Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

32.661	Configuration Management (CM); Kernel CM Requirements
32.662	Configuration Management (CM); Kernel CM Information Service (IS)
32.663	Configuration Management (CM); Kernel CM Integration Reference Point (IRP); Common Object Request Broker Architecture (CORBA) Solution Set (SS)
32.665	Configuration Management (CM); Kernel CM Integration Reference Point (IRP); eXtensible Markup Language (XML) definitions
32.667:	Configuration Management (CM); Kernel CM Integration Reference Point (IRP); SOAP Solution Set (SS)

Configuration Management (CM), in general, provides the operator with the ability to assure correct and effective operation of the 3G network as it evolves. CM actions have the objective to control and monitor the actual configuration on the Network Elements (NEs) and Network Resources (NRs), and they may be initiated by the operator or by functions in the Operations Systems (OSs) or NEs.

CM actions may be requested as part of an implementation programme (e.g. additions and deletions), as part of an optimisation programme (e.g. modifications), and to maintain the overall Quality of Service (QoS). The CM actions are initiated either as single actions on single NEs of the 3G network, or as part of a complex procedure involving actions on many resources/objects in one or several NEs.

1 Scope

The purpose of the present document is to define the mapping of the Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) to the protocol specific details necessary for implementation of this IRP in a CORBA/IDL environment.

This Solution Set specification is related to 3GPP TS 32.662 V9.0.X [4].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.600 [3] and 3GPP TS 32.662 [4] apply.

IRP document version number string (or "IRPVersion"): see 3GPP TS 32.311 [13].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

5 Architectural features

The overall architectural feature of Kernel Configuration Management IRP is specified in 3GPP TS 32.662 [4]. This clause specifies features that are specific to the CORBA SS.

5.1 Notifications

Notifications are sent according to the Notification IRP: CORBA SS (see 3GPP TS 32.303 [9]).

The contents of the Kernel CM IRP notifications are defined in the present document.

5.2 Filter language

The filter language used in the SS is the Extended Trader Constraint Language (see OMG Notification Service [6]). IRPAgents may throw a FilterComplexityLimit exception when a given filter is too complex.

5.3 Syntax for Distinguished Names and Versions

The format of a Distinguished Name is defined in 3GPP TS 32.300 [5].

The version of this IRP is represented as a string (see also clause 3.1).

6 Mapping

6.1 Void

6.2 Operation and Notification mapping

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) defines semantics of operation and notification visible across the Kernel Configuration Management IRP. The following table in this subclause indicates mapping of these operations and notifications to their equivalents defined in this SS.

Table 6.2.1: Mapping from IS Notification/Operation to SS equivalents

IS Operation/ notification (3GPP TS 32.662 [4])	SS Method	Qualifier

6.3 Operation parameter mapping

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) defines semantics of parameters carried in operations across the Kernel Configuration Management IRP. The following tables in this subclause indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

Table 6.3.1: Mapping from IS getNRMIRPVersion parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier

6.4 Notification attribute mapping

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) identifies and defines the semantics of attributes for notifyObjectCreation, notifyObjectDeletion, notifyAttributeValueChange, notifyStateChange and notifyCMSynchronizationRecommended for use for its IRP. The following table in this subclause shows the mapping of the IS notifications to SS equivalents.

Table 6.4.1: Mapping from IS notifications to SS equivalents

NotifyObjectCreation	push_structured_event	0
NotifyObjectDeletion	push_structured_event	0
NotifyAttributeValueChange	push_structured_event	0
NotifyStateChange	push_structured_event	0
NotifyCMSynchronizationRecommended	push_structured_event	0

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) also qualifies the attributes. The following tables in this subclause show the mapping of these IS attributes to SS equivalents.

Table 6.4.2: Mapping from IS Notification Header attributes to SS equivalent

sourceIndicator	KernelCmNotifications::StateChange::SOURCE_INDICATOR	0
NOTE: The stateChange attribute is mapped into name-value pairs that contain the state identifier in the name and		
the new and optional old state values in the attribute field (See TS 32.673 [12]		
StateManagementIRPConstDefs IDL < State Name>OldNewValue structures).		

7 Use of OMG Structured Event

In CORBA SS, OMG defined StructuredEvent (see OMG Notification Service [6]) is used to carry notifications. This clause identifies the OMG defined StructuredEvent attributes that carry the attributes of notifications defined in 3GPP TS 32.662 [4].

The composition of OMG Structured Event, as defined in OMG Notification Service [6], is:

```
Header
Fixed Header
domain_name
type_name
event_name
Variable Header

Body
filterable_body_fields
remainder_of_body
```

The following table in this clause lists all OMG Structured Event attributes in its leftmost column. The second column identifies the SS attributes, if any, that shall be carried there.

Attributes that are denoted as "optional" may be absent from the OMG Structured Event. As an example, if the optional additionalText attribute is not used for a particular notification, then the IRPAgent may exclude additionalText from the filterable body fields for that particular notification. Individual notifications from the same IRPAgent may include or exclude the same optional attribute.

Table 7.1: Use of OMG Structured Event

IS Parameters	OMG CORBA Structured Event attribute	Comment
There is no corresponding IS parameter	domain_name	It contains the supported SS document version (see clause 4). This version is defined by the string constant KernelCmIRPSystem::VERSION defined in this specification.
notificatio nType	type_name	It is an attribute of notificationHeader. It shall indicate one of the following: Object Creation, Object Deletion, Attribute Value Change, State Change and CM Synchronization Recommended. It is a string. Its value is either defined by KernelCmNotifications::MOCreation::EVENT_TYPE, KernelCmNotifications::MODeletion::EVENT_TYPE, KernelCmNotifications::AttributeValueChange::EVENT_TYPE, KernelCmNotifications::StateChange::EVENT_TYPE or KernelCmNotifications::CMSynchronizationRecommended::EVENT_TYPE
There is no corresponding IS parameter	event_name	It shall be set to an empty string.
There is no corresponding IS parameter	variable Header	
objectClass, objectInstance	One NV pair of filterable_body_fields	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.303 [9]).
notificatio nId	One NV pair of remainder_of_body	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.303 [9]).
eventTime	One NV pair of filterable_body_fields	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.303 [9]).
systemDN	One NV pair of filterable_body_fields	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS [9].
correlatedN otification s	One NV pair of remainder_of_body	It is an attribute of the Object Creation, Object Deletion and Attribute Value Change notifications. Name of NV pair is the KernelCmNotifications::NotificationCommon::CORRELATED_NOTIFICATIONS. Value of NV pair is a NotificationIRPConstDefs::CorrelatedNotificationSet defined in 3GPP TS 32.303 [9].
additionalT ext	One NV pair of remainder_of_body	It is an attribute of the Object Creation, Object Deletion, Attribute Value Change and CM Synchronization Recommended notifications. Name of NV pair is the KernelCmNotifications::NotificationCommon::ADDITIONAL_TEXT Value of NV pair is a string.

sourceIndic ator	One NV pair of remainder of body	It is an attribute of the Object Creation, Object Deletion and Attribute Value Change notifications.
	Tomamaor_or_soay	Name of NV pair is the KernelCmConstDefs::AttributeNameValue::SOURCE_INDICATOR.
		Value of NV pair is the KernelCmNotifications::NotificationCommon::RESOURCE_OPERATION or MANAGEMENT_OPERATION or UNKNOWN_OPERATION.
attributeLi st	remainder_of_non_filterable_ body (see 3GPP TS 32.303	It is used to transport attribute information.
	[9])	For Object Creation notification, this is defined by KernelCmNotifications::MOCreation::InitialAttributeValues. For Object Deletion notification, this is defined by KernelCmNotifications::MODeletion::AttributeValues.
		The name component of InitialAttributeValues and AttributeValues will be set to attribute names defined in KernelCmNRMDefs.
attributeVa lueChangeDe	remainder_of_non_filterable_ body (see 3GPP TS 32.303	For Attribute Value Change notification, this is defined by KernelCmNotifications::AttributeValueChange::ModifiedAttributeSet.
finition	[9])	The name component of ModifiedAttributeSet will be set to attribute name defined in KernelCmNRMDefs.
StateManage mentIRPCons	Name-value pairs	For state change notifications a series of up to 9 name-value pairs might be sent corresponding with the new and old values of each state/status attribute which has changed it's value.
tDefs::Attr ibuteNameVa lue	See table 7.2. All these 9 NV pairs are part of the remainder_of_body	The new values of each state/status attributes that have changed are sent.
ide	Ternainder_or_body	The IRP agent may optionally send the old state/status changes. The name of the name-value pairs are defined by StateManagementIRPConstDefs::AttributeNameValue
baseMOClass	One NV pair of remainder_of_body	It is an attribute of the CMSynchronizationRecommended notification. Name of NV pair is a string,
		KernelCmNotifications::CMSynchronizationRecommended::BASE_MO_CLASS.
		Value of NV pair is a string. This string conveys the semantics of the Managed Object Class.
baseMOInsta nce	One NV pair of remainder_of_body	It is an attribute of the CMSynchronizationRecommended notification. Name of NV pair is the KernelCmNotifications::CMSynchronizationRecommended::BASE_MO_INSTANCE.
		Value of NV pair is a string. This is the DN string of the Managed Object Instance.
scope	One NV pair of	It is an attribute of the CMSynchronizationRecommended notification.
	remainder_of_body	Name of NV pair is the KernelCmNotifications::CMSynchronizationRecommended::SCOPE.
		Value of NV pair is KernelCmConstDefs::ScopePara.

8 Rules for NRM extensions

This clause discusses how the models and IDL definitions provided in the present document can be extended for a particular implementation and still remain compliant with 3GPP SA5's specifications.

8.1 Void

8.2 Extensions not allowed

The IDL specifications in the present document cannot be edited or altered. Any additional IDL specifications shall be specified in separate IDL files.

IDL interfaces (note: not MOCs) specified in the present document may not be subclassed or extended. New interfaces may be defined with vendor-specific methods.
