## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

#### **Foreword**

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <a href="http://webapp.etsi.org/key/queryform.asp">http://webapp.etsi.org/key/queryform.asp</a>.

#### **Foreword**

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

#### where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

## 1 Scope

The present document lists the 3GPP specific Diameter protocol codes, including the AVP codes and Experimental result codes.

This document lists also the application identifiers assigned to 3GPP specific Diameter applications by IANA and the Diameter command code range which is assigned to 3GPP by IANA.

#### 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

#### 3 Definitions and abbreviations

#### 3.1 Definitions

For the purposes of the present document, the following terms and definitions apply.

**3GPP specific:** A definition which is used in conjunction with the 3GPP's vendor identifier.

#### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AVP Attribute-Value-Pair CR Change Request

IANA Internet Assigned Numbers Authority
IETF Internet Engineering Task Force

LS Liaison Statement

### 4 Application identifiers

The Diameter applications are identified with the application identifiers as specified in the RFC 3588 [9]. There are two kind of applications: IETF standards track applications and vendor specific applications. All application identifiers are assigned by IANA [12]. This chapter lists the application identifiers asigned by IANA to all 3GPP Diameter applications.

The application identifiers are transferred in Diameter command's header in the Application-ID field.

#### 4.1 3GPP specific application identifiers

The 3GPP specific application identifiers allocated by IANA are listed in the following table.

Table 4.1: 3GPP specific application identifiers

| Application identifier | Application     | 3GPP TS                   |
|------------------------|-----------------|---------------------------|
| 16777216               | 3GPP Cx/Px      | 29.228 [1] and 29.229 [2] |
| 16777217               | 3GPP Sh/Ph      | 29.328 [3] and 29.329 [4] |
| 16777218               | 3GPP Re         | 32.296 [14]               |
| 16777219               | 3GPP Wx         | 29.234 [6]                |
| 16777220               | 3GPP Zn         | 29.109 [7]                |
| 16777221               | 3GPP Zh         | 29.109 [7]                |
| 16777222               | 3GPP Gq         | 29.209 [8]                |
| 16777223               | 3GPP Gmb        | 29.061 [13]               |
| 16777224               | 3GPP Gx         | 29.210 [15]               |
| 16777225               | 3GPP Gx over Gy | 29.210 [15]               |
| 16777226               | 3GPP MM10       | 29.140 [16]               |
| 16777229               | 3GPP Rx         | 29.211 [17]               |
| 16777230               | 3GPP Pr         | 29.234 [6]                |

#### 5 Command codes

The command codes are used for communicating the command associated with the Diameter message. The command code is carried in the Diameter header's Command-Code field. The command codes can be divided into standard command codes allocated by IANA and experimental command codes for testing purposes only.

#### 5.1 Command codes allocated for 3GPP

Based on the IETF RFC 3589 [10] the IANA has allocated a standard command code range 300 - 313 for 3GPP. The command codes are presented in the following table.

Table 5.1/1: Command codes allocated for 3GPP

| Command code | Command name                            | Abbreviation | Specified in<br>3GPP TS |  |
|--------------|---|--------------|-------------------------|--|
| 300          | User-Authorization-Request/-Answer      | UAR/UAA      |                         |  |
| 301          | Server-Assignment-Request/-Answer       | SAR/SAA      |                         |  |
| 302          | Location-Info-Request/-Answer           | LIR/LIA      |                         |  |
| 303          | Multimedia-Auth-Request/-Answer         | MAR/MAA      | 29.229 [2]              |  |
| 304          | Registration-Termination-Request/-      | RTR/RTA      |                         |  |
|              | Answer                                  |              |                         |  |
| 305          | Push-Profile-Request/-Answer            | PPR/PPA      |                         |  |
| 306          | User-Data-Request/-Answer               | UDR/UDA      |                         |  |
| 307          | Profile-Update-Request/-Answer          | PUR/PUA      | 11 000 00               |  |
| 308          | Subscribe-Notifications-Request/-Answer | SNR/SNA      | 29.329 [4]              |  |
| 309          | Push-Notification-Request/-Answer       | PNR/PNA      | 1                       |  |
| 310          | Boostrapping-Info-Request/Answer        | BIR/BIA      | 29.109 [7]              |  |
| 311          | Message-Process-Request/Answer          | MPR/MPA      | 29.140 [16]             |  |

Editors note: The following command codes have been allocated to 3GPP, but they have not been used yet.

Table 5.1/2: Command codes allocated for 3GPP.

| 312 |  |  |
|-----|--|--|
| 313 |  |  |

#### 6 Vendor identifier

The vendor identifier (also known as Enterprise number) indicates the vendor specific attributes, result codes and application identifiers in Diameter commands. The vendor identifier is used in the Vendor-ID field of the AVP header and in the Vendor-Id AVP. The Vendor-Id AVP is used to identify the vendor in the Vendor-Specific-Application-Id and Experimental-Result-Code grouped AVPs.

#### 6.1 3GPP's vendor identifier

The IANA has allocated a vendor identifier value 10415 for 3GPP [11].

#### 7 Attribute-Value-Pair codes

The AVP codes are used together with the vendor identifier to identify each attribute uniquely. There are multiple AVP namespaces. The IETF IANA namespace, that is, the AVPs with vendor identifier zero or without vendor identifier, is controlled by IANA. Each vendor controls the AVP codes within their AVP namespaces.

## 7.1 3GPP specific AVP codes

The 3GPP specific AVPs have the Vendor-Specific bit ('V' bit) set in the AVP header and they carry the 3GPP's vendor identifier in the Vendor-ID field of the AVP header. The 3GPP specific AVP codes are presented in the following table.

Table 7.1: 3GPP specific AVP codes

| AVP Code      | Attribute Name  | Data Type          | Specified in the 3GPP TS |
|---------------|---|--------------------|--------------------------|
| 100           | 3GPP-WLAN-APN-Id  |                    |                          |
| Note: The res | t of the AVP codes from 1 to 255 are reserved for backw | ards compatibility | with 3GPP RADIUS Vendor  |
|               | outes (See also TS 29.061 [13])                         | , ,                |                          |
| Note: The AV  | P codes from 256 to 299 are reserved for future use.    |                    |                          |
| 300           | Authentication-Method                                   |                    |                          |
| 301           | Authentication-Information-SIM                          |                    |                          |
| 302           | Authorization -Information-SIM                          |                    |                          |
| 303           | WLAN-User-Data  |                    |                          |
| 304           | Charging-Data   |                    |                          |
| 305           | WLAN-Access   |                    |                          |

## 8 Experimental result codes

The Diameter answer messages must carry either Result-Code AVP or Experimental-Result AVP. The values of Result-Code AVP are controlled by IANA. The Experimental-Result AVP is a grouped AVP containing the Vendor-Id AVP and Experimental-Result-Code AVP, thus the experimental result codes are controlled in a vendor-specific manner.

#### 8.1 3GPP specific result codes

The 3GPP specific result codes are always transferred in the Experimental-Result AVP, which has the Vendor-Id with value of 3GPP's vendor identifier. The 3GPP specific result codes shall follow the same classification as defined for the values of Result-Code AVP in IETF RFC 3588 [9]. That means, the result codes are grouped to following ranges:

- 1xxx (Informational)
- 2xxx (Success)
- 4xxx (Transient Failures)
- 5xxx (Permanent Failures)

#### 8.1.1 Informational

The Informational result codes shall use the values from 1001 to 1999 in the Experimental-Result-Code AVP.

Editor's note: No informational result codes have been yet defined in 3GPP.

#### 8.1.2 Success

The Success result codes shall use the values from 2001 to 2999 in the Experimental-Result-Code AVP. The reserved 3GPP specific Success result codes are presented in the following table.

Table 8.1.2: 3GPP specific Success result codes

| Experimental   | Result text  | Specified in the TS |
|----------------|--|---------------------|
| Result Code    |  |                     |
| 2001           | DIAMETER_FIRST_REGISTRATION                                  |                     |
| 2002           | DIAMETER_SUBSEQUENT_REGISTRATION                             |                     |
| 2003           | DIAMETER_UNREGISTERED_SERVICE                                | 29.229 [2]          |
| 2004           | DIAMETER_SUCCESS_SERVER_NAME_NOT_STORED                      |                     |
| 2005           | Deprecated value   |                     |
| Note: The Expe | rimental Result Codes from 2006 to 2020 are reserved for the | ΓS 29.229.          |
|                |  | 29.109 [7]          |
| Note: The Expe | rimental Result Codes from 2401 to 2420 are reserved for the | ΓS 29.109.          |

#### 8.1.3 Transient Failures

The Transient Failure result codes shall use the values from 4001 to 4999 in the Experimental-Result-Code AVP. The reserved 3GPP specific Transient Failure result codes are presented in the following table.

Table 8.1.3: 3GPP specific Transient Failure result codes

| Experimental<br>Result Code   | Result text                       | Specified in the TS |
|---|-----------------------------------|---------------------|
| 4100  | DIAMETER_USER_DATA_NOT_AVAILABLE  | 20, 220, [4]        |
| 4101  | DIAMETER_PRIOR_UPDATE_IN_PROGRESS | 29.329 [4]          |
| Note: The Experimental Result Codes from 4102 to 4120 are reserved for the TS 29.329. |                                   |                     |

|   |                                   | 32.299 [5]          |
| Note: The Experimental Result Codes from 41xx to 41yy are reserved for the TS 32.299. |                                   |                     |
|   | ••                                |                     |
|   |                                   |                     |

#### 8.1.4 Permanent Failures

The Permanent Failure result codes shall use the values from 5001 to 5999 in the Experimental-Result-Code AVP. The reserved 3GPP specific Permanent Failure result codes are presented in the following table.

Table 8.1.4: 3GPP specific Permanent Failure result codes

| Experimental  | Result text   | Specified in the TS |  |  |  |  |
|---|---|---------------------|--|--|--|--|
| Result Code   |   |                     |  |  |  |  |
| 5001  | DIAMETER_ERROR_USER_UNKNOWN                                     |                     |  |  |  |  |
| 5002  | DIAMETER_ERROR_IDENTITIES_DONT_MATCH                            |                     |  |  |  |  |

# Annex A (informative): Assignment of the Diameter codes and identifiers in 3GPP

This annex defines the recommended assignment procedure of Diameter codes and identifiers within the 3GPP.

## A.1 Application identifiers

If a working group detects it will require a new application identifier, it should contact the 3GPP TSG-CN WG 4 via a Liaison Statement. The LS shall contain the name of the Diameter application and a reference to the corresponding 3GPP TS. The 3GPP TSG-CN WG 4 will then request the application identifier from IANA. When the application identifier is received, the corresponding working group will be informed by 3GPP TSG-CN WG 4 and the table 4.1 in this specification will be updated.

According to RFC 3588 the creation of a new application should be avoided if at all possible and therefore it is recommended to use the existing application identifiers whenever possible.

#### A.2 Command codes

If a working group detects there is a need for a new command code(s) from the 3GPP's range, it should contact the 3GPP TSG-CN WG 4 via an LS. The LS shall contain the reference to the 3GPP TS, which specifies the command(s). The 3GPP TSG-CN WG 4 will inform the assigned command code(s) to the corresponding working group and the table 5.1 in this specification will be updated.

It should be noted that the standard command codes allocated for 3GPP are scarce resource and getting new ones would require IETF specification work to be done. Therefore it is recommended to use the existing command codes whenever possible.

#### A.3 AVP codes

If a working group detects a Diameter application needs new 3GPP specific AVP codes, it should contact the 3GPP TSG-CN WG 4 via an LS. The LS shall contain the name of the Diameter application and a reference to the corresponding 3GPP TS. The 3GPP TSG-CN WG 4 will allocate a range of 100 AVP codes for the application. The range will be informed to the corresponding working group and the table 7.1 will be updated in this specification to show the reserved range. The working group can use the allocated range as a working assumption when defining the actual AVPs.

When the corresponding working group has specified the AVPs, and the specification has been approved and is under CR control, it should inform the AVPs to the 3GPP TSG-CN WG 4 via an LS. The LS should list the used AVP codes in the form of the table 7.1.

If there will be defined new AVPs for a Diameter application through the CR procedure, the assigned AVP range can be used, but the 3GPP TSG-CN WG 4 should be also informed about the new AVP codes via an LS.

Re-using of the existing AVPs is recommended, but special attention should be paid on the use of enumerated AVPs. Defining new values for an enumerated AVP should be agreed case by case with the working group responsible of the particular enumerated AVP. 3GPP TSG-CN WG 4 shall be informed via an LS about the new values assigned to the enumerated AVP.

#### A.4 Result codes

If a working group detects a Diameter application needs new 3GPP specific result codes, it should contact the 3GPP TSG-CN WG 4 via an LS. The LS shall contain the name of the Diameter application and a reference to the corresponding 3GPP TS. The 3GPP TSG-CN WG 4 will allocate a range of 20 result codes from each required result

code group for the application. The ranges will be informed to the corresponding working group and the tables in the chapter 8 of this specification will be updated to show the reserved ranges. The working group can use the allocated ranges as a working assumption when defining the actual result codes.

When the corresponding working group has specified the result codes, and the specification has been approved and is under CR control, it should convey the codes to the 3GPP TSG-CN WG 4 via an LS. The LS should list the used result codes in the form of the tables in chapter 8.

If there will be defined new result codes for a Diameter application through the CR procedure, the assigned result code ranges can be used, but the 3GPP TSG-CN WG 4 should be also informed about the new result codes via an LS.

Re-using of the existing result codes is recommended.

# Annex B (informative): Change history
