DECTTM, **PLUGTESTS**TM and **UMTS**TM are Trade Marks of ETSI registered for the benefit of its Members. **TIPHON**TM and the **TIPHON logo** are Trade Marks currently being registered by ETSI for the benefit of its Members. **3GPP**TM is a Trade Mark of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners.

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document contains an electronic copy of the ANSI-C code for the Floating-point Enhanced aacPlus codec [1].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.
- [1] 3GPP TS 26.401: "Enhanced aacPlus general audio codec; General Description". [2] 3GPP TS 26.403: "Enhanced aacPlus general audio codec; Encoder Specification AAC part". 3GPP TS 26.404: "Enhanced aacPlus general audio codec; Encoder Specification SBR part". 3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TS 26.401 [1], TS 26.403 [2], TS 26.404 [3], TS 26.405 [4] and TS 26.402 [9] apply.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AAC Advanced Audio Coding

aacPlus Combination of MPEG-4 AAC and MPEG-4 Bandwidth extension (SBR)

Enhanced aacPlus Combination of MPEG-4 AAC, MPEG-4 Bandwidth extension (SBR) and MPEG-4

Parametric Stereo

MDCT Modified Discrete Cosine Transform

QMF Quadrature Mirror Filter SBR Spectral Band Replication

ANSI	American National Standards Institute
GSM	Global System for Mobile communications

I/O Input/Output

RAM Random Access Memory ROM Read Only Memory

4 Floating point ANSI-C code structure

This clause gives an overview of the structure of the floating point ANSI-C code and provides an overview of the contents and organization of the C code attached to the present document.

The C code has been verified on the following systems:

- IBM PC/AT compatible computers with Windows XP, 2000 and Microsoft Visual C++ v.6.0 compiler.
- IBM PC/AT compatible computers with Linux OS and GCC v.3.3 compiler.

ANSI-C was selected as the programming language because portability was desirable.

4.1 Contents of the floating point ANSI-C source code

The C code distribution is organised in two directories for encoder and decoder and further into several subdirectories, reflecting the major building blocks of the Enhanced aacPlus codec. The file descriptions on root level as well as the directory structure is given as follows:

Table 1: Source code directory structure for the encoder (FloatFR_aacPlusenc)

Directory	Description		
README.txt	information on how to compile		
Makefile	UNIX style encoder Makefile		
FloatFR_aacPlusEnc.dsw	Win32 MSVC 6.0 encoder workspace		
FloatFR_aacPlusEnc.dsp	Win32 MSVC 6.0 encoder makefile		
src/	directory for the encoder frontend		
FloatFR_fastaacenc/	AAC encoder library		
FloatFR_resamplib/	resampler library		
FloatFR_sbrenclib/	SBR encoder library		

Table 2: Source code directory structure for the decoder (FloatFR_aacPlusdec)

Directory	Description		
README.txt	information on how to compile		
Makefile	UNIX style encoder Makefile		
FloatFR_aacPlusdec_mp eg4.dsw	Win32 MSVC 6.0 decoder workspace		
FloatFR_aacPlusdec_mp eg4.dsp	Win32 MSVC 6.0 decodec makefile		
src/	directory for the decoder frontend		
FloatFR_aacdec	AAC decoder library		
FloatFR_sbrdeclib/	SBR decoder library		

Table 3: Source code directory structure common for encoder and decoder

Directory	Description		
FloatFR_bitbuflib/	bitstream reading/writing library		
FloatFRlib/	general purpose functionalities		
lib/	precompiled libraries for audio and bitstream		
	file format handling		

The distributed files with suffix "c" contain the source code and the files with suffix "h" are the header files. Within the respective libraries, the RAM data is contained in "xxx_ram" files with suffix "c", the ROM data is contained in "xxx_rom" files with suffix "c". Makefiles are provided for the platforms in which the C code has been verified (listed above).

Note that the FloatFRlib/, FloatFR_bitbuflib/ and lib/ directory are identical for encoder and decoder. A list of source code files with the respective lines of code (pure C instructions) is given below:

Table 4: Encoder source code files and lines of code

	transcendent.c	15

4.2 Program execution

The Enhanced aacPlus codec is implemented in two programs:

- enhAacPlusEnc.exe
- enhAacPlusDec.exe

The programs should be called like:

- enhAacPlusEnc.exe <wav_file> <bitstream_file> <bitrate> <(m)ono/(s)tereo>
- enhAacPlusDec.exe

bitstream_file> <wav_file> <mode> [error_pattern_file]

The audio files contain 16-bit linear encoded PCM samples with wav header, the bitstream files are of 3GPP type an the error patter file is a ASCII file, see section 5.

The encoder and decoder command line handling is also explained by running the applications without input arguments.

4.3 Memory requirements

The data types of variables and tables used in the floating-point implementation are plain ANSI-C data types, the following types are used:

- char
- unsigned char
- short
- int
- unsigned int
- float

4.3.1 Constants and tables

This clause contains a listing of all constants and tables contributing to the ROM requirements of the encoder and decoder.

Table 7: Encoder constants and tables

sbr_GainSmooth	float	96	sbr_ram.c	Gain smoothing filter states
sbr_NoiseSmooth	float	96	sbr_ram.c	Noise level smoothing filter states
sbr_QmfStatesSynthesis	float	1280	sbr_ram.c	QMF synthesis filter bank states
sbr_OverlapBuffer	float	1536	sbr_ram.c	SBR delay buffer, only half the size for mono only decoder
sbr_LpcFilterStatesReal	float	128	sbr_ram.c	LPC filter states
sbr_LpcFilterStatesImag	float	128	sbr_ram.c	LPC filter states, obsolete for mono only decoder
sbr_TransposerSettings	float	18	sbr_ram.c	Transposer configuration parameters
FreqBandData	FREQ_BAND_DATA	164	sbr_ram.c	SBR Frequency band information
PrevFrameData[nChan]	SBR_PREV_FRAME_ DATA	120	sbr_ram.c	SBR previous frame data, only half the size for mono only decoder
sbr_PrevBitstream	SBRBITSTREAM	584	sbr_ram.c	SBR previous frame bitstream
sbrDecoderInstance	SBR_DECODER_INS TANCE	797	sbrdecoder.c	SBR decoder instance
TimeDataFloat[nChan]	float	4096	main.c	Output buffer for time-domain signal, only half the size for mono only decoder
inBuffer	int	384	main.c	Input buffer for bitstream
splineResamplerInstance	SPLINE_RESAMPLE R	21	spline_resam pler.c	Spline resampler instance
Sum		11163		

4.3.3 Dynamic memory

This clause contains a listing of all dynamic buffers contributing to the RAM requirements of the encoder and decoder. Dynamic memory can be re-used outside of the encoder or decoder application.

Table 11: Encoder dynamic memory

Name	Data	Size	Allocated in	Description
	type	[word]	Source File	·
PsBuf3	float	1024	sbr_ram.c	Note: reused in AAC encoder
sbr_envRBuffer	float	4096	sbr_ram.c	Note: reused in AAC encoder
sbr_envlBuffer	float	4096	sbr_ram.c	Note: reused in AAC encoder
sbr_transients	float	192	sbr_ram.c	Note: reused in AAC encoder
Sum		9408		

Table 12: Decoder dynamic memory

Name	Data	Size	Allocated in	Description
	type	[word]	Source File	
WorkBufferCore	float	2048	aac_ram.c	Note: reused in SBR decoder
InterimResult	float	1024	sbr_ram.c	
Sum		3072		

4.3.4 Maximum stack size

This clause contains tables for the encoder and the decoder which describe the call stack that results in the maximum stack size usage.

Table 13: Encoder call stack

5 File formats

This clause describes the file formats used by the encoder and decoder programs.

5.1 Audio input file (encoder input/decoder output)

The audio input files read by the encoder and written by the decoder are 16-bit PCM wave files. For convenient handling of wave files a precompiled audio-fileformat library is used.

5.2 Bitstream file format (encoder output/decoder input)

The encoder program writes and the decoder program reads raw frames packetized in access units as described by 3GPP TS 26.244. For packetization the ISO media library is used. A precompiled library is used.

5.3 Error pattern file (decoder input)

The decoder program can optionally process an additional input file which describes an error pattern. The format of the error pattern file is 1 character per line. Each line corresponds to one frame, where a "0" indicates that the respective frame has been transmitted without errors, while a "1" indicates that the corresponding frame has been lost and error concealment shall be applied by the decoder.

Annex A (informative): Weighted MOPS and PROM

The complexity numbers for the Enhanced aacPlus audio codec can be found in the following table, the numbers have been derived using the "allcat.wav" item, which holds all the material from the selection test concatenated in one single item. For every test case the average and worst frame weighted MOPS figure has been derived. The worst case wMOPS figure over all test cases has been marked in **blue**.

Table A.1: Weighted MOPS and PROM figures

	Test Case	Mono Encoder	Stereo Encoder	Decoder	Decoder, mono only
	14m	15.23 / 16.98	15.36 / 17.21	9.38 / 10.07	8.07 / 8.78
	18s		25.79 / 28.36	19.48 / 20.35	8.31 / 9.17
	24m	16.72 / 18.93	16.86 / 19.14	10.30 / 11.39	8.89 / 9.94
wMOPS	24s		27.01 / 29.85	20.45 / 21.63	8.82 / 9.93
[average / worst frame]	32s		27.49 / 29.97	21.08 / 22.42	9.28 / 10.58
	48s		35.22 / 42.22	17.96 / 20.26	12.42 / 14.32
	14m, 16 kHz	15.42 / 18.41	15.47 / 18.46	7.85 / 8.61	7.85 / 8.60
	14m, 3% FER			9.38 / 10.07	8.07 / 8.78

2005-03	27	SP-050095	019	1	Correction to C-code: the decoder mono only compile	6.1.1	6.2.0
2005-03	27	SP-050095	020	1	target not working correctly Correction to C-code: PS-decoding with varying upper	6.1.1	6.2.0
2005-03	21	SF-050095	020	1		0.1.1	0.2.0
2005-03	27	SP-050095	021	1	frequency border not working correctly Correction to C-code: PS-decoding with variable	6.1.1	6.2.0
2005-03	21	SF-050095	021	1	framing not working correctly	0.1.1	0.2.0
2005-03	27	SP-050095	022		Correction to written specification: move WMOPS	6.1.1	6.2.0
2000 00	-1	0. 00000	022		numbers to informative Annex	0.1.1	0.2.0
2005-06	28	SP-050251	023		Correction to C-code: 10 kbit/s mono encoding with	6.2.0	6.3.0
2005-09	29	SP-050426	0024		stereo input files failed Correction to C-Code: Enable 44.1 kHz input material	6.3.0	6.4.0
2000-09	23	000420	0024		encoding (floating-point code)	0.3.0	0.4.0
2005-09	29	SP-050426	0025		Correction of C-Code: removal of obsolete table	6.3.0	6.4.0
2005-09	29	SF-030420	0023		(floating-point code)	0.3.0	0.4.0
2005 12	20	SP-050786	0027		Correction to C-code: encoder bitrate switching	640	6.5.0
2005-12	30	SP-050766	0027		l	6.4.0	6.5.0
200E 42	20	CD 050706	0020		simulation toolset	6.4.0	6.5.0
2005-12	30	SP-050786	0028		Correction to C-code: encoder tuning table entry for 44.1 kHz was wrong	6.4.0	6.5.0
2005-12	30	SP-050786	0029		Correction to C-code: fix to make decoder more robust against corrupt input data	6.4.0	6.5.0
2005-12	30	SP-050786	0030		Correction to C-code: removal of unused coefficients in	6.4.0	6.5.0
2000 22	04	CD 000040	0004		resampler	6.5.0	6.0.0
2006-03	31	SP-060013		4	Correction to C-code: encoder switch is wrong	6.5.0	6.6.0
2006-09	33	SP-060595		1	Correction of written specification: correct memory tables (floating-point code)	6.6.0	6.7.0
2007-03	35	SP-070025	0036		Bugfix for Enhanced aacPlus encoder when operated at 44.1 kHz	6.7.0	6.8.0
