Important notice

The present document can be downloaded from: <u>http://www.etsi.org/standards-search</u>

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status.

Information on the current status of this and other ETSI documents is available at https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx

If you find errors in the present document, please send your comment to one of the following services: https://portal.etsi.org/People/CommitteeSupportStaff.aspx

Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.

The content of the PDF version shall not be modified without the written authorization of ETSI.

The copyright and the foregoing restriction extend to reproduction in all media.

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document describes the protocol to be used on the IMS Application Level Gateway (ALG) – IMS Access Gateway (IMS-AGW) interface. The basis for this protocol is the H.248 protocol as specified in ITU-T. The IMS architecture is described in 3GPP TS 23.228 [2]. The underlying reference model and stage 2 information is described in Annex G of 3GPP TS 23.228 [2] and in 3GPP TS 23.334 [23].

This specification describes the application of H.248 on the Iq interface (see Figure 1). Required extensions use the H.248 standard extension mechanism. In addition certain aspects of the base protocol H.248 are not needed for this interface and thus excluded by this profile.

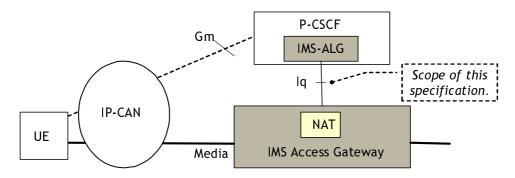

Figure 1: Reference model for IMS access

The reference model for the IMS-ALG and the IMS-AGW supporting the ATCF/ATGW function is shown in Figure 1a below.

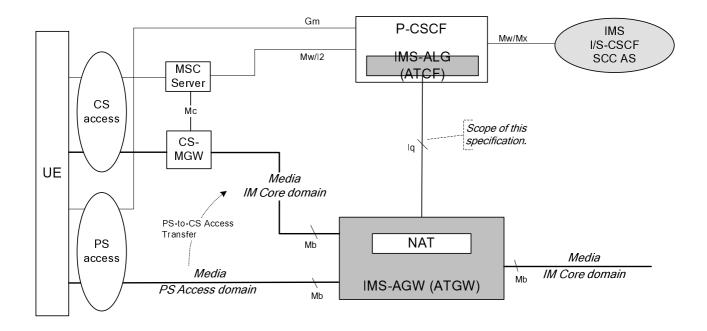

Figure 1a: Reference model for IMS-ALG/IMS-AGW with ATCF/ATGW function

See 3GPP TS 23.237 [38] clause 5.2 for a comprehensive description of the reference model.

The reference model for the P-CSCF enhanced for WebRTC (eP-CSCF) and the IMS-AGW enhanced for WebRTC (eIMS-AGW) to support WebRTC client access to IMS is shown in Figure 1b as below, see 3GPP TS 23.228 [2] Annex U for a comprehensive description of the reference model.

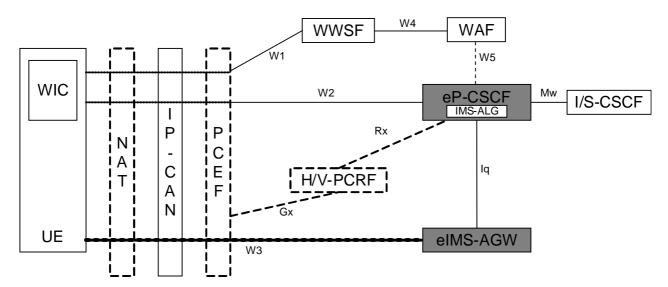

Figure 1b: Reference Architecture for eP-CSCF/eIMS-AGW supporting WebRTC access to IMS

NOTE: The presence of dashed elements in the figure depends on the configuration.

PCC functional elements are present only for EPC access with QoS.

The corresponding PCC elements for fixed access are also optionally supported but not shown.

The NAT in figure 1b is meant for non-cellular access to IMS.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply.

Address: term used for "network address" (IP address)

End-to-access edge security: media protection extending between an IMS UE and the first IMS core network node in the media path without being terminated by any intermediary node.

Port: term used for "transport port" (L4 port).

Transcoding: transcoding in general is the translation from one type of encoded media format to another different media format, e.g. G.711 A-law to μ -law or vice versa, G.729 to AMR with 4.75 rate.

NOTE 1: The definition of "transcoding" is according clause 3.10/ITU-T Recommendation V.152 [23].

NOTE 2: Transcoding belongs to the category of "media aware" IP-to-IP interworking.

Transport Address: term used for the combination of a Network Address and a Transport Port.

For the purposes of the present document, the following terms and definitions as defined in 3GPP TS 23.334 [23] apply:

ICE lite

Full ICE.

3.2 Symbols

For the purposes of the present document, the following symbols apply:

Iq Interface between the IMS Application Level Gateway (ALG) (IMS-ALG) and the IMS Access Gateway (IMS-AGW)

3.3 Abbreviations

For the purposes of the present document, the abbreviations defined in 3GPP TR 21.905 [1] apply, with the following additions. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

ABNF Augmented Backus-Naur Form
ATCF Access Transfer Control Function
ATGW Access Transfer Gateway
B-ALG Bearer Level Application-Level Gateway
BFCP Binary Floor Control Protocol

CVO Coordination of Video Orientation
DSCP Differentiated Service Code Point
e2ae End-to-Access-Edge (security model)
ECN Explicit Congestion Notification

eIMS-AGW IMS Access Gateway enhanced for WebRTC

eP-CSCF P-CSCF enhanced for WebRTC ICE Interactive Connectivity Establishment

IMS-AGW IMS Access Gateway

IMS-ALG IMS Application Level Gateway

IP Internet Protocol

LD Local Descriptor (H.248 protocol element)

MG Media Gateway

MGC Media Gateway Controller
MPS Multimedia Priority Service
MSRP Message Session Relay Protocol

NA Not Applicable

NAPT Network Address and Port Translation NAPT-PT NAPT and Protocol Translation NAT Network Address Translation

RD Remote Descriptor (H.248 protocol element)

RTCP RTP Control Protocol

SCTP Stream Control Transport Protocol
SRVCC Single Radio Voice Call Continuity
STUN Session Traversal Utilities for NAT
TCP Transmission Control Protocol
TLS Transport Layer Security (protocol)

ToS Type-of-Service

TISPAN Telecommunications and Internet converged Services and Protocols for Advanced Networking

WebRTC Web Real Time Communication

WIC WebRTC IMS Client

WWSF WebRTC Web Server Function

4 Applicability

The support of the Iq interface capability set shall be identified by the H.248 Iq profile and support of this profile shall be indicated in H.248 ServiceChange procedure (during the (re-)registration phase(s)).

4.1 Architecture

See Annex G and Annex U of 3GPP TS 23.228 [2].

5 Profile Description

5.1 Profile Identification

Table 5.1.1: Profile Identification

Profile name:	threeglq
Version:	3

5.2 Summary

This Profile describes the minimum mandatory settings and procedures required to fulfil the requirements of the Iq interface (see 3GPP TS 23.334 [23]):

- allocation and translation of IP addresses and port numbers (NA(P)T and NA(P)T-PT);
- opening and closing gates (i.e. packets filtering depending on "IP address / port");
- remote NA(P)T traversal;
- policing of incoming traffic;

- QoS packet marking for outgoing traffic;
- IP realm/domain indication;
- Hanging termination detection;
- RTCP handling;

and when ATCF/ATGW is supported:

- handover of bearer connections between PS and CS access networks;
- IP version interworking;
- audio transcoding.

In addition, optional settings and procedures are described which fulfil optional features and where supported, the minimum mandatory settings within the optional procedures and packages are identified that must be supported in order to support that feature.

"Optional" or "O" means that it is optional for either the sender or the receiver to implement an element. If the receiving entity receives an optional element that it has not implemented it should send an Error Code (e.g. 445 "Unsupported or Unknown Property", 501"Not Implemented", etc.). "Mandatory" or "M" means that it is mandatory for the receiver to implement an element. Whether it is mandatory for the sender to implement depends on specific functions; detail of whether elements of the core protocol are mandatory to be sent are defined in the stage 2 procedures, stage 3 procedures and/or the descriptions of individual packages.

The setting or modification of elements described in the profile under the heading "Used in Command" has the meaning that the property can be set/modified with that command. The property may be present in other commands (in order to preserve its value in accordance with ITU-T Recommendation H.248.1 [10]) when those commands are used for other procedures that affect the same descriptor.

5.3 Gateway Control Protocol Version

Version 2 (ITU-T Recommendation H.248.1 [10]) shall be used as minimum protocol version.

5.4 Connection model

Table 5.4.1: Connection Model

Maximum number of contexts: Provisioned		Provisioned
Maximum number of terminations per context: 3		3
Allowed terminations type combinations: (IP,IP);		(IP,IP);
	••	(IP,IP,IP) (NOTE)
NOTE: This is only a temporary context configuration, occurring during bearer access transfer phase		
(between PS to CS access networks or vice versa) or during the reservation of two sets of transport		
addresses/resources towards the access network to support the functionalities related to the		
	Alternate Connectivity functionality (see 3GPP TS 23.334 [23]).	

5.5 Context attributes

Table 5.5.1: Context Attributes

Context Attribute	Supported	Values Supported
Topology	Yes (NOTE 1)	See clause 5.7.9
Priority Indicator	Optional (NOTE 2)	0-15 (NOTE 3)
Emergency Indicator	Yes	YES/NO
IEPS Indicator	No	NA
ContextAttribute Descriptor	No	NA
ContextIdList Parameter	No	NA
AND/OR Context Attribute	No	NA

NOTE 1: Stream ID in Topology Descriptor shall not be supported (because only used for SRVCC service support, which is a monomedia type of call ("voice call").

NOTE 2: This Context Attribute parameter is allowed in ETSI TISPAN Ia Profile version 3. It is also used for MPS as specified in 3GPP TS 22.153 [39].

NOTE 3: Priority values 11 – 15 of the Priority Indicator are reserved for MPS.

5.6 Terminations

5.6.1 Termination names

5.6.1.1 IP Termination

5.6.1.1.1 ABNF Coding Overview and prose specification

The Termination ID structure shall follow the guidelines of H.248 and shall be based on four fields:

- "ip/<group>/<interface>/<id>".

The individual fields are described and defined in table 5.6.1.1.1.1.

Table 5.6.1.1.1.1: IP Termination Fields

Name	Description	Values	CHOOSE Wildcard	ALL Wildcard
lp	"ip" is a fixed prefix identifying	"ip"	No	No
	the termination			
Group	Group of Interface and Id	Integer (0-65535)	Yes (NOTE 5)	Yes
Interface	Logical or physical interface to a network to/from which the termination will be sending/receiving media. (NOTE 1, NOTE 2)	String of max 51 alphanumeric characters	Yes (NOTE 4)	Yes
ld	Termination specific identifier (NOTE 3)	Non-zero 32 bit integer	Yes (NOTE 4)	Yes

NOTE 1: A specific <Interface> may be used together with different groups.

NOTE 2: The generic field <Interface> may relate specifically to an "IP interface", "protocol layer 2 interface" or others.

NOTE 3: The combination of Interface and Id is unique.

NOTE 4: The MGC shall always use CHOOSE in an ADD request command. If not, the MG shall reply with an error descriptor using error code #501 "Not Implemented".

NOTE 5: The CHOOSE wildcard on 'Group' is not allowed in ETSI TISPAN "la Profiles".

NOTE: The IMS-ALG has the ability to choose the address space in which the IMS-AGW will allocate an IP address for the termination by using the *ipdc/realm* property defined in the ITU-T Recommendation H.248.41 IP domain connection package.

H.248 wildcarding may be applied on IP Termination Identifiers. Wildcarding is limited according the two columns on the right hand side.

The corresponding ABNF grammar is given below.

ABNF (IETF RFC 5234 [15]) is used for the syntax specification. The ABNF for TerminationID and relation to pathNAME is defined in annex B.2/ ITU-T Recommendation H.248.1 [10].

```
pathNAME
                = EphToken SLASH EPHsystem

5.6.1.1.2 ASN.1 Coding Overview and prose specification

The following general structure of termination ID shall be used:

4 octets shall be used for the termination ID. The following defines the general structure for the termination ID:

Table 5.6.1.1.2.1: ASN.1 coding

Termination	
type	X

Termination type:

Length 3 bits

Values:

000 Reserved

001 IP (Ephemeral) termination

010 Reserved (in 3GPP Mc and Mn profile used for TDM termination)

011 - 110 Reserved

111 Reserved for ROOT termination Id (ROOT Termination ID = 0xFFFFFFFF)

X:

Length 29 bits.

For IP termination, its usage is un-specified.

5.6.2 Multiplexed terminations

Table 5.6.2.1: Multiplexed terminations

Multiplex terminations supported?	No
If yes, then:	

Table 5.6.2.2: Multiplex Types

Multiplex types supported	NA
Maximum number of terminations connected to	NA
multiplex	

5.7 Descriptors

5.7.1 TerminationState Descriptor

Table 5.7.1.1: ServiceState property

ServiceState property used:		Yes (InService/OutofService) NOTE 1, NOTE 2
NOTE 1: This is restricted to the ROOT termination (for MGW audit).		GW audit).
NOTE 2:	2: Ephemeral H.248 Terminations have a ServiceState property according to ITU-T Recommendation H.248.1	
	[10], but explicit usage of the TerminationState Descriptor ServiceState property is not required by this	
	Profile. ServiceState changes can still occur, however, and can be indicated in ServiceChange Commands	
	(i.e. this means that the value of the ServiceState property may be implicitly changed by ServiceChange	
	procedures).	

Table 5.7.1.2: EventBufferControl property

EventBufferControl property used:	No
-----------------------------------	----

5.7.2 Stream Descriptor

5.7.2.0 General

Table 5.7.2.1: Stream descriptors

Maximum number of streams per termination type		IP	Unspecified (NOTE)
NOTE:	NOTE: At least one stream for each media component (e.g. video+audio = 2 streams). If only one stream is		If only one stream is
	applicable, then the IMS-ALG may omit the Stream Descriptor and the IMS-AGW shall assume that		W shall assume that
	StreamID = 1.		

Table 5.7.2.2: Stream configuration

Stream configuration:	ALL configurations are allowed
-----------------------	--------------------------------

5.7.2.1 LocalControl Descriptor

Table 5.7.2.1.1: Local Control Descriptor

		Termination Type	Stream Type
ReserveGroup used:	No	NA	NA
ReserveValue used: Yes		IP	Audio, Video (NOTE 1, NOTE 2)
NOTE 1: The value of the H.248 Stream Type is given here by the SDP "m=" line element media type (in contrast to the SDP "m=" line element transport protocol in Table 5.7.2.1.2). Usage of ReserveValue implies thus media type aware Local and Remote Descriptors. NOTE 2: Not used (at this profile version (see clause 5.1 for the version number)) for TCP transport (IETF RFC 793)			

- [51]) and media types: a) "Message" (for MSRP (IETF RFC 4975 [18]) and $\,$
- b) "Application" (for BFCP (IETF RFC 4582 [52])
- because the application control will not use them in context ReserveValue.

Table 5.7.2.1.2: Allowed Stream Modes

Termination Type	Stream Type	Allowed StreamMode Values
IP	RTP/AVP	SendOnly, RecvOnly, SendRecv, Inactive
	RTP/SAVP	SendOnly, RecvOnly, SendRecv, Inactive
	RTP/AVPF	SendOnly, RecvOnly, SendRecv, Inactive
	RTP/SAVPF	SendOnly, RecvOnly, SendRecv, Inactive
	TCP (NOTE 1)	SendRecv, Inactive
	TCP/MSRP (NOTE 1)	SendRecv, Inactive
	TCP/TLS (NOTE 1)	SendOnly, RecvOnly, SendRecv, Inactive
	TCP/TLS/MSRP (NOTE 1, NOTE 2)	SendOnly, RecvOnly, SendRecv, Inactive
	UDPTL	SendRecv, Inactive
	UDP	SendOnly, RecvOnly, SendRecv, Inactive
	UDP/DTLS	SendOnly, RecvOnly, SendRecv, Inactive
	UDP/TLS/RTP/SAVP	SendOnly, RecvOnly, SendRecv, Inactive
	UDP/TLS/RTP/SAVPF	SendOnly, RecvOnly, SendRecv, Inactive

NOTE 1: The H.248 StreamMode does not affect protocol control information at the bearer interface. See clause 7.1.7.1.1 in ITU-T Recommendation H.248.1 [10] and:

5.7.3 Events descriptor

Table 5.7.3.1: Events Descriptor

Events settable on termination types and stream types:	Yes		
If yes	EventID	Termination Type	Stream Type
I yes	Cause (g/cause, 0x0001/0x0001) - See clause 5.14.3.1	ALL except ROOT	ANY
	Inactivity Timeout (it/ito, 0x0045/0x0001) – See clause 5.14.3.6	only ROOT	Not applicable
	MG_Overload (ocp/mg_overload, 0x0051/0x0001) - See clause 5.14.3.8	only ROOT	Not applicable
	Termination Heartbeat (hangterm/thb, 0x0098/0x0001) - See clause 5.14.3.9	ALL except ROOT	ANY
	MGCon (chp/mgcon, 0x0029/0x0001) – See clause 5.14.3.10	only ROOT	Not Applicable
	Available Realms Changed (ipra/arc, 0x00e0/0x0001) – See clause 5.14.3.11	only ROOT	Not Applicable

a) TCP: ITU-T Recommendation H.248.89 [47], clause 8.6.4.1, Table "Impact of StreamMode on TCP bearer traffic at external MG interface"

b) TLS: ITU-T Recommendation H.248.90 [48], clause 8.6.4.1, Table "Impact of StreamMode on TLS bearer traffic at external MG interface".

NOTE 2: Conditional support, dependent on support of application-aware interworking.

(6	P Flow Stop Detection adid/ipstop, Ix009c/0x0001) – See clause 5.14.3.14	ALL except ROOT	Any

5.11 Messages

It is recommended that IMS-AGW and IMS-ALG names are in the form of fully qualified domain name. For example the domain name of the IMS-ALG may be of the form: "ALG1.whatever.net." and the name of the IMS-AGW may be of the form: "mg1.whatever.net.".

The fully qualified domain name will be used by the IMS-AGW and IMS-ALG as part of the "Message Identifier" in the H.248 messages which identifies the originator of the message.

The IMS-ALG domain name is provisioned in the IMS-AGW or retrieved from the DNS using SRV records.

The use of a domain name provides the following benefits:

- IMS-AGWs and IMS-ALGs are identified by their domain name, not their network addresses. Several addresses can be associated with a domain name. If a command cannot be forwarded to one of the network addresses, implementations shall retry the transmission using another address.

NOTE: There are then e.g. multiple numerical address entries per single MGC entity in the "MG database of MGC entries"; see Table 5 in ITU-T H.Sup7 [29].

- IMS-AGWs and IMS-ALGs may move to another platform. The association between a logical name (domain name) and the actual platform are kept in the Domain Name Service (DNS). IMS-AGW and IMS-ALG shall keep track of the record's time-to-live read from the DNS. They shall query the DNS to refresh the information if the time-to-live has expired.

The domain name may be used by IMS-ALG/IMS-AGW for authentication purposes.

5.12 Transport

Specifies what H.248 subseries transports are supported by the profile.

Table 5.12.1: Transport

Supported transports:	IPv4-based network control plane: SCTP/IPv4 (Recommended) UDP/IPv4 (Optional) IPv6-based network control plane: SCTP/IPv6 (Recommended) UDP/IPv6 (Optional)
NOTE 1: When using SCTP as defined in IETF RFC 4960 "Initiation".	[16] the IMS-AGW shall always be the node to perform the

Table 5.12.2: Segmentation

Segmentation supported:	SCTP: Inherent in Transport	
	UDP: No	

Table 5.12.3: Control Association

Control Association Monitoring supported:	Monitoring mechanism is dependent on used H.248 transport (see above table 5.12/1): SCTP: inherent capability of SCTP.	
	UDP: H.248.14 (MG-driven monitoring). Empty AuditValue on ROOT (MGC-driven monitoring).	

5.13 Security

Table 5.13.1: Security

Support	ed Security:	None
NOTE:	IPsec shall not be used by the IMS-ALG or IMS-	AGW for the Iq interface. Normally the Iq interface lies
	within a single operator's secure domain. If this is	s not the case then a Za interface (Security Gateway
	deploying IPSec) may be required, however this	is a separate logical function/entity and thus is not
	applicable to the Ig profile, the IMS-ALG or the II	MS-AGW. For further details see 3GPP TS 33.210 [27].

5.14 Packages

5.14.1 Mandatory Packages

Table 5.14.1.1: Mandatory Packages

Mandatory Packages:					
Package Name	PackageID	Version			
IP NAPT traversal (ITU-T Recommendation H.248.37 [4])	ipnapt, (0x0099)	1			
Generic (ITU-T Recommendation H.248.1 [10], annex E.1)	g, (0x0001)	1			
Base root (ITU-T Recommendation H.248.1 [10], annex E.2)	root, (0x0051)	2			
Gate management (ITU-T Recommendation H.248.43 [6], Appendix I	gm, (0x008c)	2			
Traffic management (ITU-T Recommendation H.248.53 [7])	tman, (0x008d)	1			
IP Domain Connection (ITU-T Recommendation H.248.41 [8])	ipdc, (0x009d)	1			
Hanging Termination Detection (ITU-T Recommendation H.248.36 [9])	hangterm, (0x0098)	1			
Diffserv (ITU-T Recommendation H.248.52 [12])	ds, (0x008b)	2			
RTP Control Protocol (ITU-T Recommendation H.248.57 [5])	rtcph, (0x00b5)	1			

5.14.2 Optional Packages

Table 5.14.2.1: Optional Packages

		ional Packages	
Package Name	PackageID	Version	Support dependent on:
Inactivity Timer (ITU-T Recommendation H.248.14 [11])	it, (0x0045)	1	MGC polling by MG. Only applicable for UDP transport.
Media Gateway Overload Control (ITU-T Recommendation H.248.11 [13])	ocp, (0x0051)	1	Support of message throttling, based on rate limitation, from MGC towards MG.
Media Gateway Resource Congestion Handling Package (see ITU-T Recommendation H.248.10 [14])	chp, (0x0029)	1	Support of message throttling, based on percentage limitation, from MGC towards MG.
IP realm availability (ITU- T Recommendation H.248.41 Amendment 1) [8]	ipra (0x00e0)	1	Support of mechanisms allowing the MGC to discover the IP realms that are available at the MG at a certain time and allowing the MG to inform the MGC about any changes in the availability of realms.
Application Data Inactivity Detection (ITU- T Recommendation H.248.40 [24])	adid (0x009c)	1	MGC requires to be explicitly informed of a cessation of an application data flow.
Explicit Congestion Notification for RTP- over-UDP Support (see ITU-T Recommendation H.248.82 [40])	ecnrous (0x010b)	1	Support of Transparent forwarding of ECN packets
MG Act-as STUN Server (ITU-T Recommendation H.248.50 [43])	mgastuns (0x00c2)	1	Support of incoming STUN connectivity checks. Applicable for ICE lite and full ICE
Originate STÜN Continuity Check (see ITU-T Recommendation H.248.50 [43])	ostuncc (0x00c3)	1	Support of originating STUN connectivity checks Only applicable for full ICE
TCP basic connection control (ITU-T Recommendation H.248.89 [47])	tcpbcc, (0x0115)	1	Support of state-aware TCP handling (TCP proxy mode) (NOTE).
TLS basic session control (ITU-T Recommendation H.248.90 [48])	tlsbsc, (0x0117)	1	Support of a) TCP-based media using TLS or b) UDP-based media using DTLS.
Stream endpoint interlinkage (ITU-T Recommendation H.248.92 [49])	seplink, (0x011b)	1	Support of state-aware TCP handling (TCP proxy mode) and of Forward Incoming TCP Connection Establishment Requests Indicator.
MG located Bearer Level ALG [ITU-T Recommendation H.248.78 [56])	mgbalg (0x011d)	1	Support of a bearer level application gateway (B-ALG) function for application-aware MSRP interworking.
STUN Consent Freshness (ITU-T Recommendation H.248.50 [43])	stnconfres(0x0120)	1	Support of STUN usage for consent freshness procedures. Applicable for full ICE.

IOTE: Stateless TCP handling (i.e. TCP relay and TCP merge mode) are solely based on SDP indication (thus package-less) according to ITU-T Recommendation H.248.84 [46], clause 13.

None	-	-			-
Error Codes		Mandator	y/Optio	nal	
No		· · · · · · · · · · · · · · · · · · ·	-		

NOTE 1: If the MGC uses an IP Realm Identifier (*ipdc/realm*) property exceeding the maximum length limitation defined in ITU-T Recommendation H.248.41 [8], the MG shall reply with an error descriptor using error code #410: "Incorrect identifier".

NOTE 2: The MODIFY command is listed due to the fact that subsequent Streams may be "added" by MODIFY

NOTE 2: The MODIFY command is listed due to the fact that subsequent Streams may be "added" by MODIFY requests in case of multi-Stream-per-Termination structures. The subsequent Streams shall then carry the same IP Realm Identifier (*ipdc/realm*) property value as the very first Stream.

5.14.3.8 Media Gateway Overload Control Package (ocp)

Table 5.14.3.8.1: Media Gateway Overload Control Package

Properties	Mandatory/Optional	Used in command	Supporte	ed Values	Provisioned Value		
None	-	-		-	-		
Signals	Mandatory/Optional	Used in c	ommand		ommand		Duration Provisioned Value
None	-	-			-		
	Signal Parameters	Mandatory/Optional	Supporte	ed Values	Duration Provisioned Value		
	-	-		-	-		
Events	Mandatory/Optional		Used i	in command			
MG_Overload	M		MODIFY, N	IOTIFY (NOT	E 1)		
(ocp/mg_overload,	Event Parameters	Mandatory/Optional	Supporte	ed Values	Provisioned Value		
0x0051/0x0001)	None	-		-	-		
(NOTE 1)	ObservedEvent Parameters	Mandatory/Optional	Supporte	ed Values	Provisioned Value		
	None	-		-	-		
Statistics	Mandatory/Optional	Used in comma	nd	S	upported Values		
None	-	-			-		
Error Codes		Manda	tory/Option	al			
None			-				

NOTE 1: When the MG is overloaded, overload Events may be sent **either** only following the **first ADD.request** which creates a new Context, **or** following **all ADD.request** commands (see ITU-T Recommendation H.248.11 [13] Corrigendum 1).

These two options result in different normalisations of the overload event rate as an indicator of the level of MG overload.

5.14.3.9 Hanging Termination Detection (hangterm)

5.15 Mandatory support of SDP and Annex C information elements

Table 5.15.1: Mandatory Annex C and SDP information elements

Information Element	Annex C Support	SDP Support
v-line	"SDP_V "	The value must always be equal to zero: v=0
c-line	"SDP_C "	<nettype> <addrtype> and <connection address=""> are required. The network type shall be set to "IN". The address type may be IPv4 or IPv6. The MGC may apply parameter underspecification to the <connection address=""> subfield.</connection></connection></addrtype></nettype>
m-line	"SDP_M "	There are four fields (or SDP values) <media>, <port>, <pre>, <pr< td=""></pr<></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></port></media>
		<media>, <port>, <proto> and <fmt-list> are required if the "m=" line is included.</fmt-list></proto></port></media>
		Media type <media> :</media>
		The <media> field shall be set to "audio", "video", "message", "application" or "-". When "-" is used for the <i>media</i> value then no media resources are required to be reserved at this stage (NOTE 1). If the MG does not support the requested media value it shall reject the command with error code 515.</media>
		Transport port <port> The port value may be underspecified with CHOOSE wildcard.</port>
		Transport protocol <pre></pre>
		Media format <fmt> Various values may be used for media-format, dependent on the related <media>.</media></fmt>
		"-" may be used for the <i>format list</i> value if no media reservation is required at this stage. If the MG does not support the requested media format value the
		MG shall reject the command with error code 449.
b-line	"SDP_B "	Shall not be used without a "m=" line.
		The modifier values shall be "AS", "RS" and "RR".
		The AS <i>modifier</i> implies that the <i>bandwidth-value</i> represents the ""maximum bandwidth" (see clause 5.8/ IETF RFC 4566 [17]). The <i>bandwidth-value</i> relates therefore to the <i>peak bitrate</i> (NOTE 2).
		The bandwidth-value value defines the IP layer bandwidth for the specific H.248 Stream.
		For RTP flows, where RTCP resources are reserved together with the RTP resources using the "RTP Specific Behaviour" property of the Gate Management package (gm) property, the IMS-ALG may also supply additional RTCP bandwidth modifiers (i.e. RR and RS, see IETF RFC 3556 [28]). The AS bandwidth value will include the bandwidth used by RTP. In the absence of the RTCP bandwidth modifiers the IMS-AGW shall allow an additional 5% of the AS bandwidth value for the bandwidth for RTCP, in accordance with IETF RFC 3556 [28].

o-line	"SDP_O"	The origin line consists of six fields: (<username>, <sess-id>, <sess-version>, <nettype>, <addrtype> and <unicast-address>).</unicast-address></addrtype></nettype></sess-version></sess-id></username>
		The MGC is not required to supply this line but shall accept it (see clause 7.1.8/ITU-T Recommendation H.248.1 [10]).
		The MG shall return the value received from the MGC or if there is no o-line sent by the MGC, the MG shall populate this line as follows:
		- <user name=""> should contain an hyphen - <session id=""> and <version> should contain one or mode digits as described in IETF RFC 4566 [17]</version></session></user>
		 - <network type=""> shall be set to IN</network> - <address type=""> shall be set to IP4 or IP6 The Address Type shall be set to "IP4" or "IP6" depending on the addressing scheme used by the network to which the MG is connected.</address>
		- <address> should contain the fully qualified domain name or IP address of the gateway.</address>
s-line	"SDP_S"	The session name "s=" line contains a single field s= <session name="">.</session>
		The MGC is not required to supply this line but shall accept it (see clause 7.1.8/ITU-T Recommendation H.248.1 [10]).
		The MG shall return the value received from the MGC or if there is no s-line sent by the MGC, the MG shall populate this line as follows: - "S=-"
t-line	"SDP_T"	The time "t=" line consists of two fields t= <start time=""> and <stop time="">.</stop></start>
		The MGC is not required to supply this line but shall accept it (see clause 7.1.8/ITU-T Recommendation H.248.1 [10]).
		The MG shall return the value received from the MGC or if there is no t-line sent by the MGC, the MG shall populate this line as follows: "t=0 0"

NOTE 1: IETF RFC 4566 [17] enables "-" as a valid character.

NOTE 2: The unit for the *bandwidth-value* (peak bitrate) is "kbit/s". The "b=" line is not providing any information about the traffic characteristic, i.e. whether the traffic flow has a Constant BitRate (CBR) or Variable BitRate (VBR). The bandwidth-value is thus independent of the traffic characteristic and relates to the peak bitrate for CBR and VBR traffic.

Table 5.15.2: Transport Protocol

Transport Protocol <proto> in m-line:</proto>	If the MG does not support the requested transport protocol, it shall reject the command with error code 449.
RTP/AVP	RTP profile according IETF RFC 3551 [19]. Allow only L4 protocol = UDP (see NOTE 1).
RTP/AVPF	Extended RTP profile for RTCP-based Feedback (RTP/AVPF) according to IETF RFC 4585 [25]. See 3GPP TS 26.114 [26]. Allow only L4 protocol = UDP (see NOTE 1).
RTP/SAVP	SRTP profile according IETF RFC 3711 [30] (NOTE 3). Allow only L4 protocol = UDP (see NOTE 1).
RTP/SAVPF	Extended SRTP profile for RTCP-based Feedback (RTP/SAVPF) according to IETF RFC 5124 [31] (NOTE 3). Allow only L4 protocol = UDP (see NOTE 1).
TCP	Allow only L4 protocol = TCP (NOTE 2)
TCP/MSRP	Message service using IETF RFC 4975 [18] (NOTE 6).
TCP/TLS	Application agnostic indication with L4 protocol = TCP (NOTE 4).
TCP/TLS/MSRP	Application-specific indication with L4 protocol = TCP and TLS-based transport security (SDP codepoint see IETF RFC 4975 [18]) (NOTE 6).
udptl	Allow only L4 protocol = UDP
udp	Allow only L4 protocol = UDP (NOTE 1).

UDP/DTLS	Application agnostic indication with L4 protocol = UDP and DTLS-based transport security (NOTE 5).			
UDP/TLS/RTP/SAVP	Indication for WebRTC end-to-access edge transport security using DTLS-SRTP, where DTLS is used to establish keys for SRTP according to IETF RFC 5763 [60] and IETF RFC 5764 [61].			
UDP/TLS/RTP/SAVPF	Indication for WebRTC end-to-access edge transport security using DTLS-SRTP, where DTLS is used to establish keys for extended SRTP according to IETF RFC 5763 [60] and IETF RFC 5764 [61].			
NOTE 1: Parameter "udp" is introduced by IETF RFC 4566 [17]. NOTE 2: Upper case TCP is defined by IETF RFC 4145 [20] and registered by IANA. NOTE 3: The IMS AGW does not need to reserve resources for end-to-access edge media (e2ae) security en- /decryption at this stage if RTP profile identifiers "RTP/SAVP" or "RTP/SAVPF" are signalled without the "a=crypto" property for that stream. For e2e media security either "RTP/SAVP" is signalled at all terminations in a context, or "RTP/SAVPF" is signalled at all terminations in a context and no media attribute will be signalled; the IMS AGW shall then not terminate the SRTP / SRTCP protocol, but shall pass the encrypted media and control flows (as indicated with the rtcph/rsb property) transparently.				
NOTE 4: Parameter "TCP/TLS" is defined I	E 4: Parameter "TCP/TLS" is defined by IETF RFC 4572 [55] for the TLS protocol according to			
NOTE 5: Parameter "UDP/DTLS" is introdu Recommendation H.248.93 [50]).	ced by IETF draft-schwarz-mmusic-sdp-for-gw [54] (based on ITU-T			
NOTE 6: Conditional support, dependent o	n application-aware interworking.			

5.16 Optional support of SDP and Annex C information elements

Specifies what SDP attributes and Annex C information elements may be supported.

Table 5.16.1: Optional Annex C and SDP information elements

56

Information Element	Annex C	SDP Support
	Support	

3GPP TS 29.334 version	12.9.0 Release 12	58	ETSI TS 129 334 V12.9.0 (2021-01)
a-line	"SDP_A"	The attribute "a=rtcp" lin (a=rtcp: <port> <network address="">) when the "a= optionally network addres The MGC shall supply the RTCP network address media entity.</network></port>	ansport address control": le may either contain (a=rtcp: <port>) or k type> <address type=""> <connection "="" "a='rtcp"' (see="" 3605="" [21])="" and="" are="" be="" by="" control"="" for="" ietf="" in="" is="" less="" line="" mg<="" non-default="" or="" peer="" port="" rd="" rfc="" rtcp="" s="" should="" supported="" td="" the="" transmission="" transport="" used="" values="" when=""></connection></address></port>
		line with regards to a sp SDP "a=ptime" line for a For a dynamic RTP payl	ne complementary information for the "m=" ecified media type/format (e.g. an optional particular media format). load type, for each media information on the rided in a separate SDP "a=rtpmap"line and
			sterworking (transcoding)": on in (2). Media interworking is limited to NOTE 1).
		4.1) SRTP-specific securities attribute "a=crypto" for an m-line in the local termination if the IMS-All encrypted, decrypted and end-to-access-edge measingle "a=crypto" attribute related to a single crypto "a=crypto" attribute may supporting end-to-access parameters within the "a profile in Annex of 3GPF 4.2) (D)TLS-specific securities attribute "a=finger provided in accordance for an "m="-line in the lonetwork termination if the media is encrypted, decrease.	(see IETF RFC 4568 [29]) shall be provided and remote descriptor of an access network LG wants that the corresponding media is ad/or integrity protected by the IMS-AGW (IMS dia plane security). For each m-line, only a te shall be provisioned (i.e. only information o suite is provisioned to the IMS-AGW). The contain several master keys. An IMS-AGW is-edge media plane security shall support alecrypto" attribute in accordance with the PTS 33.328 [34].
		for an m-line in the local supports the extended F	Orientation " (see IETF RFC 5285 [41]) may be provided and remote descriptor if the IMS-AGW RTP header with Coordination of Video see also 3GPP TS 26.114 [26].
		provided for an m-line in AGW supports the gene 3GPP TS 26.114 [26]. T which the IMS-AGW supselected payload type at IETF RFC 6236 [42]) in within the SDP body on indicates the image size sending direction for the the "send" keyword (see	ttr" (see IETF RFC 6236 [42]) may be the local and remote descriptor if the IMS-ric image attributes, see also he local descriptor indicates the image sizes ports in the receiving direction for the nd corresponds to the "recv" keyword (see the "a=imageattr" that the IMS-ALG will send the Mw/Mx interface. The remote descriptor is which the IMS-AGW supports in the elected payload type and corresponds to a IETF RFC 6236 [42]) in the "a=imageattr" and within the SDP body on the Mw/Mx

7) ICE support
The attributes "a=candidate", "a=ice-pwd", and "a=ice-ufrag" (see
IETF RFC 5245 [44]) may be provided for an SDP m-line in the local

and remote descriptor if the IMS-AGW supports ICE, see also 3GPP TS 24.229 [45]. In the local descriptor, the IMS-ALG shall provide "a=ice-pwd", and "a=ice-ufrag" with wildcard sign "\$" to request the allocation of a password and user name fragment, and the "a=candidate" of type "host" with the transport, port and priority parameters with wildcard sign "\$" to request the allocation of a host candidate. The IMS-AGW shall then reply with completed "a=ice-pwd", and "a=ice-ufrag" and "a=candidate" attributes in the local descriptor, and shall include "a=ice-lite" if it only supports ICE lite. In the remote descriptor, the IMS-ALG may provide the "a=candidate", "a=ice-pwd", and "a=ice-ufrag".

- 8) state-agnostic and state-aware TCP handling: The attribute "a=setup" (see IETF RFC 4145 [20]) shall be provided for TCP-based media, in accordance with ITU-T Recommendation H.248.84 [46], when triggering an end-to-end TCP simultaneous open (leading to a TCP merge mode in the IMS-AGW) or other TCP modes of operation.
- 9) Application-aware interworking for MSRP traffic: The attribute "a=path" (see IETF RFC 4975 [11]) shall be provided, when enabling a bearer level application gateway (B-ALG) function for MSRP traffic, according to ITU-T Recommendation H.248.78 [56].
- 10) Handling of RTCP APP messages when transcoding between EVS and non EVS codecs:

The attribute "a=3gpp_mtsi_app_adapt" (see 3GPP TS 26.114 [26]) containing the allowed RTCP APP message types shall be provided when the IMS-AGW is allowed to send RTCP APP messages.

NOTE 1: Media Interworking is optional.

NOTE 2: Table 1 in ITU-T Recommendation H.248.57 [5] provides the correspondent RTCP port allocation rules.

Editor's Note: The support for video transcoding is required for vSRVCC but should be changed from Rel-11, separate CRs would be required for this change.

5.17 Procedures

5.17.1 Formats and Codes

Table 5.17.1.1 shows the parameters which are required for the procedures defined in the following clauses.

The coding rules applied in ITU-T Recommendation H.248.1 [10] for the applicable coding technique shall be followed for the UMTS capability set.

The binary encoding rules which are applicable to the defined Abstract Syntaxes are the Basic Encoding Rules for Abstract Syntax Notation One, defined in ITU-T Recommendation X.690 [22]. Specifically in accordance with ITU-T Recommendation X.690 [22] clause 7.3, alternative encodings based on the definite and indefinite form of length are permitted by the basic encoding rules as a sender's option. Receivers shall support both alternatives.

Unsupported values of parameters or properties may be reported by the IMS-AGW and shall be supported by the IMS-ALG as such by using H.248.1 error code #449 " Unsupported or Unknown Parameter or Property Value ". The unsupported or unknown value is included in the error text in the error descriptor.

5.17.2 Call Related Procedures

5.17.2.1 General

This clause describes the various call related procedures performed by the IMS-AGW, which are listed in table 5.17.2.1.1

Table 5.17.2.1.1: IMS-AGW Call Related Procedures

Transaction defined in 3GPP TS 23.334 [23]	Supported	Comment
Reserve AGW Connection Point	Mandatory	See 5.17.2.2
Configure AGW Connection Point	Mandatory	See 5.17.2.3
Reserve and Configure AGW	Mandatory	See 5.17.2.4
Connection Point	-	
Release AGW Termination	Mandatory	See 5.17.2.5
Termination Heartbeat Indication	Mandatory	See 5.17.2.6
IP Bearer Released	Mandatory	See 5.17.2.7
Media Inactivity Notification	Optional	See 5.17.2.8
Change Through Connection	Mandatory	See 5.17.2.9
Change Flow Direction	Optional	See 5.17.2.10.
ECN Failure Indication	Optional	See 5.17.2.11 Only applicable if ECN endpoint capability is supported
ICE Connectivity Check Result Notification	Optional	See 5.17.2.12 Only applicable if full ICE is supported
ICE New Peer Reflexive Candidate Notification	Optional	See 5.17.2.13 Only applicable if full ICE is supported
Notify TCP connection establishment Failure Indication	Optional	See 5.17.2.14 Only applicable if state-aware TCP handling (proxy mode) is supported
Notify (D)TLS session establishment Failure Indication	Optional	See 5.17.2.15 Only applicable if IMS media security for TCP and/or UDP is supported

5.17.2.2 Reserve AGW Connection Point

The IMS-ALG sends an ADD request command as in Table 5.17.2.2.1.

Table 5.17.2.2.1: Reserve AGW Connection Point Request

```

If Media Inactivity Detection Required:

NotificationRequested (Event ID = x, "Media Inactivity Detection(Media Inactivity Detection Time, Media Inactivity Detection Direction) ") (NOTE 1)

If RTCP handling required: RTCP allocation

If ECN transparent support required: ECN Enable = "True" Initiation Method = "inactive"

If ECN Endpoint support required ECN Enable = "True" Initiation Method = "ECN Initiation Method" (NOTE 2)

If notification of ECN Failure Report: NotificationRequested (Event ID = x,"ECN Failure")

If ICE is applied: STUN server request

If Discard Incoming TCP connection establishment request required: Discard Incoming TCP Connection Establishment Requests Indicator

If Forward Incoming TCP connection establishment request required: Forward Incoming TCP Connection Establishment Requests Indicator

If indication on TCP connection establishment failure requested:
NotificationRequested (Event ID = x, "TCP connection establishment failure")

If (D)TLS session establishment required:

Establish (D)TLS session

If indication on (D)TLS session establishment failure requested: NotificationRequested (Event ID = x, "(D)TLS session establishment failure")

If media is "message":
If B-ALG for MSRP required:
Application-aware MSRP
interworking request

- NOTE 1: The event parameters "Media Inactivity Detection Time" and "Media Inactivity Detection Direction" are optional.
- NOTE 2: This shall be set to a value other than "inactive". See Table 5.14.3.15.1.
- NOTE 3: If the IMS-AGW supports the extended RTP header with Coordination of Video Orientation information it shall pass any received extended RTP header with CVO bits on to outgoing RTP streams. If the IMS-AGW is transcoding between video payloads and it supports the extended RTP header with Coordination of Video Orientation information it shall convey received RTP header bytes on the outgoing RTP stream after transcoding associated packets as specified in 3GPP TS 26.114 [26], clause 7.4.5.
- NOTE 4: The support of the generic image attributes is optional for the IMS-AGW. The list of image sizes per payload type supported by the IMS-AGW is preconfigured in the IMS-ALG. If none of the image sizes received within an SDP body on Mx/Mw interface is supported by the IMS-AGW then the IMS-ALG will not send the generic image attribute parameter to the IMS-AGW.

On reserving the termination, the IMS-AGW responds as in Table 5.17.2.2.2.

Table 5.17.2.2.2: Reserve AGW Connection Point Acknowledge

5.17.2.3 Configure AGW Connection Point

This procedure is used to configure the AGW connection point during session establishment or to reconfigure it during session establishment or after the session is established

The IMS-ALG sends a MODIFY request command as in Table 5.17.2.3.1.

Table 5.17.2.3.1: Configure AGW Connection Point Request

```

73 ETSI TS 129 334 V12.9.0 (2021-01) ECN Enable = "True" If STUN consent freshness test Initiation Method = "inactive" required: STUN consent freshness request If ECN Endpoint support required NotificationRequested(Event ID= ECN Enable = "True" x. "STUN consent freshness test Initiation Method = "ECN Initiation failure") Method" (NOTE 3) If TCP state-aware handling If notification of ECN Failure required: TCP State-aware Handling Report: NotificationRequested (Event Indicator and Setup Direction = x,"ECN Failure") If full ICE is applied: Send Connectivity Check ("Control") If notification of ICE Connectivity Check Result Report: NotificationRequested (Event ID= xx, "Connectivity Check Result") If notification of New Peer Reflexive Candidate: NotificationRequested (Event ID = xy,"New Peer Reflexive Candidate") Send Additional Connectivity Check ("Control") If Discard Incoming TCP connection establishment request required: Discard Incoming TCP Connection Establishment Requests Indicator If Forward Incoming TCP connection establishment request required: Forward Incoming TCP Connection Establishment Requests Indicator If TCP connection establishment required: Send TCP Connection

Establishment Request Indicator

If indication on TCP connection establishment failure requested: NotificationRequested (Event ID = x, "TCP connection establishment failure")

If (D)TLS session establishment required:

Establish (D)TLS session

If indication on (D)TLS session establishment failure requested: NotificationRequested (Event ID = x, "(D)TLS session establishment failure")

If (D)TLS session release required: Release (D)TLS session

If media is "message": If B-ALG for MSRP required:

Application-aware MSRP interworking request

- NOTE 1: This can only be set to the same realm as at the reservation stage. If a different realm is specified, the IMS-AGW shall return error 501 "Not Implemented".
- NOTE 2: The event parameters "Media Inactivity Detection Time" and "Media Inactivity Detection Direction" are optional.
- NOTE 3: This shall be set to a value other than "inactive". See Table 5.14.3.15.1.
- NOTE 4: The support of the modification of the Priority Indicator value is optional for the IMS-AGW and depends on implementation solution for Priority call/session authorisation (see 3GPP TS 23.334 [23]).
- NOTE 5: If the IMS-AGW supports the extended RTP header with Coordination of Video Orientation information it shall pass any received extended RTP header with CVO bits on to outgoing RTP streams. If the IMS-AGW is transcoding between video payloads and it supports the extended RTP header with Coordination of Video Orientation information it shall convey received RTP header bytes on the outgoing RTP stream after transcoding associated packets as specified in 3GPP TS 26.114 [26], clause 7.4.5.
- NOTE 6: The support of the generic image attributes is optional for the IMS-AGW. The list of image sizes per payload type supported by the IMS-AGW is preconfigured in the IMS-ALG. If none of the image sizes received within an SDP body on Mx/Mw interface is supported by the IMS-AGW then the IMS-ALG will not send the generic image attribute parameter to the IMS-AGW.
- NOTE 7: The support of ICE received candidate, ICE received password, ICE received Ufrag are optional for ICE lite, as specified in 3GPP TS 23.334 [23].
- NOTE 8: The basic RTCP port allocation rules are defined by table 1 in ITU-T Recommendation H.248.57 [5], which summarizes all rules, with and without the "explicit RTCP transport address" element.

The IMS-AGW responds as in Table 5.17.2.3.2.

                                                                             Request
                                        Diffserv Tagging Behaviour
                                                                            If TCP state-aware handling
                                      If Remote Source Address Filtering
                                                                            required:
                                                                              TCP State-aware Handling
                                      required:-
                                        Remote Source Address Filtering
                                                                             Indicator and Setup Direction
                                        If Remote Source Address range
                                         required:
                                            Remote Source Address
                                         Mask
                                                                             Remote Descriptor {
                                                                            If media is "audio" or "video":
                                      If Remote Source Port Filtering
                                                                              Codec List
                                                                              RTP Payloads
                                      required:-
                                        Remote Source Port Filtering
                                                                              Rtpbw
                                                                              If RTCP bandwidth
                                        If individual port:
                                          Remote Source Port
                                                                                RtcpbwRS
                                        If range of ports
                                                                                RtcpbwRR
                                          Remote Source Port Range
                                                                             If RTCP handling required:
                                                                              explicit RTCP transport address
                                      NotificationRequested (Event ID = x,
                                                                             (NOTE 6)
                                                                              If IMS media plane security
                                      "termination heartbeat")
                                                                             required:
                                      If IP Realm specified:-
                                                                                  Cryptographic SDES Attribute
                                                                              If RTCP APP messages allowed
                                        IP Realm
                                                                                Allowed RTCP APP message
                                      If Latching Required:-
                                                                                 types
                                        Latching
                                                                             If media is "video":
                                      If Sustainable Data Rate Policing
                                                                              If CVO required:
                                                                                Extended Header For CVO
                                         Required:-
                                        Policing Required
                                                                                (NOTE 3)
                                        Sustainable Data Rate
                                                                              If imageattr negotiation:
                                        Maximum Burst Size
                                                                                Generic Image Attribute
                                                                                (NOTE 4)
                                      If Peak Data Rate Policing Required:
                                        Policing Required
                                                                            If media is "message":
                                        Peak Data Rate
                                                                              If B-ALG for MSRP required:
                                         If Delay Variation Required
                                                                                MSRP Path
```

Delay Variation Tolerance

If Media Inactivity Detection Required:

NotificationRequested (Event ID = x, "Media Inactivity Detection(Media Inactivity Detection Time, Media Inactivity Detection Direction)") (NOTE 1)

If RTCP handling required: RTCP allocation

If ECN transparent support required: ECN Enable = "True" Initiation Method = "inactive"

If ECN Endpoint support required ECN Enable = "True" Initiation Method = "ECN Initiation Method" (NOTE 2)

If notification of ECN Failure Report: NotificationRequested (Event ID

= x,"ECN Failure")

If ICE is applied: STUN server request If full ICE is applied Send Connectivity Check ("Control") If notification of ICE Connectivity Check Result Report: NotificationRequested (Event ID = xx, "Connectivity Check Result")

Reflexive Candidate: NotificationRequested (Event ID = xy,"New Peer Reflexive Candidate")

If notification of New Peer

If Discard Incoming TCP connection establishment request required: Discard Incoming TCP Connection Establishment Requests Indicator

If Forward Incoming TCP connection establishment request required: Forward Incoming TCP Connection Establishment Requests Indicator

If indication on TCP connection establishment failure requested: NotificationRequested (Event ID = x, "TCP connection establishment failure")

If (D)TLS session establishment required:

Establish (D)TLS session

If indication on (D)TLS session establishment failure requested: If ICE is applied:

ICE received candidate

ICE received password

ICE received Ufrag

(NOTE 5)

If STUN consent freshness test required:

STUN consent freshness request NotificationRequested(Event ID= x, "STUN consent freshness test failure")

If media is "message" or "application" or "-":

If IMS media plane security required:

Remote certificate fingerprint

If TCP state-aware handling required:

TCP State-aware Handling Indicator and Setup Direction

	NotificationRequested (Event ID =
	x, "(D)TLS session establishment
	failure")
	If media is "message":
	If B-ALG for MSRP required:
	Application-aware MSRP
	interworking request
NOTE 1: The event parameters "Med	dia Inactivity Detection Time" and "Media Inactivity Detection Direction" are
optional.	
NOTE 2: This shall be set to a value	other than "inactive". See Table 5.14.3.15.1.
NOTE 3: If the IMS-AGW supports the	ne extended RTP header with Coordination of Video Orientation information it
shall pass any received ext	ended RTP header with CVO bits on to outgoing RTP streams. If the IMS-
AGW is transcoding between	en video payloads and it supports the extended RTP header with
Coordination of Video Orie	ntation information it shall convey received RTP header bytes on the outgoing
RTP stream after transcodi	ng associated packets as specified in 3GPP TS 26.114 [26], clause 7.4.5.
NOTE 4: The support of the generic	image attributes is optional for the IMS-AGW. The list of image sizes per
	the IMS-AGW is preconfigured in the IMS-ALG. If none of the image sizes
received within an SDP boo	dy on Mx/Mw interface is supported by the IMS-AGW then the IMS-ALG will

not send the generic image attribute parameter to the IMS-AGW.

NOTE 5: The support of ICE received candidate, ICE received password, ICE received Ufrag are optional for ICE lite, as specified in 3GPP TS 23.334 [23].

NOTE 6: The basic RTCP port allocation rules are defined by table 1 in ITU-T Recommendation H.248.57 [5], which summarizes all rules, with and without the "explicit RTCP transport address" element.

The IMS-AGW responds as in Table 5.17.2.4.2.

Table 5.17.2.4.2: Reserve and Configure AGW Connection Point Request Acknowledge

NOTE: Sending of the Remote De	scriptor is optional.	1 1

5.17.2.5 Release AGW Termination

The IMS-ALG sends a SUBTRACT command as in Table 5.17.2.5.1.

Table 5.17.2.5.1: Release AGW Termination Request

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= C1/ALL	
	Termination ID = T1/ALL	

On releasing the termination, the IMS-AGW responds as in Table 5.17.2.5.2

Table 5.17.2.5.2: Release AGW Termination Request Acknowledge

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1/ALL	
	Termination ID = T1/ALL	

5.17.2.6 Termination Heartbeat Indication

When the procedure "Termination heartbeat indication" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.6.1 NOT.req (Termination heartbeat)

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	
	Event_ID (Event ID = x, "termination	
	heartbeat")	

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.6.2 NOT.resp (Termination heartbeat)

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

The IMS-ALG shall correct any detected mismatch, by subtracting hanging terminations or clearing hanging contexts.

5.17.2.7 IP Bearer Released

When the procedure "IP Bearer Released" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.7.1 NOT.req (IP Bearer Released)

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	
	Event_ID (Event ID = x,	
	"BNC Release (Cause)")	

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.7.2 NOT.resp (IP Bearer Released)

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.8 Media Inactivity Notification

When the procedure "Media Inactivity Notification" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.8.1 NOT.req (Media Inactivity)

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	Event_ID (Event ID = x, "Media Inactivity Detection")	

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.8.2 NOT.resp (Media Inactivity)

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.9 Change Through Connection

The IMS-ALG sends an ADD or a MODIFY request command as in Table 5.17.2.9.1.

5.17.2.9.1 Change Through Connection Request

Address Information	Control information	Bearer information
	Transaction ID = x	
	If Context Requested:	
	Context ID = \$	
	If Context Provided:	
	Context ID = c1	
	If Termination Requested: Termination ID = \$ If Termination Provided: Termination ID = T1	
	Through-Connection = Connectivity Mode	

The IMS-AGW responds as in Table 5.17.2.9.2.

5.17.2.9.2 Change Through Connection Request Acknowledge

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.10 Change Flow Direction

The IMS-ALG sends an ADD or a MODIFY request command as in Table 5.17.2.10.1.

5.17.2.10.1 Change Flow Direction

Address Information	Control information	Bearer information
	Transaction ID = x If Context Requested: Context ID = \$ If Context Provided: Context ID = c1	
	If Termination Requested: Termination ID = \$ If Termination Provided: Termination ID = T1	
	Connection Configuration = (TerminationID= x1, TerminationID=x2, [type = x]),	

The IMS-AGW responds as in Table 5.17.2.10.2.

5.17.2.10.2 Change Flow Direction Acknowledge

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.11 ECN Failure Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.2.11.1.

Table 5.17.2.11.1: ECN Failure Indication

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= C1 Termination ID = T1	
	Event_ID (Event ID = x, " ECN Failure (ECN Failure Type)")	

The IMS-ALG responds as in Table 5.17.2.11.2

Table 5.17.2.11.2: ECN Failure Indication Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.12 ICE Connectivity Check Result Notification

The IMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.12.1.

Table 5.17.2.12.1: ICE Connectivity Check Result Notification

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= C1 Termination ID = T1	
	Event_ID (Event ID = x, "Connectivity Check Result (Candidate/Transport Pair)")	

The IMS-ALG responds as defined in Table 5.17.2.12.2

Table 5.17.2.12.2: ICE Connectivity Check Result Notification Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.13 ICE New Peer Reflexive Candidate Notification

The IMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.13.1.

Table 5.17.2.13.1: ICE New Peer Reflexive Candidate Notification

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= C1 Termination ID = T1	
	Event_ID (Event ID = x, "New Peer Reflexive Candidate (Candidate)")	

The IMS-ALG responds as defined in Table 5.17.2.13.2

Table 5.17.2.13.2: ICE New Peer Reflexive Candidate Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.14 Notify TCP connection establishment Failure Indication

When the procedure "Notify TCP connection establishment Failure Indication" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.14.1 NOT.req (TCP connection establishment Failure)

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	Event_ID (Event ID = y, "TCP connection establishment Error Indication")	

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.14.2 NOT.resp (TCP connection establishment Failure)

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.15 Notify (D)TLS session establishment Failure Indication

When the procedure "Notify (D)TLS session establishment Failure Indication" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.15.1 NOT.req ((D)TLS session establishment Failure)

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	Event_ID (Event ID = y, "(D)TLS session establishment Error Indication")	

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.15.2 NOT.resp ((D)TLS session establishment Failure)

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.16 STUN Consent Freshness Test Failure Notification

The eIMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.16.1.

Table 5.17.2.16.1: STUN Consent Freshness Test Failure Notification

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= C1	
	Termination ID = T1	
	Event_ID (Event ID = x,	
	"STUN Consent Freshness Test	
	Failure (STUN Consent	
	Freshness Test Failure Type)")	

The eP-CSCF responds as defined in Table 5.17.2.16.2

Table 5.17.2.16.2: STUN Consent Freshness Test Failure Notification Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.3 Non-Call Related Procedures

5.17.3.1 General

This clause describes the various non-call related procedures which are listed in Table 5.17.3.1.1

Table 5.17.3.1.1: IMS-AGW Non-Call Related Procedures

Mandatory	E 47.00
	5.17.3.2
Mandatory	5.17.3.3
Mandatory	5.17.3.4
Mandatory	5.17.3.5
Optional (NOTE 3)	5.17.3.6
Optional (NOTE 3)	5.17.3.7
Optional	5.17.3.8
Optional	5.17.3.9
Optional (NOTE 3)	5.17.3.10
Mandatory	The "Command Rejected" procedure may be used in
	response both to call-related
	and non-call-related ITU-T
	Recommendation H.248
	Commands - 5.17.3.11
Optional	5.17.3.12
Optional	5.17.3.13
Optional	5.17.3.14
Optional (NOTE 4)	5.17.3.15
Optional (NOTE 4)	5.17.3.16
Optional	5.17.3.17
Optional	5.17.3.18
Optional (NOTE 1)	5.17.3.19 (NOTE 2)
	Mandatory Mandatory Mandatory Mandatory Optional (NOTE 3) Optional Optional Optional (NOTE 3) Mandatory Optional (NOTE 4) Optional Optional Optional Optional Optional Optional Optional Optional

NOTE 1: Support of this procedure is mandatory in the IMS-ALG.

NOTE 2: The "Termination Out-of-Service procedure" is also used as a call-related H.248 command

NOTE 3: Support of this procedure is mandatory in the IMS-AGW.

NOTE 4: Support of this procedure is mandatory in the IMS-AGW if UDP transport is supported.

5.17.3.2 IMS-AGW Out Of Service

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.2.1.

Table 5.17.3.2.1: IMS-AGW Out Of Service Request

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = FORCED or	
	GRACEFUL	
	SC Reason = 905 Termination	
	Taken OOS or 908, MG Impending	
	Failure, or 915 State Loss	

The IMS-ALG responds as in Table 5.17.3.2.2.

Table 5.17.3.2.2: IMS-AGW Out Of Service Request Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.3 IMS-AGW Communication Up

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.3.1 to the IMS-ALG address to which the control link association was previously established.

Table 5.17.3.3.1: IMS-AGW Communication Up

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = DISCONNECTED	
	SC Reason = 900 , Service	
	Restored	

The IMS-ALG may respond as in table 5.17.3.3.2. If a response is received, the control link association is re-established and the inactivity timer would be restarted.

Table 5.17.3.3.2: IMS-AGW Communication Up Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	
	If required to register to a new IMS-	
	ALG:	
	Alternate MGC Id	

5.17.3.4 IMS-AGW Restoration

When the IMS-AGW has recovered, the IMS-AGW sends a SERVICE CHANGE as in Table 5.17.3.4.1,

Table 5.17.3.4.1: IMS-AGW Restoration

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = RESTART	
	SC Reason = 900, Service Restored	

The IMS-ALG responds as in Table 5.17.3.4.2.

Table 5.17.3.4.2: IMS-AGW Restoration Ack

89

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = - Termination ID = ROOT If required to register to a new IMS- ALG: Alternate MGC Id	

5.17.3.5 IMS-AGW Register

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.5.1.

Table 5.17.3.5.1: IMS-AGW Register

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = RESTART	
	SC Reason =901, Cold Boot or 902,	
	Warm Boot	
	H248 Profile Identity	
	H248 Protocol Version	

The IMS-ALG responds as in Table 5.17.3.5.2.

Table 5.17.3.5.2: IMS-AGW Register Ack

Add	ress Information	Control information	Bearer information
		Transaction ID = x	
		Context ID = -	
		Termination ID = ROOT	
		If applicable (NOTE):	
		H248 Protocol Version	
If applicable:-			
	H248 Profile Identity		
	If required to register to a new IMS-ALG:		
		Alternate MGC Id	
	The IMS-ALG shall include the H.248 Protocol Version if the protocol version it supports or offers is		
	lower than that proposed by the IMS-AGW. The IMS-ALG may include the H.248 Protocol Version if the		
р	protocol version it supports or offers is the protocol version proposed by the IMS-AGW.		

5.17.3.6 IMS-AGW Re-Register

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.6.1.

Table 5.17.3.6.1: IMS-AGW Re-Registration

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = Handoff	
	SC Reason = 903, MGC Directed	
	Change	
	H248 Profile Identity	
	H248 Protocol Version	

The IMS-ALG responds as in Table 5.17.3.6.2.

Table 5.17.3.6.2: IMS-AGW Re-Registration Ack

Address Information	Control information	Bearer information	
	Transaction ID = x		
	Context ID = -		
	Termination ID = ROOT		
	If applicable (NOTE):		
	H248 Protocol Version		
	If applicable:-		
	H248 Profile Identity		
	If required to register to a new IMS-		
	ALG:		
	Alternate MGC Id		
NOTE: The IMS-ALG shall include	The IMS-ALG shall include the H.248 Protocol Version if the protocol version it supports or offers is		
lower than that proposed b	lower than that proposed by the IMS-AGW. The IMS-ALG may include the H.248 Protocol Version if the		
protocol version it supports	protocol version it supports or offers is the protocol version proposed by the IMS-AGW.		

5.17.3.7 IMS-ALG Ordered Re-register

The IMS-ALG sends a SERVICE CHANGE request command as in Table 5.17.3.7.1.

Table 5.17.3.7.1: IMS-ALG Ordered Re-Register

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = HANDOFF	
	SC Reason = 903, MGC Directed	
	Change	
	Alternate MGC Id	

The IMS-AGW responds as in Table 5.17.3.7.2.

Table 5.17.3.7.2: IMS-ALG Ordered Re-Register Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

The IMS-AGW then performs an IMS-AGW Re-Register procedure according to Clause 5.17.3.6.

5.17.3.8 IMS-ALG Restoration

When the IMS-ALG has recovered, the IMS-ALG sends a SERVICE CHANGE as in Table 5.17.3.8.1,

Table 5.17.3.8.1: IMS-ALG Restoration

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = RESTART	
	SC Reason = 901, Cold Boot OR	
	902, Warm Boot	

The IMS-AGW responds as in Table 5.17.3.8.2.

Table 5.17.3.8.2: IMS-ALG Restoration Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.9 IMS-ALG Out of Service

The IMS-ALG sends a SERVICE CHANGE request command as in Table 5.17.3.9.1.

Table 5.17.3.9.1: IMS-ALG Out Of Service

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = FORCED or	
	GRACEFUL	
	SC Reason = 905, Termination	
	Taken OOS	

The IMS-AGW responds as in Table 5.17.3.9.2.

Table 5.17.3.9.2: IMS-ALG Out Of Service Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.10 Audit Value

The IMS-ALG sends an AUDIT VALUE request command as in Table 5.17.3.10.1.

Table 5.17.3.10.1: Audit Value

A	dress Information	Control information	Bearer information	
		Transaction ID = x		
		Context ID= -/ALL/C1		
		Termination ID =		
		ROOT/ALL/T1/PartialWildcard		
		(NOTE 4, NOTE 5)		
		Audit Packages (NOTE 1)		
		Audit Descriptor =		
		IndAuditParameter:=		
		IndAudMediaDescriptor:=		
		IndAudTerminationStateDescriptor:=		
		serviceState		
		Audit Descriptor = Empty (NOTE 2)		
		Audit Descriptor =		
		IndAuditParameter:=		
		IndAudMediaDescriptor:=		
		IndAudTerminationStateDescriptor:=		
		Available Realms (NOTE 3)		
		Audit Descriptor =		
		IndAuditParameter:=		
		IndAudMediaDescriptor:=		
		IndAudTerminationStateDescriptor:=		
		ROOT properties (NOTE 6)		
		Packages is for Null/Root Combination.		
		Used for control association monitoring.		
		Used for auditing available IP realms		
NOTE 4:		ation is used for the context audit (see ta	able 5.17.3.10.3) and specifies the	
NOTE -	"group" part of the terminate			
NOTE 5:	Partial wildcard shall only be used when text encoding is used on the H.248 interface.			
NOTE 6:	Used for auditing ROOT pr	operties.		

The IMS-AGW responds as in Table 5.17.3.10.2.

Table 5.17.3.10.2: Audit Value Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -/C1	
	Termination ID = ROOT/T1	
	Packages List	
	serviceState	
	Available Realms	
	ROOT Properties	

Upon reception of the command in the IMS-AGW:

- The Service State returns the current Service State
- When Packages are requested, the Package Names and Versions are returned
- When realm availability is audited, the list of available realms is returned.
- When root properties are audited, the values of root properties are returned.

The following table illustrates the allowed combinations that can be obtained with the AuditValue Command:

Table 5.17.3.10.3: Combinations of AuditValue Command

ContextID	TerminationID	Information Obtained
Specific	Wildcard	Audit of matching Terminations in a Context
Specific	Specific	Audit of a single Termination in a Context
Null	Root	Audit of Media Gateway state and/or control association or available realms, or supported packages or ROOT properties.
All	Specific	(Non-null) ContextID in which the Termination currently exists
All	Partial Wildcard	(Non-null) ContextIDs in which the Terminations currently exist
NOTE: Partial wildcard shall only be used when text encoding is used on the H.248 interface.		

5.17.3.11 Command Rejected

When the procedure "Command Reject" is required the following procedure is initiated:

The IMS-AGW / IMS-ALG sends .a response to any command.req with the following information.

Table 5.17.3.11.1: ANYcommand.resp (command reject) IMS-AGW / IMS-ALG to IMS-ALG/ IMS-AGW

Address Information	Control information	Bearer information
	Transaction ID = z	
	Context ID = c1 or no context	
	Termination ID = T1 or no	
	termination ID	
	Reason=Error	

5.17.3.12 AGW Capability Change

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.12.1.

Table 5.17.3.12.1: AGW Capability Update

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = RESTART or	
	DISCONNECTED	
	SC Reason = 916, Packages	
	Change or 917, Capability Change	

The IMS-ALG responds as in table 5.17.3.12.2.

Table 5.17.3.12.2 AGW Capability Update Ack

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = -	
	Termination ID = ROOT	

5.17.3.13 IMS-AGW Resource Congestion Handling – Activate

The IMS-ALG sends a MODIFY request command as in Table 5.17.3.13.1

Table 5.17.3.13.1: IMS-AGW Resource Congestion Handling – Activate

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= - Termination ID = ROOT	
	NotificationRequested (Event ID = x, "Overload Notification")	

The IMS-AGW responds as in Table 5.17.3.13.2.

Table 5.17.3.13.2: IMS-AGW Resource Congestion Handling – Activate Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.14 IMS-AGW Resource Congestion Handling – Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.3.14.1

Table 5.17.3.14.1: IMS-AGW Resource Congestion Handling – Indication

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	If H.248.11 used: Event_ID (Event ID = x, "Overload Notification")	
	If H.248.10 used:	
	Event_ID (Event ID = x, "	
	Overload Notification (Reduction)")	

The IMS-ALG responds as in Table 5.17.3.14.2

Table 5.17.3.14.2: IMS-AGW Resource Congestion Handling – Indication Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.15 Inactivity Timeout - Activation

The IMS-ALG sends a MODIFY request command as in Table 5.17.3.15.1

Table 5.17.3.15.1: Inactivity Timeout – Activation

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= NULL	
	Termination ID = ROOT	
	NotificationRequested (Event ID = x,	
	"Inactivity Timeout")	

The IMS-AGW responds as in Table 5.17.3.15.2.

Table 5.17.3.15.2: Inactivity Timeout – Activation Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = NULL	
	Termination ID = ROOT	

5.17.3.16 Inactivity Timeout – Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.3.16.1.

Table 5.17.3.16.1: Inactivity Timeout - Indication

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= NULL	
	Termination ID = ROOT	
	Event_ID (Event ID = x, "Inactivity	
	Timeout")	

The IMS-ALG responds as in Table 5.17.3.16.2

Table 5.17.3.16.2: Inactivity Timeout - Indication Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = NULL	
	Termination ID = ROOT	

5.17.3.17 Realm Availability Change – Activation

The IMS-ALG sends a MODIFY request command as in Table 5.17.3.17.1.

Table 5.17.3.17.1: Realm Availability Change – Activation

Address Information	Control information	Bearer information
	Transaction ID = x Context ID= - Termination ID = ROOT	
	NotificationRequested (Event ID = x, "Realm Availability Change")	

The IMS-AGW responds as in Table 5.17.3.17.2.

Table 5.17.3.17.2: Realm Availability Change – Activation Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.18 Realm Availability Change – Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.3.18.1.

Table 5.17.3.18.1: Realm Availability Change – Indication

Α	ddress Information	Control information	Bearer information		
		Transaction ID = x			
		Context ID= -			
		Termination ID = ROOT			
		Event_ID (Event ID = x,			
		"Realm Availability Change			
		(Changed Realms)")			
NOTE:	The ObservedEvent Param	ameters returned within the Changed Realms are defined as mandatory since it			
	shall contain at minimum 1 parameter but may contain both Newly Available Realms and Newly Unavailable Realms.				

The IMS-ALG responds as in Table 5.17.3.18.2

Table 5.17.3.18.2: Realm Availability Change – Indication Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.19 Termination Out Of Service

This procedure only applies when text encoding is used on the H.248 interface.

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.19.1.

Table 5.17.3.19.1: Termination Out Of Service Request

Address Information	Control information	Bearer information			
	Transaction ID = x				
	Context ID= C1/ALL				
	Termination ID = T1 or Wildcarded				
	Termination (NOTE)				
	SC Method = FORCED				
	SC Reason = 904 ("Termination				
	Malfunction") or 905 ("Termination				
	Taken OOS") or 906 ("Loss of Lower				
	Layer Connectivity"), or 907				
	("Transmission Failure") or 910				
	("Media Capability Failure")				
	This is set to a specific termination identity or a partially wildcarded identity (i.e. specifying the "interface"				
part of the termination ID a	nd wildcarding the "group" and "Id" parts	s) or a wholly wildcarded identity (i.e.			
ip/*).					

The IMS-ALG responds as in Table 5.17.3.19.2.

Table 5.17.3.19.2: Termination Out Of Service Request Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1/ALL	
	Termination ID = As received
