Important notice

The present document can be downloaded from: http://www.etsi.org/standards-search

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status.

Information on the current status of this and other ETSI documents is available at https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx

If you find errors in the present document, please send your comment to one of the following services: https://portal.etsi.org/People/CommitteeSupportStaff.aspx

Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.

The content of the PDF version shall not be modified without the written authorization of ETSI.

The copyright and the foregoing restriction extend to reproduction in all media.

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECTTM, **PLUGTESTS**TM, **UMTS**TM and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP**TM and **LTE**TM are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M**TM logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**[®] and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

shall indicates a mandatory requirement to do somethingshall not indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

should indicates a recommendation to do something

should not indicates a recommendation not to do something

may indicates permission to do something

need not indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

can indicates that something is possiblecannot indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

will indicates that something is certain or expected to happen as a result of action taken by an agency

the behaviour of which is outside the scope of the present document

will not indicates that something is certain or expected not to happen as a result of action taken by an

agency the behaviour of which is outside the scope of the present document

might indicates a likelihood that something will happen as a result of action taken by some agency the

behaviour of which is outside the scope of the present document

8

might not indicates a likelihood that something will not happen as a result of action taken by some agency

the behaviour of which is outside the scope of the present document

In addition:

is (or any other verb in the indicative mood) indicates a statement of fact

is not (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

1 Scope

The present document describes the protocol to be used on the Multimedia Resource Function Controller (MRFC) – Multimedia Resource Function Processor (MRFP) interface (Mp interface). The IMS architecture is described in 3GPP TS 23.228 [1], the functional requirements are described in 3G TS 23.333 [25]

This specification defines a profile of the Gateway Control Protocol (H.248.1), for controlling Multimedia Resource Function Processor supporting in-band user interaction, conferencing and transcoding for multimedia-services.

The present document is valid for a 3rd generation PLMN (UMTS) complying with Release 7 and later.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

5 Profile Description

5.1 Profile Identification

The name and version of the profile that is sent in the service change command are:

Table 5.1.1: Profile Identification

Profile name:	MRF
Version:	6

5.2 Summary

The profile defined in the present document enables the control of media resource function processors (MRFP) supporting in-band user interaction, conferencing and transcoding for multimedia services.

This Profile describes the minimum mandatory settings and procedures required to fulfil the Media Gateway control requirements for the MRF.

In addition optional settings and procedures are described which fulfil optional features and where supported, the minimum mandatory settings within the optional procedures and packages are identified that must be supported in order to support that feature.

"Optional" or "O" means that it is optional for either the sender or the receiver to implement an element. If the receiving entity receives an optional element that it has not implemented it should send an Error Code (e.g. 445 "Unsupported or Unknown Property", 501"Not Implemented", etc.). "Mandatory" or "M" means that it is mandatory for the receiver to implement an element. Whether it is mandatory for the sender to implement depends on specific functions; detail of whether elements of the core protocol are mandatory to be sent are defined in the stage 2 procedures, stage 3 procedures and/or the descriptions of individual packages.

The setting or modification of elements described in the profile under the heading "Used in Command" has the meaning that the property can be set/modified with that command. The property may be present in other commands (in order to preserve its value in accordance with ITU-T H.248.1[3]) when those commands are used for other procedures that affect the same descriptor.

This profile supports Explicit Congestion Notification and Multimedia Priority Service.

5.3 Gateway Control Protocol Version

Version 2 shall be the minimum version supported. Support of this version implies conformance to ITU-T Recommendation H.248 Version 2 [3].

Version 3 shall be supported for the optional MRFP based Floor Control Server functionality.

5.4 Connection Model

Media Resource Function Processors shall support ephemeral terminations that sink and source IP traffic. This type of H.248 Termination is denoted IP in the following clauses.

Table 5.4.1: Connection Model

Maximun	n number of contexts:	Provisioned (NOTE 1)
Maximun	n number of terminations per context:	Unspecified(NOTE 2)
Allowed context:	terminations type combinations in a	Not Applicable
NOTE 1:	NOTE 1: The actual number of supported contexts can be audited by the MRFC using the MaxNrOfContexts property defined in the Base Root Package.	
NOTE 2: Support of 1 termination in a context is the basic requirement for the MRFP e.g. for voice record. 2 terminations in a context are required for transcoding or any inband media detection or insertion whilst an unspecified number terminations may be required if conferencing is supported.		

5.5 Context Attributes

Table 5.5.1: Context Attributes

Context Attribute	Supported	Values Supported
Topology	Yes	See clause 5.7.8
Priority Indicator	Optional (NOTE 1)	0-15 (NOTE 2)
Emergency Indicator	No	Not Applicable
IEPS Indicator	No	
ContextAttribute Descriptor	Yes	If "yes" see clause 5.8.9 for
details of supported attributes		details of supported attributes
ContextIDList Parameter	<yes no=""></yes>	NA
NOTE 1: This Context Attribute parameter is used for MPS as specified in 3GPP TS 22.153 [42].		
NOTE 2. Descriptive values 11 15 of the Descriptive Indicator are resourced for MDS		

NOTE 2: Priority values 11 – 15 of the Priority Indicator are reserved for MPS.

Is the AND/OR Select operation Context Attribute supported?

AND/OR Context Attribute	<yes no=""></yes>	<and both="" or=""></and>
--------------------------	-------------------	---------------------------

5.6 Terminations

5.6.1 Termination Names

5.6.1.1 General

The Termination ID structure is provisioned in the MRFC and MRFP and is known by the MRFP and the MRFC at or before start up.

With ephemeral IP endpoint bearer types the internal structure of Termination ID is irrelevant for MRFC and MRFP and therefore Termination ID is only a numeric identifier for the termination.

5.6.1.2 ASN.1 encoding

The following general structure of TerminationID shall be used:

4 octets shall be used for the termination ID. The following defines the general structure for the termination ID:

Table 5.6.1.2.1: Termination ID

Termination	
type	X

Termination type:

Length 3 bits

Values:

000 Reserved

001 Ephemeral termination

011 - 110 Reserved

111 Reserved for ROOT termination Id (ROOT Termination Id = 0xFFFFFFFF)

X:

Length 29 bits.

For IP termination, its usage is un-specified.

5.6.1.3 ABNF encoding

The following general structure of termination ID shall be used:

TerminationID = "ROOT" / pathName / "\$" / "*"; according to ITU-T H.248.1 [3] Annex B.

5.6.2 Multiplexed Terminations

Table 5.6.2.1: Multiplexed Terminations

Multiplex Terminations Supported?	NO
-----------------------------------	----

5.7 Descriptors

5.7.1 Stream Descriptor

Table 5.7.1.1: Stream Descriptor

N	Maximun	n number of streams per termination type	ALL	Unspecified (NOTE)
N	NOTE:	At least 1 stream for each media (e.g. video+au	udio = 2 streams). If only one st	ream is applicable, then the
	MRFC may omit the Stream Descriptor and the MRFP shall assume that StreamID =1.			

5.7.1.1 LocalControl Descriptor

The following tables specify the level of support required with regard to the properties in the local control descriptor.

Table 5.7.1.1.1: Reserve Group and Reserve Value

		Termination Type	Stream Type	
Reserve group used:	NO (NOTE 1)	-	-	
Reserve value used:	YES	IP	Audio, Video	
	(NOTE 2)			
	(NOTE 3)			
NOTE 1: Support of Reserve Group in case of multiple p-time values requires further studies				
NOTE 2: Used for audio streams where IETF RFC 2833 [22] is also specified and for conference where participants				
are invited to join the conference.				
NOTE 3: Not used for TCP transport (see IETF RFC 793 [52]) and media types:				
a) "message" for MSRP (see IETF RFC 4975 [34]) and				
b) "application" for BFCP (see IETF RFC 4582 [53]) and ROI FECC (IETF RFC 4573 [66])				
because the application control will not use them in a context ReserveValue.				

Table 5.7.1.1.2: Stream Mode

Termination Type	Stream Type	Allowed StreamMode Values
ALL except ROOT	Any	Send, Receive, Send and Receive,
		Inactive

5.7.2 Events Descriptor

Vecanactive used an eignale:	Voc
Keepactive used on signals:	l Yes

5.7.5 DigitMap Descriptor

Table 5.7.5.1: DigitMap Descriptor

DigitMaps supported:	NO		
If yes	DigitMap Name Structure Timers		

5.7.6 Statistics Descriptor

Table 5.7.6.1: Statistics Descriptor

Statistics supported on:	Both

Table 5.7.6.2: Statistics reported on Subtract

Statistics reported on Subtract:		Yes	
If yes	Statistic IDs Reported	Termination Type	Stream Type
	msrpstat/*	IP	Message

5.7.7 ObservedEvents Descriptor

Table 5.7.7.1: ObservedEvents Descriptor

Event detection time supported:	Yes

5.7.8 Topology Descriptor

Table 5.7.8.1: Topology Descriptor

Allowed triples:	(T1,T2, isolate)
	(T1,T2, oneway)
	(T1,T2, bothway)

5.7.9 Error Descriptor

Table 5.7.9.1: Error codes sent by the MRFC

Supported H.248.8 Error Codes:	400-403, 406, 410, 411, 421, 422, 430, 431, 442, 443, 444, 446, 458, 501-506, 533
Supported Error Codes defined in packages:	All error codes defined in supported packages are supported.

Table 5.7.9.2: Error codes sent by the MRFP

Supported H.248.8 Error Codes:	400-411, 412, 421,422,430, 431, 432-435,440,441,442, 471, 500-517, 522-539.
Supported Error Codes defined in packages:	All error codes defined in supported packages are
	supported.

5.8 Command API

5.8.1 Add

Table 5.8.1.1: Descriptors used by Add request

Descriptors used by Add request:	- Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote)

Table 5.8.1.2: Descriptors used by Add reply

Descriptors used by Add reply:	Events, Signals, Media (TerminationState, LocalControl, Local and Remote)Error
	When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are: - The Error Descriptor - SDP properties returned in "Reserve IMS Resources" and "Reserve and Configure IMS Resources" procedures, as specified in 15.17.2.2 and 15.17.2.4

5.8.2 Modify

Table 5.8.2.1: Descriptors used by Modify request

Descriptors used by Modify request:	Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote)

Table 5.8.2.2: Descriptors used by Modify reply

Descriptors used by Modify reply:	Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote),Error
	When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are: - The Error Descriptor
	- SDP properties returned in "Configure IMS
	Resources" procedure as specified in 15.17.2.3.

5.8.3 Subtract

Table 5.8.3.1: Descriptors used in Subtract request

Descriptors used by Subtract request:	Audit (empty) or None	

Table 5.8.3.2: Descriptors used in Subtract reply

Descriptors used by Subtract reply:	None
-------------------------------------	------

5.8.4 Move

Table 5.8.4.1: Command Move

Move command used:	Yes
--------------------	-----

Table 5.8.4.2: Descriptor used by Move command

Descriptors used by Move Request:	Events, Signals, Media (TerminationState, LocalControl, Local and Remote)
Descriptors used by Move Reply:	Events, Signals, Media (TerminationState, LocalControl, Local and Remote), Error When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are: - The Error Descriptor

5.8.5 AuditValue

Table 5.8.5.1: Auditvalue

Audited Properties:	Property Name and Identity	Descriptor
Termination ID	ServiceState: - Root (MGW Audit)	Termination State Descriptor
Termination ID	MGC information (mgcinfo) - individualtermination (NOTE1)	LocalControl Descriptor
Termination ID	For Packages: - Root	Packages Descriptor (NOTE2)
Termination ID	None (MGW Audit) : - Root	Audit (empty) Descriptor
Termination ID	SDPCapNeg Extensions: - sdpe/*	TerminationState Descriptor
Audited Statistics:	Supported Statistics (NO	OTE3) (NOTE2)
Audited Signals:	ALL	
Audited Events:	ALL	
Package Audit possible:	Yes	

NOTE1: The purpose to audit an individual Termination is to retrieve MGC Information if supported.

NOTE2: Optional

NOTE3: The statistics defined in the MSRP Statistics Package can be obtained via the MRFC auditing the MRFP.

The supported statistics are msrpstat/nms, msrpstat/nmr, msrpstat/vms and msrpstat/vmr.

5.8.6 AuditCapabilities

Table 5.8.6.1: AuditCapabilities

Audited Properties:	Property Name and Identity	Descriptor
	FFS	FFS
Audited Statistics:	None	
Audited Signals:	None	
Audited Events:	None	

5.8.7 Notify

Table 5.8.7.1: Notify

Descriptors used by Notify Request or Reply:	ObservedEvents, Error
NOTE: The Error Descriptor shall not be used in Notify	Request.

5.8.8 ServiceChange

ServiceChangeAddress used:

Table 5.8.8.1: Service Change Methods and Reason sent by MRFC

23

Service Change Methods Supported:	ServiceChange Reasons supported:	
Restart (NOTE 1)	"900 Service Restored"	
	"901 Cold Boot",	
	"902 Warm Boot".	
Graceful (NOTE 1)	"905 Termination Taken Out Of Service"	
Forced (NOTE 1)	"905 Termination Taken Out Of Service"	
Handoff (NOTE 1, NOTE 2) "903 MGC Directed Change"		
NOTE: When a Service Change command on the Root termination with a method other than Graceful is sent, the command shall always be sent as the only command in a message. The sending node shall always wait for the reply to a Service Change command on the Root termination with a method other than Graceful before sending further command requests. A Service Change command on the Root termination with method Graceful may be combined with other commands in a single message.		
NOTE 1: ROOT Only.	,	
	2: Not involving more than 1 MRFC. No support of handoff relates to a network deployment scenario with	
"primary H.248 systems only", which transla	tes to no geographic redundancy of the MRFC.	

Table 5.8.8.2: Service Change Methods and Reason sent by MRFP:

Service C	Change Methods Supported:	ServiceChange Reasons supported:
Restart (N	IOTE 1)	"900 Service Restored",
		"901 Cold Boot",
		"902 Warm Boot",
		"916 Packages Change" (Optional)
		"917 Capability Change" (Optional).
Graceful (NOTE 1)	"908 MG Impending Failure "
Forced (N	OTE 1)	"905 Termination Taken Out Of Service"
Handoff (I	NOTE 1, NOTE 2)	"903 MGC Directed Change"
Failover (I	NOTE 3)	"909 MGC Impending Failure"
Disconnec	cted (NOTE 1)	"900 Service Restored"
		"916 Packages Change" (Optional)
		"917 Capability Change" (Optional)
NOTE 2:	command shall always be sent as the only common for the reply to a Service Change command on the before sending further command requests. A Service Change command on the service sending further command requests. A Service	termination with a method other than Graceful is sent, the mand in a message. The sending node shall always wait the Root termination with a method other than Graceful ervice Change command on the Root termination with ommands in a single message. Than 1 MRFP. No support of handoff relates to a network ms only", which translates to no geographic redundancy of

Table 5.8.8.3: Service Change Address

No

Table 5.8.8.4: Service Change Delay	

ServiceChangeDelay used:	No	
If yes	Valid time period:	-

Table 5.8.8.5: Service Change Incomplete Flag

ServiceChange Incomplete Flag used:	No
-------------------------------------	----

Table 5.8.8.6: Service Change Version

Version used in ServiceChangeVersion:	2

Table 5.8.8.7: Profile negotiation

Profile negotiation as per H.248.18:	No

5.8.9 Manipulating and Auditing Context Attributes

Table 5.8.9.1: Manipulating and Auditing Context Attributes

Context	Attributes Manipulated:	ALL supported attributes (See table 5.5.1.) (NOTE)
Context Attributes Audited: ALL supported attributes except Priority Indicator (ALL supported attributes except Priority Indicator (See
		table 5.5.1.) (NOTE)
NOTE:	NOTE: For ContextAttribute Descriptor, the details of supported attribute include: Floor Control Algorithm	
	(fcpoli/fca), Max Floor Users (fcpoli/mfu), Floor Control Conference Identity (fcsig/fconfid), Floor and Stream	
Association (fcsig/fsa) and MMCMH Policy (mmcmh/mmcmhp).		

5.9 Generic Command Syntax and Encoding

Table 5.9.1: Encoding

Supported Encodings:	Binary (optional)
	Text (optional)
	The receiver shall support:
	 Short Token Notation
	 Long Token Notation

5.10 Transactions

Table 5.10.1: Transactions

Maximum number of Transaction Requests / Replies / TransResponseAcks / Segment Replies per message:	10
NOTE: When more than one element are conveyed in one message, it is recommended that this message comprises a Transaction Request / Transaction Reply / Transaction Pending plus a Transaction Response Ack.	

Table 5.10.2: Segmentation

Segmentation Supported: UDP : No		UDP : No
	• •	SCTP : Inherent in transport
NOTE:	DTE: The H.248 Segmentation Package according Annex E.14 of H.248.1 Version 3 is intended for H.248	
transport technologies without the capability of automatic message segmentation. This method is not		
	required for UDP- or SCTP-based H.248 signalling transport in this Profile.	

Table 5.10.3: Commands per Transaction Request

Maximum number of commands per Transaction	Unlimited
request:	

Table 5.10.4: Commands per Transaction Reply

Maximum number of commands per Transaction	Unlimited
reply:	

Table 5.10.5: Optional Commands

Commai	nds able to be marked "Optional": ALL
NOTE:	The meaning of this table is that if one of the listed commands failed then the possibly present subsequent
	command within the same transaction will be processed.

Table 5.10.6: Transaction Timers

Transaction Timer:	Value
NormalMGExecutionTime	Provisioned
NormalMGCExecutionTime	Provisioned
MGOriginatedPendingLimit	Provisioned
MGCOriginatedPendingLimit	Provisioned
MGProvisionalResponseTimerValue	Provisioned
MGCProvisionalResponseTimerValue	Provisioned

5.11 Messages

It is recommended that MRFP and MRFC names are in the form of fully qualified domain name. For example the domain name of the MRFC may be of the form MRFC1.whatever.net and the name of the MRFP may be of the form mg1.whatever.net.

The fully qualified domain name will be used by the MRFP and MRFC as part of the "Message Identifier" in the H.248 messages which identifies the originator of the message.

The MRFC domain name is provisioned in the MRFP or retrieved from the DNS using SRV records.

The use of a domain name provides the following benefits:

- MRFPs and MRFCs are identified by their domain name, not their network addresses. Several addresses can be associated with a domain name. If a command cannot be forwarded to one of the network addresses, implementations shall retry the transmission using another address.
- MRFPs and MRFCs may move to another platform. The association between a logical name (domain name) and the actual platform are kept in the Domain Name Service (DNS). MRFP and MRFC shall keep track of the record's time-to-live read from the DNS. They shall query the DNS to refresh the information if the time-to-live has expired.

The domain name may be used by MRFC/MRFP for authentication purposes.

5.12 Transport

Table 5.12.1: Transport

Supporte	ed Transports:	Transport over SCTP shall be supported and shall conform to Recommendation H.248.4 [4]. Support of UDP is optional, dependent on a network operator's decision, based on the network configuration. SCTP(recommended) (NOTE1). UDP(optional).	
NOTE:	If using SCTP as defined in IETF RFC 2960 [8], the MRFP shall always be the node to perform the "Initiation".		
NOTE1:	H.248 is "SCTP user" in this case of H.248/SCTP/IP based transport according ITU-T Rec. H.248.4. The number of used SCTP Streams for traffic of the H.248 Control Association must be defined, see clause 8/H.248.4. A single SCTP Stream is the default assumption ("Single-Stream Mode") in this Profile.		

Table 5.12.2: Segmentation

Segmentation Supported:	No

Table 5.12.3: Control Association Monitoring

Control Association Monitoring Supported:	Monitoring mechanism is dependent on used H.248 transport • SCTP: inherent capability of SCTP (NOTE) • UDP: 1. H.248.14 (MRFP-driven monitoring) 2. Empty AuditValue on ROOT (MRFC-driven monitoring)
NOTE: Use of H.248.14 for this is FFS.	

5.13 Security

Table 5.13.1: Security

Supporte	ed Security:	None
NOTE:	Both the MRFC and MRFP are assumed to be w	rithin a secure IP zone of a single operator.

5.14 Packages

5.14.1 Mandatory Packages

Table 5.14.1: Mandatory packages

Mandatory Packages				
Package Name / Reference	Version			
Generic (see ITU-T Recommendation H.248.1 [3])	g, (0x0001)	1		
Base Root (see ITU-T Recommendation H.248.1 [3])	root, (0x0002)	2		
Network (see ITU-T Recommendation H.248.1 [3])	nt, (0x000b)	1		
Hanging Termination Detection (see ITU-T Recommendation H.248.36 [30]).	hangterm, (0x0098)	1		

5.14.2 Optional Packages

Table 5.14.2: Optional packages

Optional Packages					
Package Name / Reference	Package ID	Version	Support dependent on:		
DTMF Detection Package (see ITU-T Recommendation H.248.1 [3] Annex E.6);	dd, (0x0006)	1	Support is mandatory if DTMF Detection is supported.		
Tone Generator Package (see ITU-T Recommendation H.248.1 [3])	tonegen, (0x0003)	1	This package is "extension only". It must be supported if extended but shall not be published over the protocol. It is here for information only.		
Basic Call Progress Tones Generator with Directionality(see ITU-T Recommendation Q.1950 [13])	bcg, (0x0023)	1	If CS type Services provided by network		
Call Progress Tones Generator (see ITU-T Recommendation H.248.1 3])	cg, (0x0007)	1	If CS type Services provided by network		
Basic Services Tones Generator (see ITU-T Recommendation Q.1950 [13])	srvtn, (0x0025)	1	If CS type Services provided by network		
Expanded Call Progress Tones Generator (see ITU-T Recommendation Q.1950 [13])	xcg, (0x0024)	1	If CS type Services provided by network		
Basic Announcement Syntax (see ITU-T Recommendation H.248.9 [6])	bannsyx, (0x0047)	1	Support is optional if playing announcement is supported.		
Voice Variable Syntax (see ITU-T Recommendation H.248.9 [6])	vvsyx, (0x0048)	1	Support is optional if playing announcement is supported.		
Announcement Set Syntax (see ITU-T Recommendation H.248.9 [6])	setsyx, (0x0049)	2	Support is optional if playing announcement is supported.		
General text Variable type (see ITU-T Recommendation H.248.9 [6])	phrsyx, (0x004a)	2	Support is optional if playing announcement is supported.		
Advanced Audio Server Base (see ITU-T Recommendation H.248.9 a1 [26])	aasb, (0x0033)	2	Support is optional if playing announcement is supported.		
AAS Recording package (see ITU-T Recommendation H.248.9 [6])	aasrec, (0x0035)	1	Support is optional if Audio Record is supported.		
AAS segment management (see ITU-T Recommendation H.248.9 [6])	aassm, (0x0036)	1			
Generic Announcement (see ITU-T Recommendation H.248.7 [5])	an, (0x001d)	2	Support is mandatory if playing announcement is supported.		
Intrusion Tones Generation (see ITU-T Recommendation Q.1950 [13])	int, (0x0027)	1	If CS type Services provided by network		
Business Tones Generation (see ITU-T Recommendation Q.1950 [13])	biztn, (0x0028)	1	If CS type Services provided by network		
Conferencing Tones Generation (see ITU-T Recommendation H.248.27 [12])	conftn, (0x0038)	1	Support is optional and may be used if Audio Conference is supported.		
Inactivity Timer (see ITU-T Recommendation H.248.14 [9])	it, (0x0045)	1	Support is mandatory if UDP transport is enabled for H.248 messages.		
MGC Information Package (see ITU-T Recommendation H.248.45,	mgcinfo, (0x00a0)	1	This package may be supported as an operator option. For this profile the information string shall be limited to 32 octets in length.		
Advanced audio server base package for TTS enhancement (see ITU-T Recommendation H.248.9 a1 [26])	aastts, (0x00a8)	1	Support is mandatory if Text to Speech is supported.		
ASR package (see ITU-T Recommendation H.248.9 a1 [26])	asr, (0x00a6)	1	Support is mandatory if Automatic Speech Recognition is supported.		

Multimedia Recording Package (see ITU- T Recommendation H.248.9 a1 [26])	mrp, (0x00b3)	1	Support is mandatory if Multimedia recording is supported.
Multimedia play package (see ITU-T	mpp,	1	Support is mandatory if Multimedia
Recommendation H.248.9 a1 [26]) Overload Control Package (see ITU-T	(0x00a9) ocp,	1	announcement file is supported.
Recommendation H.248.11 [7])	(0x0051)		
RTP Package (see ITU-T	rtp, (0x000c)	1	
Recommendation H.248.1 [3]) MSRP Statistics Package (see ITU-T	msrpstat,	1	Support is mandatory if Message conference is
Recommendation H.248.69 [35])	(0x00ea)		supported.
Play Message Package (see ITU-T Recommendation H.248.69 [35])	mess, (0x00ec)	1	Support is mandatory if Message conference is supported.
Message Filtering Package (see ITU-T Recommendation H.248.69 [35])	mf, (0x00ef)	1	Support is mandatory if Message conference is supported.
Record Message Package (see ITU-T Recommendation H.248.69 [35])	recmess, (0x00f1)	1	Support is mandatory if Message conference is
Floor Control Package (see ITU-T	fcp, (0x006e)	2	supported. Support is mandatory if Floor control is
Recommendation H.248.19 [33]) Floor Control Policy Package (see ITU-T	fonali	1	supported.
Recommendation H.248.19 [33])	fcpoli, (0x00ab)	1	Support is mandatory if Floor control is supported.
Floor Status Change Handling Package	fschp, (0x00aa)	1	Support is mandatory if Floor control is supported.
(see ITU-T Recommendation H.248.19 [33])	(uxuuaa)		supported.
Floor Control Signalling Package (see	fcsig,	1	Support is mandatory if Floor control is
ITU-T Recommendation H.248.19 [33]) Explicit Congestion Notification for RTP-	(0x00e5) ecnrous	1	supported. Support of ECN feature
over-UDP Support (see see ITU-T Recommendation H.248.82 [44])	(0x010b)	'	Support of Lory realtine
Diffserv (ITU-T Recommendation	ds, (0x008b)	2	Support of MPS
H.248.52 [43]) MG Act-as STUN Server (ITU-T	mgastuns	1	Support of incoming STUN connectivity
Recommendation H.248.50 [47])	(0x00c2)		checks.
Originate STUN Continuity Check (see	ostuncc	1	Applicable for ICE lite and full ICE Support of originating STUN connectivity
ITU-T Recommendation H.248.50 [47])	(0x00c3)	·	checks
TCP basic connection control	tcpbcc,	1	Only applicable for full ICE Support of TCP based media.
(ITU-T Recommendation H.248.89 [54])	(0x0115)		
TLS basic session control	tlsbsc,	1	Support of TCP based media using TLS.
(ITU-T Recommendation H.248.90 [55])	(0x0117)		Support is mandatory if IMS media plane security using the pre-shared key (PSK)
			ciphersuites for TLS is supported.
MGC Controlled Bearer Level ALG (see ITU-T Recommendation H.248.78 [65])	mcbalg (0x0108)	2	Support of MGC controlled bearer level ALG functionality for CLUE message handling in
110-1 Recommendation 11.248.78 [63])	(0x0108)		telepresence.
Enhanced Revised Offer/Answer SDP Support ([ITU-T Recommendation	eroas, (0x0109)	1	Support of the SDP Capability Negotiation syntax
H.248.80 [70]) Remote Pause and Resume Package	rempr,	1	Support is mandatory if MMCMH feature is
(see ITU-T Recommendation	(0x0123)		supported. Allows the MRFC to request that
H.248.98 [76])			the MRFP issue a request to a remote endpoint to pause (and subsequently resume)
			the transmission of an RTP media stream.
Multi-stream Multiparty Conferencing	mmcmh,	1	Support is mandatory if MMCMH feature is
Media Handling Package (see Annex C)	(0x????)		supported. Defines functionality that allows the MRFP to interconnect video media flows with
			different StreamIDs and to autonomously
			determine the mix of a video streams in a
			conference dependent on the active speaker. For example, everyone sees the active
			speaker and he sees the previous speaker in a
			normal resolution, all other conference
			participants (or the most recent previous speakers) are seen in low resolution.
	I		1 Speakers, are seen in low resolution.

5.15 Mandatory Support of SDP and Annex C Information Elements

The v=, o=, s=, m=, c=, t=, a= and b= lines of the SDP [20] syntax shall be supported. All other lines should be ignored if received.

Table 5.15.1: Supported Annex C and SDP information elements

Supported Annex C and SDP information elements:

Information Element	Annex C Support	SDP Support
Protocol version (v=)	"SDP_V "	The protocol version (v=) line contains a single field: v= <version></version>
		and shall be used in accordance with IETF RFC 2327 [20] (i.e. v=0).
Origin (o=)	"SDP_O "	The origin line consists of 6 fields:
		o= <user name=""> <session id=""> <version> <network type=""> <address type=""> <address>.</address></address></network></version></session></user>
		The MRFC is not required to supply this line but shall accept it.
		The MRFP should populate this line as follows or use the value received from the MRFC:
		- <user name=""> should contain an hyphen - <session id=""> and <version> should contain one or mode digits as described in IETF RFC 2327 [20] - <network type=""> shall be set to IN</network></version></session></user>
		- <address type=""> shall be set to IP4 or IP6 The Address Type shall be set to "IP4" or "IP6" depending on the addressing scheme used by the network to which the MRFP</address>
		is connected <address> should contain the fully qualified domain name of the gateway.</address>
Session Name (s=)	"SDP_S"	The session name (s=) line contains a single field: s= <session-name>.</session-name>
		The MRFC is not required to supply a session name but shall accept one. This line may be used to convey correlation information for use in CDRs.
		The MRFP shall use an hyphen "-" as a session name or the value received from the MRFC.
Connection data (c=)	"SDP_C "	The connection data line consists of 3 fields: c= <network-type> <address-type> <connection-address></connection-address></address-type></network-type>
		- The <network-type> shall be set to "IN" The <address-type> shall be set to "IP4" or "IP6" depending on the addressing scheme used by the network</address-type></network-type>
		to which the MRFP is connected. - The <connection-address> sent by the MRFC in the remote descriptor is the address to which the MRFP shall send the media flows.</connection-address>
		- The <connection-address> sent by the MRFC in local descriptors may be a unicast IPv4 or IPv6 address or it may be wildcarded to allow the MRFP to choose an address. In</connection-address>
		the second case, MGs shall fill this field with a unicast IP address at which they will receive the media stream. Thus a TTL value shall not be present and a "number of addresses"
		value shall not be present. The field shall not be filled with a fully-qualified domain name instead of an IP address.
		When the <connection address=""> is wildcarded (i.e. choose wildcard) by the MRFC, the MRFP allocates an IP address based on the address type. The addressing space for which this address is taken may depend on the termination ID</connection>
		supplied by the MRFC.

	I	
Media announcements	"SDP_M "	Media Announcements (m=) lines consist of 3 fields:
(m=)		m= <media> <port> <transport> <format></format></transport></port></media>
		- The <media> field shall be set to "audio"or "video" or</media>
		"message" or "application" (NOTE 1).
		- The <port> field in remote descriptors is provided by the</port>
		MRFC and represents the port to which the MRFP shall
		send the media flows.
		- The <port> field in local descriptors may be provided by</port>
		the MRFC or wildcarded (i.e. choose wildcard) to allow the
		MRFP to choose a value for the port on which it wishes to
		receive the media stream The strengerty field shall be according to table 5.15.2
		- The <transport> field shall be according to table 5.15.2 - The <format> field may be explicitly supplied by the</format></transport>
		MRFC, wildcarded or overspecified. If the MRFC wishes to
		request the MRFP to choose which media formats it wishes
		to use for the call then the MRFC shall provide a "\$"
		wildcard. If the MRFC wishes to suggest that the MRFP
		selects a media format from a list of possible media formats
		then it shall provide a list of appropriate media types in
		accordance with SDP. All conforming gateways shall
		support at least the default narrowband AMR codec as
		defined in 3GPP TS 26.114 [41]. Optionally, other codecs defined in 3GPP TS 26.114 [41] and format "8" for
		RTP/AVP (i.e. G.711 A-Law).
		1017/101 (i.o. O.71171 Law).
		Dynamic payloads shall not be used when a static
		RTP/AVP payload value is defined in IETF RFC 3551 [21].
Bandwidth (b=)	"SDP_B "	The Bandwitdh (b=) line consists of 2 fields:
		b= <modifier>: <bandwidth-value></bandwidth-value></modifier>
		Deadwidth information shall be somelied by the MDEO if the
		Bandwidth information shall be supplied by the MRFC if the
		required bandwidth cannot be immediately derived from the information contained in the m= line. If absent, the MRFP
		shall assume a reasonable default bandwidth value for well-
		known codecs and shall provide this value in the response
		sent to the MRFC. The Modifier field shall be set to "AS".
		The Bandwidth Value field shall be set to the maximum
		bandwidth requirement of the media stream in kbit/s. The
		bandwidth value shall take into account all headers down to
Time (t=)	"SDP_T "	the IP layer, including a 5% bandwidth for RTCP packets. The time (t=) line consists of two fields:
i iiie (t=)	SUP_I	t = <start-time> <stop-time>.</stop-time></start-time>
		t= start amoz stop-amoz.
		This line is ignored by both the MRFC and the MRFP if
		received in local and remote descriptors.
		·
		The MRFC is not required to supply a time description but
		shall accept one.
		When supplied this line shall be set to 0.0
		When supplied, this line shall be set to 0 0.

	T.,	1
Attributes (a=)	"SDP_A "	Attributes (a=) lines consist of two fields: a= <attribute>: <value></value></attribute>
		One or more of the "a" attribute lines specified below may be included, depending on the payload type.
		An attribute line not specified below should not be used. Only the following attributes are understood by the MRFP. Other attributes are ignored.
		a= rtpmap: <payload type=""> <encoding name="">/<clock rate=""> [/<encoding parameters="">] a= fmtp:<format> <format parameters="" specific=""> a= ptime: <time> a= userid: <token identifier="" of="" user=""> (NOTE 3) a= floorid: <token floor="" identifier="" of=""> (NOTE 3) a= path:MSRP-URI (NOTE 4) a= rtcp-fb: <> (NOTE 5, NOTE 13, NOTE 14)</token></token></time></format></format></encoding></clock></encoding></payload>
		a= extmap: <x> <cvo-urn or="" roi="" urn=""> (NOTE 6) a= imageattr: <payload type=""> <> (NOTE 7) a= sctp-port: <port> (NOTE 8) a= max-message-size: <value> (NOTE 8) a= dcmap:< dcmap-stream-id> < subprotocol-opt> (NOTE 9)</value></port></payload></cvo-urn></x>
		a= fingerprint: <certificate fingerprint=""> (NOTE 10) a=predefined_ROI: <> (NOTE 11) a=bw-info: <payload type=""> <dir> <maxsupbw>; <maxdesbw>; <mindesbw>; <minsupbw>; <ipver> (NOTE 12) a=content: <mediacnt> (NOTE 15)</mediacnt></ipver></minsupbw></mindesbw></maxdesbw></maxsupbw></dir></payload></certificate>
		a=simulcast: <sc-dir> <rid-id-list> (NOTE 16) a=rid: <rid-id> <dir> <payload type=""> (NOTE 17) a=ccc_list: <codeclist> " " <ccc-prof> (NOTE 18)</ccc-prof></codeclist></payload></dir></rid-id></rid-id-list></sc-dir>
		ICE support The attributes "a=candidate", "a=ice-pwd", and "a=ice-ufrag" (see IETF RFC 5245 [48]) may be provided for an SDP m-line in the local and remote descriptor if the MRFP supports ICE, see also 3GPP TS 24.229 [49]. In the local descriptor, the MRFC shall provide "a=ice-pwd", and "a=ice-ufrag" with wildcard sign "\$" to request the allocation of a password and user name fragment, and the "a=candidate" of type "host" with the transport, port and priority parameters with wildcard sign "\$" to request the allocation of a host candidate. The MRFP shall then reply with
		completed "a=ice-pwd", and "a=ice-ufrag" and "a=candidate" attributes in the local descriptor, and shall include "a=ice-lite" if it only supports ICE lite. In the remote descriptor, the MRFC may provide the "a=candidate", "a=ice-pwd", and "a=ice-ufrag".
		SDP Capability Negotiation support: the attributes of "a=acap", "a=tcap", "a=pcfg" and "a=acfg" (see IETF RFC 5939 [69]) may be provided in the local descriptor and/or remote descriptor.

- NOTE 1: The "application" media is used to describe H.248 stream for a BFCP stream or H.248 stream for an UDP/DTLS/SCTP stream to be created for a CLUE data channel in telepresence using IMS as specified in 3GPP TS 24.103 [60]. The way to generate an "m" line for a BFCP stream follows the format specified in IETF RFC 4583 [32], where the port is always a TCP port, the transport field is "TCP/TLS/BFCP" if IMS media plane security is applied or otherwise "TCP/BFCP", the fmt (format) list is ignored. When a CLUE data channel is created, the "m" line for a UDP/DTLS/SCTP stream follows the format specified in IETF RFC 8841 [61] and IETF RFC 8864 [62], where the transport field is "UDP/DTLS/SCTP", the fmt (format) indicates the usage of the SCTP association as "webrtc-datachannel".
- NOTE 2: Void
- NOTE 3: The "userid" and "floorid" are SDP media-level attributes. They are used in BFCP 'm' lines. The "floorid" defines a list of Floor identifiers, indicating the available Floor(s) for the user represented by the termination. The token representing the Floor identifier is the integer representation of the Floor ID. The "userid" attributes carry the integer representation of a user ID.
- NOTE 4: An MSRP-URI is an "msrp" or "msrps" URI defined as "MSRP-URI = msrp-scheme "://" authority ["/" session-id] ";" transport *(";" URI-parameter)". The authority component contains a numeric IP address and port. The session-id part identifies a particular session of the participant allowing multiple sessions to share the same TCP connection.
- NOTE 5: For AVPF transport, the "rtcp-fb" SDP attribute defined in IETF RFC 4585 [40] may be used to provide the feedback message types the MRFP is allowed to send and to indicate RTCP timing information. The support is optional and dependent on RTCP-fb support as described in 3GPP TS 26.114 [41]. The list of feedback messages supported by the MRFP is preconfigured in the MRFC. The "rtcp-fb" SDP attribute shall be sent from MRFC when applicable.
- NOTE 6: Support of the RTP header extension to signal CVO or Sent ROI is optional. The attribute "a=extmap" (see IETF RFC 5285 [45]) may be provided for an m-line in the local and remote descriptor. CVO-URN is "urn:3gpp:video-orientation" for a 2 bit granularity of rotation or "urn:3gpp:video-orientation:6" for a higher granularity of rotation, and ROI-URNs are "urn:3gpp:roi-sent" for arbitrary ROI information and "urn:3gpp:predefined-roi-sent" for predefined ROI information respectively, as specified in 3GPP TS 26.114 [41] and "x" represents the local identifier of the RTP header extension element as specified in IETF RFC 5285 [45] and is any number in a range [1 14].
- NOTE 7: The support of the generic image attribute to negotiate the image size is optional. The attribute "a=imageattr" (see IETF RFC 6236 [46]) may be provided for an m-line in the local and remote descriptor if the MRFP supports the generic image attributes, see also 3GPP TS 26.114 [41]. The local descriptor indicates the image sizes which the MRFP supports in the receiving direction for the selected payload type and corresponds to the "recv" keyword (see IETF RFC 6236 [46]) in the "a=imageattr" that the MRFC will send within the SDP body on the Mr interface. The remote descriptor indicates the image sizes which the MRFP supports in the sending direction for the selected payload type and corresponds to the "send" keyword (see IETF RFC 6236 [46]) in the "a=imageattr" that the MRFC will send within the SDP body on the Mr interface.
- NOTE 8: The support of the "a=sctp-port" attribute to indicate the actual SCTP port is used only when the transport field of 'm' line is "UDP/DTLS/SCTP". The SDP "a=max-message-size" attribute may be used to indicate the maximum message size that an SCTP endpoint is willing to receive on the SCTP association associated with the 'm' line.
- NOTE 9: The support of the dcmap attribute to realize the CLUE data channel is used only when the transport field of 'm' line is "UDP/DTLS/SCTP", where the dcmap-stream-id field indicates the actual SCTP stream, and the subprotocol field indicates the protocol "CLUE".
- NOTE 10: The attribute(s) "a=fingerprint" (see IETF RFC 8122 [64]) shall be provided for an "m=" line in the local and remote descriptor if the MRFC requests the MRFP to establish the CLUE data channel.
- NOTE 11: The support of the predefined ROI attribute in the SDP is optional. The attribute "a=predefined_ROI" (see TS 26.114 [41]) may be provided for an m-line in the local and remote descriptor if the MRFP supports the predefined ROI attributes, see also 3GPP TS 26.114 [41].
- NOTE 12: If the MRFP performs media transcoding and if the rate adaptation for media endpoints using the enhanced bandwidth negotiation is supported by the MRFP, attribute(s) "a=bw-info" (defined in 3GPP TS 26.114 [41], clause 19) with direction "send" or "sendrecv" may be provided for an m-line and the selected IP payload type and applicable IP version in the remote descriptor.
- NOTE 13: The support of the "RTCP Codec Control Commands and Indications" signalling is optional. The "rtcp-fb" SDP attribute with the "ccm" feedback parameter and the "fir" and/or "tmmbr" ccm parameters as defined in IETF RFC 5104 [71] may be provided for an m-line in the local and remote descriptor to indicate that the MRFP shall be prepared to receive and is allowed to send, respectively, the RTCP CCM feedback messages FIR, and/or TMMBR and TMMBN (the usage of the messages have been agreed in the SDP offer/answer negotiation between the MRFC and the end user).
- NOTE 14: The "rtcp-fb" SDP attribute with the "ccm" feedback parameter and the "pause" ccm parameter may be provided for an m-line in the local and remote descriptor to request the MRFP to apply "RTP-level pause and resume" procedures as defined in IETF RFC 7728 [75] and to indicate to the MRFP which RTCP feedback "CCM PAUSE-RESUME" messages the MRFP may send to the end user.
- NOTE 15: The "content" SDP attribute (see IETF RFC 4796 [72]) may be provided for an m-line in the local and remote descriptor to indicate a content of the media stream.
- NOTE 16: The "simulcast" SDP attribute (see IETF RFC 8853 [73]) may be provided for an m-line in the local and remote descriptor to indicate the list of the supported simulcast RTP formats in the receiving direction

- and/or in the sending direction. Each simulcast RTP format is identified by a simulcast stream identifier which has the form of the RTP stream identifier.
- NOTE 17: The "rid" SDP attribute (see IETF RFC 8851 [74]) may be provided for an m-line in the local and remote descriptor to indicate the identity, directionality and the payload type of the simulcast RTP stream.
- NOTE 18: The support of "Compact Concurrent Codec Negotiation and Capabilities" is optional. The "ccc_list" SDP attribute (defined in 3GPP TS 26.114 [41], clause S.5.7.2) may be provided in the remote descriptor to indicate to the MRFP the concurrent codec capabilities of an MMCMH conference participant in a compact representation.

Table 5.15.2: Transport Protocol

Transport Protocol <proto> in m-line:</proto>	If the MG does not support the requested transport protocol, it shall reject the command with error code 449.	
RTP/AVP	RTP profile according IETF RFC 3551 [21]. For voice and video services	
RTP/AVPF	Extended RTP profile for RTCP-based Feedback (RTP/AVPF) according IETF RFC 4585 [40]. For voice and video services (NOTE 1).	
TCP/BFCP	For floor control service, see IETF RFC 4583 [32]. (NOTE 1)	
TCP/MSRP	For message service, see IETF RFC 4975 [34]. (NOTE 1)	
TCP/TLS/BFCP	For floor control service with IMS media plane security, see IETF RFC 4583 [32]). (NOTE 1)	
TCP/TLS/MSRP	For message service with IMS media plane security, see IETF RFC 4975 [34]). (NOTE 1)	
UDP/DTLS/SCTP	Data channel support using IETF RFC 8841 [61] and IETF RFC 8864 [62].	
NOTE 1: support optional. NOTE 2: Upper case TCP is defined by IETF RFC 4145 [39] and registered by IANA.		

5.16 Optional support of SDP and Annex C information elements

Specifies what SDP attributes and Annex C information elements may be supported.

Table 5.16.1:

Optional Annex C and SDP information elements:					
Information Element	Annex C Support	SDP Support	Support Dependent on:		
<name></name>	<annex c="" property=""></annex>	<describe></describe>	<describe></describe>		

5.17 Procedures

5.17.1 Formats and Codes

Table 5.17.1.1 shows the parameters which are required for the procedures defined in the following clauses.

The coding rules applied in ITU-T Recommendation H.248.1 [3] for the applicable coding technique shall be followed for the UMTS capability set.

The binary encoding rules which are applicable to the defined Abstract Syntaxes are the Basic Encoding Rules for Abstract Syntax Notation One, defined in ITU-T Recommendation X.690 [41]. Specifically in accordance with ITU-T Recommendation X.690 [41] clause 7.3, alternative encodings based on the definite and indefinite form of length are permitted by the basic encoding rules as a sender's option. Receivers shall support both alternatives.

Unsupported values of parameters or properties may be reported by the MGW and shall be supported by the MSC as such by using H.248.1 error code #449 "Unsupported or Unknown Parameter or Property Value". The unsupported or unknown value is included in the error text in the error descriptor.

Table 5.17.1.1: Information Elements Used in Procedures

Signalling Object	H.248 Descriptor	Coding	
Additional Bandwidth Properties	Remote Descriptor	The "a=bw-info" SDP attribute defined in 3GPP TS 26.114 [41], see table 5.15.1.	
Allowed RTCP APP message types	Remote Descriptor	The "a=3gpp_mtsi_app_adapt" SDP attribute defined in 3GPP TS 26.114 [41].	
Announcement Cause	Events ObservedEvents	The "Meth" parameter in g/sc event per ITU-T Recommendation H.248.1 [3] Annex E.1.2	
Announcement	Events	The g/sc event per ITU-T Recommendation H.248.1 [3] Annex E.1.2	
Completed Announcement Cycles	ObservedEvents Signal	The "noc" parameter as per ITU-T Recommendation H.248.7 [5], Clause 4.3.1	
Announcement Direction	Signal	The "di" parameter as per ITU-T Recommendation H.248.7 [5], Clause 4.3.1	
Announcement Variant	Signal	The "av" parameter as per ITU-T Recommendation H.248.7 [5], Clause 4.3.1	
Arbitrary ROI Sent	Local Descriptor	The "rtcp-fb" SDP attribute defined in IETF RFC 4585 [30] to indicate the "Arbitrary ROI" RTCP feedback message expressed by the "3gpp-roi-arbitrary" parameter, as described in 3GPP TS 26.114 [41].	
Arbitrary ROI Received	Remote Descriptor	The "rtcp-fb" SDP attribute defined in IETF RFC 4585 [30] to indicate the "Arbitrary ROI" RTCP feedback message expressed by the "3gpp-roi-arbitrary" parameter, as described in 3GPP TS 26.114 [41].	
ASR Cause	Events ObservedEvents	The "rc" parameter in asr/asrfail event as per ITU-T Recommendation H.248.9a1 [26] Clause 12.2.1.	
Autonomous response	LocalControl	Defined as "Autonomous Response" property ("rempr/ar") in ITU-T Recommendation H.248.98 [76].	
Autonomous request	LocalControl	Defined as "Autonomous Request" property ("rempr/aq") in ITU-T Recommendation H.248.98 [76].	
Cause	Events ObservedEvents	Encoded as "Meth" parameter in g/sc event per ITU-T Recommendation H.248.1 [3] Annex E.1.2	
CCM BASE	Local Descriptor or Remote Descriptor	"rtcp-fb" SDP attribute (defined in IETF RFC 4585 [30]) with the	
CCM pause-resume	Local Descriptor or Remote Descriptor	The "rtcp-fb" SDP attribute (defined in IETF RFC 4585 [40]) with the	
Certificate Fingerprint	Local Descriptor or Remote Descriptor	The "a=fingerprint" SDP attribute(s) as defined in IETF RFC 8122 [64], see table 5.15.1.	
CLUE Message Send	Signal	Defined as the " <i>mcbalg/sblm</i> " signal with the application protocol indicating "CLUE" in ITU-T Recommendation H.248.78 [65].	
CLUE Message Received	Events ObservedEvents	Defined according to <i>Detect Bearer Level Message</i> event with the application protocol indicating "CLUE" in ITU-T Recommendation H.248.78 [65].	
Codec List	Local Descriptor or Remote Descriptor	<fmt list=""> in a single SDP m-line. For a static RTP payload type, the codec type should be implied by the RTP payload type, if not then each codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s). For a dynamic RTP payload type, for each codec information on the codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s).</fmt>	
Concurrent Codec Capabilities	Remote Descriptor	The "a=ccc_list" session level SDP attribute defined in 3GPP TS 26.114 [41], see table 5.15.1.	
ConfID	ContextAttribute Descriptor	The "fconfid" parameter as per ITU-T Recommendation H.248.19 [33], Clause 10.6.1.1.It is defined as type integer as used over BFCP.	
Context ID	NA	Binary Encoding: As per ITU-T Recommendation H.248.1 [3] Annex A. Textual Encoding: As per ITU-T Recommendation H.248.1 [3] Annex B.	
ControlledByChair	TerminationState Descriptor	List of Floor Ids controlled by this termination as a chair, specified by "cfi" as defined in Clause 10.1.1.2 of ITU-T Recommendation H.248.19 [33].	
Diffserv Code Point	Local Control	Defined according to the <i>Differentiated Services Code Point</i> property in ITU-T Recommendation H.248.52 [43].	

Digit Diserved Events DIMFTrigger Signal Descriptor ECN Failure Signal Descriptor ECN Failure Descriptor ECN Failure ECN Failure ECN Failure ECN Failure Type Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure Type" in ITU-T Recommendation H.248.82 [44] Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [44] Defined according to the Economical Interview of the end of a recording. ObservedEvents ObservedEvents ObservedEvents ObservedEvents ObservedEvents ObservedEvents Descriptor Type Interview Int		T	
ECN Failure EVents ObservedEvents ObservedE	Digit	Observed Events	Encoding as per ITU-T Recommendation H.248.1 Annex E.6.2. Digits are reported individually by the MRFP.
ECN Failure Local Descriptor or Recommendation H248.82 [44]. MaxFloorHolder	Context Attribute (NOTE 1)	Sub-list of (FloorID, Number). "mfu" as defined in Clause 10.4.1.2 of ITU-T Recommendation H.248.19 [33].
Maximum Record Time	Signal	"Record Length Timer, rlt" parameter in H.248.9a1 [26] Clause 16.3.1.1.8 for multimedia recording or Clause 10.3.1.1.8 for audio recording
Media Identifier	Signal	TBD
Mediatype	Local Descriptor or	<media> in sdp m-line</media>
	Remote Descriptor	"audio" for voice service, and "image" for T.38 service.
MessageContentType		TBD as enumeration to indicate the content type of message. (e.g. video, audio)
MessageContentFmt		TBD as enumeration to indicate the content format (e.g. mpeg, jpeg for picture)
Messageldentifier	Signal	"mcr" parameter in the mess/sm signal in H.248.69 [35] Clause 10.3.1.1.2, which is defined as URI that points to the message data that shall be sent.
MessagePlayResultRepor t	Signal	"fr" or "sr" parameter in the mess/sm signal in H.248.69 [35], which is defined as Enumeration to indicate the request of report result of message play (Success Report, Failure Report, Both or None)
MessagePlayCause	ObservedEvents	"sc" parameter in the mess/msrs event in H.248.69 [35] Clause 10.2.1.2.2, which is defined as Enumeration to notify the result of the message play.
MessageRecordFileIdentif ier	Signal	"sl" parameter in the recmess/rm signal in H.248.69 [35] Clause 15.3.1.1.1, which is defined as a URI where the messages are to be stored.
MessagesReceivedNumQ uota	Events	"mrq" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.2, which is defined as integer to define the quota for number of messages that may be received on the termination for the messaging Stream.
MessagesReceivedVolQu ota	Events	"mrv" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.4, which is defined as integer to define the quota for cumulative total size of messages that may be received on the Termination for the messaging Stream.
MessagesreceivedNum	ObservedEvents Statistics	"nmr" parameter in the msrpstat/mquota event or statistics in H.248.69 [35], which is defined as integer to define the number of messages that have been received on the termination for the messaging Stream.
MessagesReceivedVol	ObservedEvents Statistics	"vmr" parameter in the msrpstat/mquota event or statistics in H.248.69 [35], which is defined as integer to define the cumulative total size of messages that have been received on the Termination for the messaging Stream.
MessagesSentNumQuota	Events	"msq" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.1, which is defined as integer to define the quota for number of messages that may be sent from the termination for the messaging Stream.
MessagesSentVolQuota	Events	"msv" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.3, which is defined as integer to define the quota for cumulative total size of messages that may be sent from the Termination for the messaging Stream.
MessagesSentNum	ObservedEvents Statistics	"nms" parameter in the msrpstat/mquota event or or statistics in H.248.69 [35], which is defined as integer to define the number of messages that have been sent from the termination for the messaging Stream.
MessagesSentVol	ObservedEvents Statistics	"vms" parameter in the msrpstat/mquota event or statistics in H.248.69 [35], which is defined as integer to define the cumulative total size of messages that may be sent from the Termination for the messaging Stream.
MMCMH policy	Context Attrribute (NOTE 1)	Defined as "MMCMH policy" property in Annex C, clause C.2.2.1.
MSRP session identity	Local Descriptor or Remote Descriptor	<session-id> in SDP "a= path:MSRP-URI"-line.</session-id>
Notify TCP Connection Establishment Failure Event	ObservedEvents	As for the ObservedEvent Parameter in clause E.1.2 of ITU-T Recommendation H.248.1 [3] "General cause".
Notify (D)TLS session establishment Failure Event	ObservedEvents	As for the ObservedEvent Parameter in clause E.1.2 of ITU-T Recommendation H.248.1 [3] "General cause".

SRGS Grammar	Signal	"grammar file, gf" parameter in asr/asr signal in H.248.9a1 [26] Clause 12.3.1.1.2
SRGS grammar URI	Signal	" Recognition grammar identifier, rgid" parameter in asr/ asrid signal in H.248.9a1 [26] Clause 12.3.2.1.2
SSML	Signal	"an" parameter in the aastts/play signal in H.248.9a1 [26] Clause 14.3.1.1.1
StatRepReason	ObservedEvents	"qreach" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.2.1, which is defined as enumeration to indicate the quota that has triggered the reporting of the event.
StatValTime	Events	"tm" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.5, which is defined as integer to define how long for the quotas associated are active for.
Stream content	Local Descriptor or Remote Descriptor	
Stream Number	Stream	Encoding as per ITU-T Recommendation H.248.1 Annex B "Stream"/"ST". For a single stream, this may be omitted by the MRFC.
STUN server request	LocalControl	Encoding as per ITU-T Recommendation H.248.50 [47] "MG Act-as STUN Server" (mgastuns) package "Act-as STUN Server" (astuns, 0x0001) property.
Termination heartbeat	Events ObservedEvents	The hangterm/thb event as per ITU-T Recommendation H.248.36 [30] Clause 5.2.1.
Termination ID	NA	Binary Encoding: As per ITU-T Recommendation H.248.1 [3] Annex A. Textual Encoding: As per ITU-T Recommendation H.248.1 [3] Annex B.
Timing	Events	As in dd package H.248.1 [3] Annex E.6.2, (end tone detected shall be used)
Tone Completed	Events ObservedEvents	"g/sc" see H.248.1 [3] Annex E.1.2
Tone Duration	Signal	As in the respective tone package
Tone Identity	Signal	Encoding as per ITU-T Recommendation H.248.1 Annex B and the package which defines the tone (Tone Signal Ids only).
Transaction ID	NA	Binary Encoding: As per ITU-T Recommendation H.248.1 [3] Annex A. Textual Encoding: As per ITU-T Recommendation H.248.1 [3] Annex B.
TTS Completed	Events ObservedEvents	"g/sc" see H.248.1 [3] Annex E.1.2 if successful, aastts/ttsfail H.248.9a1 [26] Clause 14.2.1 if not successful.
Transport	Local Descriptor or Remote Descriptor	<transport> in SDP m-line, see 5.15</transport>
UserID	Local Descriptor	"a= userid" SDP line as specified in Table 5.15.1.
NOTE 1: H.248.1 version		
		needs to be specified in ITU-T Recommendation H.248.90 [55].

Call Related Procedures 5.17.2

5.17.2.1 General

This clause describes the various call related procedures performed by the MRFP, which are listed in table 15.17.2.1.

Table 5.17.2.1.1: MRFP Call Related Procedures

Transaction defined in 3GPP TS 23.333 [25]	Transaction used from TS 29.163 [27]	Supported	Comment
Reserve IMS Resources	Reserve IMS Connection point	Mandatory	See 5.17.2.2
Configure IMS Resources	Configure IMS Resources	Mandatory	See 5.17.2.3

		gateway:
		SDPCapNeg configuration
		}
		Or Local Descriptor (
		Local Descriptor { RTP Payloads = \$
		RTP Payloads = 5
		,
	l .	l

- NOTE 1: This shall be set to a value other than "inactive".
- NOTE 2: If the MRFP supports the extended RTP header it shall pass any received extended RTP header with CVO bits on to succeeding RTP streams. If the MRFP transcodes between video payloads and it supports the extended RTP header with CVO bits it shall keep the video orientation unchanged during the transcoding and convey received RTP CVO header bytes on the succeeding RTP streams after transcoding associated packets as specified in 3GPP TS 26.114 [41], clause 7.4.5.
- NOTE 3: The support of the generic image attributes is optional for the MRFP. The list of image sizes per payload type supported by the MRFP is preconfigured in the MRFC. If none of the image sizes received within an SDP body on Mr interface is supported by the MRFP then the MRFC will not send the generic image attribute parameter to the MRFP.

On reserving the IMS termination, the MRFP responds as in Table 5.17.2.2.2.

Table 5.17.2.2.2: Reserve IMS Resources Request Acknowledge

- NOTE1: It is highly recommended to request termination heartbeat notification to detect hanging context and termination in the MRFP that may result e.g. from a loss of communication between the MRFC and the MRFP.
- NOTE 2: This shall be set to a value other than "inactive".
- NOTE 3: If the MRFP supports the extended RTP header it shall pass any received extended RTP header with CVO bits on to succeeding RTP streams. If the MRFP transcodes between video payloads and it supports the extended RTP header with CVO bits it shall keep the video orientation unchanged during the transcoding and convey received RTP CVO header bytes on the succeeding RTP streams after transcoding associated packets as specified in 3GPP TS 26.114 [41], clause 7.4.5.
- NOTE 4: The support of the generic image attributes is optional for the MRFP. The list of image sizes per payload type supported by the MRFP is preconfigured in the MRFC. If none of the image sizes received within an SDP body on Mr interface is supported by the MRFP then the MRFC will not send the generic image attribute parameter to the MRFP.
- NOTE 5: The support of ICE received candidate, ICE received password, ICE received Ufrag are optional for ICE lite, as specified in 3GPP TS 23.333 [25].
- NOTE 6: The MRFC and the MRFP may support IMS media plane security i.e. end-to-end media security for session-based messaging (MSRP) using the pre-shared key (PSK) ciphersuites for TLS (specified in IETF RFC 4279 [58] and profiled as specified in Annex E of 3GPP TS 33.310 [59]). The list of PSK ciphersuites for TLS supported by the MRFP is preconfigured in the MRFC.
- NOTE 7: The support of rate adaptation for media endpoints using the additional bandwidth properties is optional for the MRFP. If media transcoding is required the MRFC may provide for the selected payload type and the used IP version the additional bandwidth properties.
- NOTE 8: The support of "Compact Concurrent Codec Negotiation and Capabilities" is optional. If the MRFC received from the MMCMH conference participant the session level "ccc_list" SDP attribute, the MRFC may indicate to the MRFP the concurrent codec capabilities of the conference participant in a compact representation.

The MRFP responds as in 5.17.2.3.2.

types

If ICE is applied: ICE received candidate ICE received password ICE received Ufrag (NOTE 5)

If SDPCapNeg is signalled to the gateway: SDPCapNeg configuration

- NOTE1: It is highly recommended to request termination heartbeat notification to detect hanging context and termination in the MRFP that may result e.g. from a loss of communication between the MRFC and the MRFP.
- NOTE 2: This shall be set to a value other than "inactive".
- NOTE 3: If the MRFP supports the extended RTP header it shall pass any received extended RTP header with CVO bits on to succeeding RTP streams. If the MRFP transcodes between video payloads and it supports the extended RTP header with CVO bits it shall keep the video orientation unchanged during the transcoding and convey received RTP CVO header bytes on the succeeding RTP streams after transcoding associated packets as specified in 3GPP TS 26.114 [41], clause 7.4.5.
- NOTE 4: The support of the generic image attributes is optional for the MRFP. The list of image sizes per payload type supported by the MRFP is preconfigured in the MRFC. If none of the image sizes received within an SDP body on Mr interface is supported by the MRFP then the MRFC will not send the generic image attribute parameter to the MRFP.
- NOTE 5: The support of ICE received candidate, ICE received password, ICE received Ufrag are optional for ICE lite, as specified in 3GPP TS 23.333 [25].
- NOTE 6: The MRFC and the MRFP may support IMS media plane security i.e. end-to-end media security for session-based messaging (MSRP) using the pre-shared key (PSK) ciphersuites for TLS (specified in IETF RFC 4279 [58] and profiled as specified in Annex E of 3GPP TS 33.310 [59]). The list of PSK ciphersuites for TLS supported by the MRFP is preconfigured in the MRFC.
- NOTE 7: The support of rate adaptation for media endpoints using the additional bandwidth properties is optional for the MRFP. If media transcoding is required the MRFC may provide for the selected payload type and the used IP version the additional bandwidth properties.
- NOTE 8: The support of "Compact Concurrent Codec Negotiation and Capabilities" is optional. If the MRFC received from the MMCMH conference participant the session level "ccc_list" SDP attribute, the MRFC may indicate to the MRFP the concurrent codec capabilities of the conference participant in a compact representation.

The MRFP responds as in Table 5.17.2.4.2.

5.17.2.21 ASR Request

This procedure enables the MRFC to request the MRFP to perform automatic speech recognition; an advanced interaction with the user involving guidance announcements and collection of user input via speech and also possibly DTMF. In turn, the MRFP attempts to recognize and match the detected speech to the specified grammar file and report this to the MRFC.

The MRFC sends an ADD or MODIFY command as in table 5.17.2.21.1.

Table 5.17.2.21.1: ASR request

5.17.2.25 Stop Playing Multimedia

This procedure is used to stop an announcement. This procedure is the same as the procedure Start Playing Multimedia however the signal descriptor shall not include the started multimedia signal. Note that playing multimedia may also be stopped by releasing the IMS termination.

5.17.2.26 Playing Multimedia Completed

This procedure is used to report that a playing multimedia has ended.

The MRFP sends a NOTIFY to the MRFC as shown in table 5.17.2.26.1.

Table 5.17.2.26.1: Playing Multimedia Completed

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1 End Of Signal Notification = Playing Multimedia Completed Cause = Announcement Cause	

The MRFC responds as shown in Table 5.17.2.26.2.

Address information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.27 Start Multimedia Record

This procedure enables a caller to leave/record a multimedia message. This procedure is similar to that of Audio Record (5.17.2.15) with the difference that multiple H.248 streams will be used and both audio and video codecs are specified for each participant in the conference. Any prompting "announcements" are played out in the appropriate format by the MRFP based on the fact that multimedia codecs are specified by the MRFC in the Remote Descriptor. Similarly, the MRFP records all received media streams that are consistent with the Local Descriptor of the termination.

The MRFC sends an ADD or MODIFY command as in table 5.17.2.27.1.

Table 5.17.2.27.1 - Start Multimedia Record

5.17.2.29 Multimedia Record Completed

This procedure enables the MRFP to inform the MRFC when multimedia recording is complete.

The MRFP sends a NOTIFY command as in table 5.17.2.29.1.

Table 5.17.2.29.1: Multimedia Record Completed

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	End Of Recording Notification	

The MRFC responds as shown in table 5.17.2.29.2.

Table 5.17.2.29.2: Multimedia Record Completed Acknowledge

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	

5.17.2.30 Adhoc Audio Conference

This includes support for N-party conferences plus the support of audio transcoding. In this case, up to N ephemeral terminations may be placed in a context and appropriate audio transcoding performed by the MRFP between any codec differences between the terminations. In terms of the media mixing, the MRFP mixes audio from terminations N-1, N-2 etc plays to termination N and so forth.

This procedure consists of the creation of the first ephemeral termination of a conference within a context using procedure "Reserve and Configure IMS Resources" and then subsequent parties are added using procedures "Reserve IMS Resources" and "Configure IMS Resources".

5.17.2.31 Multi-Media Conferencing

This is similar to audio conferencing (5.17.2.y) with the difference that multiple H.248 streams will be used and both audio and video codecs are specified for each participant in the conference. The MRFP shall only transcode and mix between streams of the same media type.

5.17.2.32 Termination heartbeat indication

When the procedure "Termination heartbeat indication" is required the following procedure is initiated: the MRFP sends a NOT.req command with the following information.

5.17.2.32.1 NOT.req (Termination heartbeat) MRFP to MRFC

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	Event_ID (Event ID = x, "termination heartbeat")	

When the processing of command is complete, the MRFC initiates the following procedure.

5.17.2.32.2 NOT.resp (Termination heartbeat) MRFC to MRFP

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

The heartbeat timer shall be configured to a value much greater than the mean call holding time.

The MRFC is in charge of correcting any detected mismatch, by substracting hanging terminations or clearing hanging contexts.

5.17.2.33 Configure BFCP Termination

This procedure configures a termination to support Binary Floor Control Protocol.

The MRFC sends an ADD or MODIFY command as in Table 5.17.2.33.1.

Table 5.17.2.33.1: Configure BFCP Termination MRFC to MRFP

	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.50 ICE Connectivity Check Result Notification

The MRFP sends a NOTIFY request command as defined in Table 5.17.2.50.1.

Table 5.17.2.50.1: ICE Connectivity Check Result Notification

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= C1 Termination ID = T1	
	Event_ID (Event ID = x, " Connectivity Check Result (Candidate/Transport Pair)")	

The MRFC responds as defined in Table 5.17.2.50.2

Table 5.17.2.50.2: ICE Connectivity Check Result Notification Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.51 ICE New Peer Reflexive Candidate Notification

The MRFP sends a NOTIFY request command as defined in Table 5.17.2.51.1.

Table 5.17.2.51.1: ICE New Peer Reflexive Candidate Notification

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= C1	
	Termination ID = T1	
	Event_ID (Event ID = x,	
	" New Peer Reflexive Candidate	
	(Candidate)")	

The MRFC responds as defined in Table 5.17.2.51.2

Table 5.17.2.51.2: ICE New Peer Reflexive Candidate Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.52 Notify TCP connection establishment Failure Indication

If the MRFC has requested reporting of TCP connection establishment failures the MRFP sends a NOTIFY request command as defined in table 5.17.2.52.1 when a TCP connection establishment failure occurs.

Table 5.17.2.52.1: Notify TCP connection establishment Failure Indication

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	
	Event_ID (Event ID = y,	
	"TCP connection establishment Error Indication")	

The MRFC responds as defined in table 5.17.2.52.2.

Table 5.17.2.52.2: Notify TCP connection establishment Failure Indication Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.53 Notify TLS session establishment Failure Indication

If the MRFC has requested reporting of TLS session establishment failures the MRFP sends a NOTIFY request command as defined in table 5.17.2.53.1 when an unsuccessful TLS session set-up occurs.

Table 5.17.2.53.1: Notify TLS session establishment Failure Indication

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	
	Event_ID (Event ID = y,	
	"(TLS session establishment Error Indication")	

The MRFC responds as defined in table 5.17.2.53.2.

Table 5.17.2.53.2: Notify TLS session establishment Failure Indication Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.54 CLUE Message Send

This procedure is used in a telepresence session by the MRFC to request the MRFP to send a CLUE message.

The MRFC sends a MODIFY command as in table 5.17.2.54.1.

Table 5.17.2.54.1: CLUE Message Send

Address information	Control information	Bearer information
	Transaction ID = x Context ID= C1 Termination ID = T1	
	CLUE Message Send (enhanced protocol=CLUE,label, message content)	

The MRFP responds as shown in table 5.17.2.54.2.

Table 5.17.2.54.2: CLUE Message Send acknowledge

Address information	Control information	Bearer information
	Transaction ID = x Context ID= C1 Termination ID = T1	

5.17.2.55 CLUE Message Received

This procedure enables the MRFP to inform the MRFC when a CLUE message received.

The MRFP sends a NOTIFY command as in table 5.17.2.55.1.

Table 5.17.2.55.1: CLUE Message Received

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	Detect bearer level message (protocol= CLUE, message content)	

The MRFC responds as shown in table 5.17.2.55.2.

Table 5.17.2.55.2: CLUE Message Received Acknowledge

Address information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.3 Non-Call Related Procedures

5.17.3.1 General

This clause describes the various non-call related procedures which are listed in table 5.17.3.1.1

Table 5.17.3.1.1: MRFP Non-Call Related Procedures

Transaction defined in 3GPP TS 23.333 [25]	Support	Comment
MRFP Out of service	Mandatory	5.17.3.2
MRFP Communication Up	Mandatory	5.17.3.3
MRFP Register	Mandatory	5.17.3.4
MRFP Re-register	Mandatory	5.17.3.5
MRFC Ordered Re-register	Mandatory	5.17.3.6
MRFC Restoration	Optional	5.17.3.7
MRFC Out of Service	Optional	5.17.3.8
Audit Value	Mandatory	5.17.3.9
Audit Capability	Optional	5.17.3.10
Capability Update	Optional	5.17.3.11
MRFP Resource Congestion Handling – Activate	Mandatory	5.17.3.12
MRFP Resource Congestion Handling – Indication	Mandatory	5.17.3.13
Command Rejected	Mandatory	5.17.3.14
		The "Command Rejected" procedure may be used in response both to call-related and non-call-related ITU-T Recommendation H.248 Commands
MRFP Restoration	Mandatory	5.17.3.15

5.17.3.2 MRFP Out Of Service

The MRFP sends a SERVICE CHANGE request command as in Table 5.17.3.2.1.

Table 5.17.3.2.1: MRFP Out Of Service Request

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = FORCED or	
	GRACEFUL	
	SC Reason = 905 Termination	
	Taken OOS or 908, MG Impending	
	Failure	

The MRFC responds as in table 5.17.3.2.2.

Table 5.17.3.2.2: MRFP Out Of Service Request Ack

Address Information	Control information	Bearer information

5.17.3.5 MRFC Restoration

When the MRFC has recovered, the MRFC sends a SERVICE CHANGE as in Table 5.17.3.5.1,

The MRFP may respond as in Table 5.17.3.5.2.

The MRFC sends a SERVICE CHANGE as in Table 5.17.3.5.1

Table 5.17.3.5.1: MRFC Restoration

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = RESTART	
	SC Reason = 901, Cold Boot OR	
	902, Warm Boot	

The MRFP responds as in table 5.17.3.5.2.

Table 5.17.3.5.2: MRFC Restoration Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.6 MRFP Re-Register

The MRFP sends a SERVICE CHANGE request command as in Table 5.17.3.6.1.

Table 5.17.3.6.1: Re-Registration

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = Handoff	
	SC Reason = 903, MGC Directed	
	Change	
	H248 Profile Identity	
	H248 Protocol Version	

The MRFC responds as in table 5.17.3.6.2.

Table 5.17.3.6.2: Re-Registration Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	
	H248 Protocol Version	
	If applicable:-	
	H248 Profile Identity	

5.17.3.7 MRFC Ordered Re-register

The MRFC sends a SERVICE CHANGE request command as in Table 5.17.3.7.1.

Table 5.17.3.7.1: MRFC Ordered Re-Register

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = HANDOFF	
	SC Reason = 903, MGC Directed	
	Change	

The MRFP responds as in table 5.17.3.7.2.

Table 5.17.3.7.2: MRFC Ordered Re-Register Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

The MRFP then performs an MRFP Re-Register procedure according to Clause 5.17.3.6.

Audit Value 5.17.3.8

The MRFC sends an AUDIT VALUE request command as in Table 5.17.3.8.1.

Table 5.17.3.8.1: Audit Value

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= -/ALL Termination ID = ROOT/ALL/T1 Audit Packages (NOTE1) Audit Descriptor = Empty/IndAuditParameter:= IndAudMediaDescriptor:= streams { IndAudStreamParms:= { Stream Number, IndAudStreamParms:= IndAudLocalControlDescriptor:= IndAudPropertyParm:= mgcinfo } }	
	Audit Descriptor = IndAuditParameter:= IndAudMediaDescriptor:= IndAudTerminationStateDescriptor:= SDPCapNeg Supported Capabilities (NOTE 2)	
NOTE 1: Packages are used for Null	/Root Combination.	

NOTE 2: Used for auditing SDPCapNeg Extensions when SDPCapNeg signalling to the gateway is supported.

The MRFP responds as in table 5.17.3.8.2.

Table 5.17.3.8.2: Audit Value Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -/Context ID	
	Termination ID = ROOT/T1	
	Packages List	
	Mgcinfo	
	SDPCapNeg Extensions	

Upon reception of the command in the MRFP:

- The Service State returns the current Service State
- When Packages are requested, the Package Names and Versions are returned

The following table illustrates the allowed combinations that can be obtained with the AuditValue Command:

Table 15.17.3.8.3: Combinations of AuditValue Command

ContextID	TerminationID	Information Obtained
Specific	Wildcard	Audit of matching Terminations in a Context
Specific	Specific	Audit of a single Termination in a Context
Null	Root	Audit of Media Gateway state and events
All	Specific	(Non-null) ContextID in which the Termination currently exists

5.17.3.9 Audit Capabilities

The MRFC sends an AUDIT CAPABILITY request command as in Table 5.17.3.9.1.

Table 5.17.3.9.1: Audit Capability Request

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	Audited Capabilities	

The MRFP responds as in table 5.17.3.9.2.

Table 5.17.3.8.2.2: Audit Capability Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	
	Capabilities	

5.17.3.10 Capability Update

The MRFP sends a SERVICE CHANGE request command as in Table 5.17.3.10.1.

Table 5.17.3.10.1: Capability Update

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = RESTART or	
	DISCONNECTED	
	SC Reason = 916, Packages	
	Change or 917, Capability	
	Change	

The MRFC responds as in table 5.17.3.10.2.

Table 5.17.3.10.2 Capability Update Ack

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = - Termination ID = ROOT	

5.17.3.11 MRFC Out of Service

The MRFC sends a SERVICE CHANGE request command as in Table 5.17.3.11.1.

Table 5.17.3.11.1: MRFC Out Of Service

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = FORCED or	
	GRACEFUL	
	SC Reason = 905, Termination	
	Taken OOS	

The MRFP responds as in table 5.17.3.11.2.

Annex A (normative): The W3C SSML Profile for TTS function

A.1 Introduction

This annex contains a profile to the W3C Speech Synthesis Markup Language (SSML) specification [28]. The SSML specification is a W3C Recommendation, and is designed to provide a rich, XML-based markup language for assisting the generation of synthetic speech in Web and other applications. The essential role of the markup language is to provide authors of synthesizable content a standard way to control aspects of speech such as pronunciation, volume, pitch, rate, etc. across different synthesis-capable platforms.

This annex provides a profile for SSML according to the stage 2 specification of the Mp interface. This profile is referenced by the advanced audio server base package for TTS enhancement.

A.2 TTS Profile

Table A.2.1: The profile of SSML

Element	Description	Support
or attribute		
speak	This is the root element that can contain text to be rendered and the following elements: audio, break, emphasis, lexicon, mark, meta, metadata, p, phoneme, say-as, sub, s, voice	Mandatory.
xml:lang	This attribute defines the language that applied to the element, subelements and its attributes. The phoneme , emphasis , break , p , and s elements are language specific dependent	Mandatory
xml:base	This attribute defines the base URI for resolving relative URI that may be used for the following elements: - The optional src attribute of audio element - The uri attribute of lexicon element	Optional
lexicon	An SSML document may reference one or more external pronunciation documents, the lexicon element is used to identified the URI of this external document. A lexicon document contains pronunciation for tokens that can appear in a text to be spoken. A lexicon element shall contain an uri.	Mandatory
meta and metadata	The metadata and meta elements are containers in which information about the document can be placed	Optional

p and s	A p element represents a paragraph and s element represents a sentence. The use of p and s elements is optional. Where text occurs without an enclosing p or s element the <u>synthesis processor</u> should attempt to determine the structure using language-specific knowledge of the format of plain text. The p element can only contain text to be rendered and the following elements: <u>audio</u> , <u>break</u> , <u>emphasis</u> , <u>mark</u> , <u>phoneme</u> , <u>prosody</u> , <u>say-as</u> , <u>sub</u> , <u>s</u> , <u>voice</u> . The <u>s</u> element can only contain text to be rendered and the following elements: <u>audio</u> , <u>break</u> , <u>emphasis</u> , <u>mark</u> , <u>phoneme</u> , <u>prosody</u> , <u>say-as</u> , <u>sub</u> , <u>voice</u> .	Optional
say-as	The <u>say-as</u> element allows the author to indicate information on the type of text construct contained within the element and to help specify the level of detail for rendering the contained text. For example for English when "\$200" appears in a document it may be spoken as "two hundred dollars", similarly, "1/2" may be spoken as "half", "one of two" Defining a comprehensive set of text format types is difficult because of the variety of languages that have to be considered and because of the innate flexibility of written languages. SSML only specifies the <u>say-as</u> element, its attributes, and their purpose. It does not enumerate the possible values for the attributes. The Working Group expects to produce a separate document that will define standard values and associated normative behavior for these values. The say-as element has three attributes: interpret-as, format and detail The say-as element can only contains text to be rendered	Optional
phoneme	The phoneme element provides a phonemic/phonetic pronunciation for the contained text. The ph attribute is a required attribute that specifies the phoneme/phone string. The alphabet attribute is an optional attribute that specifies the phonemic/phonetic alphabet. An alphabet in this context refers to a collection of symbols to represent the sounds of one or more human languages. The only valid values for this attribute are "ipa" (see the next paragraph) and vendor-defined strings of the form "x-organization" or "x-organization-alphabet". Example: <pre></pre>	Optional

sub	The <u>sub</u> element is employed to indicate that the text in the alias attribute value replaces the contained text for pronunciation. The required alias attribute specifies the string to be spoken instead of the enclosed string. The <u>sub</u> element can only contain text (no elements). Example: _{W3C}	Optional
Voice	The voice element indicates the characteristics of the voice rendering. The voice element is commonly used to change the language The following attributes are used: - gender: male, female or neutral - age - variant: indicates a preferred variant of the other voice characteristics - name indicates the processor-specific voice name	Optional
emphasis	The <u>emphasis</u> element requests that the contained text be spoken with emphasis (also referred to as prominence or stress). the optional level attribute indicates the strength of emphasis to be applied. Defined values are "strong", "moderate", "none" and "reduced". The <u>emphasis</u> element can only contain text to be rendered and the following elements: <u>audio</u> , <u>break</u> , <u>emphasis</u> , <u>mark</u> , <u>phoneme</u> , <u>prosody</u> , <u>say-as</u> , <u>sub</u> , <u>voice</u> .	Optional
break	The break element is an empty element that controls the pausing or other prosodic boundaries between words. The break element is most often used to override the typical automatic behaviour of a synthesis processor. The following attributes are used on the break element: - strength: "none", "x-weak", "weak" "medium", "strong", or "x-strong". It indicates the strength of the prosodic break in the speech output. For example, the breaks between paragraphs are typically much stronger than the breaks between words within a sentence. - Time: the time attribute is an option attribute indicating the duration of a pause to be inserted in the output in seconds or milliseconds e.g. "250ms", "3s"	Optional

prosody	The prosody element permits control of the pitch, speaking rate and volume of the speech output, the optional attributes are: - pith : this attribute indicates the baseline pitch. legal value are: a number followed by "Hz", a relative change (+10Hz or +5st, a semitone is half of a tone on the standard diatonic scale), or a "x-low", "low", "medium", high", x-high", or "default". The exact meaning of baseline pitch may vary across synthesis processors - pitch contour : the pitch contour is a set of the form (time position,target), the first value is a percentage of the period of the contained text (a <u>number</u> followed by "%") and the second value is the value of the pitch attribute. e.g. (20%,"+10Hz) (40%, "+20Hz) means increase the pitch of 10Hz at 20% of the period of the contained text and 20Hz at 40% of the text duration Range : the pitch range although the exact meaning may vary across synthesis processor. The same value as for pitch are legal value from SSML Rate : change the speaking rate. Legal values are: a relative change or "x-slow", "slow", "medium", "fast", "x-fast" or "default" Duration : a value in seconds or milliseconds for the desired time to take to read the element contents Volume : the volume for the contained text in the range 0.0 to 100.0. Legal values are: a number, a relative change or "silent", "x-soft", "soft", "medium", "loud", "x-loud", or "default".	Optional
audio	The audio element supports the insertion of recorded audio files.	Optional
Mark	The mark element is an empty element that places a marker into the text/tag sequence that the environment will be informed to detect the corresponding position within the rendered output and may report an event when encountered. This element has a name attribute.	Optional
Desc	The desc element can only occur within the content of the audio element. It describes the textual content of the audio source that may be used when text-only output is being produced by the synthesis processor.	Optional

Annex B (normative): The W3C SRGS Profile for ASR function

B.1 Introduction

This annex contains a profile to the W3C Speech Recognition Grammar Specification (SRGS) [29]. The SGRS are intended for use by speech recognizers and other grammar processors so that developers can specify the words and patterns of words to be listened for by a speech recognizer.

This annex provides a profile for SRGS according to the stage 2 specification of the Mp interface. This profile is referenced by the ASR Package.

B.2 SRGS Profile

Table B.2.1: The profile of SRGS

Declaration Item	Description	Support or not
Language	The language declaration of a grammar provides the language identifier that indicates the primary language contained by the document and optionally indicates a country or other variation. Additionally, any legal rule expansion may be labeled with a language identifier. The language declaration is required for all speech recognition grammars.	Mandatory
Mode	The mode of a grammar indicates the type of input that the user agent should be detecting. The default mode is "voice" for speech recognition grammars. An alternative input mode is "dtmf" input. For the Mp interface, only voice mode is supported.	Mandatory
Root rule	Both the XML Form and ABNF Form permit the grammar header to optionally declare a single rule to be the root rule of the grammar. The rule declared as the root rule must be defined within the scope of the grammar. The rule declared as the root rule may be scoped as either public or private .	Mandatory

Tag format	The tag-format declaration is an optional declaration of a tag-format identifier that indicates the content type of all rule tags and header tags contained within a grammar. The tag-format identifier is a URI. It is recommended that the tag format identifier indicate both the content type and a version. Tags typically contain content for a semantic interpretation processor and in such cases the identifier, if present, should indicate the semantic processor to use. Tag-format identifier values beginning with the string "semantics/x.y" (where x and y are digits) are reserved for use by the W3C Semantic Interpretation for Speech Recognition specification [SEM] or future versions of the specification.	Mandatory
Base URI	Relative URIs are resolved according to a base URI, which may come from a variety of sources. The base URI declaration allows authors to specify a document's base URI explicitly. The path information specified by the base URI declaration only affects URIs in the document where the element appears. The base URI declaration is permitted but optional in both the XML Form and the ABNF Form.	Optional
Pronounciation lexicon	A grammar may optionally reference one or more external pronunciation lexicon documents. A lexicon document is identified by a URI with an optional media type . The pronunciation information contained within a lexicon document is used only for tokens defined within the enclosing grammar. The W3C Voice Browser Working Group is developing the Pronunciation Lexicon Markup Language [LEX]. The specification will address the matching process between tokens and lexicon entries and the mechanism by which a speech recognizer handles multiple pronunciations from internal and grammar-specified lexicons. Pronunciation handling with proprietary lexicon formats will necessarily be specific to the speech recognizer. Pronunciation lexicons are necessarily language-specific. Pronunciation lookup in a lexicon and pronunciation inference for any token may use an algorithm that is language-specific. (See Clause 2.1 for additional information on token handling and pronunciations.)	Mandatory
Metadata	Grammar documents let authors specify metadata — information about a document rather than document content — in a number of ways. A meta declaration in either the ABNF Form or XML Form may be used to express metadata information in both XML	Not Applicable

	Form and ABNF Form grammars or to reference metadata available in an external resource. The XML Form also supports a metadata element that provides a more general and powerful treatment of metadata information than meta . Since metadata requires an XML metadata schema which cannot be expressed in ABNF, there is no equivalent of metadata in the ABNF Form of grammars.	
Tag	A grammar may optionally specify one or more tag declarations in the header. The content of a tag in the header, just like a <u>tag</u> in <u>rule expansions</u> , is an arbitrary string which may be used for <u>semantic interpretation</u> .	Mandatory

Annex C (normative):

H.248 Package for Multi-stream Multiparty Conferencing Media Handling (MMCMH)

C.1 Introduction

This annex contains a Multi-party Multimedia Conference Media Handling Package that is required for the Multi-stream Multiparty Conferencing Media Handling (MMCMH) feature as specified in 3GPP TS 23.333 [25] clause 5.11.3. The MMCMH feature requires support of simulcast RTP media streams, see IETF RFC 8853 [73].

NOTE: The ID value of Packages, Properties, Events, Parameters, Signals, etc. are designated below by "textID" (a string representing its text ID) and by "0x????" (the ID hexadecimal representation).

C.2 Specification of Multi-party Multimedia Conference Media Handling Package

C.2.1 Multi-party Multimedia Conference Media Handling Package

Package name: Multi-party Multimedia Conference Media Handling

Package ID: mmcmh (0x????)

Description: This package defines functionality that allows the MP to interconnect video media

flows with different StreamIDs and to autonomously determine the mix of video streams in a conference dependent on the active speaker. For example, everyone sees the active speaker and he sees the previous speaker in high resolution, and some or all other conference participants can be seen in low resolution

("thumbnail" videos).

Designed to be No

C.2.2 Properties

C.2.2.1 MMCMH Policy

Property name: MMCMH Policy

Property ID: mmcmhp (0x0001)

Description: This property indicates how the MP shall interconnect media streams.

Type: Sub-list of Enumeration

Possible values: mmcmhbp (0x0001) "MMCMH basic policy":

The StreamID of a received media stream does not determine on which outgoing media streams the media are to be forwarded. The MP shall not send media streams received on a termination towards that termination. The MP shall forward a received media stream of a particular media type (i.e. audio, main video or screenshare video) only towards outgoing media streams of the same media type. The MP shall select the video streams to be sent to a conference participant from among the videos received from the other conference participants in such a way that:

- a) from each other conference participant at most one main video is sent to this conference participant; and
- b) at most one screenshare video stream is sent to this conference participant.

If the MP does not pass a received media stream to any conference participant and the "RTP-level pause resume" capability was configured for that media stream (using the "rtcp-fb" SDP attribute, defined in IETF RFC 4585 [40], with the "ccm" feedback parameter, defined in IETF RFC 5104 [71], and the "pause" ccm parameter as defined in IETF RFC 7728 [75]), the MP should signal to the sender of that media stream to pause sending that media stream in accordance with IETF RFC 7728 [75]. If the MP has previously signalled to a sender to pause sending a media stream and decides to pass that media stream to some conference participant(s), based on any of the criteria above, the MP shall signal to the sender to resume sending that media stream in accordance with IETF RFC 7728 [75].

NOTE: The media level SDP attribute "a=content" defined in IETF RFC 4796 [72] determines whether the video media stream is a main video or a screenshare video.

vadv (0x0002) "Voice activity detected video":

The MP shall detect voice activity on audio streams. The MP shall forward the main video received from the active speaker (i.e. from the media sender from which an audio stream is received where voice activity is currently detected) to all other conference participant. If several video streams are simulcasted from the active speaker, the MP should select for each other conference participant the simulcast format that matches the configured encoding and resolution of the main video stream towards that conference participant to avoid transcoding. The MP should forward the main video of the previous speaker (i.e. received from the media sender from which an audio stream was received where the most recent past voice activity has been detected) to the active speaker (i.e. towards the media receiver associated with the media sender from which an audio stream is received where voice activity is currently detected). If several video streams are simulcasted from the previous speaker, the MP should select the simulcast format that matches the configured encoding and resolution of the main video stream towards the active speaker to avoid transcoding. The MP should forward received thumbnail video streams from the most recent previous speaker(s) (i.e. from the media sender(s) from which audio stream(s) was/were received where the most recent past voice activities have been detected). If several video streams are simulcasted from a previous speaker, the MP should select for each other conference participant the simulcast format that matches the configured encoding and resolution of a thumbnail video stream towards that conference participant to avoid transcoding. In order to avoid a too frequent switching of video images, the MP should wait for a short period when detecting voice activity from a new source before switching the video image. If the MP receives RTCP feedback about increased packet loss from a media receiver, the MP should reduce the number of video streams sent towards that media receiver and select only video streams with lower resolution (e.g. thumbnail video streams). The MP should select video streams received from the most recent speaker(s) (i.e. from the media sender(s) from which audio stream(s) are received where the most recent voice activities are or have been detected).

vada (0x0003) "Voice activity detected audio":

The MP shall detect voice activity on audio streams. The MP should forward the received audio stream of the active speaker (i.e. the audio stream where voice activity is detected) to all other conference participants. If simulcasted audio streams are received from the active speaker, the MP should select for each other conference participant an audio encoding among the received audio simulcast formats that is supported at the termination towards that participant to avoid transcoding.

ma (0x0004) "Mix audio":

The MP shall mix all the received audio streams from all other conference participants in the context and send the resulting audio stream(s) to each conference participant. If two audio streams were reserved towards a conference participant, the MP may distribute the received audio stream from each other conference participant in a specific way to render a stereo impression.

bfcpa (0x0005) "BFCP audio":

If the MP receives BFCP messages, the MP shall select received audio streams to forward or mix based on these BFCP messages.

bfcpv (0x0006) "BFCP video":

If the MP receives BFCP messages, the MP shall select received video streams to forward or mix based on these BFCP messages.

bfcps (0x0007) "BFCP screenshare":

If the MP receives BFCP messages, the MP shall select received screenshare streams to forward or mix based on these BFCP messages.

C.2.5 Statistics

None.

C.2.6 Error Codes

None.

C.2.7 Procedures

To enable the Multi-party Multimedia Conference Media Handling functionality, the MC:

a) shall reserve a context and indicate the applicable MMCMH policies via the *mmcmhp* property, including at least the "mmcmhbp" value;

- b) for each conference participant, shall allocate a termination within that context and place all streams towards/from that participant within that termination; and
- c) for each media stream:
 - shall indicate the media type for each stream;
 - may indicate the video media type via the "a=content" SDP attribute (defined in IETF RFC 4796 [72]) in the local descriptor and the remote descriptor;
 - may provide the "a=simulcast" attribute (defined in IETF RFC 8853 [73]), and the corresponding "a=rid" attributes (defined in IETF RFC 8851 [74]) with the "pt" parameter defining the simulcast stream identification in the local descriptor and the remote descriptor; and
 - may provide the "a=rtcp-fb" line (see IETF RFC 4585 [40]) with the "pause" CCM parameter (defined in IETF RFC 5104 [71]), the "nowait" pause attribute and the "config" pause attribute (defined in IETF RFC 7728 [75]) in the local descriptor and the remote descriptor and the "*Autonomous Response* (*rempr/ar*)" and the "*Autonomous Request*" (*rempr/aq*)" properties defined in ITU-T Recommendation H.248.98 [76] in the LocalControl descriptor.

NOTE: The SDP "a=rid" attribute lines with a "pt" parameter define the simulcast stream identifications within a single media description.

Upon reception of the mmcmhp property, the MP shall execute the policies defined for the received values.

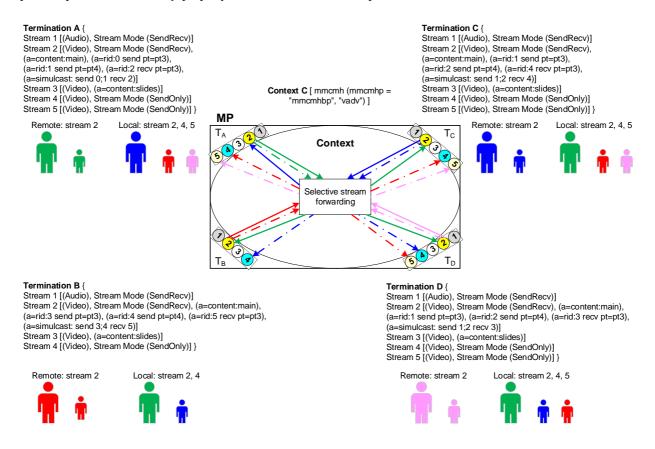

Figure C.2.7.1: Example of MMCMH switching

Figure C.2.7.1 shows an example of MMCMH switching where video media flows with different StreamIDs can be interconnected. The context level *mmcmhp* property is set to "mmcmhbp, vadv". Value "vadv" indicates that the MP shall detect voice activity on the incoming audio streams. The MP shall forward the main video received from the active speaker (i.e. from the media sender from which the audio stream is received where voice activity is currently detected) to all other conference participant. The MP should forward the main video of the previous speaker (i.e. received from the media sender from which an audio stream was received where the most recent past voice activity has been detected) to the active speaker (i.e. towards the media receiver associated with the media sender from which an audio stream is received where voice activity is currently detected). The MP should forward received thumbnail video streams from the

most recent previous speaker(s) (i.e. from the media sender(s) from which audio stream(s) was/were received where the most recent past voice activities have been detected). The MP should select video streams received from the most recent speaker(s) (i.e. from the media sender(s) from which audio stream(s) are received where the most recent voice activities are or have been detected).

Stream ID = 1 is an audio stream whose volume level on each termination is being monitored. Main video stream Stream ID = 2 is configured with a simulcast property on each termination: two simulcast RTP video streams with "recv" property and one RTP video stream with "send" property. Stream ID = 3 is a screenshare video stream. StreamID = 4 and StreamID = 5 are thumbnail video streams with the *StreamMode* property set to "SendOnly". On termination B only one thumbnail video stream StreamID = 4 can be sent. Termination A is the active speaker. Termination C was the previous speaker. As the *mmcmhp* property is set to "mmcmhbp, vadv", the received incoming videos are sent as outgoing videos according to the figure C.2.7.1. Local image shows the simulcast streams of main video: one video stream in high resolution and the other video stream in low resolution (thumbnail-sized simulcast format of the main video) received by the MP on StreamID = 2 and the remote image shows the video streams sent to each user: main video stream of active speaker in high resolution on StreamID = 2, and thumbnail videos of the other participants on StreamID = 4 and StreamID = 5. Active speaker A will receive the main video of the previous speaker C in high resolution on StreamID = 2. On termination B only the thumbnail video from the previous speaker C is sent.

Annex D (informative): Change history
