Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document describes the protocol to be used on the Multimedia Resource Function Controller (MRFC) -Multimedia Resource Function Processor (MRFP) interface (Mp interface). The IMS architecture is described in 3GPP TS 23.228 [1], the functional requirements are described in 3G TS 23.333 [25]

This specification defines a profile of the Gateway Control Protocol (H.248.1), for controlling Multimedia Resource Function Processor supporting in-band user interaction, conferencing and transcoding for multimedia-services.

The present document is valid for a 3rd generation PLMN (UMTS) complying with Release 7 and later.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same

	ne present document.

3 Definitions and symbols

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [50] and the following apply.

Media Gateway: See ITU-T Recommendation H.248.1 [3].

Media Gateway Controller: See ITU-T Recommendation H.248.1 [3].

MultiMedia Resource Function Controller: See 3GPP TS 23.002 [2].

MultiMedia Resource Function Processor: See 3GPP TS 23.002 [2].

For the purposes of the present document, the following terms and definitions as defined in 3GPP TS 23.333 [25] apply:

ICE lite

Full ICE.

For the purposes of the present document, the following terms and definitions given in IETF RFC 3830 [51] apply:

Crypto Session (CS)
Traffic-Encrypting Key (TEK).

3.2 Symbols

None.

4. Abbreviations

For the purposes of the present document, the following abbreviations apply:

BFCP Binary Floor Control Protocol

CDR Call Data Record CN Comfort Noise

CRC Cyclic Redundancy Check

CS Crypto Session

CVO Coordination of Video Orientation

DNS Domain Name System

DTLS Datagram Transport Layer Security

DTMF Dual Tone Multi Frequency
CE Congestion Experienced
ECN Explicit Congestion Notification
FEC Forward Error Correction

ICE Interactive Connectivity Establishment

IP Internet Protocol IPsec IP Security

MGC Media Gateway Controller

MGW Media Gateway MID Message Identifier

MPS Multimedia Priority Service

MRFC MultiMedia Resource Function Controller

MRFP	MultiMedia Resource Function Processor
MSRP	Message Session Relay Protocol
OAM	Operation, Administration and Maintenance
OoS	Out of Service
PLC	Packet Loss Concealment
PSK	Pre-Shared Key
PT	Payload Type
QoS	Quality of Service
SCTP	Stream Control Transmission Protocol
SDP	Session Description Protocol
SPNE	Signal Processing Network Equipment
SSRC	Synchronisation Source
STUN	Session Traversal Utilities for NAT
TCP	Transmission Control Protocol
TEK	Traffic-Encrypting Key
TLS	Transport Layer Security
TTL	Time To Live
UDP	User Datagram Protocol
URN	Uniform Resource Name
VBD	Voiceband Data

5 Profile Description

5.1 Profile Identification

The name and version of the profile that is sent in the service change command are:

Table 5.1.1: Profile Identification

Profile name:	MRF
Version:	4

5.2 Summary

The profile defined in the present document enables the control of media resource function processors (MRFP) supporting in-band user interaction, conferencing and transcoding for multimedia services.

This Profile describes the minimum mandatory settings and procedures required to fulfil the Media Gateway control requirements for the MRF.

In addition optional settings and procedures are described which fulfil optional features and where supported, the minimum mandatory settings within the optional procedures and packages are identified that must be supported in order to support that feature.

"Optional" or "O" means that it is optional for either the sender or the receiver to implement an element. If the receiving entity receives an optional element that it has not implemented it should send an Error Code (e.g. 445 "Unsupported or Unknown Property", 501"Not Implemented", etc.). "Mandatory" or "M" means that it is mandatory for the receiver to implement an element. Whether it is mandatory for the sender to implement depends on specific functions; detail of whether elements of the core protocol are mandatory to be sent are defined in the stage 2 procedures, stage 3 procedures and/or the descriptions of individual packages.

The setting or modification of elements described in the profile under the heading "Used in Command" has the meaning that the property can be set/modified with that command. The property may be present in other commands (in order to preserve its value in accordance with ITU-T H.248.1[3]) when those commands are used for other procedures that affect the same descriptor.

This profile supports Explicit Congestion Notification and Multimedia Priority Service.

5.3 Gateway Control Protocol Version

Version 2 shall be the minimum version supported. Support of this version implies conformance to ITU-T Recommendation H.248 Version 2 [3].

Version 3 shall be supported for the optional MRFP based Floor Control Server functionality.

5.4 Connection Model

Media Resource Function Processors shall support ephemeral terminations that sink and source IP traffic. This type of H.248 Termination is denoted IP in the following clauses.

Table 5.4.1: Connection Model

Maximun	n number of contexts:	Provisioned (NOTE 1)
Maximum number of terminations per context:		Unspecified(NOTE 2)
Allowed terminations type combinations in a context: Not Applicable		Not Applicable
NOTE 1: The actual number of supported contexts can be audited by the MRFC using the MaxNrOfContexts property defined in the Base Root Package.		
NOTE 2: Support of 1 termination in a context is the basic requirement for the MRFP e.g. for voice record. 2 terminations in a context are required for transcoding or any inband media detection or insertion whilst an unspecified number terminations may be required if conferencing is supported.		

5.5 Context Attributes

Table 5.5.1: Context Attributes

Context Attribute	Supported	Values Supported
Topology	Yes	See § 5.7.8
Priority Indicator	Optional (NOTE 1)	0-15 (NOTE 2)
Emergency Indicator	No	Not Applicable
IEPS Indicator	No	
ContextAttribute Descriptor	Yes	If "yes" see clause 5.8.9 for details of supported attributes
ContextIDList Parameter	<yes no=""></yes>	NA
NOTE 1: This Context Attribute parameter is used for MPS as specified in 3GPP TS 22.153 [42].		
NOTE 2: Priority values $11 - 15$ of the Priority Indicator are reserved for MPS.		

Is the AND/OR Select operation Context Attribute supported?

AND/OR Context Attribute	<yes no=""></yes>	<and both="" or=""></and>

5.6 Terminations

5.6.1 Termination Names

5.6.1.1 General

The Termination ID structure is provisioned in the MRFC and MRFP and is known by the MRFP and the MRFC at or before start up.

With ephemeral IP endpoint bearer types the internal structure of Termination ID is irrelevant for MRFC and MRFP and therefore Termination ID is only a numeric identifier for the termination.

5.6.1.2 ASN.1 encoding

The following general structure of TerminationID shall be used:

4 octets shall be used for the termination ID. The following defines the general structure for the termination ID:

Table 5.6.1.2.1: Termination ID

Termination	
type	Χ

Termination type:

Length 3 bits

Values:

000 Reserved

001 Ephemeral termination

011 - 110 Reserved

111 Reserved for ROOT termination Id (ROOT Termination Id = 0xFFFFFFFF)

X:

Length 29 bits.

For IP termination, its usage is un-specified.

5.6.1.3 ABNF encoding

The following general structure of termination ID shall be used:

TerminationID = "ROOT" / pathName / "\$" / "*" ; according to ITU-T H.248.1 [3] Annex B.

5.6.2 Multiplexed Terminations

Table 5.6.2.1: Multiplexed Terminations

Multiplex Terminations Supported?	NO

5.7 Descriptors

5.7.1 Stream Descriptor

Table 5.7.1.1: Stream Descriptor

Maximu	m number of streams per termination type	ALL	Unspecified (NOTE)
NOTE:	At least 1 stream for each media (e.g. video+aud	io = 2 streams). If only one stre	am is applicable, then the
MRFC may omit the Stream Descriptor and the MRFP shall assume that StreamID =1.			

5.7.1.1 LocalControl Descriptor

The following tables specify the level of support required with regard to the properties in the local control descriptor.

Table 5.7.1.1.1: Reserve Group and Reserve Value

			Termination Type	Stream Type
Reserve	group used:	NO (NOTE 1)	-	-
Reserve	value used:	YES	IP	Audio, Video
		(NOTE 2) (NOTE 3)		
NOTE 1: Support of Reserve Group in case of multiple p-time values requires further studies				
NOTE 2: Used for audio streams where IETF RFC 2833 [22] is also specified and for conference where participants are invited to join the conference.				
NOTE 3: Not used for TCP transport (see IETF RFC 793 [52]) and media types:				
a) "message" for MSRP (see IETF RFC 4975 [34]) and				
b) "application" for BFCP (see IETF RFC 4582 [53])				
	because the application	control will not use	e them in a context ReserveValue	·.

Table 5.7.1.1.2: Stream Mode

Termination Type	Stream Type	Allowed StreamMode Values
ALL except ROOT	Any	Send, Receive, Send and Receive, Inactive

5.7.2 Events Descriptor

Table 5.7.2.1: Events Descriptor

Events settable on termination types and stream types:	Yes		
If yes	Event ID	Termination Type	Stream Type
	g/*	IP	Audio, Video
	nt/*	IP	Audio, Video
	rtp/*	IP	Audio, Video
	aasrec/*	IP	Audio, Video
	aasb/*	IP	Audio, Video
	dd/d0-dd	IP	Audio
	it/*	ROOT	Not Applicable
	ocp/mg_overload	ROOT	Not Applicable
	aastts/*	IP	Audio
	asr/*	IP	Audio
	mrp/*	IP	Audio, Video
	mpp/*	IP	Audio, Video
	vavsp/*	IP	Audio, Video
	Hangterm/thb	IP	Audio, Video
	msrpstat/mquota	IP	Message
	mess/*	IP	Message
	fschp/*	IP	Audio, Video

ECN Failure (ecnrous/fail, 0x010b/0x0001) see sub-clause 5.14.3.37	IP	Audio, Video
ICE New Peer Reflexive Candidate (ostuncc/nprc, 0x00c3/0x0002) – See subclause 5.14.3.40	IP	Any, only applicable for full ICE
ICE Connectivity Check Result (ostuncc/ccr, 0x00c3/0x0001) – See subclause 5.14.3.40	IP	Any, only applicable for full ICE
TCP connection state change ("BNC change") (tcpbcc/BNCChange, 0x0115/0x0001) see subclause 5.14.3.41	IP	TCP based
TLS session state change ("BNC change") (tlsbsc/BNCChange, 0x0117/0x0001) see subclause 5.14.3.42	IP	TLS based
Detect bearer level message (mcbalg/det, 0x0108/0x0001) – See subclause 5.14.3.43	IP	Application

Table 5.7.2.2: Event Buffer Control

Event Buffer Control used: No

Table 5.7.2.3: Keep Active

Keepactive used on events:	Yes	

Table 5.7.2.4: Embedding in event

Embedded events in an event descriptor:	No
Embedded signals in an event descriptor:	No

Table 5.7.2.5: Notify Behaviour

NotifyBehaviour used on ev	rents:	No
If yes	Supported values	Not Applicable

5.7.3 EventBuffer Descriptor

Table 5.7.3.1: Event Buffer

Event Buffer descriptor used:	No	

5.7.4 Signals Descriptor

Table 5.7.4.1: Signals dependant on termination or streams

Signals settable dependant on termination or streams types:	Yes		
If yes	Signal ID	Termination Type	Stream Type / ID
-	cg/*	IP	Audio
	srvtn/*	IP	Audio
	xcg/*	IP	Audio
	an/apf	IP	Audio, video
	int/*	IP	Audio
	biztn/*	IP	Audio

	fschp/*	IP	Audio, video
	Send Additional Connectivity Check (ostuncc/sacc, 0x00c3/0x0002)	IP	Message, audio, video, only applicable for full ICE
	Send Connectivity Check (ostuncc/scc, 0x00c3/0x0001)	IP	Message, audio, video, only applicable for full ICE
	Establish BNC (tcpbcc/EstBNC, 0x0115/0x0001)	IP	TCP based
	Release BNC (tcpbcc/RelBNC, 0x0115/0x0002)	IP	TCP based
	Establish BNC (tlsbsc/EstBNC, 0x0117/0x0001)	IP	TLS based
	Release BNC (tlsbsc/RelBNC, 0x0117/0x0002)	IP	TLS based
	Send bearer level message (mcbalg/sblm, 0x0108/0x0001) – See subclause 5.14.3.43	IP	Application

Table 5.7.4.2: Signal Lists

Signals Lists supported:	Yes	
If yes	Termination Type Supporting Lists	
	Stream Type Supporting lists	Audio, Video
	Maximum number of signals per Provisioned	
	signal list	

Table 5.7.4.3: Signal type and duration

Signal type and duration supported?	Yes	
If yes	Signal ID	Type or duration override
	ALL	Both

Table 5.7.4.4: Signal Direction

Signal Direction supported:	No

Table 5.7.4.5: Notify completion

Notify completion supported:	Yes		
If yes	Signal ID Type of completion supported		
	cg/*, svrtn/*, xcg/*, an/*, int/*, biztn/*,	ALL	
	conftn/*, tonegen/*, bcg/*, aasb/*,		
	aastts/*, mpp/*, fschp/*		

Table 5.7.4.6: RequestID Parameter

RequestID Parameter	Yes
Supported:	

Table 5.7.4.7: Signals played simultaneously

Signals p	-	No (NOTE)	
If yes		Signal Ids that can be played simultaneously:	-
NOTE:	,		usly with signals for playing
	announcement.		

Table 5.7.4.8: Keep Active

Keepactive used on signals:	Yes	

5.7.5 DigitMap Descriptor

Table 5.7.5.1: DigitMap Descriptor

DigitMaps supported:	NO		
If yes	DigitMap Name	Structure	Timers

5.7.6 Statistics Descriptor

Table 5.7.6.1: Statistics Descriptor

Statistics supported on:	Both

Table 5.7.6.2: Statistics reported on Subtract

Statistics reported on Subtract:		Yes	
If yes	Statistic IDs Reported	Termination Type	Stream Type
	msrpstat/*	IP	Message
			_

5.7.7 ObservedEvents Descriptor

Table 5.7.7.1: ObservedEvents Descriptor

Event detection time supported:	Yes

5.7.8 Topology Descriptor

Table 5.7.8.1: Topology Descriptor

Allowed triples:	(T1,T2, isolate)
	(T1,T2, oneway)
	(T1,T2, bothway)

5.7.9 Error Descriptor

Table 5.7.9.1: Error codes sent by the MRFC

Supported H.248.8 Error Codes:	400-403, 406, 410, 411, 421, 422, 430, 431, 442, 443, 444, 446, 458, 501-506, 533
Supported Error Codes defined in packages:	All error codes defined in supported packages are supported.

Table 5.7.9.2: Error codes sent by the MRFP

Supported H.248.8 Error Codes:	400-411, 412, 421,422,430, 431, 432-435,440,441,442, 471, 500-517, 522-539.
Supported Error Codes defined in packages:	All error codes defined in supported packages are
	supported.

5.8 Command API

5.8.1 Add

Table 5.8.1.1: Descriptors used by Add request

Descriptors used by Add request:	- Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote)

Table 5.8.1.2: Descriptors used by Add reply

Descriptors used by Add reply:	Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote)Error
	When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are: - The Error Descriptor
	- SDP properties returned in "Reserve IMS Resources" and "Reserve and Configure IMS Resources"
	procedures, as specified in 15.17.2.2 and 15.17.2.4

5.8.2 Modify

Table 5.8.2.1: Descriptors used by Modify request

Descriptors used by Modify request:	Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote)

Table 5.8.2.2: Descriptors used by Modify reply

Descriptors used by Modify reply:	Events, Signals, Media (TerminationState, LocalControl, Local and Remote),Error
	When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are: The Error Descriptor - SDP properties returned in "Configure IMS Resources" procedure as specified in 15.17.2.3.

5.8.3 Subtract

Table 5.8.3.1: Descriptors used in Subtract request

Descriptors used by Subtract request:	Audit (empty) or None
---------------------------------------	-----------------------

Table 5.8.3.2: Descriptors used in Subtract reply

Descriptors used by Subtract reply:	None

5.8.4 Move

Table 5.8.4.1: Command Move

Move command used:	Voc	

Table 5.8.4.2: Descriptor used by Move command

Descriptors used by Move Request:	Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote)
Descriptors used by Move Reply:	Events, Signals, Media (TerminationState,
	LocalControl, Local and Remote), Error
	When command request excludes an Audit Descriptor, the
	MGW response shall only include descriptors which
	contained underspecified or overspecified properties in the
	command request. Furthermore, only those properties that
	were underspecified or overspecified in the request shall
	be sent in the reply. Exceptions to this rule are:
	The Error Descriptor

5.8.5 AuditValue

Table 5.8.5.1: Auditvalue

ServiceState: - Root (MGW Audit) MGC information (mgcinfo) - individualtermination (NOTE1)	Termination State Descriptor LocalControl Descriptor
MGC information (mgcinfo) - individualtermination (NOTE1)	<u> </u>
- individualtermination (NOTÉ1)	·
, ,	
For Dackages:	
rui raukayes.	Packages Descriptor (NOTE2)
- Root	
None (MGW Audit) :	Audit (empty) Descriptor
- Root	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \
Supported Statistics (N	IOTE3) (NOTE2)
ALL	
ALL	
Yes	
	None (MGW Audit) : - Root Supported Statistics (NALL

NOTE1: The purpose to audit an individual Termination is to retrieve MGC Information if supported.

NOTE2: Optional

NOTE3: The statistics defined in the MSRP Statistics Package can be obtained via the MRFC auditing the MRFP. The supported statistics are msrpstat/nms, msrpstat/nmr, msrpstat/vms and msrpstat/vmr.

5.8.6 AuditCapabilities

Table 5.8.6.1: AuditCapabilities

Audited Properties:	Property Name and Identity	Descriptor
	FFS	FFS
Audited Statistics:	None	
Audited Signals:	None	
Audited Events:	None	

5.8.7 Notify

Table 5.8.7.1: Notify

Descripto	ors used by Notify Request or Reply:	ObservedEvents, Error
NOTE:	The Error Descriptor shall not be used in Notify R	equest.

5.8.8 ServiceChange

Table 5.8.8.1: Service Change Methods and Reason sent by MRFC

Service Change Methods Supported:	ServiceChange Reasons supported:
Restart (NOTE 1)	"900 Service Restored"
	"901 Cold Boot",
	"902 Warm Boot".
Graceful (NOTE 1)	"905 Termination Taken Out Of Service"
Forced (NOTE 1)	"905 Termination Taken Out Of Service"
Handoff (NOTE 1, NOTE 2)	"903 MGC Directed Change"

NOTE: When a Service Change command on the Root termination with a method other than Graceful is sent, the command shall always be sent as the only command in a message. The sending node shall always wait for the reply to a Service Change command on the Root termination with a method other than Graceful before sending further command requests. A Service Change command on the Root termination with method Graceful may be combined with other commands in a single message.

NOTE 1: ROOT Only.

NOTE 2: Not involving more than 1 MRFC. No support of handoff relates to a network deployment scenario with "primary H.248 systems only", which translates to no geographic redundancy of the MRFC.

Table 5.8.8.2: Service Change Methods and Reason sent by MRFP:

Service Change Methods Supported:	ServiceChange Reasons supported:	
Restart (NOTE 1)	"900 Service Restored",	
	"901 Cold Boot",	
	"902 Warm Boot",	
	"916 Packages Change" (Optional)	
	"917 Capability Change" (Optional).	
Graceful (NOTE 1)	"908 MG Impending Failure "	
Forced (NOTE 1)	"905 Termination Taken Out Of Service"	
Handoff (NOTE 1, NOTE 2)	"903 MGC Directed Change"	
Failover (NOTE 3)	"909 MGC Impending Failure"	
Disconnected (NOTE 1)	"900 Service Restored"	
	"916 Packages Change" (Optional)	
	"917 Capability Change" (Optional)	
NOTE: When a Service Change command on the Root termination with a method other than Graceful is sent, the command shall always be sent as the only command in a message. The sending node shall always wait for the reply to a Service Change command on the Root termination with a method other than Graceful before sending further command requests. A Service Change command on the Root termination with method Graceful may be combined with other commands in a single message.		
NOTE 1: ROOT only	,	

NOTE 1: ROOT only.

NOTE 2: In response to a MGC Ordered Re-Register

NOTE 3: Only for TISPAN NGN MRF. Not involving more than 1 MRFP. No support of handoff relates to a network deployment scenario with "primary H.248 systems only", which translates to no geographic redundancy of the MGW.

Table 5.8.8.3: Service Change Address

ServiceChangeAddress used:	No		
Table 5.8.8.4: Service Change Delay			
ServiceChangeDelay used:	No		
If yes	Valid time period:	-	

Table 5.8.8.5: Service Change Incomplete Flag

ServiceChange Incomplete Flag used:	No		
Table 5.8.8.6: Se	ervice Change Version		
Version used in ServiceChangeVersion:	2		

Table 5.8.8.7: Profile negotiation

Profile negotiation as per H.248.18:	No

5.8.9 Manipulating and Auditing Context Attributes

Table 5.8.9.1: Manipulating and Auditing Context Attributes

Context	Attributes Manipulated:	ALL supported attributes (See table 5.5.1.) (NOTE)
Context Attributes Audited:		ALL supported attributes except Priority Indicator (See
		table 5.5.1.) (NOTE)
NOTE:	For ContextAttribute Descriptor, the details of supported attribute include: Floor Control Algorithm (fcpoli/fca),	
	Max Floor Users (fcpoli/mfu), Floor Control Conference Identity (fcsig/fconfid) and Floor and Stream	
	Association (fcsig/fsa)	

5.9 Generic Command Syntax and Encoding

Table 5.9.1: Encoding

Supported Encodings:	Binary (optional)
''	Text (optional)
	The receiver shall support:
	Short Token Notation
	 Long Token Notation

5.10 Transactions

Table 5.10.1: Transactions

Maximum number of Transaction Requests / Replies / TransResponseAcks / Segment Replies per message:	10
NOTE: When more than one element are conveyed in o	one message, it is recommended that this message Reply / Transaction Pending plus a Transaction Response

Table 5.10.2: Segmentation

Segmentation Supported:		UDP : No
		SCTP : Inherent in transport
NOTE:	The H.248 Segmentation Package according Annex E.14 of H.248.1 Version 3 is intended for H.248 transport technologies without the capability of automatic message segmentation. This method is not required for UDP-	
	or SCTP-based H.248 signalling transport in this Profile.	

Table 5.10.3: Commands per Transaction Request

Maximum number of commands per Transaction	Unlimited
request:	

Table 5.10.4: Commands per Transaction Reply

Maximum number of commands per Transaction reply: U	Unlimited
---	-----------

Table 5.10.5: Optional Commands

Commands able to be marked "Optional":		ALL
NOTE:	The meaning of this table is that if one of the listed	d commands failed then the possibly present subsequent
command within the same transaction will be processed.		

Table 5.10.6: Transaction Timers

Transaction Timer:	Value
NormalMGExecutionTime	Provisioned
NormalMGCExecutionTime	Provisioned
MGOriginatedPendingLimit	Provisioned
MGCOriginatedPendingLimit	Provisioned
MGProvisionalResponseTimerValue	Provisioned
MGCProvisionalResponseTimerValue	Provisioned

5.11 Messages

It is recommended that MRFP and MRFC names are in the form of fully qualified domain name. For example the domain name of the MRFC may be of the form MRFC1.whatever.net and the name of the MRFP may be of the form mg1.whatever.net.

The fully qualified domain name will be used by the MRFP and MRFC as part of the "Message Identifier" in the H.248 messages which identifies the originator of the message.

The MRFC domain name is provisioned in the MRFP or retrieved from the DNS using SRV records.

The use of a domain name provides the following benefits:

- MRFPs and MRFCs are identified by their domain name, not their network addresses. Several addresses can be associated with a domain name. If a command cannot be forwarded to one of the network addresses, implementations shall retry the transmission using another address.
- MRFPs and MRFCs may move to another platform. The association between a logical name (domain name) and
 the actual platform are kept in the Domain Name Service (DNS). MRFP and MRFC shall keep track of the record's
 time-to-live read from the DNS. They shall query the DNS to refresh the information if the time-to-live has
 expired.

The domain name may be used by MRFC/MRFP for authentication purposes.

5.12 Transport

Table 5.12.1: Transport

Supported	Transports:	Transport over SCTP shall be supported and shall conform to Recommendation H.248.4 [4]. Support of UDP is optional, dependent on a network operator"s decision, based on the network configuration. SCTP(recommended) (NOTE1). UDP(optional).
NOTE1: H	If using SCTP as defined in IETF RFC 2960 [8], the MRFP shall always be the node to perform the "Initiation". H.248 is "SCTP user" in this case of H.248/SCTP/IP based transport according ITU-T Rec. H.248.4. The number of used SCTP Streams for traffic of the H.248 Control Association must be defined, see § 8/H.248.4. A single SCTP Stream is the default assumption ("Single-Stream Mode") in this Profile.	

Table 5.12.2: Segmentation

Segmentation Supported:	No

Table 5.12.3: Control Association Monitoring

Control Association Monitoring Supported:	Monitoring mechanism is dependent on used H.248 transport
	SCTP: inherent capability of SCTP (NOTE)
	• UDP: 1. H.248.14 (MRFP-driven monitoring)
	2. Empty AuditValue on ROOT (MRFC-driven monitoring)
NOTE: Use of H.248.14 for this is FFS.	

5.13 Security

Table 5.13.1: Security

Support	ed Security:	None
NOTE:	Both the MRFC and MRFP are assumed to be wi	thin a secure IP zone of a single operator.

5.14 Packages

5.14.1 Mandatory Packages

Table 5.14.1: Mandatory packages

Mandatory Packages				
Package Name / Reference	Package ID	Version		
Generic (see ITU-T Recommendation H.248.1 [3])	g, (0x0001)	1		
Base Root (see ITU-T Recommendation H.248.1 [3])	root, (0x0002)	2		
Network (see ITU-T Recommendation H.248.1 [3])	nt, (0x000b)	1		
Hanging Termination Detection (see ITU-T Recommendation H.248.36 [30]).	hangterm, (0x0098)	1		

5.14.2 Optional Packages

Table 5.14.2: Optional packages

Optional Packages				
Package Name / Reference	Package ID	Version	Support dependent on:	
DTMF Detection Package (see ITU-T Recommendation H.248.1 [3] Annex E.6);	dd, (0x0006)	1	Support is mandatory if DTMF Detection is supported.	
Tone Generator Package (see ITU-T Recommendation H.248.1 [3])	tonegen, (0x0003)	1	This package is "extension only". It must be supported if extended but shall not be published over the protocol. It is here for information only.	
Basic Call Progress Tones Generator with Directionality(see ITU-T Recommendation Q.1950 [13])	bcg, (0x0023)	1	If CS type Services provided by network	
Call Progress Tones Generator (see ITU-T Recommendation H.248.1 3])	cg, (0x0007)	1	If CS type Services provided by network	
Basic Services Tones Generator (see ITU-T Recommendation Q.1950 [13])	srvtn, (0x0025)	1	If CS type Services provided by network	
Expanded Call Progress Tones Generator (see ITU-T Recommendation Q.1950 [13])	xcg, (0x0024)	1	If CS type Services provided by network	
Basic Announcement Syntax (see ITU-T Recommendation H.248.9 [6])	bannsyx, (0x0047)	1	Support is optional if playing announcement is supported.	
Voice Variable Syntax (see ITU-T Recommendation H.248.9 [6])	vvsyx, (0x0048)	1	Support is optional if playing announcement is supported.	
Announcement Set Syntax (see ITU-T Recommendation H.248.9 [6])	setsyx, (0x0049)	2	Support is optional if playing announcement is supported.	
General text Variable type (see ITU-T Recommendation H.248.9 [6])	phrsyx, (0x004a)	2	Support is optional if playing announcement is supported.	
Advanced Audio Server Base (see ITU-T Recommendation H.248.9 a1 [26])	aasb, (0x0033)	2	Support is optional if playing announcement is supported.	
AAS Recording package (see ITU-T Recommendation H.248.9 [6])	aasrec, (0x0035)	1	Support is optional if Audio Record is supported.	
AAS segment management (see ITU-T Recommendation H.248.9 [6])	aassm, (0x0036)	1		
Generic Announcement (see ITU-T Recommendation H.248.7 [5])	an, (0x001d)	2	Support is mandatory if playing announcement is supported.	
Intrusion Tones Generation (see ITU-T Recommendation Q.1950 [13])	int, (0x0027)	1	If CS type Services provided by network	
Business Tones Generation (see ITU-T Recommendation Q.1950 [13])	biztn, (0x0028)	1	If CS type Services provided by network	
Conferencing Tones Generation (see ITU-T Recommendation H.248.27 [12])	conftn, (0x0038)	1	Support is optional and may be used if Audio Conference is supported.	
Inactivity Timer (see ITU-T Recommendation H.248.14 [9])	it, (0x0045)	1	Support is mandatory if UDP transport is enabled for H.248 messages.	
MGC Information Package (see ITU-T Recommendation H.248.45,	mgcinfo, (0x00a0)	1	This package may be supported as an operator option. For this profile the information string shall be limited to 32 octets in length.	

	•		
Advanced audio server base package for	aastts,	1	Support is mandatory if Text to Speech is
TTS enhancement (see ITU-T	(0x00a8)		supported.
Recommendation H.248.9 a1 [26])			
ASR package (see ITU-T	asr,	1	Support is mandatory if Automatic Speech
Recommendation H.248.9 a1 [26])	(0x00a6)		Recognition is supported.
Multimedia Recording Package (see ITU-	mrp,	1	Support is mandatory if Multimedia recording is
T Recommendation H.248.9 a1 [26])	(0x00b3)		supported.
Multimedia play package (see ITU-T	mpp,	1	Support is mandatory if Multimedia
Recommendation H.248.9 a1 [26])	(0x00a9)		announcement file is supported.
Overload Control Package (see ITU-T	оср,	1	
Recommendation H.248.11 [7])	(0x0051)		
RTP Package (see ITU-T	rtp, (0x000c)	1	
Recommendation H.248.1 [3])			
MSRP Statistics Package (see ITU-T	msrpstat,	1	Support is mandatory if Message conference is
Recommendation H.248.69 [35])	(0x00ea)		supported.
Play Message Package (see ITU-T	mess,	1	Support is mandatory if Message conference is
Recommendation H.248.69 [35])	(0x00ec)		supported.
Message Filtering Package (see ITU-T	mf, (0x00ef)	1	Support is mandatory if Message conference is
Recommendation H.248.69 [35])	, (6/1000)		supported.
Record Message Package (see ITU-T	recmess,	1	Support is mandatory if Message conference is
Recommendation H.248.69 [35])	(0x00f1)	•	supported.
Floor Control Package (see ITU-T	fcp, (0x006e)	2	Support is mandatory if Floor control is
Recommendation H.248.19a2 [33])	тор, (олоссо)	_	supported.
Floor Control Policy Package (see ITU-T	fcpoli,	1	Support is mandatory if Floor control is
Recommendation H.248.19a2 [33])	(0x00ab)	•	supported.
Floor Status Change Handling Package	fschp,	1	Support is mandatory if Floor control is
(see ITU-T Recommendation	(0x00aa)	•	supported.
H.248.19a2 [33])	(ολοσαα)		supported.
Floor Control Signalling Package (see	fcsig,	1	Support is mandatory if Floor control is
ITU-T Recommendation H.248.19a2	(0x00e5)		supported.
[33])	(0,0000)		supported.
Explicit Congestion Notification for RTP-	ecnrous	1	Support of ECN feature
over-UDP Support (see see ITU-T	(0x010b)	•	Support of Zort roatars
Recommendation H.248.82 [44])	(0,10100)		
Diffserv (ITU-T Recommendation	ds, (0x008b)	2	Support of MPS
H.248.52 [43])	αο, (ολοσου)	_	Support of IIII S
MG Act-as STUN Server (ITU-T	mgastuns	1	Support of incoming STUN connectivity

5.15 Mandatory Support of SDP and Annex C Information Elements

The v=, o=, s=, m=, c=, t=, a= and b= lines of the SDP [20] syntax shall be supported. All other lines should be ignored if received.

Table 5.15.1: Supported Annex C and SDP information elements

Supported Annex C and SDP information elements:

Protocol version (v=)	"SDP_V "	The protocol version (v=) line contains a single field:
		v= <version></version>
		and shall be used in accordance with IETF RFC 2327 [20] (i.e. v=0).
Origin (o=)	"SDP_O "	The origin line consists of 6 fields:
		o= <user name=""> <session id=""> <version> <network type=""> <address type=""> <address>.</address></address></network></version></session></user>
		The MRFC is not required to supply this line but shall accept it.
		The MRFP should populate this line as follows or use the value received from the MRFC:
		- <user name=""> should contain an hyphen - <session id=""> and <version> should contain one or mode digits as described in IETF RFC 2327 [20] - <network type=""> shall be set to IN</network></version></session></user>
		 - <address type=""> shall be set to IP4 or IP6 The Address Type shall be set to "IP4" or "IP6" depending on the addressing scheme used by the network to which the MRFP is connected.</address>
		 - <address> should contain the fully qualified domain name of the gateway.</address>
Session Name (s=)	"SDP_S"	The session name (s=) line contains a single field: s= <session-name>.</session-name>
		The MRFC is not required to supply a session name but shall accept one. This line may be used to convey correlation information for use in CDRs.
		The MRFP shall use an hyphen "-" as a session name or the value received from the MRFC.
Connection data (c=)	"SDP_C "	The connection data line consists of 3 fields: c= <network-type> <address-type> <connection-address></connection-address></address-type></network-type>
		 The <network-type> shall be set to "IN".</network-type> The <address-type> shall be set to "IP4" or "IP6" depending on the addressing scheme used by the network to which the MRFP is connected.</address-type>
		- The <connection-address> sent by the MRFC in the remote descriptor is the address to which the MRFP shall send the media flows.</connection-address>
		- The <connection-address> sent by the MRFC in local descriptors may be a unicast IPv4 or IPv6 address or it may be wildcarded to allow the MRFP to choose an address. In</connection-address>
		the second case, MGs shall fill this field with a unicast IP address at which they will receive the media stream. Thus a TTL value shall not be present and a "number of addresses" value shall not be present. The field shall not be filled with a fully-qualified domain name instead of an IP address.
		When the <connection address=""> is wildcarded (i.e. choose wildcard) by the MRFC, the MRFP allocates an IP address based on the address type. The addressing space for which this address is taken may depend on the termination ID</connection>
Media announcements (m=)	"SDP_M "	supplied by the MRFC. Media Announcements (m=) lines consist of 3 fields: m= <media> <port> <transport> <format></format></transport></port></media>
		- The <media> field shall be set to "audio"or "video" or "message" or "application" (NOTE 1) The <port> field in remote descriptors is provided by the MRFC and represents the port to which the MRFP shall send the media flows.</port></media>

- The <port> field in local descriptors may be provided by the MRFC or wildcarded (i.e. choose wildcard) to allow the MRFP to choose a value for the port on which it wishes to receive the media stream - The <transport> field shall be according to table 5.15.2 - The <format> field may be explicitly supplied by the MRFC, wildcarded or overspecified. If the MRFC wishes to request the MRFP to choose which media formats it wishes to use for the call then the MRFC shall provide a "\$" wildcard. If the MRFC wishes to suggest that the MRFP selects a media format from a list of possible media formats then it shall provide a list of appropriate media types in accordance with SDP. All conforming gateways shall support at least the default narrowband AMR codec as defined in 3GPP TS 26.235 [31]. Optionally, other codecs defined in 3GPP TS 26.235 [31] and format "8" for RTP/AVP (i.e. G.711 A-Law).</format></transport></port>
Dynamic payloads shall not be used when a static RTP/AVP payload value is defined in IETF RFC 3551 [21].

Bandwidth (b=)	"SDP_B "	The Bandwitdh (b=) line consists of 2 fields: b= <modifier>: <bandwidth-value></bandwidth-value></modifier>
		Bandwidth information shall be supplied by the MRFC if the required bandwidth cannot be immediately derived from the information contained in the m= line. If absent, the MRFP shall assume a reasonable default bandwidth value for well-known codecs and shall provide this value in the response sent to the MRFC. The Modifier field shall be set to "AS".
Time (t.)	"CDD T"	The Bandwidth Value field shall be set to the maximum bandwidth requirement of the media stream in kbit/s. The bandwidth value shall take into account all headers down to the IP layer, including a 5% bandwidth for RTCP packets.
Time (t=)	"SDP_T"	The time (t=) line consists of two fields: t= <start-time> <stop-time>.</stop-time></start-time>
		This line is ignored by both the MRFC and the MRFP if received in local and remote descriptors.
		The MRFC is not required to supply a time description but shall accept one.
		When supplied, this line shall be set to 0 0.
Attributes (a=)	"SDP_A "	Attributes (a=) lines consist of two fields: a= <attribute>: <value></value></attribute>
		One or more of the "a" attribute lines specified below may be included, depending on the payload type.
		An attribute line not specified below should not be used. Only the following attributes are understood by the MRFP. Other attributes are ignored.
		a= rtpmap: <payload type=""> <encoding name="">/<clock rate=""> [/<encoding parameters="">] a= fmtp:<format> <format parameters="" specific=""> a= ptime: <time> a= userid: <token identifier="" of="" user=""> (NOTE 3)</token></time></format></format></encoding></clock></encoding></payload>
		a= floorid: <token floor="" identifier="" of=""> (NOTE 3) a= path:MSRP-URI (NOTE 4) a= rtcp-fb: <> (NOTE 5)</token>
		a= extmap: <x> <cvo-urn> (NOTE 6) a= imageattr: <payload type=""> <> (NOTE 7)</payload></cvo-urn></x>
		a= sctp-port: <port> (NOTE 8)</port>
		a= max-message-size: <value> (NOTE 8) a= dcmap:< dcmap-stream-id> < subprotocol-opt> (NOTE 9) a= fingerprint: <certificate fingerprint=""> (NOTE 10)</certificate></value>
		ICE support The attributes "a=candidate", "a=ice-pwd", and "a=ice-ufrag" (see IETF RFC 5245 [48]) may be provided for an SDP m- line in the local and remote descriptor if the MRFP supports
		ICE, see also 3GPP TS 24.229 [49]. In the local descriptor, the MRFC shall provide "a=ice-pwd", and "a=ice-ufrag" with wildcard sign "\$" to request the allocation of a password and user name fragment, and the "a=candidate" of type "host"
		with the transport, port and priority parameters with wildcard sign "\$" to request the allocation of a host candidate. The MRFP shall then reply with completed "a=ice-pwd", and
		"a=ice-ufrag" and "a=candidate" attributes in the local descriptor, and shall include "a=ice-lite" if it only supports ICE lite. In the remote descriptor, the MRFC may provide the "a=candidate", "a=ice-pwd", and "a=ice-ufrag".
NOTE 1: The "application	un" modia is used to describe H	248 stream for a RECP stream or H 248 stream for an

NOTE 1: The "application" media is used to describe H.248 stream for a BFCP stream or H.248 stream for an UDP/DTLS/SCTP stream to be created for a CLUE data channel in telepresence using IMS as specified in 3GPP TS 24.103 [60]. The way to generate an "m" line for a BFCP stream follows the format specified in IETF RFC 4583 [32], where the port is always a TCP port, the transport field is "TCP/TLS/BFCP" if IMS

media plane security is applied or otherwise "TCP/BFCP", the fmt (format) list is ignored. When a CLUE data channel is created, the "m" line for a UDP/DTLS/SCTP stream follows the format specified in IETF draft-ietf-mmusic-sctp-sdp [61] and IETF draft-ietf-mmusic-data-channel-sdpneg [62], where the transport field is "UDP/DTLS/SCTP", the fmt (format) indicates the usage of the SCTP association as "webrtc-datachannel".

- NOTE 2: Void
- NOTE 3: The "userid" and "floorid" are SDP media-level attributes. They are used in BFCP 'm' lines. The "floorid" defines a list of Floor identifiers, indicating the available Floor(s) for the user represented by the termination. The token representing the Floor identifier is the integer representation of the Floor ID. The "userid" attributes carry the integer representation of a user ID.
- NOTE 4: An MSRP-URÍ is an "msrp" or "msrps" URI defined as "MSRP-URI = msrp-scheme "://" authority ["/" session-id] ";" transport *(";" URI-parameter)". The authority component contains a numeric IP address and port. The session-id part identifies a particular session of the participant allowing multiple sessions to share the same TCP connection.
- NOTE 5: For AVPF transport, the "rtcp-fb" SDP attribute defined in IETF RFC 4585 [40] may be used to provide the feedback message types the MRFP is allowed to send and to indicate RTCP timing information. The support is optional and dependent on RTCP-fb support as described in 3GPP TS 26.114 [41]. The list of feedback messages supported by the MRFP is preconfigured in the MRFC. The "rtcp-fb SDP shall be sent from MRFC when applicable.
- NOTE 6: Support of the RTP header extension to signal CVO is optional. The attribute "a=extmap" (see IETF RFC 5285 [45]) may be provided for an m-line in the local and remote descriptor. CVO-URN is "urn:3gpp:video-orientation" for a 2 bit granularity of rotation or "urn:3gpp:video-orientation:6" for a higher granularity of rotation as specified in 3GPP TS 26.114 [41] and "x" represents the local identifier of the RTP header extension element as specified in IETF RFC 5285 [45] and is any number in a range [1 14].
- NOTE 7: The support of the generic image attribute to negotiate the image size is optional. The attribute "a=imageattr" (see IETF RFC 6236 [46]) may be provided for an m-line in the local and remote descriptor if the MRFP supports the generic image attributes, see also 3GPP TS 26.114 [41]. The local descriptor indicates the image sizes which the MRFP supports in the receiving direction for the selected payload type and corresponds to the "recv" keyword (see IETF RFC 6236 [46]) in the "a=imageattr" that the MRFC will send within the SDP body on the Mr interface. The remote descriptor indicates the image sizes which the MRFP supports in the sending direction for the selected payload type and corresponds to the "send" keyword (see IETF RFC 6236 [46]) in the "a=imageattr" that the MRFC will send within the SDP body on the Mr interface.
- NOTE 8: The support of the "a=sctp-port" attribute to indicate the actual SCTP port is used only when the transport field of 'm' line is "UDP/DTLS/SCTP". The SDP "a=max-message-size" attribute may be used to indicate the maximum message size that an SCTP endpoint is willing to receive on the SCTP association associated with the 'm' line.
- NOTE 9: The support of the dcmap attribute to realize the CLUE data channel is used only when the transport field of 'm' line is "UDP/DTLS/SCTP", where the dcmap-stream-id field indicates the actual SCTP stream, and the subprotocol field indicates the protocol "CLUE".
- NOTE 10: The attribute "a=fingerprint" (see IETF RFC 4572 [64]) shall be provided for an "m=" line in the local and remote descriptor if the MRFC requests the MRFP to establish the CLUE data channel.

Table 5.15.2: Transport Protocol

Transport Protocol <proto> in m-line:</proto>	If the MG does not support the requested transport protocol, it shall reject
	the command with error code 449.
RTP/AVP	RTP profile according IETF RFC 3551 [21]. For voice and video services
RTP/AVPF	Extended RTP profile for RTCP-based Feedback (RTP/AVPF) according
	IETF RFC 4585 [40]. For voice and video services (NOTE 1).
TCP/BFCP	For floor control service, see IETF RFC 4583 [32]. (NOTE 1)
TCP/MSRP	For message service, see IETF RFC 4975 [34]. (NOTE 1)
TCP/TLS/BFCP	For floor control service with IMS media plane security, see
	IETF RFC 4583 [32]). (NOTE 1)
TCP/TLS/MSRP	For message service with IMS media plane security, see
	IETF RFC 4975 [34]). (NOTE 1)
UDP/DTLS/SCTP	Data channel support using IETF draft-ietf-mmusic-sctp-sdp [61] and
	IETF draft-ietf-mmusic-data-channel-sdpneg [62].
NOTE 1: support optional.	
NOTE 2: Upper case TCP is defined by IE	TF RFC 4145 [39] and registered by IANA.

5.16 Optional support of SDP and Annex C information elements

Specifies what SDP attributes and Annex C information elements may be supported.

Table 5.16.1:

Optional Annex C and SDP information elements:			
Information Element	Annex C Support	SDP Support	Support Dependent on:
<name></name>	<annex c="" property=""></annex>	<describe></describe>	<describe></describe>

5.17 Procedures

5.17.1 Formats and Codes

Table 5.17.1.1 shows the parameters which are required for the procedures defined in the following clauses.

The coding rules applied in ITU-T Recommendation H.248.1 [3] for the applicable coding technique shall be followed for the UMTS capability set.

The binary encoding rules which are applicable to the defined Abstract Syntaxes are the Basic Encoding Rules for Abstract Syntax Notation One, defined in ITU-T Recommendation X.690 [41]. Specifically in accordance with ITU-T Recommendation X.690 [41] section 7.3, alternative encodings based on the definite and indefinite form of length are permitted by the basic encoding rules as a sender's option. Receivers shall support both alternatives.

Unsupported values of parameters or properties may be reported by the MGW and shall be supported by the MSC as such by using H.248.1 error code #449 "Unsupported or Unknown Parameter or Property Value". The unsupported or unknown value is included in the error text in the error descriptor.

Table 5.17.1.1: Information Elements Used in Procedures

Signalling Object	H.248 Descriptor	Coding
Allowed RTCP APP	Remote Descriptor	The "a=3gpp_mtsi_app_adapt" SDP attribute defined in
message types		3GPP TS 26.114 [41].
Announcement Cause	Events ObservedEvents	The "Meth" parameter in g/sc event per ITU-T Recommendation H.248.1 [3] Annex E.1.2
Announcement	Events	The g/sc event per ITU-T Recommendation H.248.1 [3] Annex E.1.2
Completed	ObservedEvents	TI
Announcement Cycles	Signal	The "noc" parameter as per ITU-T Recommendation H.248.7 [5], Clause 4.3.1
Announcement Direction	Signal	The "di" parameter as per ITU-T Recommendation H.248.7 [5], Clause 4.3.1
Announcement Variant	Signal	The "av" parameter as per ITU-T Recommendation H.248.7 [5], Clause 4.3.1
ASR Cause	Events ObservedEvents	The "rc" parameter in asr/asrfail event as per ITU-T Recommendation H.248.9a1 [26] Clause 12.2.1.
Cause	Events	Encoded as "Meth" parameter in g/sc event per ITU-T
Cartificata Fingarorint	ObservedEvents	Recommendation H.248.1 [3] Annex E.1.2 The "a=fingerprint" SDP attribute as defined in IETF RFC 4572 [64],
Certificate Fingerprint	Local Descriptor or Remote Descriptor	see table 5.15.1.
CLUE Message Send	Signal	Defined as the " <i>mcbalg/sblm</i> " signal with the application protocol indicating "CLUE" in ITU-T Recommendation H.248.78 [65].
CLUE Message Received	Events ObservedEvents	Defined according to <i>Detect Bearer Level Message</i> event with the application protocol indicating "CLUE" in ITU-T Recommendation H.248.78 [65].
Codec List	Local Descriptor or Remote Descriptor	<fmt list=""> in a single SDP m-line. For a static RTP payload type, the codec type should be implied by the RTP payload type, if not then each codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s). For a dynamic RTP payload type, for each codec information on the codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s).</fmt>
ConfID	ContextAttribute Descriptor	The "fconfid" parameter as per ITU-T Recommendation H.248.19a2 [33], Clause 10.6.1.1.It is defined as type integer as used over BFCP.
Context ID	NA	Binary Encoding: As per ITU-T Recommendation H.248.1 [3] Annex A. Textual Encoding: As per ITU-T Recommendation H.248.1 [3] Annex B.
ControlledByChair	TerminationState Descriptor	List of Floor Ids controlled by this termination as a chair, specified by "cfi" as defined in Clause 10.1.1.2 of H.248.19a2 [33].
Diffserv Code Point	Local Control	Defined according to the <i>Differentiated Services Code Point</i> property in ITU-T Recommendation H.248.52 [43].
Digit	Observed Events	Encoding as per ITU-T Recommendation H.248.1 Annex E.6.2. Digits are reported individually by the MRFP.
DTMFTrigger	Signal Descriptor	"endinputkey, eik" see H.248.9a1 [26] Clause 16.3.1.1.16.
ECN Enabled	Local Descriptor or	Defined according to the "ECN Enabled" property in ITU-T
ECN Failure	Remote Descriptor Events,	Recommendation H.248.82 [44]. Defined according to the "ECN Failure" Event in ITU-T
	Observed Events	Recommendation H.248.82 [44].
ECN Failure Type	ObservedEvents Descriptor	As for the ObservedEventsDescriptor Parameter "Failure Type" in ITU-T Recommendation H.248.82 [44].
ECN Initiation Method	Local Descriptor or	Defined according to "Initiation Method" property in ITU-T
End of Recording Notification	Remote Descriptor Events ObservedEvents	Recommendation H.248.82 [44]. Enables the MRFC to be informed of the end of a recording. Corresponds to aasrec/audfail (mrp/audfail) and aasrec/precsucc, (mrp/precsucc) events see ITU-T Recommendation H.248.9a1 [26] 12.2.
Establish TCP Connection	Signals	Defined according to the Establish BNC signal (tcpbcc/EstBNC) in ITU-T Recommendation H.248.89 [54].
Establish (D)TLS session	Signals	Defined according to the Establish BNC signal (tlsbsc/EstBNC) in ITU-T Recommendation H.248.90 [55] and for DTLS usage in ITU-T Recommendation H.248.93 [63].
Extended Header for	Local Descriptor or	"extmap" attribute in SDP a-line as defined in IETF RFC 5285 [45],

	1	
CVO	Remote Descriptor	see table 5.15.1.
FloorControlAlgorithm	Context Attrribute (NOTE 1)	Sub-list of (Floorid, Algorithm). "fca" as defined in Clause 10.4.1.2 of H.248.19a2[33].
FloorID	Local Descriptor	"a= floorid" SDP line as specified in Table 5.15.1.
FloorRequestResult	Signal Descriptor	The "res" parameter as per ITU-T Recommendation H.248.19a2
		[33], Clause 10.5.3.1.1.2. It is defined as Boolean (success or fail)
FloorResAssociations	Context Attribute	The "fsa" parameter as per ITU-T Recommendation H.248.19a2
	(NOTE 1)	[33], Clause 10.6.1.2. It is defined as sub-list of (Floorid, StreamID).
FloorStatus	Observed Events	"Floor Status, fs" as defined in H.248.19 a2 [33].
		This is a list of Floorlds and status (e.g. granted, revoked)
Generic Image Attribute	Local Descriptor or	"imageattr" attribute in SDP a-line as defined in IETF RFC 6236 [46],
	Remote Descriptor	see table 5.15.1.
ICE host candidate	Local Descriptor	The "a=candidate" SDP attribute defined in IETF RFC 5245 [48] of
request		type "host" with the transport, port and priority parameters with
		wildcard sign "\$" to request the allocation of a host candidate
ICE host candidate	Local Descriptor	The "a=candidate" SDP attribute defined in IETF RFC 5245 [48]
ICE lite indication	Local Descriptor	The "a=ice-lite" SDP attribute defined in IETF RFC 5245 [48].
ICE password request	Local Descriptor	The "a=ice-pwd" SDP attribute defined in IETF RFC 5245 [48] with wildcard sign "\$".
ICE password	Local Descriptor	The "a=ice-pwd" SDP attribute defined in IETF RFC 5245 [48].
ICE received candidate	Remote Descriptor	The "a=candidate" SDP attribute defined in IETF RFC 5245 [48]
ICE received password	Remote Descriptor	The "a=ice-pwd" SDP attribute defined in IETF RFC 5245 [48].
ICE received Ufrag	Remote Descriptor	The "a=ice-ufrag" SDP attribute defined in IETF RFC 5245 [48].
ICE Ufrag request	Local Descriptor	The "a=ice-ufrag" SDP attribute defined in IETF RFC 5245 [48] with
		wildcard sign "\$".
ICE Ufrag	Local Descriptor	The "a=ice-ufrag" SDP attribute defined in IETF RFC 5245 [48].
ICE Connectivity Check	Events,	Defined according to Connectivity Check Result event in ITU-T
Result	Observed Events	Recommendation H.248.50 [47].
ICE Send Connectivity	Signals	Defined as the ostuncc/scc signal in ITU-T Recommendation
Check		H.248.50 [47].
ICE New Peer Reflexive	Events,	Defined according to New Peer Reflexive Candidate event in ITU-T
Candidate	Observed Events	Recommendation H.248.50 [47].
ICE Send Additional	Signals	Defined as the ostuncc/sacc signal in ITU-T Recommendation
Connectivity Check		H.248.50 [47].
IncMessageFilters	LocalControl	"Incoming Message Filters, imf" parameter in H.248.69 [35] Clause
	Descriptor	13.1.1, which is defined as string and complies with Sieve [IETF
		RFC5228] with the exceptions described in H.248.69 [35] Clause
		13.6.
IP Address	Local Descriptor or	<pre><connection address=""> in SDP "c-line"</connection></pre>
	Remote Descriptor	
Iterations	Signal	" Iterations, it" parameter in H.248.9a1 [26] Clause 13.3.1.1.3 or
	0 (Clause 13.3.2.1.3
MaxFloorHolder	Context Attribute	Sub-list of (FloorID, Number). "mfu" as defined in Clause 10.4.1.2 of
Marrian D 17	(NOTE 1)	H.248.19a2 [33]
Maximum Record Time	Signal	"Record Length Timer, rlt" parameter in H.248.9a1 [26] Clause
		16.3.1.1.8 for multimedia recording or Clause 10.3.1.1.8 for audio
		recording
Modia Idayiti	Cimal	TDD
Media Identifier	Signal	TBD
Mediatype	Local Descriptor or	<pre><media> in sdp m-line "audia" for value carries and "image" for T 39 caption</media></pre>
ManagagagagtagtTug	Remote Descriptor	"audio" for voice service, and "image" for T.38 service.
MessageContentType		TBD as enumeration to indicate the content type of message. (e.g.
Managan		video, audio)
MessageContentFmt		TBD as enumeration to indicate the content format (e.g. mpeg, jpeg
Moocogoldantitian	Cianal	for picture)
Messageldentifier	Signal	"mcr" parameter in the mess/sm signal in H.248.69 [35] Clause
		10.3.1.1.2, which is defined as URI that points to the message data
Massaga Play Popult Popus	Signal	that shall be sent. "fr" or 'sr' parameter in the mess/sm signal in H.248.69 [35], which is
MessagePlayResultRepor	Signal	defined as Enumeration to indicate the request of report result of
		message play (Success Report, Failure Report, Both or None)
MessagePlayCause	ObservedEvents	"sc" parameter in the mess/msrs event in H.248.69 [35] Clause
wiessayer iayCause	ObservedEverits	10.2.1.2.2, which is defined as Enumeration to notify the result of
		the message play.
MessageRecordFileIdentif	Signal	"sl" parameter in the recmess/rm signal in H.248.69 [35] Clause
ier	Signal	15.3.1.1.1, which is defined as a URI where the messages are to be
1.01		stored.
•	Î	

_	T	
MessagesReceivedNumQ uota	Events	"mrq" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.2, which is defined as integer to define the quota for number of messages that may be received on the termination for the messaging Stream.
MessagesReceivedVolQu ota	Events	"mrv" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.4, which is defined as integer to define the quota for cumulative total size of messages that may be received on the Termination for the messaging Stream.
MessagesreceivedNum	ObservedEvents Statistics	"nmr" parameter in the msrpstat/mquota event or statistics in H.248.69 [35], which is defined as integer to define the number of messages that have been received on the termination for the messaging Stream.
MessagesReceivedVol	ObservedEvents Statistics	"vmr" parameter in the msrpstat/mquota event or statistics in H.248.69 [35], which is defined as integer to define the cumulative total size of messages that have been received on the Termination for the messaging Stream.
MessagesSentNumQuota	Events	"msq" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.1, which is defined as integer to define the quota for number of messages that may be sent from the termination for the messaging Stream.
MessagesSentVolQuota	Events	"msv" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.1.3, which is defined as integer to define the quota for cumulative total size of messages that may be sent from the Termination for the messaging Stream.
MessagesSentNum	ObservedEvents Statistics	"nms" parameter in the msrpstat/mquota event or or statistics in H.248.69 [35], which is defined as integer to define the number of messages that have been sent from the termination for the messaging Stream.
MessagesSentVol	ObservedEvents Statistics	"vms" parameter in the msrpstat/mquota event or statistics in H.248.69 [35], which is defined as integer to define the cumulative total size of messages that may be sent from the Termination for the messaging Stream.
MSRP session identity	Local Descriptor or Remote Descriptor	<pre><session-id> in SDP 'a= path:MSRP-URI'-line.</session-id></pre>
Notify TCP Connection Establishment Failure Event	ObservedEvents	As for the ObservedEvent Parameter in subclause E.1.2 of ITU-T Recommendation H.248.1 [3] "General cause".
Notify (D)TLS session establishment Failure Event	ObservedEvents	As for the ObservedEvent Parameter in subclause E.1.2 of ITU-T Recommendation H.248.1 [3] "General cause".
OutMessageFilters	LocalControl Descriptor	"Outgoing Message Filters, omf" parameter in H.248.69 [35] Clause 13.1.3, which is defined as string and complies with Sieve [IETF RFC5228] with the exceptions described in H.248.69 [35] Clause 13.6.
Port	Local Descriptor or Remote Descriptor	<port> in SDP m-line.</port>
Pre-Shared Key	LocalControl Descriptor	Traffic-Encrypting Key (TEK) associated with the Crypto Session (CS) as defined in IETF RFC 6043 [56] and Annex H of 3GPP TS 33.328 [57] that will be used in TLS handshake. (NOTE 2)
Priority Information	NA	Priority Indicator (subclause 6.1.1 of ITU-T Recommendation H.248.1 [3]) Binary Encoding: Encoding as per ITU-T Recommendation H.248.1 [3] Annex A "priority" context attribute Textual Encoding: Encoding as per ITU-T Recommendation H.248.1 [3] Annex B "priority" context attribute
Recognition Result	ObservedEvents	"asrr" parameter to "asrsucc" event in H.248.9a1 [26] Clause 12.2.2.2.1. Each result may be able to be structured by multiple parts in time sequence with the input time, may be able to include the text token that the value will correspond to tokens as defined by the SRGS grammar, may be able to include the interpretation of application specific markup, may be able to include the confidence score that represents the recognition quality.
Record File Format	Signal	To Be Defined
Record File Identifier	Signal	"rid" parameter in playrec signal H.248.9a1 [26] Clause 16.3.1.1.9 for multimedia recording or Clause 10.3.1.1.9 for audio recording
Release TCP Connection	Signals	Defined according to the Release BNC signal (tcpbcc/RelBNC) in ITU-T Recommendation H.248.89 [54].

Release TLS session	Signals	Defined according to the Release BNC signal (tlsbsc/RelBNC) in
Telease TEO 3e33lol1	Olgridis	ITU-T Recommendation H.248.90 [55].
Reserve_Value	Local Control	ITU-T Recommendation H.248.1 [3] Mode property.
		Binary Encoding: Encoding as per ITU-T Recommendation H.248.1
		Annex A "reserveValue"
		Textual Encoding: Encoding as per ITU-T Recommendation H.248.1 Annex B "reservedValueMode".
RtcpbwRS	Local Descriptor or	<pre>chandwidth> in SDP "b:RS"-line.</pre>
1.1.000	Remote Descriptor	Sanaman meet sine me.
RtcpbwRR	Local Descriptor or	<bandwidth> in SDP "b:RR"-line.</bandwidth>
	Remote Descriptor	
RTPpayload	Local Descriptor or	<fmt list=""> in SDP m-line</fmt>
SCTP Max Message Size	Remote Descriptor	The "e may manage size" CDD ethibute so defined in IETE droft
SCIP Wax Wessage Size	Local Descriptor or Remote Descriptor	The "a=max-message-size" SDP attribute as defined in IETF draft-ietf-mmusic-sctp-sdp [61], see table 5.15.1.
SCTP Port	Local Descriptor or	The "a=sctp-port" SDP attribute as defined in IETF draft-ietf-mmusic-
	Remote Descriptor	sctp-sdp [61], see table 5.15.1.
SCTP Stream ID	Local Descriptor or	<dcmap-stream-id> in SDP "a=dcmap" line as defined in IETF draft-</dcmap-stream-id>
	Remote Descriptor	ietf-mmusic-data-channel-sdpneg [62], see table 5.15.1.
SCTP Subprotocol	Local Descriptor or	<subprotocol-opt> in SDP "a=dcmap" line as defined in IETF draft-</subprotocol-opt>
SenderAddr	Remote Descriptor	ietf-mmusic-data-channel-sdpneg [62], see table 5.15.1.
SRGS Grammar	Signal	grammar file, gf" parameter in asr/asr signal in H.248.9a1 [26]
Orco Grammar	Olgilai	Clause 12.3.1.1.2
SRGS grammar URI	Signal	" Recognition grammar identifier, rgid" parameter in asr/ asrid signal
-		in H.248.9a1 [26] Clause 12.3.2.1.2
SSML	Signal	"an" parameter in the aastts/play signal in H.248.9a1 [26] Clause
CtatDanDagaan	ObservedEvents	14.3.1.1.1
StatRepReason	ObservedEvents	"qreach" parameter in the msrpstat/mquota event in H.248.69 [35] Clause 8.2.1.2.1, which is defined as enumeration to indicate the
		quota that has triggered the reporting of the event.
StatValTime	Events	"tm" parameter in the msrpstat/mquota event in H.248.69 [35]
		Clause 8.2.1.1.5, which is defined as integer to define how long for
	0.	the quotas associated are active for.
Stream Number	Stream	Encoding as per ITU-T Recommendation H.248.1 Annex B "Stream"/"ST".
		For a single stream, this may be omitted by the MRFC.
STUN server request	LocalControl	Encoding as per ITU-T Recommendation H.248.50 [47] "MG Act-as
		STUN Server" (mgastuns) package "Act-as STUN Server" (astuns,
		0x0001) property.
Termination heartbeat	Events	The hangterm/thb event as per ITU-T Recommendation H.248.36
Townsingstion ID	ObservedEvents	[30] Clause 5.2.1. Binary Encoding: As per ITU-T Recommendation H.248.1 [3] Annex
Termination ID	NA	Binary Encoding: As per 110-1 Recommendation H.248.1 [3] Annex A.
		Textual Encoding: As per ITU-T Recommendation H.248.1 [3]
		Annex B.
Timing	Events	As in dd package H.248.1 [3] Annex E.6.2, (end tone detected shall
		be used)
Tone Completed	Events	"g/sc" see H.248.1 [3] Annex E.1.2
Tone Duration	ObservedEvents Signal	As in the respective tone package
Tone Identity	Signal	Encoding as per ITU-T Recommendation H.248.1 Annex B and the
Tone identity	Gigilai	package which defines the tone (Tone Signal Ids only).
Transaction ID	NA	Binary Encoding: As per ITU-T Recommendation H.248.1 [3] Annex
		A
		Textual Encoding: As per ITU-T Recommendation H.248.1 [3]
TTS Completed	Events	Annex B. "g/sc" see H.248.1 [3] Annex E.1.2 if successful, aastts/ttsfail
1 13 Completed	ObservedEvents	H.248.9a1 [26] Clause 14.2.1 if not successful.
Transport	Local Descriptor or	<pre><td< td=""></td<></pre>
·	Remote Descriptor	
UserID	Local Descriptor	"a= userid" SDP line as specified in Table 5.15.1.
NOTE 1: H.248.1 version	3 required.	

NOTE 1: H.248.1 version 3 required.

NOTE 2: Pre-Shared Key information element needs to be specified in ITU-T Recommendation H.248.90 [55].

5.17.2 Call Related Procedures

5.17.2.1 General

This section describes the various call related procedures performed by the MRFP, which are listed in table 15.17.2.1.

Table 5.17.2.1.1: MRFP Call Related Procedures

Transaction defined in 3GPP TS 23.333 [25]	Transaction used from TS 29.163 [27]	Supported	Comment
Reserve IMS Resources	Reserve IMS Connection point	Mandatory	See 5.17.2.2
Configure IMS Resources	Configure IMS Resources	Mandatory	See 5.17.2.3
Reserve and Configure IMS	Reserve IMS Connection	Mandatory	See 5.17.2.4
Resources	Point and configure remote resources		
Release IMS termination	Release IMS termination	Mandatory	See 5.17.2.5
Detect DTMF	Detect IMS RTP Tel Event	Optional	See 5.17.2.18
Stop DTMF Detection	End IMS RTP Tel Event	Optional	See 5.17.2.20
Report DTMF	Notify IMS RTP Tel Event	Optional	See 5.17.2.19
Start Playing Multimedia	n.a for re-use	Optional	See 5.17.2.24
Stop Playing Multimedia	n.a for re-use	Optional	See 5.17.2.25
Playing Multimedia Completed	n.a for re-use	Optional	See 5.17.2.26
Send Tone	n.a for re-use	Optional	See 5.17.2. 6
Stop Tone	IMS Stop Tone	Optional	See 5.17.2.7
Tone Completed	IMS Tone Completed	Optional	See 5.17.2.8
Start Announcement	n.a for re-use	Optional	See 5.17.2.9
Stop Announcement	Stop Announcement	Optional	See 5.17.2.10

5.17.2.18 Detect DTMF

This procedure is used to collect DTMF digits.

The MRFP applies the procedures defined in RFC 4733 [22] to receive DTMF digits at the user plane, however only complete single digits shall be reported, i.e. the MRFP shall wait until E-bit is set to 1 before reporting the digit to the MRFC.

The MRFC sends an ADD or MODIFY command as in Table 5.17.2.18.1.

Table 5.17.2.18.1: Detect DTMF

	Transaction ID = x Context ID = C1 Termination ID = T1	

5.17.2.21 ASR Request

This procedure enables the MRFC to request the MRFP to perform automatic speech recognition; an advanced interaction with the user involving guidance announcements and collection of user input via speech and also possibly DTMF. In turn, the MRFP attempts to recognize and match the detected speech to the specified grammar file and report this to the MRFC.

The MRFC sends an ADD or MODIFY command as in table 5.17.2.21.1.

Table 5.17.2.21.1: ASR request

5.17.2.25 Stop Playing Multimedia

This procedure is used to stop an announcement. This procedure is the same as the procedure Start Playing Multimedia however the signal descriptor shall not include the started multimedia signal. Note that playing multimedia may also be stopped by releasing the IMS termination.

5.17.2.26 Playing Multimedia Completed

This procedure is used to report that a playing multimedia has ended.

The MRFP sends a NOTIFY to the MRFC as shown in table 5.17.2.26.1.

Table 5.17.2.26.1: Playing Multimedia Completed

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1 End Of Signal Notification = Playing Multimedia Completed Cause = Announcement Cause

	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.27 Start Multimedia Record

This procedure enables a caller to leave/record a multimedia message. This procedure is similar to that of Audio Record (5.17.2.15) with the difference that multiple H.248 streams will be used and both audio and video codecs are specified for each participant in the conference. Any prompting "announcements" are played out in the appropriate format by the MRFP based on the fact that multimedia codecs are specified by the MRFC in the Remote Descriptor. Similarly, the MRFP records all received media streams that are consistent with the Local Descriptor of the termination.

The MRFC sends an ADD or MODIFY command as in table 5.17.2.27.1.

Table 5.17.2.27.1 - Start Multimedia Record

	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.29 Multimedia Record Completed

This procedure enables the MRFP to inform the MRFC when multimedia recording is complete.

The MRFP sends a NOTIFY command as in table 5.17.2.29.1.

Table 5.17.2.29.1: Multimedia Record Completed

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	End Of Recording Notification	

The MRFC responds as shown in table 5.17.2.29.2.

Table 5.17.2.29.2: Multimedia Record Completed Acknowledge

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	

5.17.2.30 Adhoc Audio Conference

This includes support for N-party conferences plus the support of audio transcoding. In this case, up to N ephemeral terminations may be placed in a context and appropriate audio transcoding performed by the MRFP between any codec differences between the terminations. In terms of the media mixing, the MRFP mixes audio from terminations N-1, N-2 etc plays to termination N and so forth.

This procedure consists of the creation of the first ephemeral termination of a conference within a context using procedure "Reserve and Configure IMS Resources" and then subsequent parties are added using procedures "Reserve IMS Resources" and "Configure IMS Resources".

5.17.2.31 Multi-Media Conferencing

This is similar to audio conferencing (5.17.2.y) with the difference that multiple H.248 streams will be used and both audio and video codecs are specified for each participant in the conference. The MRFP shall only transcode and mix between streams of the same media type.

5.17.2.32 Termination heartbeat indication

When the procedure "Termination heartbeat indication" is required the following procedure is initiated: the MRFP sends a NOT.req command with the following information.

5.17.2.32.1 NOT.req (Termination heartbeat) MRFP to MRFC

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	Event_ID (Event ID = x, "termination heartbeat")	

When the processing of command is complete, the MRFC initiates the following procedure.

5.17.2.32.2 NOT.resp (Termination heartbeat) MRFC to MRFP

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

The heartbeat timer shall be configured to a value much greater than the mean call holding time.

The MRFC is in charge of correcting any detected mismatch, by substracting hanging terminations or clearing hanging contexts.

5.17.2.33 Configure BFCP Termination

This procedure configures a termination to support Binary Floor Control Protocol.

The MRFC sends an ADD or MODIFY command as in Table 5.17.2.33.1.

Table 5.17.2.33.1: Configure BFCP Termination MRFC to MRFP

Address Information	Control information	Bearer information	
Local Descriptor {	Transaction ID = x	Local Descriptor {

Table 5.17.2.34.2: Configure Conference Acknowledge MRFP to MRFC

Address Information	Control information	Bearer information
	Context ID = C1	

5.17.2.35 Designate Floor Chair

This procedure configures a termination to be Floor Chair support Binary Floor Control Protocol.

Pre-requisites:

- This procedure is dependent on "Configure Conference" procedure having been successfully completed or it may be combined in the same ADD command.
- This procedure is dependent on "Configure BFCP Termination" procedure having been successfully completed or it may be combined in the same command.

The MRFC sends an ADD or MODIFY command as in Table 5.17.2.35.1.

Table 5.17.2.35.1: Designate Floor Chair MRFC to MRFP

Address Information	Control information	Bearer information
	Transaction ID = x

Address Information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	

5.17.2.37 Report Floor Request Decision

This procedure indicates the decision made by the FCS in response to a BFCP Floor Request. The MRFP indicates the agreed Floor Permissions so that any required changes to the streams can be managed by the MRFC.

The MGW sends a NOT.req command with the following information.

Table 5.17.2.37.1: NOT.req (FloorRequestDecision) MRFP to MRFC

Address Information	Control information	Bearer information
	Transaction ID = z	
	Context ID = c1	
	Termination ID = bearer1

5.17.2.41 Stop Playing Message

This procedure is used to stop an announcement. This procedure is the same as the procedure Start Playing Message however the signal descriptor shall not include the started message signal. Note that playing message may also be stopped by releasing the IMS termination.

5.17.2.42 Playing Message Completed

This procedure is used to report that a playing message has ended.

The MRFP sends a NOTIFY to the MRFC as shown in table 5.17.2.aa+3.1.

Table 5.17.2.42.1: Playing Message Completed

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1 End Of Signal Notification = Playing Message Completed Cause = MessagePlayCause	

The MRFC responds as shown in Table 5.17.2.42.2.

Table 5.17.2.42.2: Playing Message Completed Ack

Address information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	

5.17.2.43 Start Message Record

This procedure enables a caller to leave/record a messaging message. This procedure is similar to that of Multimedia Record (5.17.2.27) with the difference that messaging H.248 stream will be used. Similarly, the MRFP records all received media streams that are consistent with the Local Descriptor of the termination.

The MRFC sends an ADD or MODIFY command as in table 5.17.2.43.1.

Table 5.17.2.43.1 - Start Message Record

Address information	Control information	Bearer information
	Transaction ID = x If context already exists: Context ID = C1 Else Context = \$ If Termination exists: Termination ID = T1 Else Termination ID = \$	
	If Stream Number specified: Stream Number If specific record file Recording File Identity = MessageRecordFileIdentifier Else Recording File Identity = ?	
	If maximum record time Maximum Recording Length = Maximum Record Time If override Signal Direction Direction = Signal Direction	
	If MRFC requires to be informed of the end of the recording :- End Of Recording Notification	

The MRFP responds as shown in table 5.17.2.43.2.

Table 5.17.2.43.2: Start Message Record acknowledge

Address information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	
	If local resources were provided in	
	request:	
	Stream Number	

5.17.2.44 Stop Message Record

This procedure is used to stop recording of message. Note that Message Record may also be stopped by releasing the IMS termination.

Table 5.17.2.44.1: Stop Message Record

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	
	Stop Multimedia Record Indication	
	If End of Multimedia Record Notification previously requested: Stop End of Record Notification	

The MRFP responds as shown in Table 5.17.2.44.2.

Table 5.17.2.44.2: Stop Message Record Response

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	

5.17.2.45 Message Record Completed

This procedure enables the MRFP to inform the MRFC when message recording is complete.

The MRFP sends a NOTIFY command as in table 5.17.2.bb+3.1.

Table 5.17.2.45.1: Message Record Completed

Address information	Control information	Bearer information
	Transaction ID = x	
	Context ID = C1	
	Termination ID = T1	
	End Of Recording Notification	

The MRFC responds as shown in table 5.17.2.45.2.

Table 5.17.2.45.2: Message Record Completed Acknowledge

Address information	Control information	Bearer information
	Transaction ID = x Context ID = C1 Termination ID = T1	

5.17.2.46 Configure Granted Quota

This procedure configures a termination of the granted quota to support message statistics.

The MRFC sends an ADD or MODIFY command as in Table 5.17.2.46.1.

Table 5.17.2.46.1: Configure Granted Quota MRFC to MRFP

Address Information	Control information	Bearer information
	Transaction ID = x	
	If context already exists:

5.17.3 Non-Call Related Procedures

5.17.3.1 General

This section describes the various non-call related procedures which are listed in table 5.17.3.1.1

Table 5.17.3.1.1: MRFP Non-Call Related Procedures

Transaction defined in 3GPP TS 23.333 [25]	Support	Comment
MRFP Out of service	Mandatory	5.17.3.2
MRFP Communication Up	Mandatory	5.17.3.3
MRFP Register	Mandatory	5.17.3.4
MRFP Re-register	Mandatory	5.17.3.5
MRFC Ordered Re-register	Mandatory	5.17.3.6
MRFC Restoration	Optional	5.17.3.7
MRFC Out of Service	Optional	5.17.3.8
Audit Value	Mandatory	5.17.3.9
Audit Capability	Optional	5.17.3.10
Capability Update	Optional	5.17.3.11
MRFP Resource Congestion Handling – Activate	Mandatory	5.17.3.12
MRFP Resource Congestion Handling – Indication	Mandatory	5.17.3.13
Command Rejected	Mandatory	5.17.3.14
		The "Command Rejected" procedure may be used in response both to call-related and non-call-related ITU-T Recommendation H.248 Commands
MRFP Restoration	Mandatory	5.17.3.15

5.17.3.2 MRFP Out Of Service

The MRFP sends a SERVICE CHANGE request command as in Table 5.17.3.2.1.

Table 5.17.3.2.1: MRFP Out Of Service Request

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = FORCED or	
	GRACEFUL	
	SC Reason = 905 Termination	
	Taken OOS or 908, MG Impending	
	Failure	

The MRFC responds as in table 5.17.3.2.2.

Table 5.17.3.2.2: MRFP Out Of Service Request Ack

Address Information	Control information	Bearer information
	Transaction ID = x

5.17.3.5 MRFC Restoration

When the MRFC has recovered, the MRFC sends a SERVICE CHANGE as in Table 5.17.3.5.1,

The MRFP may respond as in Table 5.17.3.5.2.

The MRFC sends a SERVICE CHANGE as in Table 5.17.3.5.1

Table 5.17.3.5.1: MRFC Restoration

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = RESTART	
	SC Reason = 901, Cold Boot OR	
	902, Warm Boot	

The MRFP responds as in table 5.17.3.5.2.

Table 5.17.3.5.2: MRFC Restoration Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

5.17.3.6 MRFP Re-Register

The MRFP sends a SERVICE CHANGE request command as in Table 5.17.3.6.1.

Table 5.17.3.6.1: Re-Registration

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = Handoff	
	SC Reason = 903, MGC Directed	
	Change	
	H248 Profile Identity	
	H248 Protocol Version	

The MRFC responds as in table 5.17.3.6.2.

Table 5.17.3.6.2: Re-Registration Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	
	H248 Protocol Version	
	If applicable:-	
	H248 Profile Identity	

5.17.3.7 MRFC Ordered Re-register

The MRFC sends a SERVICE CHANGE request command as in Table 5.17.3.7.1.

Table 5.17.3.7.1: MRFC Ordered Re-Register

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT	
	SC Method = HANDOFF	
	SC Reason = 903, MGC Directed	
	Change	

The MRFP responds as in table 5.17.3.7.2.

Table 5.17.3.7.2: MRFC Ordered Re-Register Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -	
	Termination ID = ROOT	

The MRFP then performs an MRFP Re-Register procedure according to Clause 5.17.3.6.

5.17.3.8 Audit Value

The MRFC sends an AUDIT VALUE request command as in Table 5.17.3.8.1.

Table 5.17.3.8.1: Audit Value

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -/ALL	
	Termination ID = ROOT/ALL/T1	
	Audit Packages (NOTE1)	
	Audit Descriptor =	
	Empty/IndAuditParameter:=	
	IndAudMediaDescriptor:=	
	streams	
	{	
	IndAudStreamParms:=	
	{	
	Stream Number,	
	IndAudStreamParms:=	
	IndAudLocalControlDescriptor:=	
	IndAudPropertyParm:=	
	mgcinfo	
	}	
	}	
NOTE 1: Packages is for Null/Root C	Combina.	

The MRFP responds as in table 5.17.3.8.2.

Table 5.17.3.8.2: Audit Value Ack

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID = -/Context ID	
	Termination ID = ROOT/T1	
	Packages List	
	mgcinfo	

Upon reception of the command in the MRFP:

- The Service State returns the current Service State

When Packages are requested, the Package Names and Versions are returned

The following table illustrates the allowed combinations that can be obtained with the AuditValue Command:

Table 15.17.3.8.3: Combinations of AuditValue Command

ContextID	TerminationID	Information Obtained
Specific	Wildcard	Audit of matching Terminations in a Context
Specific	Specific	Audit of a single Termination in a Context
Null	Root	Audit of Media Gateway state and events
All	Specific	(Non-null) ContextID in which the Termination currently exists

5.17.3.9 Audit Capabilities

The MRFC sends an AUDIT CAPABILITY request command as in Table 5.17.3.9.1.

Table 5.17.3.9.1: Audit Capability Request

Address Information	Control information	Bearer information
	Transaction ID = x	
	Context ID= -	
	Termination ID = ROOT

Annex A (normative): The W3C SSML Profile for TTS function

A.1 Introduction

This annex contains a profile to the W3C Speech Synthesis Markup Language (SSML) specification [28]. The SSML specification is a W3C Recommendation, and is designed to provide a rich, XML-based markup language for assisting the generation of synthetic speech in Web and other applications. The essential role of the markup language is to provide authors of synthesizable content a standard way to control aspects of speech such as pronunciation, volume, pitch, rate, etc. across different synthesis-capable platforms.

This annex provides a profile for SSML according to the stage 2 specification of the Mp interface. This profile is referenced by the advanced audio server base package for TTS enhancement.

A.2 TTS Profile

Table A.2.1: The profile of SSML

Element	Description	Support
or		
attribute		
speak	This is the root element that can contain text to be rendered	Mandatory.
	and the following elements: audio, break, emphasis,	
	lexicon, mark, meta, metadata, p, phoneme, say-as,	
	sub, s, voice	
xml:lang	This attribute defines the language that applied to the element,	Mandatory
	subelements and its attributes. The phoneme , emphasis ,	
	break , p , and s elements are language specific dependent	
xml:base	This attribute defines the base URI for resolving relative URI	Optional
	that may be used for the following elements:	
	- The optional src attribute of audio element	
	- The uri attribute of lexicon element	
lexicon	An SSML document may reference one or more external	Mandatory
	pronunciation documents, the lexicon element is used to	
	identified the URI of this external document.	
	A lexicon document contains pronunciation for tokens that can	
	appear in a text to be spoken. A lexicon element shall contain	
	an uri.	
meta and	The metadata and meta elements are containers in which	Optional
metadata	information about the document can be placed	

n and s	A n element represents a paragraph and s element represents	Optional
p and s	A p element represents a paragraph and s element represents a sentence. The use of p and s elements is optional. Where text occurs without an enclosing p or s element the <u>synthesis processor</u> should attempt to determine the structure using language-specific knowledge of the format of plain text. The p element can only contain text to be rendered and the following elements: <u>audio</u> , <u>break</u> , <u>emphasis</u> , <u>mark</u> , <u>phoneme</u> , <u>prosody</u> , <u>say-as</u> , <u>sub</u> , <u>s</u> , <u>voice</u> . The <u>s</u> element can only contain text to be rendered and the following elements: <u>audio</u> , <u>break</u> , <u>emphasis</u> , <u>mark</u> , <u>phoneme</u> , <u>prosody</u> , <u>say-as</u> , <u>sub</u> , <u>voice</u> .	Ориона
say-as	The <u>say-as</u> element allows the author to indicate information on the type of text construct contained within the element and to help specify the level of detail for rendering the contained text. For example for English when "\$200" appears in a document it may be spoken as "two hundred dollars", similarly, "1/2" may be spoken as "half", "one of two" Defining a comprehensive set of text format types is difficult because of the variety of languages that have to be considered and because of the innate flexibility of written languages. SSML only specifies the <u>say-as</u> element, its attributes, and their purpose. It does not enumerate the possible values for the attributes. The Working Group expects to produce a separate document that will define standard values and associated normative behavior for these values. The say-as element has three attributes: interpret-as, format and detail The say-as element can only contains text to be rendered	Optional
phoneme	The phoneme element provides a phonemic/phonetic pronunciation for the contained text. The ph attribute is a required attribute that specifies the phoneme/phone string. The alphabet attribute is an optional attribute that specifies the phonemic/phonetic alphabet. An alphabet in this context refers to a collection of symbols to represent the sounds of one or more human languages. The only valid values for this attribute are "ipa" (see the next paragraph) and vendor-defined strings of the form "x-organization" or "x-organization-alphabet". Example: <pre></pre>	Optional

sub	The <u>sub</u> element is employed to indicate that the text in the alias attribute value replaces the contained text for pronunciation. The required alias attribute specifies the string to be spoken instead of the enclosed string. The <u>sub</u> element can only contain text (no elements). Example:	Optional
	_{W3C}	
Voice	The voice element indicates the characteristics of the voice rendering. The voice element is commonly used to change the language The following attributes are used: - gender: male, female or neutral - age - variant: indicates a preferred variant of the other voice	Optional
	characteristics	
	- name indicates the processor-specific voice name	
emphasis	The emphasis element requests that the contained text be spoken with emphasis (also referred to as prominence or stress). the optional level attribute indicates the strength of emphasis to be applied. Defined values are "strong", "moderate", "none" and "reduced". The emphasis element can only contain text to be rendered and the following elements: audio, break, emphasis, mark, phoneme, prosody, say-as, sub, voice. The break element is an expert algorith that controls the	
break	The break element is an empty element that controls the pausing or other prosodic boundaries between words. The break element is most often used to override the typical automatic behaviour of a synthesis processor. The following attributes are used on the break element: - <a "medium",="" "strong",="" "weak"="" "x-strong".="" "x-weak",="" -="" <a="" a="" are="" between="" break="" breaks="" example,="" for="" href="Time" in="" indicates="" it="" much="" none",="" of="" or="" output.="" paragraphs="" prosodic="" sentence.="" speech="" strength="" stronger="" than="" the="" typically="" within="" words="">Time : the time attribute is an option attribute indicating the duration of a pause to be inserted in the output in seconds or milliseconds e.g. "250ms", "3s"	Optional

prosody	The prosody element permits control of the pitch, speaking rate and volume of the speech output, the optional attributes are: - pith : this attribute indicates the baseline pitch. legal value are: a number followed by "Hz", a relative change (+10Hz or +5st, a semitone is half of a tone on the standard diatonic scale), or a "x-low", "low", "medium", high", x-high", or "default". The exact meaning of baseline pitch may vary across synthesis processors - pitch contour : the pitch contour is a set of the form (time position,target), the first value is a percentage of the period of the contained text (a <u>number</u> followed by "%") and the second value is the value of the pitch attribute. e.g. (20%,"+10Hz) (40%, "+20Hz) means increase the pitch of 10Hz at 20% of the period of the contained text and 20Hz at 40% of the text duration Range : the pitch range although the exact meaning may vary across synthesis processor. The same value as for pitch are legal value from SSML Rate : change the speaking rate. Legal values are: a relative change or "x-slow", "slow", "medium", "fast", "x-fast" or "default" Duration : a value in seconds or milliseconds for the desired time to take to read the element contents Volume : the volume for the contained text in the range	Optional
	0.0 to 100.0. Legal values are: a number, a relative change or "silent", "x-soft", "soft", "medium", "loud", "x-loud", or "default".	
audio	The audio element supports the insertion of recorded audio files.	Optional
Mark	The mark element is an empty element that places a marker into the text/tag sequence that the environment will be informed to detect the corresponding position within the rendered output and may report an event when encountered. This element has a name attribute.	
Desc	The desc element can only occur within the content of the audio element. It describes the textual content of the audio source that may be used when text-only output is being produced by the synthesis processor.	Optional

Annex B (normative): The W3C SRGS Profile for ASR function

B.1 Introduction

This annex contains a profile to the W3C Speech Recognition Grammar Specification (SRGS) [29]. The SGRS are intended for use by speech recognizers and other grammar processors so that developers can specify the words and patterns of words to be listened for by a speech recognizer.

This annex provides a profile for SRGS according to the stage 2 specification of the Mp interface. This profile is referenced by the ASR Package.

B.2 SRGS Profile

Table B.2.1: The profile of SRGS

Declaration Item	Description	Support or not
Language	The language declaration of a grammar provides the <u>language identifier</u> that indicates the primary language contained by the document and optionally indicates a country or other variation. Additionally, any legal rule expansion may be <u>labeled with a language identifier</u> . The language declaration is required for all speech recognition grammars.	Mandatory
Mode	The mode of a grammar indicates the type of input that the user agent should be detecting. The default mode is "voice" for speech recognition grammars. An alternative input mode is "dtmf" input. For the Mp interface, only voice mode is supported.	Mandatory
Root rule	Both the XML Form and ABNF Form permit the grammar header to optionally declare a single rule to be the root rule of the grammar. The rule declared as the root rule must be defined within the scope of the grammar. The rule declared as the root rule may be scoped as either public or private .	Mandatory

Tag format	The tag-format declaration is an optional declaration of a tag-format identifier that indicates the content type of all rule tags and header tags contained within a grammar. The tag-format identifier is a URI. It is recommended that the tag format identifier indicate both the content type and a version. Tags typically contain content for a semantic interpretation processor and in such cases the identifier, if present, should indicate the semantic processor to use. Tag-format identifier values beginning with the string "semantics/x.y" (where x and y are digits) are reserved for use by the W3C Semantic Interpretation for Speech Recognition specification [SEM] or future versions of the specification.	Mandatory
Base URI	Relative URIs are resolved according to a base URI, which may come from a variety of sources. The base URI declaration allows authors to specify a document's base URI explicitly. The path information specified by the base URI declaration only affects URIs in the document where the element appears. The base URI declaration is permitted but optional in both the XML Form and the ABNF Form.	Optional
Pronounciation lexicon	A grammar may optionally reference one or more external pronunciation lexicon documents. A lexicon document is identified by a URI with an optional media type . The pronunciation information contained within a lexicon document is used only for tokens defined within the enclosing grammar. The W3C Voice Browser Working Group is developing the Pronunciation Lexicon Markup Language [LEX]. The specification will address the matching process between tokens and lexicon entries and the mechanism by which a speech recognizer handles multiple pronunciations from internal and grammar-specified lexicons. Pronunciation handling with proprietary lexicon formats will necessarily be specific to the speech recognizer. Pronunciation lexicons are necessarily language-specific. Pronunciation lookup in a lexicon and pronunciation inference for any token may use an algorithm that is language-specific. (See Section 2.1 for additional information on token handling and pronunciations.)	Mandatory
Metadata	Grammar documents let authors specify metadata — information about a document rather than document content — in a number of ways. A meta declaration in either the ABNF Form or XML Form may be used to express metadata information in both XML	Not Applicable

	Form and ABNF Form grammars or to reference metadata available in an external resource. The XML Form also supports a metadata element that provides a more general and powerful treatment of metadata information than meta. Since metadata requires an XML metadata schema which cannot be expressed in ABNF, there is no equivalent of metadata in the ABNF Form of grammars.	
Tag	A grammar may optionally specify one or more tag declarations in the header. The content of a tag in the header, just like a <u>tag</u> in <u>rule expansions</u> , is an arbitrary string which may be used for <u>semantic interpretation</u> .	Mandatory
