Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;

definitions"

- 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project: Technical Specification Group Services and System Aspects; Telecommunication management, as identified below:

32.361:	"Entry Point (EP) Integration Reference Point (IRP): Requirements"
32.362:	"Entry Point (EP) Integration Reference Point (IRP): Information Service (IS)"
32.363:	"Entry Point (EP) Integration Reference Point (IRP): Common Object Request Broker Architecture (CORBA) Solution Set (SS)"
32.365:	"Entry Point (EP) Integration Reference Point (IRP): eXtensible Markup Language (XML)

The present document is part of a set of technical specifications defining the Telecommunication Management (TM) of 3G systems. The TM principles are described in 3GPP TS 32.101 [1]. The TM architecture is described in 3GPP TS 32.102 [2]. The other specifications define the interface (Itf-N) between the managing system (manager), which is in general the Network Manager (NM) and the managed system (agent), which is either an Element Manager (EM) or the managed NE itself. The Itf-N is composed of a number of Integration Reference Points (IRPs) defining the information in the agent that is visible for the manager, the operations that the manager may perform on this information and the notifications that are sent from the agent to the manager. EP (Entry Point) IRP is one of these IRPs with special function.

The IRPs defined in 3GPP Release 5 and earlier versions are externally published and the 3GPP specifications of Release 5 and earlier versions do not provide standard mechanism for the NM to discover the references of these top IRPs in the managed systems. The discovery is a vendor-specific matter.

It's difficult for an NM to discover all IRPs in the environment that there are several managed systems and/or if there are multiple IRPs related to each managed systems. This Entry Point is proposed to provide a convenient mechanism for NM to discover the managed systems and their related IRPs.

1 Scope

The present document specifies the CORBA Solution Set for the IRP whose semantics are specified in the Entry Point IRP: Information Service (3GPP TS 32.362 [6]).

This Solution Set specification is related to 3GPP TS 32.362 V8.0.X.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions defined in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.361 [3] and the following apply:

IRP document version number string (or "IRPVersion"): See 3GPP TS 32.311 [5].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA Common Object Request Broker Architecture
DN Distinguished Name

EM Element Manager
EP Entry Point
EPIRP Entry Point IRP

IRP Integration Reference Point
IOC Information Object Class
IS Information Service
NE Network Element
NM Network Manager
SS Solution Set

4 Architectural features

The overall architectural feature of EPIRP is specified in 3GPP TS 32.362 [6].

This clause specifies features that are specific to the CORBA SS.

4.1 Notifications

Notifications are sent according to the Notification IRP: CORBA SS (see 3GPP TS 32.303 [7]).

The contents of the EPIRP notifications are defined in the present document.

4.2 Syntax for Distinguished Names and versions

The format of a Distinguished Name is defined in 3GPP TS 32.300 [9].

The version of this IRP is represented as a string (see also clause 3 for versions).

5 Mapping

5.1 Operation and Notification mapping

EPIRP: IS (3GPP TS 32.362 [6]) defines semantics of operation and notification visible across the EPIRP. Table 1 indicates the mapping of these operations and notifications to their equivalents defined in this SS.

Table 1: Mapping from IS Operations and Notification to SS equivalents

IS Operations/ notification TS 32.362 [6]	SS Method	Qualifier
getIRPOutline	get_irp_outline	M
getIRPReference	get_irp_reference	M
releaseIRPReference	release_irp_reference	M
notifyIRPInfoChanges	push_structured_event (See clause 6.1)	M

5.2 Operation parameter mapping

The EPIRP: IS 3GPP TS 32.362 [6] defines semantics of parameters carried in operations across the EPIRP. The following tables indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

Table 2: Mapping from IS getIRPOutline parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
iRPVersion	ManagedGenericIRPConstDefs::VersionNumber irp_version	M
supportedIRPList	EPIRPConstDefs::SupportedIRPList supported_irp_list	M
status	Return value of type EPIRPConstDefs::Result	M
	Exception:	
	GetIRPOutline, InvalidIRPVersion	

Table 3: Mapping from IS getIRPReference parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
managerldentifier	EPIRPConstDefs::ManagerIdentifier manager_identifier	M
systemDn	EPIRPConstDefs::DN system_dn	M
rDN	EPIRPConstDefs::RDN rDN	M
iRPReference	string irp_reference (stringified IOR)	M
status	Return value of type EPIRPConstDefs::Result Exception:	М
	GetlRPReference, ManagedGenericIRPSystem::InvalidParameter	

Table 4: Mapping from IS releaseIRPReference parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
managerldentifier	EPIRPConstDefs::ManagerIdentifier manager_identifier	M
iRPReference	string irp_reference (stringified IOR)	M
status	Return value of type EPIRPConstDefs::Result Exception:	М
	ReleaseIRPReference, UnknownIRPReference	

Table 5: Mapping from IS getIRPVersion parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
versionNumberSet	Return value of type ManagedGenericIRPConstDefs::VersionNumberSet	M

operationNameProfile, operationParameterProfile	Return value of type ManagedGenericIRPConstDefs::MethodList		
	Exception: GetEPIRPOperationsProfile, ManagedGenericIRPSystem::OperationNotSupported, ManagedGenericIRPSystem::InvalidParameter	M	

Table 7: Mapping from IS getNotificationProfile parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
iRPVersion	ManagedGenericIRPConstDefs::VersionNumber	M
	irp_version	
notificationNameProfile,	Return value of type	M
notificationParameterProfile	ManagedGenericIRPConstDefs::MethodList	
status	Exception:	M
	GetEPIRPNotificationProfile,	
	ManagedGenericIRPSystem::OperationNotSupported,	
	ManagedGenericIRPSystem::InvalidParameter	

5.3 Notification parameter mapping

The EPIRP: IS (3GPP TS 32.362 [6]) defines semantics of parameters carried in notifications. The following table indicates the mapping of these parameters to their OMG CORBA Structured Event (defined in OMG Notification Service [8]) equivalents. The composition of OMG Structured Event, as defined in the OMG Notification Service [8], is:

```
Header
Fixed Header
domain_name
type_name
event_name
Variable Header

Body
filterable_body_fields
remaining_body
```

The following table lists all OMG Structured Event attributes in the second column. The first column identifies the EPIRP: IS (3GPP TS 32.362 [6]) defined notification parameters.

Table 8: Mapping for notifyIRPInfoChanges

IS Parameters	OMG CORBA Structured Event	Qualifier	Comment

6 EPIRPNotification Interface

OMG CORBA Notification push operation is used to realise the notification of EPIRPNotifications. All the notifications in this interface are implemented using this push_structured_event method.

6.1 Method push (M)

- 1) The push_structured_events method takes an input parameter of type EventBatch as defined in the OMG CosNotification module (OMG Notification Service [8]). This data type is the same as a sequence of Structured Events. Upon invocation, this parameter shall contain a sequence of Structured Events being delivered to IRPManager by IRPAgent to which it is connected.
- 2) The maximum number of events that shall be transmitted within a single invocation of this operation is controlled by IRPAgent wide configuration parameter.
- 3) The amount of time the supplier (IRPAgent) of a sequence of Structured Events shall accumulate individual events into the sequence before invoking this operation is controlled by IRPAgent wide configuration parameter as well.
- 4) IRPAgent may push EventBatch with only one Structured Event.

Annex A (normative): IDL specifications

A.1 IDL specification (file name "EPIRPConstDefs.idl")

```
//File: EPIRPConstDefs.idl
#ifndef _EP_IRP_CONST_DEFS_IDL_
#define _EP_IRP_CONST_DEFS_IDL_
#include <ManagedGenericIRPConstDefs.idl>
// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"
/* ## Module: EPIRPSystem
module EPIRPConstDefs
   enum Result {OK, FAILURE};
   The RDN carries an optional instance class name and a mandatory
  instance identifier. This type (a string) may contain 0 or 1
   equal sign. If an equal sign is present, the substring before
   the equal sign is the class name, and the substring after the
  equal sign is the instance identifier. If the equal sign is
  absent, the entire string is the instance identifier.
   typedef string RDN;
   typedef string DN;
   typedef sequence<DN> DNList;
   IRPManagementScopeOpt is a type carrying an optional parameter.
   If the boolean is TRUE, then the value is present.
   Otherwise the value is absent.
   union IRPManagementScopeOpt switch (boolean)
      case TRUE: DNList value;
   The IRPElement defines the structure to be returned as part of
   get_irp_outline().
   struct IRPElement

Annex B (informative): Convention when using INS to fulfill part of EPIRP functions

The implementation of the EPIRP and in particular, the management of CORBA object references within EPIRP, is not a subject matter for 3GPP standardization.

ITU-T SG4 Framework for CORBA-Based Telecommunications Management Network Interfaces (ITU-T Recommendation Q.816.1 [10]) uses OMG Interoperable Naming Service (INS) [11] for the management of CORBA object references. Furthermore, it specifies a convention to name and populate the CORBA object entries within the INS.

This Annex notes that, in the event that an EPIRP implementation uses INS to fulfill part of EPIRP functions, it is advantageous to populate the INS using the ITU-T defined convention.

Convention

The OMG INS CORBA name component (in short, called CORBA compound name) has the following IDL definition:

```
// IDL
typedef string Istring;
struct NameComponent {
    Istring id;
    Istring kind;
};
```

Istring is a placeholder for a future IDL internationalized string. The id and kind attributes must be composed of characters from the ISO 8859-1 [12] character set, excluding the null character and other non-printable characters. The strings cannot exceed 255 characters. The id attribute cannot be an empty string but the kind attribute can be an empty string.

The CORBA compound name (see Name below) is defined as a sequence of name components:

```
// IDL
typedef sequence<NameComponent> Name;
```

The 3GPP defined DN (in short, called DN) of a managed object is represented by the CORBA *compound name*. For example, a DN, quoted from 3GPP TS 32.300 [9], say

'DC=se.companyZ.lmc, Network=9, SubNetwork=1, IRPAgent=1, AlarmIRP.iRPId=2', shall be represented by a sequence of 6 name components where the id and kind of the first name component shall be 'se_companyZ_lmc' and 'DC' respectively. The CORBA compound name, shall be:

index	kind	id
0	'DC'	'se_companyZ_lmc'
1	'Network'	' 9'
2	'SubNetwork'	'1'
3	'IRPAgent'	'1'
4	'AlarmIRP.iRPId'	'2'
5	"	'Object'

The CORBA compound name, in stringified name form, shall be

'se_companyZ_lmc.DC/9.Network/1.SubNetwork/1.IRPAgent/2.AlarmIRP.iRPId/Object'.

NOTE 1: DN appears in interactions (e.g. operations, notifications) across the Itf-N.

NOTE 2: The CORBA compound name is used internally with the IRPAgent (and its INS) and does not appear in interactions across the Itf-N.

The use of the last row of the CORBA *compound name*, i.e. kind == "and id =='Object', is in accordance to the convention standardized by ITU-T Recommendation Q.816.1 [10]. According to convention standardized by ITU-T Recommendation Q.816.1 [10], the use of index 0 to 4 inclusive is to indicate the naming context of the object and the use of index 0 to 5 inclusive is to indicate the object itself.

DN DC component is composed of multiple words separated by separator, i.e. a dot. It is suggested that the applications (e.g. IRPAgent codes) that process CORBA compound name and DN should map the dot, used as separator in DN DC component, with underscore. This mapping is necessary because in the stringified CORBA *compound name*, the dot is used for the separation of *id* and *kind*. This replacement rule also implies that underscore should not be used as character of DC words.

Annex C (informative): Change history
