simservs.ngn.etsi.org/users/ sip%3Aob.stf160%40etsi.org/simservs.xml/-
Document selector for user .

~~ - Document selector separator, see RFC 4825
/simservs/terminating-identity-presentation/%40active - Node selector pointing to the information in the XCAP server to be accessed. This is an XPATH expression, see RFC 4825 section 6.3. true - Is the xml fragment (in this case very simple) to be set as value of the XPATH expression

Following operations shall be implemented in the XCAP server, see RFC 4825.

GET - Returns the requested data as an XML fragment to be send to the UE input parameters: charstring documentSelector, charstring xpathExpr returns: XML fragment or XML document
```

PUT - Builds an XML subtree or sets an attribute given by the xmlFragment at the position pointed by the xpath expression

input parameters: charstring documentSelector, charstring xpathExpr, charstring xmlFragment or xmlDocument

 ${\tt DELETE-Deletes} \quad \text{an XML subtree or sets an attribute given by the xmlFragment at the position} \\ \text{pointed by the xpath expression}$ 

input parameters: charstring documentSelector, charstring xpathExpr

### 5.6 Void

# 6 ASP definitions

This clause defines abstract system primitives (ASPs) for system interfaces which are used additionally to the system interfaces defined in TS 36.523-3[30] and TS 34.123-3[4]. Further interfaces are documented in annex H to support the IP-CAN test model according to TS 34.229-4 [50] but these interfaces are not system interfaces in the scope of this document.

- 6.1 Void
- 6.2 Void
- 6.3 Void
- 6.4 Void

# 6.5 XCAP server ASP definitions

XCAP Layer ASPs are applicable to clause 5.2. and 5.6.

Name	XCAP_REQ		
Port	XCAP_PORT	XCAP_PORT	
Comment		ASP type for sending a request to the external XCAP server according to RFC 4825 [26]	
Parameter Name	Parameter Type	Comment	
method	charstring	GET, PUT, DELETE or RESET	
xcapExpression	charstring	XCAP expression sent by the UE in its http request line	
contentType	charstring	media type as contained in the HTTP content type header (optional)	
xmlBody	charstring	XML fragment sent by the UE in its http body or simservs document initialised by the test cases (optional)	

Name	XCAP_RSP		
Port	XCAP_PORT	XCAP_PORT	
Comment	ASP type for sending the XCAP server to TTCN	ASP type for sending the response to the XCAP_REQ from the XCAP server to TTCN	
Parameter Name	Parameter Type	Comment	
errorInfo	charstring	string indicating a system error (optional)	
contentType	charstring	media type as contained in the HTTP content type header (optional)	
xmlBody	charstring	Result returned by the XCAP server (optional)	

# 7 Codec definitions for IP User Data

#### 7.1 Introduction

SIP is a text-based protocol, thus the message exchange between the UE and the SS are pure character strings. In the TTCN-3 ATS the messages are structured and optimized to take the advantage of TTCN-3 functionality, and to make the debugging and maintenance of the ATS easier.

# 7.2 General Aspects

IP user data for IMS conformance testing can be distinguished into:

- 1. text based: SIP (including SDP and XML messages), HTTP (see clause 7.4)
- 2. octetstring based: DHCP, DHCPv6, DNS (see clause 7.4)

In TTCN the following encoding information is used for user data:

**Table 7.2-1** 

Type definitions	Encoding
SMS Types	Tabular notated (see note 1)
DHCPv4-Codec	Tabular notated (see note 1)
DHCPv6-Codec	Tabular notated (see note 1)
DNS-Codec	Tabular notated (see note 1)
SIPCodec	(see clause 7.3)
SDPCodec	(see clause 7.3)
HttpCodec	(see clause 7.3)

NOTE 1: Tabular notated is performed by concatenation of all the present fields in the TTCN-3 template.

NOTE 2: Encoding information is only needed for type definitions of peer-to-peer signalling; encoding of ASPs used for system configuration or as co-ordination messages between PTCs is out of scope for this document.

# 7.3 Requirements on abstract message syntax for IMS (SIP, SDP)

# 7.3.1 Type definition - Syntax / Semantic aspects

All given defined BNF grammars (e.g. the ABNF of RFC 3261) are unique. Thus the syntax tree for each syntactically correct message derived with these grammars are unique too and the parts of a message can be uniquely identified (represented) by the terminal phrase belonging to a non terminal symbol and its derivation path in the syntax tree.

The syntax tree of all given messages can be used to uniquely identify and describe the parts of the messages. The leaves are the part of every message and the nodes from the root to the leaves represent the sequence of rules to be applied to derive that part

The IMS/SIP root message type is an ordered structured type, which is represented as a record type in TTCN-3. For each grammar rule of the ABNF a TTCN-3 record type is declared with the specific name of the rule. The following rules are applied to the fields within a record:

- A non-terminal symbol is declared as a record type for this symbol.
- The order of the symbols in the rule are represented by an equal order of the fields.
- Repetitions are declared as 'set of' or 'record of' types.

- Options are represented as optional record/set fields.
- Alternatives are declared as union types.

#### 7.3.2 Deviations of the type definition semantic

- Most of the 'literals' of a message (for example: the string "Via" or "v" in the message header fields) are not represented.
- The TTCN-3 charstring type is used where we stop structuring even if the ABNF uses structured types. More details found in clause 8.3.3.
- Wherever possible parts are mapped to their best type representation, e.g. DIGIT based rules are mapped to integer type not to a charstring type.
- All of the following delimiters (including preceding or following whitespace) defined by the ABNF grammar to separate the parts of a message are not represented (see note).

```
SWS "*" SWS ; asterisk
STAR
           SWS "/" SWS ; slash
SLASH
        = SWS "=" SWS ; equal
EOUAL
LPAREN = SWS "(" SWS ; left parenthesis
RPAREN = SWS ")" SWS ; right parenthesis
RAQUOT = ">" SWS ; right angle quote
LAQUOT = SWS "<"; left angle quote
COMMA = SWS ", " SWS ; comma
       = SWS ";" SWS; semicolon
= SWS ":" SWS; colon
SEMI
COLON
LDQUOT = SWS DQUOTE; open double quotation mark
RDQUOT = DQUOTE SWS ; close double quotation mark
HCOLON = *( SP / HTAB ) ":" SWS
        = single space
SP
HTAB
        = tab
         = sep whitespace
SWS
```

NOTE: If they are present within a pure charstring they will be handled like a normal character and are still included.

 Messages which are not of interest to the test suite are left undecoded as a charstring and will not be further structured.

Further clarifications on the handling of delimiters are provided hereafter:

In many cases the TTCN-3 type definitions are of lower granularity than the BNF and the codec shall consider the TTCN type definitions only. Therefore as stated in the NOTE above the rules for handling of delimiters do not require delimiters to be blindly removed from strings but the codec shall only deal with the delimiters needed to encode/decode the TTCN-3 types; sub-structures of the BNF being mapped to TTCN-3 charstrings need to be handled in TTCN and are out of scope of the codec implementation.

#### Example 1:

According to the BNF Alert-Info is defined as

```
Alert-Info = "Alert-Info" HCOLON alert-param *(COMMA alert-param)
alert-param = LAQUOT absoluteURI RAQUOT *( SEMI generic-param )
The corresponding TTCN-3 type definition is
```

⇒ LAQUOT and RAQUOT are delimiters of the URI field which shall be removed by the codec in UL.

#### Example 2:

Some fields according to the BNF for SIP are defined as "(token LWS)/ quoted-string", i.e. the field can be either a (case-insensitive) token or a quoted string. In general in TTCN this can be mapped a) to a charstring or

b) to a union of two charstring (one for the token, one for the quoted string).

In case of a) the codec shall preserve the double-quotes for the quoted-string as otherwise it cannot be distinguished from a token anymore which is vital when case-sensitivity matters whereas in case of b) the double quotes shall be removed.

# 7.3.3 Additional requirements for codec implementations (SIP/IMS Message

The SIP/IMS codec is based on a normalized encoding which is always produced by an encoder. Decoder implementations, however, have to handle normalization before, or when constructing the structured message value, e.g. long versus compact form, whitespace compression, delimiter removal, same header grouping, etc. All these aspects will be handled in the next clause.

#### 7.3.3.1 Differences between BNF - TTCN-3 Type Mapping

In normal cases the mapping is straight forward. Below you find the exceptions, including potential examples.

- The root message type is not a SIP-message but directly a Request or Response type which is represented as a TTCN-3 record. All Method - Message names (INVITE, BYE, ACK etc.) and all message header field names (To, From, CallID, Cseq, Via etc.) are mapped to an enumerated type in TTCN-3 to simplify the extension of new headers. During encoding, the long-form of these message header fields is always used. The respective field in the header type is restricted to values which are allowed.

BNF rules of RFC	TTCN-3 Type Mapping
SIP-message = Request / Response t t t	type record REGISTER_Request {}, type record INVITE_Request {}, type record PRACK_Request {}, type record NOTIFY_Request {}, type record UPDATE_Request {}, type record Response {}

Method =	INVITEm	type enumerated Method { ACK_E, BYE_E, CANCEL_E,
	/ ACKm	INVITE_E, OPTIONS_E, REGISTER_E,}
	/ OPTIONSm	
	/ BYEm	
	/ CANCELm	
	/ REGISTERm	
	/	

- The structure of the message header fields are mapped to a "set" type in TTCN-3, because the order of these header fields is not mandatory. There is an Unknown Header List given in the type system to decode unknown headers with ID and Value.

```
Message-header = 

/ Contact
/ Content-Disposition
/ Via
/ Warning
/ WWW-Authenticate
/ extension-header) CRLF

type set MessageHeader {
...
Contact contact optional,
ContentDisposition contentDisposition optional,
...
Via via,
Warning warning optional,
WwwAuthenticate wwwAuthenticate optional,
UndefinedHeader_List undefinedHeader_List optional
}
```

- The various parameter lists defined in the BNF are mapped and combined into three different TTCN-3 sets of generic-param types. These types differ only in their name: SemicolonParam\_List, AmpersandParam\_List, CommaParam\_List to distinguish between the relevant separators.

Uri-parameters =	*( ";" uri-parameter)	type set of GenericParam SemicolonParam_List;
Authentication-In	fo = "Authentication-Info" HCOLON ainfo *(COMMA ainfo)	type record AuthenticationInfo {     FieldName fieldName(AUTHENTICATION_INFO_E),     CommaParam_List ainfo }
ainfo =	nextnonce / message-qop / response-auth / cnonce / nonce-count	type set of GenericParam CommaParam_List;
Headers =	"?" header *( "&" header )	type set of GenericParam AmpersandParam_List;

- Any more specific parameter rule (e.g. uri-param, user-param, lr-param, digest-cln, etc.) is simplified to the generic-param rule which will be mapped as a record structure of two charstrings (ID and paramValue). This is equivalent to a token with an optional generic value (token [ EQUAL gen-value ]).

Digest-cln =	realm	type record GenericParam {
	/ domain	charstring id ,
	/ nonce	charstring paramValue optional
	/ opaque	}
	/ stale	
	/ algorithm	
	/ qop-options	
	/ auth-param	

- In addition to the pure charstring as a base type, the TTCN-3 type system provides base integer types which are unrestricted to the model e.g. the portField, Cseq number, maxForward digit.

/ escaped / user-unreserved )	
telephone-subscriber as defined in RFC 2806	
password = *( unreserved	narstring

Port =	1*DIGIT	integer
Status-Code =	Informational / Redirection / Success / Client-Error / Server-Error / Global-Failure / extension-code	integer

- Where the same header type can appear multiple times within a message, they will be decoded as a single header field, with multiple list elements. The order of appearance of the headers will be preserved within the header list value.

Contact =	("Contact" / "m" ) HCOLON ( STAR / (contact-param *(COMMA contact-param) )	type record Contact {     FieldName fieldName(CONTACT_E),     ContactBody contactBody }
contact-param =	(name-addr / addr-spec) *(SEMI contact-params)	type record ContactAddress {    Addr_Union addressField,    SemicolonParam_List contactParams optional }  type union ContactBody {    charstring wildcard,    ContactAddress_List contactAddresses }  Used in  type set of ContactAddress ContactAddress List;

- The BNF (clause 7.3.1 Header Field Format RFC 3261 [16]) specifies that several WWW or Proxy Authentication/Authorization headers should not be combined into a single header; however they will be decoded into such in the codec. If these need to be sent downlink then a new, 'raw' (pure charstring) message type will be introduced.

Authorization =	"Authorization" HCOLON credentials	type record Authorization { FieldName fieldName(AUTHORIZATION_E), Credentials body }
Credentials =	/ other-response	type union Credentials { CommaParam_List digestResponse, OtherAuth otherResponse }

- The different schemes (sip, sips, tel, fax, absoluteUri) in the SIP URI are all handled via the same type definition. The union "UriComponents" can be enhanced to support further specific URI formats. Nevertheless it is possible to use the "other" branch of "UriComponents" for any other URI format in which case the charstring shall contain the URI without the scheme and the first ":".

```
Request-URI =
                    SIP-URI
                                                          type record SipUriComponents {
                    / SIPS-URI
                                                           // sip-uri acc. To RFC 3261 [16] cl. 19.1
                    / absoluteURI
                                                           UserInfo
                                                                        userInfo optional,
                                                           HostPort
                                                                        hostPort
with
SIP-URI =
                    "sip:"
                                                          type record TelUriComponents {
                    [ userinfo ]
                                                           // tel-uri acc. To RFC 3966 [38]
                    hostport
                                                           charstring subscriber
                    uri-parameters
                    [headers]
                                                          type record UrnUriComponents {
and
                                                           // urn-uri acc. To RFC 2141 [39]
                                                                                        // e.g. "service"
                                                           charstring namespaceld,
SIPS-URI =
                    "sips:"
                                                                       namespaceSpecificString // e.g. "sos"
                                                           charstring
                    [userinfo]
                    hostport
                    uri-parameters
                                                          type union UriComponents {
                                                           SipUriComponents sip,
                                                                                     // scheme: "sip" or sips"
                    [headers]
                                                           TelUriComponents tel,
                                                                                     // scheme: "tel"
                                                           UrnUriComponents urn,
and
                                                                                     // scheme: "urn"
                                                           charstring
                                                                              other
absoluteURI =
                    scheme ":" ( hier-part / opaque-part )
                                                          type record SipUrl
                                                           charstring
                                                                              scheme,
                                                           UriComponents
                                                                              components,
                                                           SemicolonParam_List
                                                                                     urlParameters optional,
                                                           AmpersandParam_List
                                                                                     headers optional
                                                          type record SipUrl {
                                                             charstring scheme,
                                                             UserInfo userInfo optional,
                                                             HostPort hostPort,
                                                             SemicolonParam_List urlParameters optional,
                                                             AmpersandParam_List headers optional
```

- Universal charstrings shall be supported by the codec especially for the Display name in the URI.
- For downlink messages the len field in the ContentLength header is always set to 0 by TTCN; in case of the SIP message containing a message body SS shall replace the value by the actual length of the encoded message body (see clause 7.3.4).
- According to the SIP type definitions there are many 'charstring' fields being optional in records; ⇒ in UL the decoder shall map missing information by setting the respective field to omit rather than by assigning an empty string ("").
- type union Addr\_Union
  As in 'NameAddr' the field 'displayName' is optional in the first place the two branches of 'Addr\_Union' are
  equivalent when there is no 'displayName'; nevertheless in UL the decoder shall use the branch 'nameAddr' if –
  and only if the address information is surrounded by '<' and '>' (what is needed at least when there is a display
  name followed by the address information)
- Ipv6 address in URI
  When an Ipv6 address is used as hostname in a SIP URI it is typically surrounded by '[' and ']' what is matter of the codec: in DL the codec shall add '[' and ']' when needed, in UL the '[' and ']' shall be removed i.e. in the 'host' field of the SipUriComponents' hostPort there shall be no '[' or ']' at the beginning or at the end.

#### 7.3.3.2 URL Encoding

Several fields or parameters in SIP headers require URL encoding (e.g. Contact header, Accept-Contact header). In TTCN there is no encoding rule defined for URL encoding and there is no specific type definition for URL encoded strings. For that reason URL encoding/decoding is not a matter of codec implementation but shall be done in TTCN.

#### 7.3.4 Additional requirements for codec implementations (Message Body)

The message body of a SIP message may contain the message of other protocols (SDP, SMS, etc.) and can be represented e.g. by XML. Therefore the type definitions for these protocols can be TTCN-3 as well as XSD definitions.

As in principle the message body of a SIP message may host any XSD definition, SIP and XSD definitions are decoupled:

To avoid import of all potential XSD definitions the XML body of SIP messages is defined as a charstring. This requires a two-stage encoding and decoding: In DL an XML message needs to be encoded in TTCN first before it gets put in the message body of a SIP message, in UL the XML message contained in the message body needs to be explicitly decoded in TTCN. By defining the XML message body as a charstring the SIP definitions are independent from any XSD definitions and a specific XSD definition needs to be known only when it is really used.

An SDP message may be contained in the message body itself or in a MIME message. In both cases the SDP message is represented as charstring in the SIP message and as for XML a two-stage encoding and decoding is applied in TTCN. This allows explicit fail assignments in case of syntactically incorrect SDP messages when syntactical correctness is a test requirement.

NOTE: Test specifications (e.g. TS 34.229-1 [5]) define the criteria for syntactical correctness and codec implementations follow these criteria.

In detail the message body for SIP messages is defined as:

```
type charstring XmlBody;
type charstring SdpBody;
type union MessageBody {
                      sdpMessageBody
   SdpBody
   XmlBody
                       xmlBody,
   MIME_Message
                      mimeMessageBody,
   charstring
                       sipfrag,
   charstring
                      textplain,
   SimpleMsgSummary, impleMsgSummary,
   octetstring
                      smsMessage
         In contrast to SIP and SDP definitions which are commonly defined by ETSI the definition of the
NOTE:
         message body is project specific i.e. other IMS test projects at ETSI may use different definitions of the
         message body.
```

# 7.3.5 Additional requirements for codec implementations (SDP Body)

The Session Description Protocol is defined in RFC 4566.

- The 'type' fields (such as 'v' and 'o' are not represented).
- For the defined attributes, the att-field is also not represented (e.g. 'curr' is not represented in SDP\_attribute\_curr).
- The Messages which are not of interest to a test suite are left undecoded as a charstring and will not be further structured.

#### 7.3.5.1 Differences between BNF - SDP Type Mapping

In normal cases the mapping is straight forward. Below are the exceptions which differ.

- The numerical fields in the origin-field, the time-field and the timezone field have been defined as charstring because they may not fit into a 32-bit signed integer.

BNF Rules of RFC 4566	TTCN 3 Type Mapping
origin = username	type record SDP_Origin {
sess-id	charstring username,
sess-version	charstring session_id,
nettype	charstring session_version,
addrtype	charstring net_type,
unicast-address	charstring addr_type,
	charstring addr
	}
time-fields = start-time	type record SDP_time_field {
stop-time	charstring start_time,
repeat-fields	charstring stop_time
[ zone-adjustments]	}
zone-adjustments = time	type record SDP_timezone {
typed-time	charstring adjustment_time,
	SDP_typed_time offset
	}

- The zone-adjustments field in the time-fields has been included as an additional field in the top-level message definition.

BNF Rules of RFC 4566	TTCN 3 Type Mapping
session-description = proto-version	type record SDP_Message {

#### 7.3.5.2 Defined attributes

The SDP\_attribute type is defined as a union of the following attribute types. There is an unknown attribute given to decode undefined attributes with a name and value.

SDP Attribute	TTCN 3 Type Mapping
cat	type record SDP_attribute_cat {
charset	type record SDP_attribute_charset {
conf	type record SDP_attribute_curr {
curr	type record SDP_attribute_curr {
des	type record SDP_attribute_des {
fmtp	type record SDP_attribute_fmtp {
framerate	type record SDP_attribute_framerate {
inactive	type record SDP_attribute_inactive { }
keywds	type record SDP_attribute_keywds {
lang	type record SDP_attribute_lang {
orient	type record SDP_attribute_orient {
ptime	type record SDP_attribute_ptime {
quality	type record SDP_attribute_quality {
recvonly	type record SDP_attribute_recvonly { }
rtcp	type record SDP_attribute_rtcp {
rtpmap	type record SDP_attribute_rtpmap {
sdplang	type record SDP_attribute_sdplang {
sendrecv	type record SDP_attribute_sendrecv { }
sendonly	type record SDP_attribute_sendonly { }
Tool	type record SDP_attribute_tool {
Туре	type record SDP_attribute_type {

SDP Attribute	TTCN 3 Type Mapping
Unknown	type record SDP_attribute_tool {

#### 7.3.6 Additional requirements for codec implementations (HTTP)

For HTTP the same types and header are used as for SIP.

 $\Rightarrow$  Rules and requirements are applicable as defined for SIP in clause 7.3.

#### 7.3.7 Additional requirements for codec implementations (XML)

XML data schema is used in IMS conformance testing according to ETSI ES 201 873-9. No further requirements are necessary.

# 7.4 Requirements for codec implementations (DHCP, DNS)

The DHCP/DNS codec converts TTCN descriptions into/from octet streams as specified in the RFCs. The TTCN type defintions for DHCP/DNS types closely follow the data formats defined in the corresponding RFCs (RFC 1035, RFC 1533, RFC 2131, RFC 3315, RFC 3319 and RFC 3361).

# 8 Design consideration

- 8.1 Void
- 8.2 Void
- 8.3 Void

#### 8.4 AT commands

All mandatory and optional AT commands are sent as AT command strings as defined above. If an optional AT command is not implemented in the UE, the system adaptor needs to parse the AT command and map it to an appropriate MMI command (which is out of scope for this document).

The following AT commands are applied in TTCN.

Table 8.4-1: AT Commands

Command
AT+CLIP
AT+CLIR
AT+COLP
AT+CCFCU
AT+CHLD
AT+CDU
AT+CHCCS
AT+CDEFMP
AT+COLR
AT+CCWA
AT+CNAP
AT+CLCK
AT+CCMMD

AT commands are referred to TS 27.007 [49].

# 8.5 Timer Tolerances

For timers used in conformance test cases according to TS 34.229-1 [5], a tolerance of 10% shall be applied.

# 8.6 Bearer information for UTRAN

The Radio Access Bearer for IMS signalling is configured according to TS 34.108 [7] clause 6.10.2.4.1.26.

# Annex A (normative): Abstract Test Suites (ATS)

This annex contains the approved ATSs.

The ATSs have been produced using the Testing and Test Control Notation version 3 (TTCN3) according to ES 201 873 [12].

# A.1 Version of specifications

Table A.1 shows the version of the test specifications which the delivered ATSs are referred to.

Table A.1: Versions of the test and Core specifications

Core specifications	3GPP TS 24.229 [11]
Test specifications	3GPP TS 34.229-1 [5]
	3GPP TS 34.229-2 [6]
	3GPP TS 34.123-3 [2]
	3GPP TS 36.523-3 [30]

# A.2 IMS-CC ATS

Table A.2 lists all approved test cases.

Table A.2: IMS-CC TTCN test cases

Test case	Description
lo 0	
6.3	Dedicated PDP Context Establishment
7.1	P-CSCF Discovery via PDP Context
8.1 8.2	Initial registration User Initiated Re-Registration
8.3	Mobile Initiated Deregistration
8.4	Invalid behaviour- 423 Interval too brief
8.15	Refresh for ISIM parameters
8.16	User initiated re-registration- 423 Interval Too Brief
9.1	Invalid Behaviour – MAC Parameter Invalid
9.2	Invalid Behaviour – SQN out of range
10.1	Invalid Behaviour – 503 Service Unavailable
11.1	Network-initiated deregistration
11.2	Network initiated re-authentication
12.2	MO Call – 503 Service Unavailable
12.2a	MO Call – 504 Server Time-out
12.12	MO MTSI Voice Call Successful with preconditions
12.13	MT MTSI speech call
12.13a	MTSI speech call when MO reserves resources before sending INVITE
12.18 12.19	MTSLMO video call / SSAC / 0% access probability for MTSLMO video call
12.19	MTSI MO video call / SSAC / 0% access probability for MTSI MO video call  Emergency call / Success / SSAC / 0% access probability for MTSI MO speech call
12.21	MO MTSI Video call
12.22	MT MTSI Video call
12.23	MO MTSI speech call / EVS
12.24	MT MTSI speech call / EVS
12.25	MO MTSI speech call / EVS / AMR-WB
12.26	MT MTSI speech call / EVS / AMR-WB IO mode
15.1	Originating Identification Presentation
15.2	Originating Identification Restriction
15.2a	Originating Identification Restriction / Signalling
15.3	Terminating Identification Presentation
15.4	Terminating Identification Restriction
15.4a	Terminating Identification Restriction / Signalling
15.5	Communication Forwarding unconditional
15.7	Communication Forwarding on non Reply: activation
15.8 15.9	Communication Forwarding on non reply: MO call initiation Communication Forwarding on Busy
15.10	Communication Forwarding on Not logged-in
15.10a	Communication Forwarding on Not reachable
15.11	MO Call Hold without announcement
15.11a	MO Video Call Hold without announcement
15.12	MT Call Hold without announcement
15.12a	MT Video Call Hold without announcement
15.13	Incoming Communication Barring except for a specific user
15.14a	Communication barring while roaming
15.14b	Outgoing Communication Barring while roaming
15.15	Subscription to the MWI event package
15.17	Creating a conference
15.19	Inviting user to conference by sending a REFER request to the conference focus
15.19a	Inviting user to conference by sending a REFER request to the conference focus / Video
15.21a	Three way session creation Three way session creation / Video
15.21c 15.25	MO Explicit Communication Transfer – Consultative Call Transfer
15.27	Communication Waiting and answering the call
15.28	Communication Waiting and cancelling the call
15.29	GBA authentication
16.2	Speech AMR, indicate selective codec modes
16.3	Speech AMR-WB, indicate all codec modes
16.4	Speech AMR-WB, indicate selective codec modes
17.1	MO Speech, add video remove video
17.2	MT Speech, add video remove video
18.1	Mobile Originating SMS
18.2	Mobile Terminating SMS

# Annex B (normative): Partial IXIT proforma

Notwithstanding the provisions of the copyright related to the text of the present document, The Organizational Partners of 3GPP grant that users of the present document may freely reproduce the partial IXIT proforma in this annex so that it can be used for its intended purposes and may further publish the completed partial IXIT.

# B.0 Introduction

This partial IXIT proforma contained in the present document is provided for completion, when the related Abstract Test Suite is to be used against the Implementation Under Test (IUT).

Text in *italics* is comments for guidance for the production of an IXIT, and is not to be included in the actual IXIT.

The completed partial IXIT will normally be used in conjunction with the completed ICS, as it adds precision to the information provided by the ICS.

## B.1 Parameter values

#### B.1.1 PIXITS

Table B.1.1: PIXIT

Parameter name	Description	Туре	Default value	Supported value
px_IMS_AssociatedTelUri	TEL URI for the user	charstring	"+331234567"	format shall be TEL URI
px_IMS_CalleeUri	URI of Callee, send by the UE in INVITE (MO call establishment) to address the remote UE	charstring	"sip:User- B@3gpp.org"	
px_IMS_CalleeUri2	remote UE	charstring	" sip:User- C@3gpp.org "	
px_IMS_CalleeContactUri	URI provided by the remote side (i.e. by SS) to be used by the UE as contact address in further SIP signalling of the dialog NOTE: in general this URI shall be different than the one in px_CalleeUri	charstring	"sip:User-B- Contact@3gpp.o rg"	
px_IMS_CalleeContactUri2	URI provided by the remote side (i.e. by SS) to be used by the UE as contact address in further SIP signalling of the dialog NOTE: in general this URI shall be different than the one in px_CalleeUri2	charstring	"sip:User-C- Contact@3gpp.o rg"	
px_IMS_CiphAlgo_Def	Ciphering Algorithm; NOTE: Unless specified otherwise in the test prose "nociph" shall not be used for verification	CiphAlgo	des_ede3_cbc	enumerated type: des_ede3_cbc, aes_cbc or nociph
px_IMS_HomeDomainNam e	Home Domain Name. Applicable when using an ISIM: same value as EFDOMAIN. (derived from the IMSI otherwise) FBBA: value as preconfigured at the UE	charstring	As defined in TS 34.229-1 [5], Annex E	
px_IMS_HomeDomainNam e_Refreshed	used in 8.15	charstring	"refreshed3gpp. org"	
px_IMS_Private_UserId_Ref reshed	used in 8.15	charstring	"privateuser@ref reshed3gpp.org"	

Parameter name	Description	Туре	Default value	Supported value
px_IMS_PublicUserIdentity1 _Refreshed	used in 8.15	charstring	"sip:PublicId1@r efreshed3gpp.or g"	
px_IMS_MessageAccountId entity	used in 15.15	charstring	""	
px_IMS_SPI_ValidValueList _PDN1	List of comma separated integer values that can be used as SPI values for IMS security on PDN1; each value shall be ≥ 256	charstring	""	
px_IMS_SPI_ValidValueList _PDN2	List of comma separated integer values that can be used as SPI values for IMS security on PDN2; each value shall be ≥ 256	charstring	""	
px_IMS_IPSecAlgorithm	Integrity Algorithm	IntAlgo	hmac_sha_1_96	enumerated type; hmac_md5_96, hmac_sha_1_96
px_IMS_Private_UserId	Private User Identity. Applicable when using an ISIM: same value as EF <sub>IMPI</sub> . (derived from the IMSI otherwise) FBBA: username as used for authorization	charstring	As defined in TS 34.229-1 [5], Annex E	
px_IMS_PublicUserIdentity1	Public User Identity. It is set to the same value as the first record in EF <sub>IMPU</sub> . FBBA: IMPU preconfigured in the UE	Charstring	As defined in TS 34.229-1 [5], Annex E	
px_IMS_PublicUserIdentity2	It is set to the same value as the second record in EF <sub>IMPU</sub> .	Charstring	As defined in TS 34.229-1 [5], Annex E	
px_IMS_PublicUserIdentity3	It is set to the same value as the third record in EF <sub>IMPU</sub> .	Charstring	As defined in TS 34.229-1 [5], Annex E	
px_SMS_SMSC_Internation alNumber	international number of the SMSC: Dialled number string of the TS-Service Centre Address according to clause 4.5.3.9 "EFSMSP (Short message service parameters)" in TS 31.121 [52] (TON is assumed to be "International Number").	charstring	As defined in Annex E.3.2.14 of TS 34.229-1 [5]: "112233445566 778" according to TS 31.121 [52].	
px_UEwithISIM	true: UE has ISIM false: UE has USIM only	boolean	true	
px_DigestPasswordForXCA P	XCAP password	charstring	"XCAP- Password"	
px_DigestPasswordForSIP	SIP password	charstring	"SIP-Password"	
px_XCAP_RootUri	XCAP Root URI according to section 6.1 of RFC 4825 [70] as configured at the UE	charstring	"/XCAP.3gpp.or g"	
px_XCAP_TargetUri	Target (SIP or TEL URI) where to forward to	charstring	"sip:user@doma in.com"	
px_XCAP_Username	username to be used for HTTP authentication in case of pc_XCAP_UsernameIsConfiguredInUE ==true	charstring		

# B.2 MMI Commands

In addition to the MMI commands defined in TS 36.523-3 clause 5 there are further MMI commands for IMS:

Table B.2.1-1: MMI commands

Command	Parameters	
Command	Name	Value
"DEREGISTER"	(no	ne)
"ACCEPT_MTSI_TEXT"	(no	ne)
"ACTIVATE_MESSAGE_WAIT_INDIC ATION"	(no	ne)
"TRIGGER_SMS"	(no	ne)
"TRIGGER_2ND_IMPU"	(none)	
"TRIGGER_3RD_IMPU"	(no	ne)
"REFRESH"	"Uri"	<callee's uri=""></callee's>
" INVITE_TO_CONFERENCE"	"Uri"	<refer-to uri=""></refer-to>
"IMS_INITIATE_CONFERENCE"	(no	ne)
"ACTIVATE_IMS_TIR"	(no	ne)
"DEACTIVATE_IMS_TIR"	(no	ne)

Annex C: Void

Annex D: Void

# Annex E (informative): TTCN3 style guide for 3GPP IMS ATS

For IMS conformance tests, the style guide of 36.523-3[30], Annex B shall be applied

# Annex F (informative): BNF Message Definitions

The BNF definitions required for the ATS are defined in the following RFCs:

3261, 3262, 3265, 3311, 3313, 3323, 3325, 3326, 3327, 3329, 3428, 3455, 3515, 3608, 3840, 3841, 3891, 3892, 3903, 3911, 4028.

# Annex G (Normative): SIP Type Definitions and XSD References

# G.0 References of XSD and SIP Type Definitions

# G.0.1 XML Schema Definitions (XSD)

The XSD references listed in this Annex are imported in the Test Suite.

# G.0.2 Common TTCN-3 Libraries

Additionally the Test Suite imports the following modules of ETSI's LibSip (ETSI SIP Library, see ):

Module	Revision
LibSip_Common	LibSip v3.0.5
LibSip_SDPTypes	LibSip v3.0.5
LibSip_SimpleMsgSummaryTypes	LibSip v3.0.5
LibSip_SIPTypesAndValues	LibSip v3.0.5

The LibSip module LibSip\_MessageBodyTypes (imported by LibSip\_SIPTypesAndValues) contains type definitions for the message body of SIP messages which in general are project specific. For 3GPP conformance testing LibSip\_MessageBodyTypes is defined as shown below.

# G.1 LibSip\_MessageBodyTypes

# G.1.1 MIMETypes

# IMS\_IPCAN\_CommandName\_Type

TTCN-3 Enumerated Type			
Name	IMS_IPCAN_CommandName_Type		
Comment			
IPCAN_INIT	trigger the IPCAN_PTC to create a cell and do further appropriate initialisation; which RAN technology to be use is decided by the IPCAN_PTC based on PIXITs; as test procedure shall be specified which procedure is used during the test body to know which DRBs need to be pre-configured; IPCAN returns response indicating the RAN type		
IPCAN_STARTPRO CEDURE	trigger the IPCAN to expect (MO) or page (MT) the UE to establish an RRC connection; depending on the connection type triggers may need to be sent from IPCAN to IMS or from IMS to IPCAN to synchronise establishment of dedicated DRBs (EUTRA) or secondary PDP contexts (UTRAN)		
IPCAN_ENDPROCE DURE	trigger RRC connection release by the IPCAN_PTC; as a SIP message may be sent out just before end of the procedure in general a delay of 2s shall be added before sending IPCAN_ENDPROCEDURE to IPCAN; for UTRAN it is up to IPCAN and SS implementation to cope with possible/necessary release of (secondary) PDP context; a trigger shall be sent from IPCAN to IMS to indicate when RRC connection is released		
IPCAN_RELEASE	Detach UE and release cell (postamble); a trigger is shall be sent from IPCAN to IMS to indicate when IPCAN is released		
IPCAN_QUERY	query information from the IPCAN PTC		
IPCAN_PROVIDELO CATIONINFORMATI ON	trigger IPCAN to provide UELocationInformation to the UE acc. to 36.509

serverPort	PortNumber_Type		Port number of simulated server
drbInfo	IP_DrbInfo_Type		DRB info as used by the IP PTC (LTE model, see TS 36.523-3 [30])
tlsConfig	TLSConfig_Type	opt	TLS parameters as used by the IP PTC (LTE model, see TS 36.523-3 [30]) (omit: no TLS)

# HttpServerList\_Type

TTCN-3 Record of Type		
Name	HttpServerList_Type	
Comment		
record length (1 infinity) of HttpServerInfo Type		

#### HTTP\_CTRL\_REQ

TTCN-3 Record Type			
Name	HTTP_CTRL_REQ		
Comment	ASP type to configure the http layer;		
	when any of the optional fields is omitted the previous configuration of this field is kept		
httpServerList	HttpServerList_Type		

#### HTTP\_CTRL\_CNF

TTCN-3 Record Type			
Name	HTTP_CTRL_CNF		
Comment	ASP type to confirm HTTP_CTRL_REQ		
errorInfo	charstring	opt	string indicating a system error

#### HTTP\_DATA\_IND

TTCN-3 Record Type			
Name	HTTP_DATA_IND		
Comment	ASP type for sending a message from the http layer to TTCN; it transports relevant information of a http Request from the UE to the Tester		
routingInfo	IP_Connection_Type  TCP connection from which the request has been received;  => response shall use the same		
httpRequest	HttpRequest Type		

# HttpRequest\_Type

TTCN-3 Record Type								
Name	HttpRequest_Type	HttpRequest_Type						
Comment								
requestLine	HttpRequestLine_Type		RFC 2616 clause 5.1					
userAgent	UserAgent	opt	User Agent according to RFC 2616 [27] clause 14.43					
authorization	Authorization	opt	Authorization according to RFC 2616 [27] clause 14.8 (optional;					
			NOTE: Same type definition as for SIP type definitions)					
host	Host	opt	host according to RFC 2616 [27] clause 14.23					
contentType	ContentType	opt	Content-Type according to RFC 2616 [27] clause 14.17 (optional,					
			NOTE: Same type definition as for SIP type definitions)					
cacheControl	HttpCacheControl_Type	opt	RFC 2616 clause 14.9					
x3GPPIntende	charstring	opt	3GPP TS 24.109 [33] clause G.2					
dldentity								
messageBody	charstring	opt	e.g. XCAP Message					

# HttpResponse\_Type

TTCN-3 Record Type							
Name	HttpResponse_Type						
Comment							
statusLine	HttpStatusLine Type		Status-Line in RFC 2616 [27] clause 6.1				
date	Date	opt	Date according to RFC 2616 [27] clause 14.18				
eTag	SIP_ETag	opt	ETag according to RFC 2616 [27] clause 14.19				
server	Server	opt	Server according to RFC 2616 [27] clause 14.38				
wwwauthentica te	WwwAuthenticate	opt	WWW-Authenticate in RFC 2616 [27] clause 14.47 (NOTE: Same type definition as for SIP type definitions)				
authenticationI nfo	AuthenticationInfo	opt	Authentication-Info in RFC 2617 [37] clause 3.2.3 (NOTE: Same type definition as for SIP type definitions)				
contentType	ContentType	opt	Content-Type in RFC 2616 [27] clause 14.17 (NOTE: Same type definition as for SIP type definitions)				
location	HttpLocation_Type	opt	RFC 2616 clause 14.30				
contentLength	ContentLength	opt	Content-Length in RFC 2616 [27] clause 14.13 (NOTE: Same type definition as for SIP type definitions)				
expires	Expires	opt	Expires in RFC 2616 [27] clause 14.21 (NOTE: Same type definition as for SIP type definitions)				
messageBody	charstring	opt	e.g. XCAP Message (XML document or XML fragment)				

### HTTP\_DATA\_REQ

TTCN-3 Record Type							
Name	HTTP_DATA_REQ						
Comment	ASP type for sending messag	ASP type for sending messages from TTCN to the http layer;					
	it transports information need	it transports information needed by the http layer to generate a http Response to the UE					
routingInfo	IP_Connection_Type						
	corresponding request						
httpResponse	HttpResponse_Type						

# HttpRequestLine\_Type

TTCN-3 Record Type							
Name	HttpRequestLine_Type	httpRequestLine_Type					
Comment	request line according to RFC	equest line according to RFC 2616 [27] clause 5.1					
method	charstring						
uri	charstring	XCAP: selection expression, RFC 4825 [26]					
version	charstring						

# HttpStatusLine\_Type

TTCN-3 Record	TTCN-3 Record Type						
Name	lttpStatusLine_Type						
Comment	status line according to RFC 2616 [27] clause 5.1						
version	charstring						
code	integer						
reasonPhrase	charstring						

# HttpCacheControl\_Type

TTCN-3 Record Type							
Name	HttpCacheControl_Type						
Comment	RFC 2616 clause 14.9						
cacheControl	charstring						

### HttpLocation\_Type

TTCN-3 Record Type								
Name	HttpLocation_Type	HttpLocation_Type						
Comment	RFC 2616 clause 14.30, see a	RFC 2616 clause 14.30, see also RFC 3986 section 4.3						
uri	charstring							

# H.3.2 HTTP\_Port\_Definitions

### HTTP\_CTRL\_PORT

TTCN-3 Port Type						
Name	HTTP_CTRL_PORT					
Comment						
out	HTTP_CTRL_REQ					
in	HTTP CTRL CNF					

#### HTTP\_DATA\_PORT

TTCN-3 Port Type						
Name	HTTP_DATA_PORT					
Comment						
in	HTTP_DATA_IND					
out	HTTP_DATA_REQ

# Annex I (informative): Change history

Meet- ing	TSG doc	CR	Rev	Subject	Cat	Old vers	New vers	WG doc
RP-31	RP-060054	-	-	Update to version 1.0.0 and present to RAN#31 for information	-	-	1.0.0	R5-060513
RP-34	RP-060664	-	-	Present version 1.3.0 to RAN#34 for information	-	-	1.3.0	R5-063500
RP-35	RP-070010	-	-	Presented as version 2.0.0 for approval to go under revision control	-	-	2.0.0	R5-070456
_	-	-	-	Upgraded to version 5.0.0 by the 3GPP support	-	-	5.0.0	-
RP-36	RP-070352	0001	ı	Addition of IMS-CC test case 8.6 to IMS_CC ATS V1.3.0	F	5.0.0	5.1.0	R5s070101
RP-36	RP-070353	0002	-	CR to 34.229-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 34.229-3 (prose), Annex A	F	5.0.0	5.1.0	-
RP-37	RP-070594	0003	-	Extension to TTCN ASP DeactivatePDPContextReq	F	5.1.0	5.2.0	R5-072509
RP-37	RP-070594	0004	-	IMS CC / PIXIT parameter px_CellId	F	5.1.0	5.2.0	R5-072546
RP-38	RP-070870	0007		Addition of IMS-CC test case 8.5 to IMS_CC ATS V5.1.0	В	5.2.0	5.3.0	R5s070489
RP-38	RP-070870	8000		Addition of IMS-CC test case 8.7 to IMS_CC ATS V5.3.0	В	5.2.0	5.3.0	R5s070259
RP-38	RP-070870	0009		Addition of IMS-CC test case 9.1 to IMS_CC ATS V5.3.0	В	5.2.0	5.3.0	R5s070261
RP-38	RP-070889	0010		CR to 34.229-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 34.229-3 (prose), Annex A	F	5.2.0	5.3.0	-
RP-38	RP-070869	0006		Production of 34.229-3 pointer version in Rel-5 pointing to Rel-6 version	F	5.2.0	5.3.0	R5-073439
RP-38	RP-070869	0005		Addition of an MMI command	F	5.2.0	6.0.0	R5-073046
RP-39	RP-080098	0011		Update of MMI command strings	F	6.0.0	6.1.0	R5-080041
RP-39	RP-080089	0012		CR to 34.229-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 34.229-3 (prose), Annex A	F	6.0.0	6.1.0	-
RP-39	RP-080094	0013		Addition of IMS-CC test case 7.2 to IMS_CC ATS V5.3.0	В	6.0.0	6.1.0	R5s070535
RP-39	RP-080094	0014		Addition of IMS-CC test case 10.1 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070549
RP-39	RP-080094	0015		Addition of IMS-CC test case 8.3 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070545
RP-39	RP-080094	0016		Addition of IMS-CC test case 8.2 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070543
RP-39	RP-080094	0017		Addition of IMS-CC test case 7.6 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070539
RP-39	RP-080094	0018		Addition of IMS-CC test case 7.4 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070537
RP-39	RP-080094	0019		Addition of IMS-CC test case 11.1 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070551
RP-39	RP-080094	0020		Addition of IMS-CC test case 14.1 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070555
RP-39	RP-080094	0021		Addition of IMS-CC test case 13.1 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070553
RP-39	RP-080094	0022		Addition of IMS-CC test case 8.4 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070547
RP-39	RP-080094	0023		Addition of IMS-CC test case 8.1 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070541
RP-39	RP-080094	0024		Addition of IMS-CC test case 7.1 to IMS_CC ATS V5.1.0	В	6.0.0	6.1.0	R5s070491
RP-39	RP-080094	0025		Common corrections to IMS-CC test cases	F	6.0.0	6.1.0	R5s070534
RP-40	RP-080369	0027		Correction to regular expressions in IMS	F	6.1.0	7.0.0	R5s080036
RP-40	RP-080369	0028		IMS ATS / handling of P-Access-Network-Info header over non secure ports	F	6.1.0	7.0.0	R5s080063
RP-40	RP-080369	0029		IMS ATS / test case 9.1 / handling of authorization header in Register messages	F	6.1.0	7.0.0	R5s080085
RP-40	RP-080376	0030		Extend test model supporting XCAP test	F	6.1.0	7.0.0	R5-081036
RP-41	RP-080654	0031		CR to 34.229-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 34.229-3 (prose), Annex A	F	7.0.0	7.1.0	-
RP-41	RP-080615	0032		Addition of IMS-CC test case 9.2 to IMS_CC ATS v.7.0.0	F	7.0.0	7.1.0	R5s080115
RP-41	RP-080615	0033		Addition of IMS-CC test case 7.3 to IMS_CC ATS v.7.0.0	F	7.0.0	7.1.0	R5s080114
