Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under www.etsi.org/key.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document contains an electronic copy of the ANSI-C code for the Adaptive Multi-Rate codec. The ANSI-C code is necessary for a bit exact implementation of the Adaptive Multi Rate speech transcoder (TS 26.090 [2]), Voice Activity Detection (TS 26.094 [6]), comfort noise (TS 26.092 [4]), source controlled rate operation (TS 26.093 [5]) and example solutions for substituting and muting of lost frames (TS 26.091 [3]).

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.
- [1] TS 26.074: "AMR Speech Codec; Test sequences".
- [2] TS 26.090: "AMR Speech Codec; Speech transcoding".

3 Definitions and abbreviations

3.1 Definitions

Definition of terms used in the present document, can be found in TS 06.090 [2], TS 06.091 [3], TS 06.092 [4], TS 06.093 [5] and TS 06.094 [6].

3.2 Abbreviations

For the purpose of the present document, the following abbreviations apply:

ANSI American National Standards Institute
ETS European Telecommunication Standard
GSM Global System for Mobile communications

I/O Input/Output

RAM Random Access Memory ROM Read Only Memory

4 C code structure

This clause gives an overview of the structure of the bit-exact C code and provides an overview of the contents and organization of the C code attached to this document.

The C code has been verified on the following systems:

- Sun Microsystems workstations and GNU gcc compiler;
- DEC Alpha workstations and GNU gcc compiler;
- IBM PC/AT compatible computers with Linux operating system and GNU gcc compiler.

ANSI-C 9899 was selected as the programming language because portability was desirable.

4.1 Contents of the C source code

The C code distrubution has all files in the root level.

The distributed files with suffix "c" contain the source code and the files with suffix "h" are the header files. The ROM data is contained mostly in files with suffix "tab".

The C code distribution also contains one speech coder installation verification data file, "spch_dos.inp". The reference encoder output file is named "spch_dos.cod", the reference decoder input file is named "spch_dos.dec" and the reference decoder output file is named "spch_dos.out". These four files are formatted such that they are correct for an IBM PC/AT compatible computer. The same files with reversed byte order of the 16 bit words are named "spch_unx.inp", "spch_unx.cod", "spch_unx." and "spch_unx.out", respectively.

Final verification is to be performed using the GSM Adaptive Multi-Rate test sequences described in GSM 06.74 [2].

Makefiles are provided for the platforms in which the C code has been verified (listed above). Once the software is installed, this directory will have a compiled version of *encoder* and *decoder* (the bit-exact C executables of the speech codec) and all the object files.

4.2 Program execution

The GSM Adaptive Multi-Rate codec is implemented in two programs:

- (encoder) speech encoder;
- (decoder) speech decoder.

The programs should be called like:

- encoder [encoder options] <speech input file> <parameter file>;

The speech files contain 16-bit linear encoded PCM speech samples and the parameter files contain encoded speech data and some additional flags.

The encoder and decoder options will be explained by running the applications with option –h. See the file readme.txt for more information on how to run the *encoder* and *decoder* programs.

4.3 Coding style

The C code is written according to the following structuring conventions. Each function func() that needs static variables is considered a module. A module consists of:

- a 'state structure' (struct) combining the static variables of the module;
- three auxiliary functions func_init(), func_reset(), and func_exit();
- the processing function func() itself.

The initialization function func_init() allocates (from the heap) a new state structure, calls the func_reset() function, stores the pointer to the newly allocated structure in its first function parameter, and returns with a value of 0 if completed successful or a value of 1 otherwise.

The reset function func_reset() takes a pointer to the state structure and resets all members of the structure to a predefined value ('homing').

The exit function func_exit() performs any necessary cleanup and frees the state structure memory.

The processing function func() also takes a pointer to the state structure as well as all other necessary parameters and performs its task using (and possibly modifying) the values in the state structure.

If a module calls other modules, the higher level state structure contains a pointer to the lower level state structures, and the init, reset, and exit functions recursively call the corresponding lower level functions.

By this convention, the code becomes "instantiable" (more than one copy of a module can be used in the same program) and the static data hierarchy is clearly visible in the code.

4.4 Code hierarchy

Figures 1 to 4 are call graphs that show the functions used in the speech codec, including the functions of VAD, DTX, and comfort noise generation.

Each column represents a call level and each cell a function. The functions contain calls to the functions in rightwards neighboring cells. The time order in the call graphs is from the top downwards as the processing of a frame advances. All standard C functions: printf(), fwrite(), etc. have been omitted. Also, no basic operations (add(), L_add(), mac(), etc.) or double precision extended operations (e.g. L_Extract()) appear in the graphs. The initialization of the static RAM (i.e. calling the _init functions) is also omitted.

The basic operations are not counted as extending the depth, therefore the deepest level in this software is level 7.

The encoder call graph is broken down into three separate call graphs, Table 1 to 3.

4.5 Variables, constants and tables

The data types of variables and tables used in the fixed point implementation are signed integers in 2's complement representation, defined by:

- Word16 16 bit variable;
- Word32 32 bit variable.

Furthermore some enum types are used, all possible to represent with one byte, and a boolean Flag.

4.5.1 Description of constants used in the C-code

This subclause contains a listing of all global constants defined in cnst.h.

Table 5: Global constants

Constant	Value	Description
L_TOTAL	320	total size of speech buffer.
L_WINDOW	240	window size in LP analysis
L_FRAME	160	frame size
L_FRAME_BY2	80	frame size divided by 2
L_SUBFR	40	subframe size
L_CODE	40	codevector length
NB_TRACK	5	number of tracks
STEP	5	codebook step size
NB_TRACK_MR102	4	number of tracks mode mr102
STEP_MR102	4	codebook step size mode mr102
M	10	order of LP filter
MP1	(M+1)	order of LP filter + 1
LSF_GAP	205	minimum distance between LSF after quantization; 50 Hz = 205
LSP_PRED_FAC_MR122	21299	MR122 LSP prediction factor (0.65 Q15)
AZ_SIZE	44	size of array of LP filters in 4 subframes (4*M+4)
PIT_MIN_MR122	18	minimum pitch lag (MR122 mode)
PIT_MIN	20	minimum pitch lag (all other modes)
PIT_MAX	143	maximum pitch lag
L_INTERPOL	(10+1)	length of filter for interpolation
L_INTER_SRCH	4	length of filter for CL LTP search interpolation
MU	26214	factor for tilt compensation filter 0,8
AGC_FAC	29491	factor for automatic gain control 0,9
L_NEXT	40	overhead in LP analysis
SHARPMAX	13017	maximum value of pitch sharpening
SHARPMIN	0	minimum value of pitch sharpening
MAX_PRM_SIZE	57	max. num. of params
MAX_SERIAL_SIZE	244	max. num. of serial bits
GP_CLIP	15565	pitch gain clipping = 0.95
N_FRAME	7	old pitch gains in average calculation
EHF_MASK	8	16 bit representation of all samples in the encoder homing frame (left
		justification)

4.5.2 Description of fixed tables used in the C-code

This section contains a listing of all fixed tables sorted by source file name and table name. All table data is declared as **Word16**.

Table 6: Fixed tables

File	Table name	Length	Description
c2_9pf.c	trackTable	4*5	track table for algebraic code book search (MR475, MR515)
cod_amr.c	gamma1	10	spectral expansion factors
cod_amr.c	gamma1_12k2	10	spectral expansion factors
cod amr.c	gamma2	10	spectral expansion factors
dtx_dec.c	lsf_hist_mean_scale	10	initialization values for DTX lsf parameters
dtx_dec.c	dtx_log_en_adjust	9	level adjustments for ech mode
ec gains.c	cdown	7	attenuation factors for codebook gain
ec_gains.c	pdown	7	attenuation factors for adaptive codebook gain
gc_pred.c	pred	4	algebraic code book gain MA predictor coefficients
gc_pred.c	pred_MR122	4	algebraic code book gain MA predictor coefficients (MR122)
pitch_fr.c	mode_dep_parm	72	parameters defining the adaptive codebook search per mode
post_pro.c	a	3	HP filter coefficients (denominator) in Post_Process
post_pro.c	b	3	HP filter coefficients (numerator) in Post_Process
pre_proc.c	a	3	HP filter coefficients (denominator) in Pre_Process
pre_proc.c	b	3	HP filter coefficients (numerator) in Pre_Process
pred_lt.c	inter_6	61	interpolation filter coefficients
pstfilt.c	gamma3_MR122	10	spectral expansion factors
pstfilt.c	gamma3	10	spectral expansion factors
pstfilt.c	gamma4_MR122	10	spectral expansion factors
pstfilt.c	gamma4	10	spectral expansion factors
bitno.tab	prmno	9	number of bits for each mode
bitno.tab	prmnofsf	8	number of parameters for LPC and first subframe for each mode (used for
Diti io.tab	pititioisi	O	decoder homing procedure)
bitno.tab	bitno	9	pointers to the bitno_MR tables
bitno.tab	bitno_MR475	17	number of bits per parameter to transmit (MR475)
bitno.tab	bitno_MR515	19	number of bits per parameter to transmit (MR515)
bitno.tab	bitno_MR59	19	number of bits per parameter to transmit (MR515)
bitno.tab	bitno_MR67	19	number of bits per parameter to transmit (MR67)
bitno.tab	bitno_MR74	19	number of bits per parameter to transmit (MR74)
bitno.tab	bitno_MR795	23	number of bits per parameter to transmit (MR795)
bitno.tab	bitno_MR102	39	number of bits per parameter to transmit (MR102)
bitno.tab	bitno_MR122	57	number of bits per parameter to transmit (MR122)
bitno.tab	bitno_MRDTX	5	number of bits per parameter to transmit (MRDTX)
c2_11pf.tab	startPos1	2	track start search position for first pulse
c2_11pf.tab	startPos2	4	track start search position for second pulse
c2_9pf.tab	startPos	16	track start search position
corrwght.tab	corrweight	251	weighting of the correlation function in open loop LTP search (MR102)
d_homing.tab	dhf	8	pointers to the dhf_MR tables
d_homing.tab	dhf_MR475	17	parameter values for the decoder homing frame (MR475)
d_homing.tab	dhf_MR515	19	parameter values for the decoder homing frame (MR515)
d_homing.tab	dhf_MR59	19	parameter values for the decoder homing frame (MR59)
d_homing.tab	dhf_MR67	19	parameter values for the decoder homing frame (MR67)
d_homing.tab	dhf_MR74	19	parameter values for the decoder homing frame (MR74)
d_homing.tab	dhf_MR795	23	parameter values for the decoder homing frame (MR795)
d_homing.tab	dhf_MR102	39	parameter values for the decoder homing frame (MR102)
d_homing.tab	dhf_MR122	57	parameter values for the decoder homing frame (MR122)
gains.tab	qua_gain_pitch	16	adaptive codebook gain quantization table (MR122, MR795)
gains.tab	qua_gain_code	96	fixed codebook gain quantization table (MR122, MR795)
gray.tab	gray	96 8	gray coding table
	• •	8	gray decoding table
gray.tab	dgray		gray decoding table grid points at wich Chebyshev polynomials are evaluated
grid.tab inter_36.tab	grid inter_6	61 25	interpolation filter coefficients
inv_sqrt.tab	table	49	table used in inverse square root computation
		49 10	high part of the lag window table
lag_wind.tab	lag_h	10	0
lag_wind.tab	lag_l	10	low part of the lag window table

(continued)

Table 6 (concluded): Fixed tables

File	Table name	Length	Description
log2.tab	table	33	table used inbase 2 logharithm computation
lsp.tab	lsp_init_data	10	initialization table for lsp history in DTX
lsp_lsf.tab	table	65	table to compute cos(x) in Lsf_lsp()
lsp_lsf.tab	slope	64	table to compute acos(x) in Lsp_lsf()
ph_disp.tab	ph_imp_low_MR795	40	phase dispersion impulse response (MR795)
ph_disp.tab	ph_imp_mid_MR79	40	phase dispersion impulse response (MR795)
	5		
ph_disp.tab	ph_imp_low	40	phase dispersion impulse response (MR475 - MR67)
ph_disp.tab	ph_imp_mid	40	phase dispersion impulse response (MR475 - MR67)
pow2.tab	table	33	table used in 2 to the power computation
q_plsf_3.tab	past_rq_init	80	initialization table for the MA predictor in DTX
q_plsf_3.tab	mean_lsf	10	LSF means (not in MR122)
q_plsf_3.tab	pred_fac	10	LSF prediction factors (not in MR122)
q_plsf_3.tab	dico1_lsf	3*256	1 st LSF quantizer (not in MR122 and MR795)
q_plsf_3.tab	dico2_lsf	3*512	2 nd LSF quantizer (not in MR122)
q_plsf_3.tab	dico3_lsf	4*512	3 rd LSF quantizer (not in MR122, MR515 and MR475)
q_plsf_3.tab	mr515_3_lsf	4*128	3 rd LSF quantizer (MR515 and MR475)
q_plsf_3.tab	mr795_1_lsf	3*512	1 st LSF quantizer (MR795)
q_plsf_5.tab	mean_lsf	10	LSF means (MR122)
q_plsf_5.tab	dico1_lsf	4*128	1 st LSF quantizer (MR122)
q_plsf_5.tab	dico2_lsf	4*256	2 nd LSF quantizer (MR122)
q_plsf_5.tab	dico3_lsf	4*256	3 rd LSF quantizer (MR122)
q_plsf_5.tab	dico4_lsf	4*256	4 th LSF quantizer (MR122)
q_plsf_5.tab	dico5_lsf	4*64	5 th LSF quantizer (MR122)
ggain475.tab	table_gain_MR475	4*256	gain quantization table (MR475)
qua_gain.tab	table_gain_highrate	128*4	gain quantization table (MR67, MR74 and MR102)
	S		
qua_gain.tab	table_gain_lowrates	64*4	gain quantization table (MR515 and MR59)
R_fft.c	phs_tbl	128	sine/cosine phase table
R_fft.c	ii_table	8	indexing table
sqrt_l	table	49	table to compute sqrt(x)
Vad1.c	ch_tbl	2*16	channel energy combination table
Vad1.c	ch_tbl_sh	16	channel energy scaling table
Vad1.c	vm_tbl	90	voice metric table
Vad1.c	hangover_table	20	used to determine hangover as a function of SNR
Vad1.c	burstcount_table	20	used to determine burst count threshold as a function of SNR
Vad1.c	vm_thresh_table	20	used to determine the voice metric threshold as a function of SNR
Vad1.c	energy state tables	2*6	constants as a function of scaling state
window.tab	window_200_40	240	LP analysis window (not in MR122)
window.tab	window_160_80	240	1 st LP analysis window (MR122)
window.tab	window_232_8	240	2 nd LP analysis window (MR122)

4.5.3 Static variables used in the C-code

In this section two tables that specify the static variables for the speech encoder and decoder respectively are shown. All static variables are declared within a C **struct.**

Table 7: Speech encoder static variables

Struct name	Variable	Type[Length]	Description
Speech_Encode_	cod_amr_state	cod_amrState	see below in this table
FrameState	pre_state	Pre_ProcessState	see below in this table
	dtx	Flag	Is set if DTX functionality is used
	complexityCounter	int	Used for wMOPS counting
Pre_ProcessState	y2_hi	Word16	filter state, upper word
	y2_lo	Word16	filter state, lower word
	y1_hi	Word16	filter state, upper word
	y1_lo	Word16	filter state, lower word
	x0	Word16	filter state
	x1	Word16	filter state
cod_amrState	old_speech	Word16[320]	speech buffer
	speech p_window	Word16* Word16*	pointer to current frame in old_speech pointer to LPC analysis window in old_speech
	p_window p_window_12k2	Word16*	pointer to LPC analysis window in oid_speech
	p_window_12kz	VVOIGTO	in old_speech (MR122)
	new_speech	Word16*	pointer to the last 160 speech samples in
			old_speech
	old_wsp	Word16[303]	buffer holding spectral weighted speech
	wsp	Word16*	pointer to the current frame in old_wsp
	old_lags	Word16[5]	open loop LTP states
	ol_gain_flg	Word16[2]	enables open loop pitch lag weighting (MR102)
	old_exc	Word16[314]	excitation vector
	exc	Word16*	current excitation
	ai_zero	Word16[51]	history of weighted synth. filter followed by zero vector
	zero	Word16*	zero vector
	h1	Word16*	impulse response of weighted synthesis filter
	hvec	Word16[80]	zero vector followed by impulse response
	lpcSt	IpcState	see below in this table
	IspSt	IspState	see below in this table
	clLtpSt	clLtpState	see below in this table
	gainQuantSt	gainQuantState	see below in this table
	pitchOLWghtSt	pitchOLWghtState	see below in this table
	tonStabSt	tonStabState	see below in this table
	vadSt vadSt	vadState1 vadState2	see below in this table see below in this table
	dtx	Flag	is set if DTX functionality is used
	dtx_encSt	dtx_encState	see below in this table
	mem_syn	Word16[10]	synthesis filter memory
	mem_w0	Word16[10]	weighting filter memory (applied to error signal)
	mem_w	Word16[10]	weighting filter memory (applied to input signal)
	mem_err	Word16[50]	filter memory for production of error vector
	error	Word16*	error signal (input minus synthesized speech)
	sharp	Word16	pitch sharpening gain
vadState1	bckr_est	Word16[9]	background noise estimate
	ave_level	Word16[9]	averaged input components for stationary
	old_level	Word16[9]	estimation input levels of the previous frame
	sub_level	Word16[9]	input levels of the previous frame
	Sub_level	VVOIGTO[9]	(lookahead)
	a_data5	Word16[6]	memory for the filter bank
	a_data3	Word16[5]	memory for the filter bank
	burst_count	Word16	counts length of a speech burst
	hang_count	Word16	hangover counter
	stat_count	Word16	stationary counter
	vadreg	Word16	15 flags for intermediate VAD decisions
	pitch	Word16	15 flags for pitch detection
	tone	Word16	15 flags for tone detection
	complex_high	Word16	flags for complex detection
	complex_low	Word16	flags for complex detection
	oldlag_count	Word16	variables for pitch detection
	oldlag	Word16	variables for pitch detection
	complex_hang_count	Word16	complex hangover counter, used by VAD

Struct name	Variable	Type[Length]	Description
	complex_hang_timer	Word16	hangover initiator, used by CAD
		140	
	best_corr_hp	Word16 Word16	filtered value
	speech_vad_decision complex_warning	Word16	final decision complex background warning
	sp_burst_count	Word16	counts length of a speech burst incl HO addition
	corr_hp_fast	Word16	filtered value
vadState2	pre_emp_mem	Word16	input pre-emphasis memory
	update_cnt	Word16	noise update counter
	hyster_cnt	Word16	hysteresis counter
	last_update_cnt	Word16	noise update counter value for last frame
	ch_enrg_long_db	Word16[16]	long term channel energy in dB
	Lframe_cnt	Word32	10 ms frame counter
	Lch_enrg	Word32[16]	channel energy estimate
	Lch_noise	Word32[16]	channel noise estimate
	last_normb_shift	Word16	block shift factor for last frame, used for
	tenr	Word16	pre_emp_mem total estimated peak SNR in dB
	tsnr hangover	Word16	VAD hangover
	burstcount	Word16	number of consecutive voice active frames
	fupdate_flag	Word16	A flag to control a forced update of the noise
	rupuato_nag		estimate
	negSNRvar	Word16	SNR variability
	negSNRbias	Word16	sensitivity bias
	shift_state	Word16	indicates scaling state of channel energy estimate
	L_R0	Word32	LTP energy
	L_Rmax	Word32	LTP max correlation
	LTP_flag	Flag	set when open loop pitch prediction gain >
	<u> </u>		threshold
dtx_encState	Isp_hist	Word16[80]	LSP history (8 frames)
	log_en_hist	Word16[8]	logarithmic frame energy history (8 frames)
	hist_ptr	Word16 Word16	pointer to the cyclic history vectors
	log_en_index	VVOIGTO	Index for logarithmic energy
	init_lsf_vq_index	Word16	initial index for lsf predictor
	Isp_index	Word16[3]	Isp indecies to the three code books
	dtxHangoverCount	Word16	is decreased in DTX hangover period
	decAnaElapsedCount	Word16	counter for elapsed speech frames in DTX
IpcState	LevinsonSt	LevinsonState	see below
LevinsonState	old_A	Word16[11]	last frames direct form coefficients
IspState	lsp_old	Word16[10]	old LSP vector
	lsp_old_q	Word16[10]	old quantized LSP vector
	qSt	Q_plsfState	see below in this table
Q_plsfState	past_rq	Word16[10]	past quantized LSF prediction error
clLtpState	pitchSt	Pitch_frState	see below in this table
tonStabState	count	Word16	count consecutive (potential) resonance frames
	gp	Word16[7]	pitch gain history
Pitch_frState	T0_prev_subframe	Word16	integer. pitch lag of previous subframe
gainQuantState	sf0_exp_gcode0	Word16	subframe 0/2 codebook gain exponent
	sf0_frac_gcode0	Word16	subframe 0/2 codebook gain fraction
	sf0_exp_target_en	Word16	subframe 0/2 target energy exponent
	sf0_frac_target_en	Word16	subframe 0/2 target energy fraction
	sf0_exp_coeff sf0_frac_coeff	Word16[5]	subframe 0/2 energy coefficient exponents
	gain_idx_ptr	Word16[5] Word16*	subframe 0/2 energy coefficient fractions pointer to gain index value in parameter frame
	gc_predSt	gc_predState	see below in this table
	gc_predUncSt	gc_predState	see below in this table
	adaptSt	GainAdaptState	see below in this table
gc_predState	past_qua_en	Word16[4]	MA predictor memory (20*log10(pred. error))
0 ·_i · · · · · · · · · · · · ·	past_qua_en_MR122	Word16[4]	MA predictor memory, 12.2 style (log2(pred.
	_ =		error))
GainAdaptState	onset	Word16	onset counter
	prev_alpha	Word16	previous adaptor output
	prev_gc	Word16 Word16[5]	previous codebook gain pitch gain history

Struct name	Variable	Type[Length]	Description
pitchOLWghtState	old_T0_med	Word16	weighted open loop pitch lag

	lsf_hist	Word16[80]	LSF vector history (8 frames)	
	lsf_hist_ptr	Word16	index to beginning of LSF history	
	lsf_hist_mean	Word16[80]	mean-removed LSF history (8 frames)	
	log pg mean	Word16	mean-removed logarithmic prediction gain	
	log_en_hist	Word16[8]	logarithmic frame energy history	
	log_en_hist_ptr	Word16	index to beginning of log, frame energy	
	Janp.		history	
	log_en_adjust	Word16	mode-dependent frame energy adjustment	
	dtxHangoverCount	Word16	counts down in hangover period	
	decAnaElapsedCount		counts elapsed speech frames after DTX	
	sid_frame '	Word16	flags SID frames	
	valid_data	Word16	flags SID frames containing valid data	
	dtxHangoverAdded	Word16	flags hangover period at end of speech	
	dtxGlobalState	enum DTXStateType	DTX state flags	
	data_updated	Word16	flags CNI updates	
Bgn_scdState	frameEnergyHist	Word16[60]	history of synthesis frame energy	
	bgHangover	Word16	number of frames since last speech frame	

Struct name	Variable	Type[Length]	Description
Cb_gain_averageState	cbGainHistory	Word16[7]	codebook gain history
	hangVar	Word16	counts length of talkspurt in subframes
	hangCount	Word16	number of subframes since last talkspurt
lsp_avgState	lsp_meanSave	Word16[10]	averaged LSP vector
D_plsfState	past_r_q	Word16[10]	past quantized LSF prediction vector
	past_lsf_q	Word16[10]	past dequantized LSF vector
ec_gain_pitchState	pbuf	Word16[5]	pitch gain history
	past_gain_pit	Word16	previous pitch gain (limited to 1.0)
	prev_gp	Word16	previous good pitch gain
ec_gain_codeState	gbuf	Word16[5]	codebook gain history
	past_gain_code	Word16	previous codebook gain
	prev_gc	Word16	previous good codebook gain
ph_dispState	gainMem	Word16[5]	pitch gain history
	prevState	Word16	previously used impulse response
	prevCbGain	Word16	previous codebook gain
	lockFull	Word16	force maximum phase dispersion
	onset	Word16	onset counter
Post_FilterState	res2	Word16[40]	LP residual
	mem_syn_pst	Word16[10]	synthesis filter memory
	synth_buf	Word16[170]	synthesis filter work area
	agc_state	agcState	see below in this table
	preemph_state	preemphasisState	see below in this table
agcState	past_gain	Word16	past agc gain
preemphasisState	mem_pre	Word16	filter state
Post_ProcessState	y2_hi	Word16	filter state, upper word
	y2_lo	Word16	filter state, lower word
	y1_hi	Word16	filter state, upper word
	y1_lo	Word16	filter state, lower word
	x0	Word16	filter state
	x1	Word16	filter state

5 Homing procedure

The principles of the homing procedures are described in [2]. This specification only includes a detailed description of the 8 decoder homing frames. For each AMR codec mode, the corresponding decoder homing frame has a fixed set of speech parameters shown in table 9a-9h. The bit allocation within these parameters is identical to the corresponding bit allocation of the source encoder output parameters given in [2].

In the following tables, the following naming convention is used for the individual parameters. Letters in *italics* indicate numbers.

index of nth LSF submatrix. LPC_n LTP-LAG *m* adaptive codebook index for subframe m. LTP-GAIN m adaptive codebook gain index in subframe m. FCB-GAIN m fixed codebook gain index in subframe m. GAIN_VQ m codebook gain VQ index in subframe m (subframe m and m+1 for MR475). POS *m_n* position index of *n*th pulse in subframe m. position index of nth and kth pulse in subframe m. POS m_n_k position index of nth, kth, lth, and jth pulse in subframe m. POS $m_n_k_l_j$ SIGN m n ksign information for nth and kth pulse in subframe m. SIGN $m_n_k_l_j$ sign information for *n*th, *k*th, *l*th, and *j*th pulse in subframe *m*. $SIGN_m_n_k_POS_m_n$ sign information for *n*th and *k*th pulse and position index for *n*th pulse in subframe *m*.

File formats

DDAMD DVDD

This section describes the file formats used by the encoder and decoder programs. The test sequences defined in [1] also use the file formats described here.

Speech file (encoder input / decoder output) 6.1

Spech files read by the encoder and written by the decoder consist of 16-bit words where each word contains a 13-bit, left aligned speech sample. The byte order depends on the host architecture (e.g. MSByte first on SUN workstations, LSByte first on PCs etc.). Both the encoder and the decoder program process complete frames (of 160 samples) only.

This means that the encoder will only process n frames if the length of the input file is n*160 + k words, while the files produced by the decoder will always have a length of n*160 words.

6.2 Mode control file (encoder input)

The encoder program can optionally read in a mode control file which specifies the encoding mode for each frame of speech processed. The file is a text file containing one line per speech frame. Each line contains one of the mode names from the list {MR475, MR515, MR59, MR67, MR74, MR795, MR102, MR122}.

Parameter bitstream file (encoder output / decoder input) 6.3

The files produced by the speech encoder/expected by the speech decoder contain an arbitrary number of frames in the following format.

FRAME_TYPE	В1	В2	 B244	MODE_INFO	unused1	 unused4

Each box corresponds to one Word16 value in the bitstream file, for a total of 250 words or 500 bytes per frame. The fields have the following meaning:

FRAME_TYPE	transmit	frame	type,	which	is	one	of
	TX_S1	PEECH	(0x0000)				
	TX_S	D_FIRST	(0x0001)				
	TX_S	D_UPDATE	(0x0002)				
	TX_N	D_DATA	(0x0003)				
-0 -044			l-:4- /: - 4l	: :	- IK)	ما ما المالية	41

speech encoder parameter bits (i.e. the bitstream itself). Each Bx either has the B0...B244 value 0x0000 or 0x0001. Only mode MR122 really uses all 244 bits; for the other modes, only the first *n* bits are used (35 \leq n \leq 204). The remaining bits are unused

(written as 0×0000)

					_		
MODE_INFO	encoding	mode	information,	which	is	one	of
	MR475		(0x0000)				
	MR515		(0x0001)				
	MR59		(0x0002)				
	MR67		(0x0003)				
	MR74		(0x0004)				
	MR795		(0x0005)				
	MR102		(0x0006)				
	MR122		(0x0007)				

unused, written as 0x0000 unused1...4

As indicated in section 6.1 above, the byte order depends on the host architecture.
