Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present specification provides the stage 3 definition of the Session Management Event Exposure Service (Nsmf_EventExposure) of the 5G System.

The stage 2 definition and procedures of the Session Management Event Exposure Service are contained in 3GPP TS 23.502 [3] and 3GPP TS 23.503 [6]. The 5G System Architecture is defined in 3GPP TS 23.501 [2].

Stage 3 call flows for policy and charging control use cases are provided in 3GPP TS 29.513 [7].

The Technical Realization of the Service Based Architecture and the Principles and Guidelines for Services Definition of the 5G System are specified in 3GPP TS 29.500 [4] and 3GPP TS 29.501 [5].

The Session Management Event Exposure Service is provided by the Session Management Function (SMF). This service exposes events related to PDU Sessions observed at the SMF.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

4 Session Management Event Exposure Service

4.1 Service Description

4.1.1 Overview

The Session Management Event Exposure Service, as defined in 3GPP TS 23.502 [3] and 3GPP TS 23.503 [6], is provided by the Session Management Function (SMF).

This service:

- allows consumer NFs to subscribe and unsubscribe for events on a PDU session; and
- notifies consumer NFs with a corresponding subscription about observed events on the PDU session.

The types of observed events applicable for (H-)SMF include:

- UP path change (e.g. addition and/or removal of PDU session anchor);
- access type change;
- PLMN change;
- PDU session release;
- PDU session establishment;
- Downlink data delivery status (for non-roaming);
- UE IP address/prefix change;
- QFI allocation; and/or
- QoS monitoring.

The types of observed events applicable for V-SMF include:

- Downlink data delivery status.

The types of observed events applicable for I-SMF include:

- Downlink data delivery status.

4.1.2 Service Architecture

The 5G System Architecture is defined in 3GPP TS 23.501 [2]. The Policy and Charging related 5G architecture is also described in 3GPP TS 29.513 [7].

The Session Management Event Exposure Service (Nsmf_EventExposure) is part of the Nsmf service-based interface exhibited by the Session Management Function (SMF),

Known consumer of the Nsmf_EventExposure service are:

- Network Exposure Function (NEF),
- Access and Mobility Management Function (AMF),
- Application Function (AF),
- Unified Data Management (UDM), and
- Network Data Analytics Function (NWDAF).

The PCF accesses the Session Management Event Exposure Service at the SMF via the N7 Reference point.

NOTE: The PCF can implicitly subscribe on behalf of the AF and NEF to the UP_PATH_CH event and the QOS_MON event by including the information on AF subscription within the PCC rule.

The AMF accesses the Session Management Event Exposure Service at the SMF via the N11 Reference point.

Figure 4.1.2-1: Reference Architecture for the Nsmf_EventExposure Service; SBI representation

Figure 4.1.2-2: Reference Architecture for the Nsmf_EventExposure Service: reference point representation

4.1.3 Network Functions

4.1.3.1 Session Management Function (SMF)

The Session Management function (SMF) provides:

- Session Management e.g. Session establishment, modification and release;
- UE IP address allocation & management;
- Selection and control of UP function;
- Termination of interfaces towards Policy control functions; and
- Control part of policy enforcement and QoS.

4.1.3.2 NF Service Consumers

The Network Exposure Function (NEF);

- provides a means to securely expose the services and capabilities provided by 3GPP network functions for e.g. 3rd parties or internal exposure.

The Access and Mobility Management function (AMF) provides:

- Registration management;
- Connection management;
- Reachability management; and
- Mobility Management.

The Application Function (AF)

- interacts with the 3GPP Core Network to provide services.

The Unified Data Management (UDM).

- has access to subscriber information, can determine the SMF serving a user based on that data, and can then subscribe to event notifications for a user (e.g. when triggered by the NEF).

The Network Data Analytics Function (NWDAF)

- collects data based on event subscription, provided by AMF, SMF, PCF, UDM, AF (directly or via NEF), and OAM;
- retrieve information about NFs:
- On demand provision of analytics to consumers, as indicated in clause 6, 3GPP TS 23.288 [21].

4.2 Service Operations

4.2.1 Introduction

Table 4.2.1-1: Operations of the Nsmf_EventExposure Service

Service operation name	Description	Initiated by
Notify	Report UE PDU session related event(s) to the NF service consumer which has subscribed to the event report service.	(H-)SMF, V-SMF, I- SMF
Subscribe	This service operation is used by an NF service consumer to subscribe for event notifications on a specified PDU session, or for all PDU Sessions of one UE, a group of UE(s) or any UE, or to modify a subscription.	NF service consumer
UnSubscribe	This service operation is used by an NF service consumer to unsubscribe from event notifications.	NF service consumer
AppRelocationInfo	This service operation is used by an NF service consumer to acknowledge the notification from the SMF regarding UE PDU Session related event(s)	NF service consumer

4.2.2 Nsmf_EventExposure_Notify Service Operation

4.2.2.1 General

The Nsmf_EventExposure_Notify service operation enables notification to NF service consumers that the previously subscribed event on the related PDU session occurred.

The following procedure using the Nsmf_EventExposure_Notify service operation is supported:

- notification about subscribed events.

4.2.2.2 Notification about subscribed events

The present "notification about subscribed events" procedure is performed by the SMF when any of the subscribed events occur.

The following applies with respect to the detection of subscribed events:

- If
 - the SMF supports the "downlink data delivery status" feature,
 - the event "downlink data delivery status" is subscribed,
 - the traffic descriptors of the downlink data source has been provided for that subscription, and
 - the SMF is informed that the UE corresponding to that subscription is unreachable,
 - if the data is buffered at the UPF, then the SMF shall interact with the UPF to notify the UPF buffer the downlink packets. The SMF shall include the traffic descriptor of the subscriptions in the PDR with a higher priority if the PCC is not applied to the PDUsession or derive the PDR from the PCC rule received from the PCF as defined in subclause 4.2.4.27 of 3GPP TS 29.512 [14] if the PCC is applied to the PDU session and request the UPF to report when there are corresponding buffered downlink packets or discarded packets in the UPF as defined in subclause 5.2.1 of 3GPP TS 29.244 [23]. When receiving the report from the UPF, the SMF shall determine whether that subscribed event with delivery status "DISCARDED" and/or "BUFFERED" occurred. The SMF shall determine that subscribed event with delivery status "TRANSMITTED" occurred by the fact that the related PDU session becomes ACTIVE.
 - if the data is buffered at the SMF, the SMF shall determine whether that subscribed event occurred by comparing the downlink packets with the traffic descriptor received in the correspond event subscription.

Figure 4.2.2.2-1 illustrates the notification about subscribed events.

Figure 4.2.2.2-1: Notification about subscribed events

If the SMF observes PDU Session related event(s) for which an NF service consumer has subscribed to, the SMF shall send an HTTP POST request with "{notifUri}" as previously provided by the NF service consumer within the corresponding subscription as URI and NsmfEventExposureNotification data structure as request body that shall include:

- Notification correlation ID provided by the NF service consumer during the subscription, or as provided by the PCF for implicit subscription of UP path change as defined in subclause 4.2.6.2.6.2 of 3GPP TS 29.512 [14], or as provided by the PCF for implicit subscription of QoS Monitoring as defined in subclause 4.2.3.25 of 3GPP TS 29.512 [14], as "notifId" attribute; and
- information about the observed event(s) within the "eventNotifs" attribute that shall contain for each observed event an "EventNotification" data structure that shall include:
 - 1. the Event Trigger as "event" attribute;
 - 2. for a UP path change notification:

- a) type of notification ("EARLY" or "LATE") as "dnaiChgType" attribute;
- b) source DNAI and/or target DNAI as "sourceDnai" attribute and "targetDnai" attribute if DNAI is changed, respectively (NOTE 3); and
- c) if the PDU Session type is IP, for the source DNAI IP address/prefix of the UE as "sourceUeIpv4Addr" attribute or "sourceUeIpv6Prefix" attribute; and
- d) if the PDU Session type is IP, for the target DNAI IP address/prefix of the UE as "targetUeIpv4Addr" attribute or "targetUeIpv6Prefix" attribute;
- e) if available (NOTE 3), for the source DNAI, N6 traffic routing information related to the UE as "sourceTraRouting" attribute;
- f) if available (NOTE 3), for the target DNAI, N6 traffic routing information related to the UE as "targetTraRouting" attribute; and
- g) if the PDU Session type is Ethernet, the MAC address of the UE in the "ueMac" attribute;
- NOTE 1: UP path change notification, i.e. DNAI change notification and/or N6 traffic routing information change notification, can be the result of an implicit subscription of the PCF on behalf of the NEF/AF as part of setting PCC rule(s) via the Npcf_SMPolicyControl service (see subclause 4.2.6.2.6.2 of 3GPP TS 29.512 [14]).
- NOTE 2: If the DNAI is not changed while the N6 traffic routing information change, the source DNAI and target DNAI are not provided.
- NOTE 3: The change from the UP path status where no DNAI applies to a status where a DNAI applies indicates the activation of the related AF request and therefore only the target DNAI and N6 traffic routing information is provided in the event notification; the change from the UP path status where a DNAI applies to a status where no DNAI applies indicates the de-activation of the related AF request and therefore only the source DNAI and N6 traffic routing information is provided in the event notification.
 - 3. for a UE IP address change:
 - a) added new UE IP address or prefix as "adIpv4Addr" attribute or "adIpv6Prefix" attribute, respectively; and/or
 - b) released UE IP address or prefix as "reIpv4Addr" attribute or "reIpv6Prefix" attribute, respectively;
 - 4. for an access type change:
 - a) new access type as "accType" attribute;
 - 5. for a PLMN Change:
 - a) new PLMN as "plmnId" attribute;
 - 6. for a PDU Session Release:
 - a) ID of the released PDU session as "pduSeId" attribute;
 - b) DNN of the release PDU session as "dnn" attribute, if the "PduSessionStatus" feature is supported;
 - c) The type of the release PDU session as "pduSessType" attribute, if the "PduSessionStatus" feature is supported; and
 - d) UE IPv4 address as "ipv4Addr" attribute and/or IPv6 information (IPv6 prefix(es) or IPv6 address(es)) as "ipv6Prefixes" or "ipv6Addrs" attributes, if the released PDU session type is IP and the "PduSessionStatus" feature is supported;
 - 7. the time at which the event was observed encoded as "timeStamp" attribute;
 - 8. the SUPI as the "supi" attribute if the subscription applies to a group of UE(s) or any UE;
 - 9. if available, the GPSI as the "gpsi" attribute if the subscription applies to a group of UE(s) or any UE;

- 10. for a Downlink Data Delivery Status:
 - a) the downlink data delivery status as "dddStatus" attribute;
 - b) the downlink data descriptors impacted by the downlink data delivery status change within the "dddTraDescriptor" attribute; and
 - c) for downlink data delivery status "BUFFERED". the estimated maximum waiting time as "maxWaitTime" attribute;
- 11. for a Communication Failure:
 - a) the detailed communication failure information (e.g. 5G SM cause) as "commFailure" attribute; and
- 12. for QoS Monitoring:
 - a) one or two uplink packet delays within the "ulDelays" attribute; or
 - b) one or two downlink packet delays within the "dlDelays" attribute; or
 - c) one or two round trip packet delays within the "rtDelays" attribute.
- NOTE 4: QoS Monitoring notification can be the result of an implicit subscription of the PCF on behalf of the NEF/AF as part of setting PCC rule(s) via the Npcf_SMPolicyControl service (see subclause 4.2.3.25 of 3GPP TS 29.512 [14]).
 - 13. for a PDU Session Establishment, if the "PduSessionStatus" feature is supported:
 - a) ID of the established PDU session as "pduSeId" attribute;
 - b) DNN of the release PDU session as "dnn" attribute;
 - c) The type of the release PDU session as "pduSessType" attribute; and
 - d) UE IPv4 address as "ipv4Addr" attribute and/or IPv6 information (IPv6 prefix(es) or IPv6 address(es)) as "ipv6Prefixes" or "ipv6Addrs" attributes if available at PDU session establishment;
 - 14. for a QFI allocation:
 - a) QFI of the allocated QoS Flow ID for the application as "qfi" attribute;
 - b) DNN of the allocated PDU session as "dnn" attribute;
 - c) Slice of the allocated PDU session as "snssai" attribute; and
 - d) The description of the application traffic as "appld", "fDescs" or "ethfDescs" attribute;
- an URI for further AF acknowledgement in the "ackUri" attribute if the SMF determines to wait for the AF acknowledgement before activating the new UP path associated with the new DNAI.
- NOTE 5: Based on the indication of AF acknowledgment to be expected in the PCC rules received from the PCF and local configuration, the SMF may determine to wait for the AF acknowledgement before activating the new UP path associated with the new DNAI.

Upon the reception of the HTTP POST request with "{notifUri}" as URI and an NsmfEventExposureNotification data structure as request body, the NF shall send an "204 No Content" HTTP response for a successful processing.

If the NF service consumer is not able to handle the Notification but knows by implementation specific means that another service consumer is able to handle the notification, it shall reply with an HTTP "307 temporary redirect" error response pointing to the new NF service consumer URI. If the NF service consumer is not able to handle the Notification but another unknown service consumer could possibly handle the notification, it shall reply with an HTTP "404 Not found" error response.

NOTE 6: An AMF as service consumer can change.

If the SMF receives a "307 temporary redirect" response, the SMF shall resend the failed event notification request using the received URI in the Location header field as Notification URI. Subsequent event notifications, triggered after

the failed one, shall be sent to the Notification URI provided by the NF service consumer during the corresponding subscription creation/update.

If the SMF becomes aware that a new NF service consumer is requiring notifications (e.g. via the "404 Not found" response, or via Namf_Communication service AMFStatusChange Notifications, see 3GPP TS 29.518 [13], or via link level failures or via the Nnrf_NFDiscovery Service (using the service name and GUAMI obtained during the creation of the subscription) to query the other AMFs within the AMF set) specified in 3GPP TS 29.510 [12]), and the SMF knows alternate or backup IPv4 Address(es), IPv6 Address(es) or FQDN(s) where to send Notifications (e.g. via "altNotifIpv4Addrs", "altNotifIpv6Addrs" or "altNotifFqdns" attributes received when the subscription was created), the SMF shall exchange the authority part of the Notification URI with one of those addresses and shall use that URI in any subsequent communication. If the SMF received a "404 Not found" response, the SMF should resend the failed notification to that URI.

If the SMF in the VPLMN needs to send an event notification to the NEF in the HPLMN, it may normalize the event based on roaming agreements when required before provisioning the event report to the NEF of the HPLMN.

4.2.3 Nsmf_EventExposure_Subscribe Service Operation

4.2.3.1 General

This service operation is used by an NF service consumer to subscribe for event notifications on a specified PDU Session, or for all PDU Sessions of one UE, group of UE(s) or any UE, or to modify an existing subscription.

The following procedures using the Nsmf_EventExposure_Subscribe service operation are supported:

- creating a new subscription;
- modifying an existing subscription.

4.2.3.2 Creating a new subscription

Figure 4.2.3.2-1 illustrates the creation of a subscription.

Figure 4.2.3.2-1: Creation of a subscription

To subscribe to event notifications, the NF service consumer shall send an HTTP POST request with: "{apiRoot}/nsmf-event-exposure/v1/subscriptions/" as Resource URI and the NsmfEventExposure data structure as request body that shall include:

- if the subscription applies to events related to a single PDU session for a UE, the PDU Session ID of that PDU session as "pduSeId" attribute and the UE identification as "supi" or "gpsi" attribute;
- if the subscription applies to events not related to a single PDU session, identification of UEs to which the subscription applies via:
 - a) identification of a single UE by SUPI as "supi" attribute or GPSI as "gpsi" attribute;
 - b) identification of a group of UE(s) via a "groupId" attribute; or

c) identification of any UE via the "anyUeInd" attribute set to true;

NOTE 1: The identification of any UE does not apply for local breakout roaming scenarios where the SMF is located in the VPLMN and the NF service consumer is located in the HPLMN.

- an URI where to receive the requested notifications as "notifUri" attribute;
- a Notification Correlation Identifier assigned by the NF service consumer for the requested notifications as "notifId" attribute; and
- if the NF service consumer is an AMF, the GUAMI encoded as "guami" attribute:
- a description of the subscribed events as "eventSubs" attribute that for each event shall include:
 - a) an event identifier as "event" attribute; and
 - b) for event UP path change, whether the subscription is for early, late, or early and late notifications of UP path reconfiguration in the "dnaiChType" attribute;

and that may include:

- a) for event "downlink data delivery status", the traffic descriptor(s) of the downlink data source in the "dddTraDescriptors" attribute;
- b) for event "downlink data delivery status", the subscribed delivery statuses in the "dddStati" attribute; and
- c) for event "QFI allocation", the application identifiers in the "appIds" attribute.

The NsmfEventExposure data structure as request body may also include:

- if the NF service consumer is an AMF:
 - a) the name of a service produced by the AMF that expects to receive the notification about subscribed events encoded as "serviceName" attribute;
 - b) Alternate or backup IPv4 Address(es) where to send Notifications encoded as "altNotifIpv4Addrs" attribute;
 - c) Alternate or backup IPv6 Address(es) where to send Notifications encoded as "altNotifIpv6Addrs" attribute;
 - d) Alternate or backup FQDN(s) where to send Notifications encoded as "altNotifFqdns" attribute;
- A Data Network Name as "dnn" attribute;
- A single Network Slice Selection Assistance Information as "snssai" attribute;
- Immediate reporting flag as "ImmeRep" attribute;
- event notification method (periodic, one time, on event detection) as "notifMethod" attribute;
- Maximum Number of Reports as "maxReportNbr" attribute;
- Monitoring Duration as "expiry" attribute;
- Repetition Period for periodic reporting as "repPeriod" attribute;
- sampling ratio as "sampRatio" attribute; and/or
- group reporting guard time as "grpRepTime" attribute.

Upon the reception of an HTTP POST request with: "{apiRoot}/nsmf-event-exposure/v1/subscriptions/" as Resource URI and NsmfEventExposure data structure as request body, the SMF shall:

- create a new subscription;
- assign a subscription correlation ID;
- select an expiry time that is equal or less than a possible expiry time in the request;

- store the subscription;
- send a HTTP "201 Created" response with NsmfEventExposure data structure as response body and a Location header field containing the URI of the created individual subscription resource, i.e. {apiRoot}/nsmf-event-exposure/v1/subscriptions/{subId};
- if the "ImmeRep" attribute is included and set to true in the request, the SMF shall report the current available value(s) for the subscribed event(s) as defined in subclause 4.2.3.1;
- if the sampling ratio as the "sampRatio" attribute is included in the subscription, the SMF shall select a random subset of UEs among target UEs according to the sampling ratio and only report the event(s) related to the selected subset UEs; and
- When the group reporting guard time as the "grpRepTime" attribute is included in the subscription, the SMF shall accumulate all of the event reports for the target UEs until the group reporting guard time expires. Then the SMF shall notify the NF service consumer using the Nsmf_EventExposure_Notify service operation, as described in subclause 4.2.2.2.

If the SMF received an GUAMI, the SMF may subscribe to GUAMI changes using the AMFStatusChange service operation of the Namf_Communication service specified in 3GPP TS 29.518 [13], and it may use the Nnrf_NFDiscovery Service specified in 3GPP TS 29.510 [12] (using the obtained GUAMI and possibly service name) to query the other AMFs within the AMF set.

4.2.3.3 Modifying an existing subscription

Figure 4.2.3.3-1 illustrates the modification of an existing subscription.

Figure 4.2.3.3-1: Modification of an existing subscription

To modify an existing subscription to event notifications, the NF service consumer shall send an HTTP PUT request with: "{apiRoot}/nsmf-event-exposure/v1/subscriptions/subId}" as Resource URI, where "{subId}" is the subscription correlation ID of the existing subscription, and NsmfEventExposure data structure as request body as described in subclause 4.2.3.2.

- NOTE 1: An alternate NF service consumer than the one that requested the generation of the subscription resource can send the PUT. For instance, an AMF as service consumer can change.
- NOTE 2: The "notifUri" attribute within the NsmfEventExposure data structure can be modified to request that subsequent notifications are sent to a new NF service consumer.

Upon the reception of an HTTP PUT request with: "{apiRoot}/nsmf-event-exposure/v1/subscriptions/{subId}" as Resource URI and NsmfEventExposure data structure as request body, the SMF shall:

- store the subscription; and
- send a HTTP "200 OK" response with NsmfEventExposure data structure as response body.

4.2.4 Nsmf_EventExposure_UnSubscribe Service Operation

4.2.4.1 General

This service operation is used by an NF service consumer to unsubscribe from event notifications.

The following procedure using the Nsmf EventExposure UnSubscribe service operation is supported:

- unsubscription from event notifications.

4.2.4.2 Unsubscription from event notifications

Figure 4.2.4.2-1 illustrates the unsubscription from event notifications.

Figure 4.2.4.2-1: Unsubscription from event notifications

To unsubscribe from event notifications, the NF service consumer shall send an HTTP DELETE request with: "{apiRoot}/nsmf-event-exposure/v1/subscriptions/{subId}" as Resource URI, where "{subId}" is the subscription correlation ID of the existing subscription that is to be deleted.

Upon the reception of the HTTP DELETE request with: $\{apiRoot\}/nsmf-event-exposure/v1/subscriptions/\{subId\}$ " as Resource URI, the SMF shall:

- remove the corresponding subscription; and
- send an HTTP "204 No Content" response.

4.2.5 Nsmf_EventExposure_AppRelocationInfo Service Operation

4.2.5.1 General

The Nsmf_EventExposure_AppRelocationInfo service operation enables NF service consumer to acknowledge the notification of subscribed event on the related PDU session from the SMF.

The following procedure using the Nsmf_EventExposure_AppRelocationInfo service operation is supported:

- acknowledgement of notification about subscribed events.

4.2.5.2 Acknowledgement of Notification about subscribed events

Figure 4.2.5.2-1 illustrates the acknowledgement of notification about subscribed events.

Figure 4.2.5.2-1: Acknowledgement of Notification about subscribed events

In order to acknowledge the SMF of the application relocation information after handling of notification about UP path change event, an NF service consumer shall send an HTTP POST request to the resource URI "{ackUri}" as previously provided by the SMF in the attribute within the NsmfEventExposureNotification data during UP path change notification procedure as defined in subclause 4.2.2.2.

The AckOfNotify data structure as request body that shall include:

- Notification correlation ID provided by the NF service consumer during UP path change notification, as "notifId" attribute;
- an identifier of UE (i.e. SUPI or GPSI) if available and the subscription applies to a group of UE(s) or any UE; and
- information about the AF acknowledgement within the "ackResult" attribute that shall contain result status of the application relocation as "afStatus" attribute. If the "afStatus" attribute sets to "SUCCESS", the N6 traffic routing information associated to the target DNAI may be included as "trafficRoute" attribute. If the application relocation is not completed on time, the "afStatus" attribute shall set to the corresponding failure cause.

Upon the reception of the HTTP POST request and an AckOfNotify data structure as request body, the SMF shall send an "204 No Content" HTTP response for a successfull processing.

5 Nsmf_EventExposure API

5.1 Introduction

The Session Management Event Exposure Service shall use the Nsmf_EventExposure API.

The API URI of the Nsmf_EventExposure API shall be:

{apiRoot}/<apiName>/<apiVersion>/

The request URIs used in HTTP requests from the NF service consumer towards the SMF shall have the Resource URI structure defined in subclause 4.4.1 of 3GPP TS 29.501 [5], i.e.:

{apiRoot}/<apiName>/<apiVersion>/<apiSpecificResourceUriPart>

with the following components:

- The {apiRoot} shall be set as described in 3GPP TS 29.501 [5].
- The <apiName> shall be "nsmf-event-exposure".
- The <apiVersion> shall be "v1".
- The <apiSpecificResourceUriPart> shall be set as described in subclause 5.3.

5.2 Usage of HTTP

5.2.1 General

HTTP/2, IETF RFC 7540 [8], shall be used as specified in clause 5 of 3GPP TS 29.500 [4].

HTTP/2 shall be transported as specified in subclause 5.3 of 3GPP TS 29.500 [4].

The OpenAPI [10] specification of HTTP messages and content bodies for the Nsmf_EventExposure is contained in Annex A.

5.2.2 HTTP standard headers

5.2.2.1 General

See subclause 5.2.2 of 3GPP TS 29.500 [4] for the usage of HTTP standard headers.

5.2.2.2 Content type

JSON, IETF RFC 8259 [9], shall be used as content type of the HTTP bodies specified in the present specification as specified in subclause 5.4 of 3GPP TS 29.500 [4]. The use of the JSON format shall be signalled by the content type "application/json".

"Problem Details" JSON object shall be used to indicate additional details of the error in a HTTP response body and shall be signalled by the content type "application/problem+json", as defined in IETF RFC 7807 [18].

5.2.3 HTTP custom headers

The mandatory HTTP custom header fields specified in subclause 5.2.3.2 of 3GPP TS 29.500 [4] shall be applicable.

5.3 Resources

5.3.1 Resource Structure

{apiRoot}/nsmf-event-exposure/v1

/subscriptions
/{subId}

Figure 5.3.1-1: Resource URI structure of the Nsmf_EventExposure API

Table 5.3.1-1 provides an overview of the resources and applicable HTTP methods.

Table 5.3.1-1: Resources and methods overview

Resource name	Resource URI	HTTP method or custom operation	Description
SMF	{apiRoot}/	POST	Create a new Individual SMF Notification
Notification	nsmf-event-exposure/		Subscription resource.
Subscriptions	v1/		
	subscriptions		
Individual SMF	{apiRoot}/	GET	Read an Individual SMF Notification Subscription
Notification	nsmf-event-exposure/		resource.
Subscription	v1/	PUT	Modify an existing Individual SMF Notification
	subscriptions/		Subscription resource.
	{subId}	DELETE	Delete an Individual SMF Notification Subscription
			resource and cancel the related subscription.

5.3.2 Resource: SMF Notification Subscriptions

5.3.2.1 Description

The SMF Notification Subscriptions resource represents all subscriptions to the SMF event exposure service at a given SMF.

5.3.2.2 Resource definition

Resource URI: {apiRoot}/nsmf-event-exposure/v1/subscriptions/

This resource shall support the resource URI variables defined in table 5.3.2.2-1.

Table 5.3.2.2-1: Resource URI variables for this resource

Name	Data type	Definition
apiRoot	string	See subclause 5.1

5.3.2.3 Resource Standard Methods

5.3.2.3.1 POST

This method shall support the URI query parameters specified in table 5.3.2.3.1-1.

Table 5.3.2.3.1-1: URI query parameters supported by the POST method on this resource

Name	Data type	Р	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 5.3.2.3.1-2 and the response data structures and response codes specified in table 5.3.2.3.1-3.

Table 5.3.2.3.1-2: Data structures supported by the POST Request Body on this resource

Data type	Р	Cardinality	Description
NsmfEventExposure	M	1	Create a new Individual SMF Notification Subscription resource.

Table 5.3.2.3.1-3: Data structures supported by the POST Response Body on this resource

Data type	Р	Cardinality	Response codes	Description
NsmfEventExposure		1		The creation of an Individual SMF Notification Subscription resource is confirmed and a representation of that resource is returned.
NOTE: The mandatory HTTP error status codes for the POST method listed in Table 5.2.7.1-1 of 3GPP TS 29.500 [4] also apply.				

Table 5.3.2.3.1-4: Headers supported by the 201 Response Code on this resource

Name	Data type	Р	Cardinality	Description
Location	string	М		Contains the URI of the newly created resource, according to the structure: {apiRoot}/nsmf-event-exposure/v1/subscriptions/{subId}

5.3.2.4 Resource Custom Operations

None.

5.3.3 Resource: Individual SMF Notification Subscription

5.3.3.1 Description

The SMF Notification Subscriptions resource represents a single subscription to the SMF event exposure service.

5.3.3.2 Resource definition

Resource URI: {apiRoot}/nsmf-event-exposure/v1/subscriptions/{subId}

This resource shall support the resource URI variables defined in table 5.3.3.2-1.

Table 5.3.3.2-1: Resource URI variables for this resource

Name	Data type	Definition
apiRoot	String	See subclause 5.1
subId	3	Identifies a subscription to the SMF event exposure service formatted as defined for the SubId type in table 5.6.3.2-1.

5.3.3.3 Resource Standard Methods

5.3.3.3.1 GET

This method shall support the URI query parameters specified in table 5.3.3.3.1-1.

Table 5.3.3.3.1-1: URI query parameters supported by the GET method on this resource

Name	Data type	Р	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 5.3.3.3.1-2 and the response data structures and response codes specified in table 5.3.3.3.1-3.

Table 5.3.3.3.1-2: Data structures supported by the GET Request Body on this resource

Data type	Р	Cardinality	Description
n/a			

Table 5.3.3.3.1-3: Data structures supported by the GET Response Body on this resource

Data type	Р	Cardinality	Response codes	Description	
NsmfEventExposure	М	1		A representation of the SMF Notification Subscription matching the subId is returned.	
NOTE: The mandator also apply.	IOTE: The mandatory HTTP error status codes for the GET method listed in Table 5.2.7.1-1 of 3GPP TS 29.500 [4]				

5.3.3.3.2 PUT

This method shall support the URI query parameters specified in table 5.3.3.3.2-1.

Table 5.3.3.3.2-1: URI query parameters supported by the PUT method on this resource

Name	Data type	Р	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 5.3.3.3.2-2 and the response data structures and response codes specified in table 5.3.3.3.2-3.

Table 5.3.3.3.2-2: Data structures supported by the PUT Request Body on this resource

Data type	Р	Cardinality	Description
NsmfEventExposure	М		Modify the existing Individual SMF Notification Subscription resource
			matching the subId according to the representation in the
			NsmfEventExposure

Table 5.3.3.3.2-3: Data structures supported by the PUT Response Body on this resource

Data type	Р	Cardinality	Response	Description	
			codes		
NsmfEventExposure	M	1	200 OK	Successful case: The Individual SMF Notification	
				Subscription resource matching the subId was modified	
				and a representation is returned.	
n/a			204 No Content	Successful case: The Individual SMF Notification	
				Subscription resource matching the subId was modified.	
NOTE: The mandatory HTTP error status codes for the PUT method listed in Table 5.2.7.1-1 of 3GPP TS 29.500 [4]					
also apply.	-			• •	

5.3.3.3 DELETE

This method shall support the URI query parameters specified in table 5.3.3.3.1.

Table 5.3.3.3.1: URI query parameters supported by the DELETE method on this resource

Name	Data type	Р	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 5.3.3.3.3-2 and the response data structures and response codes specified in table 5.3.3.3.3-3.

Table 5.3.3.3-2: Data structures supported by the DELETE Request Body on this resource

Data type	Р	Cardinality	Description
n/a			

Table 5.3.3.3.3: Data structures supported by the DELETE Response Body on this resource

Data	type	Р	Cardinality	Response codes	Description
n/a				204 No Content	Successful case: The Individual SMF Notification
					Subscription resource matching the subId was deleted.
NOTE:	The man	adato	ry HTTP error	status code for the I	DELETE method listed in Table 5.2.7.1-1 of 3GPP TS
	29.500 [4] also	apply.		

5.3.3.4 Resource Custom Operations

None.

5.4 Custom Operations without associated resources

None.

5.5 Notifications

5.5.1 General

Notifications shall comply to subclause 6.2 of 3GPP TS 29.500 [4] and subclause 4.6.2.3 of 3GPP TS 29.501 [5].

Table 5.5.1-1: Notifications overview

Notification	Custom operation URI	Mapped HTTP method	Description
Event Notification	{notifUri}		Provides information about observed events.
Acknowledgement of event notification	{ackUri}		Provides acknowledgement of event notification

5.5.2 Event Notification

5.5.2.1 Description

The Event Notification is used by the SMF to report one or several observed Events to a NF service consumer that has subscribed to such Notifications via the Individual SMF Notification Subscription Resource.

5.5.2.2 Target URI

The Notification URI "{notifUri}" shall be used with the resource URI variables defined in table 5.5.2.2-1.

Table 5.5.2.2-1: Resource URI variables for this resource

Name	Data type	Definition
notifUri	Uri	The Notification Uri as assigned within the Individual SMF Notification
		Subscription Resource and described within the NsmfEventExposure type
		(see table 5.6.2.2-1).

5.5.2.3 Standard Methods

5.5.2.3.1 POST

This method shall support the URI query parameters specified in table 5.5.2.3.1-1.

Table 5.5.2.3.1-1: URI query parameters supported by the POST method on this resource

Name	Data type	Р	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 5.5.2.3.1-2 and the response data structures and response codes specified in table 5.5.2.3.1-3.

Table 5.5.2.3.1-2: Data structures supported by the POST Request Body on this resource

Data type	Р	Cardinality	Description
NsmfEventExposureNotification	М	1	Provides Information about observed events

Table 5.5.2.3.1-3: Data structures supported by the POST Response Body on this resource

Data type	Р	Cardinality	Response	Description			
			codes				
n/a			204 No Content	The receipt of the Notification is acknowledged.			
n/a			307 temporary redirect	The NF service consumer shall generate a Location header field containing a URI pointing to another NF service consumer to which the notification should be send.			
ProblemDetails	0	01	404 Not Found	The NF service consumer can use this response when the notification can be sent to another host.			
NOTE: The mandatory HTTP error status codes for the POST method listed in Table 5.2.7.1-1 of 3GPP TS 29.500 [4] also apply.							

Table 5.5.2.3.1-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	М		The URI of the resource located on the NF service consumer pointing to another NF service consumer to which the notification should be send.

5.5.3 Acknowledgement of event notification

5.5.3.1 Description

The Acknowledgement of Event Notification is used by the NF service consumer to acknowledge the SMF about handling result of the event notification (e.g. UP path change).

5.5.3.2 Target URI

The Notification URI "{ackUri}" shall be used with the resource URI variables defined in table 5.5.3.2-1.

Table 5.5.3.2-1: Resource URI variables for this resource

Name	Data type	Definition
ackUri		Acknowledgement Uri as assigned during the procedure of notification about subscribed events and described within the NsmfEventExposureNotificationtype (see table 5.6.2.3-1).

5.5.3.3 Standard Methods

5.5.3.3.1 POST

This method shall support the URI query parameters specified in table 5.5.3.3.1-1.

Table 5.5.3.3.1-1: URI query parameters supported by the POST method on this resource

Name	Data type	Р	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 5.5.3.3.1-2 and the response data structures and response codes specified in table 5.5.3.3.1-3.

Table 5.5.3.3.1-2: Data structures supported by the POST Request Body on this resource

Data type	Р	Cardinality	Description
AckOfNotify	М	1	Acknowledgement information of event notification

Table 5.5.3.3.1-3: Data structures supported by the POST Response Body on this resource

Data type		Р	Cardinality	Response	Description
			codes		
n/a				204 No Content	The receipt of the acknowledgement is successful.
NOTE:	DTE: The mandatory HTTP error status codes for the POST method listed in Table 5.2.7.1-1 of 3GPP TS 29.500				
	[4] also apply.				

5.6 Data Model

5.6.1 General

This subclause specifies the application data model supported by the API.

Table 5.6.1-1 specifies the data types defined for the Nsmf_EventExposure service based interface protocol.

Table 5.6.1-1: Nsmf_EventExposure specific Data Types

Data type	Section defined	Description	Applicability
EventNotification	5.6.2.5	Describes notifications about a single event that occurred.	
EventSubscription	5.6.2.4	Represents the subscription to a single event	
NotificationMethod	5.6.3.4	Represents the notification methods that can be subscribed	
NsmfEventExposure	5.6.2.2	Represents an Individual SMF Notification Subscription resource	
NsmfEventExposureNotification	5.6.2.3	Describes Notifications about events that occurred.	
SmfEvent	5.6.3.3	Represents the types of events that can be subscribed	
SubId	5.6.3.2	Identifies an Individual SMF Notification Subscription.	
AckOfNotify	5.6.2.7	Acknowledgement information of event notification	

Table 5.6.1-2 specifies data types re-used by the Nsmf_EventExposure service based interface protocol from other specifications, including a reference to their respective specifications and when needed, a short description of their use within the Nsmf_EventExposure service based interface.

Table 5.6.1-2: Nsmf_EventExposure re-used Data Types

Data type	Reference	Comments	Applicability

5.6.2 Structured data types

5.6.2.1 Introduction

This subclause defines the structures to be used in resource representations.

5.6.2.2 Type NsmfEventExposure

Table 5.6.2.2-1: Definition of type NsmfEventExposure

Attribute name	Data type	P	Cardinality	Description	Applicability
supi	Supi	С	01	Subscription Permanent Identifier (NOTE)	
gpsi	Gpsi	С	01	Generic Public Subscription Identifier (NOTE)	
anyUeInd	boolean	С	01	This IE shall be present if the event subscription is applicable to any UE. Default value "false" is used, if not present (NOTE)	
groupId	GroupId	С	01	Identifies a group of UEs. (NOTE)	
pduSeld	PduSessionId	С	01	PDU session ID (NOTE)	
dnn	Dnn	0	01	Data Network Name.	
snssai	Snssai	0	01	A single Network Slice Selection Assistance Information.	
subId	SubId	С	01	Subscription ID. This parameter shall be supplied by the SMF in HTTP responses that include an object of NsmfEventExposure type.	
notifld	string	М	1	Notification Correlation ID assigned by the NF service consumer.	
notifUri	Uri	М	1	Identifies the recipient of Notifications sent by the SMF.	
altNotiflpv4Addrs	array(Ipv4Addr)	0	1N	Alternate or backup IPv4 Address(es) where to send Notifications.	
altNotiflpv6Addrs	array(Ipv6Addr)	0	1N	Alternate or backup IPv6 Address(es) where to send Notifications.	
altNotifFqdns	array(Fqdn)	0	1N	Alternate or backup FQDN(s) where to send Notifications.	
eventSubs	array(EventSubscri ption)	М	1N	Subscribed events	
ImmeRep	boolean	0	01	It is included and set to true if the immediate reporting of the current status of the subscribed event, if available is required.	
notifMethod	NotificationMethod	0	01	If "notifMethod" is not supplied, the default value "ON_EVENT_DETECTION" applies.	
maxReportNbr	Uinteger	0	01	If omitted, there is no limit.	
expiry	DateTime	С	01	This attribute indicates the expiry time of the subscription, after which the SMF shall not send any event notifications and the subscription becomes invalid. It may be included in an event subscription request and may be included in an event subscription response based on operator policies. If an expiry time was included in the request, then the expiry time returned in the response should be less than or equal to that value. If the expiry time is not included in the response, the NF Service Consumer shall not associate an expiry time for the subscription.	
repPeriod	DurationSec	С	01	Is supplied for notification Method "periodic".	
guami	Guami	С	01	The Globally Unique AMF Identifier (GUAMI) shall be provided by an AMF as service consumer.	

serviceName	ServiceName	0	01	If the NF service consumer is an AMF, it should provide the name of a service produced by the AMF that makes use of the notification about subscribed events.			
supportedFeatures	SupportedFeatures	С	01	List of Supported features used as described in subclause 5.8. This parameter shall be supplied by NF service consumer and SMF in the POST request that request the creation of an SMF Notification Subscriptions resource and the related reply, respectively.			
sampRatio	SamplingRatio	0	01	Indicates the ratio of the random subset to target UEs, event reports only relates to the subset.			
grpRepTime	DurationSec	0	01	Indicates the time for which the SMF aggregates the event reports detected by the UEs in a group and report them together to the NF service consumer.			
NOTE: If the event subscription applies for a specific PDU session, the PDU session of a single UE (pduSeld, and gpsi/supi) shall be included; otherwise one and only one of a single UE (gpsi/supi), a group of UEs (groupId), or anyUeInd set to true shall be included.							

5.6.2.3 Type NsmfEventExposureNotification

Table 5.6.2.3-1: Definition of type NsmfEventExposureNotification

Attribute name	Data type	Р	Cardinality	Description	Applicability
notifld	string	М	1	Notification correlation ID used to	
				identify the subscription which the notification is corresponding to. It	
				shall be set to the same value as the	
				"notifld" attribute of	
				NsmfEventExposure data type or	
				the value of "notifCorreld" within the	
				UpPathChgEvent data type defined	
				in 3GPP TS 29.512 [14] or the value	
				of "notifCorreId" within the	
				QosMonitoringData data type	
				defined in 3GPP TS 29.512 [14].	
eventNotifs	array(EventNotificatio	М	1N	Notifications about Individual Events	
	n)				
ackUri	Uri	0	01	The URI provided by the SMF for	
				the AF acknowledgement.	
				If present, it only applies to the	
				"UP_PATH_CH" event indicated in	
				the "eventNotifs" attribute.	

5.6.2.4 Type EventSubscription

Table 5.6.2.4-1: Definition of type EventSubscription

Attribute name	Data type	Р	Cardinality	Description	Applicability
event	SmfEvent	М	1	Subscribed events	
dnaiChType	DnaiChangeType	С	01	For event UP path change, this attribute indicates whether the subscription is for early, late, or early and late DNAI change notification shall be supplied.	
dddTraDescriptor s	array(DddTrafficDesc riptor)	С	1N	The traffic descriptor(s) of the downlink data source. Shall be included for event "downlink data delivery status".	DownlinkData DeliveryStatus
dddStati	array(DIDataDelivery Status)	0	1N	May be included for event "downlink data delivery status". The subscribed statuses (discarded, transmitted, buffered) for the event. If omitted all statuses are subscribed.	DownlinkData DeliveryStatus
applds	array(ApplicationId)	0	1N	May be included for event "QFI allocation".	QfiAllocation

5.6.2.5 Type EventNotification

Table 5.6.2.5-1: Definition of type EventNotification

Attribute name	Data type	Р	Cardinality	Description	Applicability
event	SmfEvent	М	1	Event that is notified.	
timeStamp	DateTime	М	1	Time at which the event is observed.	
supi	Supi	С	01	Subscription Permanent Identifier. It	
				is included when the subscription applies to a group of UE(s) or any	
				UE.	
gpsi	Gpsi	С	01	Identifies a GPSI. It shall contain an	
91	575			MSISDN. It is included when it is	
				available and the subscription	
				applies to a group of UE(s) or any	
aguraa Dagi	Dnoi	С	01	UE. Source DN Access Identifier, Shall	
sourceDnai	Dnai	C	01	be included for event	
				"UP_PATH_CH" if the DNAI	
				changed (NOTE 1, NOTE 2).	
targetDnai	Dnai	С	01	Target DN Access Identifier. Shall	
				be included for event	
				"UP_PATH_CH" if the DNAI	
dnaiChgType	DnaiChangeType	С	01	changed (NOTE 1, NOTE 2). DNAI Change Type. Shall be	
dilaiong rype	Dilaichangerype		01	included for event "UP_PATH_CH".	
sourceUelpv4Ad	lpv4Addr	0	01	The IPv4 Address of the served UE	
dr				for the source DNAI. May be	
				included for event "UP_PATH_CH".	
sourceUeIpv6Pre	Ipv6Prefix	0	01	The Ipv6 Address Prefix of the	
fix				served UE for the source DNAI. May be included for event	
				"UP_PATH_CH".	
targetUelpv4Add	lpv4Addr	0	01	The IPv4 Address of the served UE	
r	l v v v caci		0	for the target DNAI. May be included	
				for event "UP_PATH_CH".	
targetUelpv6Pref	Ipv6Prefix	0	01	The Ipv6 Address Prefix of the	
ix				served UE for the target DNAI. May	
				be included for event "UP_PATH_CH".	
sourceTraRoutin	RouteToLocation	С	01	N6 traffic routing information for the	
g		ľ		source DNAI. Shall be included for	
				event "UP_PATH_CH" if available	
		_		(NOTE 2).	
targetTraRouting	RouteToLocation	С	01	N6 traffic routing information for the	
				target DNAI. Shall be included for event "UP_PATH_CH" if available	
				(NOTE 2).	
ueMac	MacAddr48	0	01	UE MAC address. May be included	
				for event "UP_PATH_CH".	
adlpv4Addr	lpv4Addr	0	01	Added IPv4 Address(es). May be	
II	In ODerfor		0.4	included for event "UE_IP_CH".	
adlpv6Prefix	Ipv6Prefix	0	01	Added Ipv6 Address Prefix(es). May be included for event "UE_IP_CH".	
relpv4Addr	lpv4Addr	0	01	Removed IPv4 Address(es). May be	
Tolpv I/ taal	ipv ir tadi		01	included for event "UE_IP_CH".	
relpv6Prefix	Ipv6Prefix	0	01	Removed Ipv6 Address Prefix(es).	
				May be included for event	
	DI II	<u> </u>	2.4	"UE_IP_CH".	
plmnld	Plmnld	С	01	New PLMN ID. Shall be included for	
ассТуре	AccessType	С	01	event "PLMN_CH". New Access Type. Shall be included	
acci ype	, 100000 i ype		01	for event "AC_TY_CH".	
pduSeld	PduSessionId	С	01	PDU session ID. Shall be included	
				for event "PDU_SES_REL" and	
		<u> </u>	_	"PDU_SES_EST".	
dddStatus	DIDataDeliveryStatus	С	01	Downlink data delivery status	DownlinkData
				(discarded, transmitted, buffered). Shall be included for event	DeliveryStatus
				"downlink data delivery status",	
<u> </u>	1	1	<u> </u>	, dominin data donvery status ,	1

In	_	2.4		ID 11 1 D 1
	С	01	time for downlink data delivery, Shall be included for event "downlink data delivery status" with status "BUFFERED".	DownlinkData DeliveryStatus
DddTrafficDescriptor	С	01	The downlink data descriptor impacted by downlink data delivery status change. Shall be included for event "downlink data delivery status"	DownlinkData DeliveryStatus
CommunicationFailur e	С	01	Describes the communication failure Communication failure rouse for the UE. Shall be included nFailure	
lpv4Addr	0	01	IPv4 address. May be included for event "PDU_SES_REL" or atus	
array(Ipv6Prefix)	0	1N	IPv6 prefixes. May be included for event "PDU_SES_REL" or atus	
array(Ipv6Addr)	0	1N	IPv6 addresses. May be included for event "PDU_SES_REL" or atus	
PduSessionType	С	01	PDU session type. Shall be included if the PduSessionStatus feature is supported.	PduSessionSt atus
Qfi	С	01	QoS flow identifier. Shall be included for event "QFI_ALLOC".	QfiAllocation
ApplicationId	0	01	Contains the application identifier. May be included for event "QFI_ALLOC". (NOTE 4)	QfiAllocation
array(EthFlowDescript ion)	0	12	Contains the flow description for the Uplink and/or Downlink Ethernet flows. May be included for event "QFI_ALLOC". (NOTE 4)	QfiAllocation
array(FlowDescription)	0	12	Contains the flow description for the Uplink and/or Downlink IP flows. May be included for event "QFI_ALLOC". (NOTE 4)	QfiAllocation
Dnn	С	01	Data network name, Shall be included for event "QFI_ALLOC". May be included for event "PDU_SES_REL" or "PDU_SES_EST".	QfiAllocation, PduSessionSt atus
Snssai	С	01	Identifies the slice information. Shall be included for event "QFI_ALLOC".	QfiAllocation
array(Uinteger)	0	1N	Uplink packet delay in units of milliseconds. (NOTE 5)	QoSMonitorin g
array(Uinteger)	0	1N	Downlink packet delay in units of milliseconds. (NOTE 5)	QoSMonitorin g
array(Uinteger)	0	1N	Round trip delay in units of milliseconds. (NOTE 5)	QoSMonitorin g
	CommunicationFailur e Ipv4Addr array(Ipv6Prefix) array(Ipv6Addr) PduSessionType Qfi ApplicationId array(EthFlowDescript ion) array(FlowDescription) Dnn Snssai array(Uinteger) array(Uinteger)	DddTrafficDescriptor C CommunicationFailur e Ipv4Addr O array(Ipv6Prefix) O array(Ipv6Addr) O PduSessionType C Qfi C ApplicationId O array(EthFlowDescript or ion) O Dnn C Snssai C array(Uinteger) O array(Uinteger) O array(Uinteger) O	DddTrafficDescriptor C 01 CommunicationFailur C 01 Ipv4Addr O 01 array(Ipv6Prefix) O 1N array(Ipv6Addr) O 1N PduSessionType C 01 Qfi C 01 ApplicationId O 01 array(EthFlowDescript O 12 ion) 12 Dnn C 01 Snssai C 01 array(Uinteger) O 1N array(Uinteger) O 1N	time for downlink data delivery, Shall be included for event "downlink data delivery status" with status "BUFFERED". DddTrafficDescriptor C

| milliseconds. (NOTE 5) |g
NOTE 1: If the DNAI is not changed while the N6 traffic routing information is changed, the "sourceDnai" attribute and "targetDnai" attribute shall not be provided.

NOTE 2: The change from the UP path status where no DNAI applies to a status where a DNAI applies indicates the activation of the related AF request and therefore only the target DNAI and N6 traffic routing information is provided in the event notification; the change from the UP path status where a DNAI applies to a status where no DNAI applies indicates the de-activation of the related AF request and therefore only the source DNAI and N6 traffic routing information is provided in the event notification.

- NOTE 3: If provided, either ipv6Prefixes or ipv6Addrs shall be present.
- NOTE 4: Only one of the appld, ethfDescs or fDescs shall be provided.
- NOTE 5: In this release of the specification the maximum number of elements in the array is 2. If more than one value is received at one given point of time for UL packet delay, DL packet delay or round trip packet delay respectively, the SMF reports the minimum and maximum packet delays to the NEF/AF.

5.6.2.6 void.

5.6.2.7 Type AckOfNotify

Table 5.6.2.x-1: Definition of type AckOfNotify

Attribute name	Data type	Р	Cardinality	Description	Applicability
notifld	string	М	1	Notification correlation ID used to	
				identify the subscription which the	
				notification is corresponding to.	
ackResult	AfResultInfo	М	1	Identifies the result of application	
				layer handling.	
supi	Supi	0	01	Subscription Permanent Identifier.	
gpsi	Gpsi	0	01	Identifies a GPSI.	

5.6.3 Simple data types and enumerations

5.6.3.1 Introduction

This subclause defines simple data types and enumerations that can be referenced from data structures defined in the previous subclauses.

5.6.3.2 Simple data types

The simple data types defined in table 5.6.3.2-1 shall be supported.

Table 5.6.3.2-1: Simple data types

Type Name	Type Definition	Description	Applicability
SubId	string	Identifies an Individual SMF Notification	
		Subscription. To enable that the value is used as	
		part of a URI, the string shall only contain	
		characters allowed according to the "lower-with-	
		hyphen" naming convention defined in 3GPP TS	
		29.501 [5]. In an OpenAPI [10] schema, the format	
		shall be designated as "SubId".	

5.6.3.3 Enumeration: SmfEvent

Table 5.6.3.3-1: Enumeration SmfEvent

Enumeration value	Description	Applicability
AC_TY_CH	Access Type Change	
UP_PATH_CH	UP Path Change	
PDU_SES_REL	PDU Session Release	
PLMN_CH	PLMN Change	
UE_IP_CH	UE IP address change	
DDDS	Downlink data delivery status	DownlinkDataDe liveryStatus
COMM_FAIL	Communication failure	Communication Failure
PDU_SES_EST	PDU Session Establishment	PduSessionStat us
QFI_ALLOC	QFI allocation	QfiAllocation
QOS_MON	QoS Monitoring	QoSMonitoring

5.6.3.4 Enumeration: NotificationMethod

The enumeration NotificationMethod represents the notification methods that can be subscribed. It shall comply with the provisions defined in table 5.6.3.4-1.

Table 5.6.3.4-1: Enumeration NotificationMethod

Enumeration value	Description	Applicability
PERIODIC	The notification is periodically sent.	
ONE_TIME	The notification is only sent one time.	
ON_EVENT_DETECTION	The notification is sent each time the event is detected.	

5.6.3.5 void.

5.7 Error handling

5.7.1 General

For the Nsmf_EventExposure API, HTTP error responses shall be supported as specified in subclause 4.8 of 3GPP TS 29.501 [5]. Protocol errors and application errors specified in table 5.2.7.2-1 of 3GPP TS 29.500 [4] shall be supported for an HTTP method if the corresponding HTTP status codes are specified as mandatory for that HTTP method in table 5.2.7.1-1 of 3GPP TS 29.500 [4].

In addition, the requirements in the following subclauses are applicable for the Nsmf_EventExposure API.

5.7.2 Protocol Errors

No specific procedures for the Nsmf_EventExposure service are specified.

5.7.3 Application Errors

The application errors defined for the Nsmf_EventExposure service are listed in Table 5.7.3-1.

Table 5.7.3-1: Application errors

Application Error	HTTP status code	Description

5.8 Feature negotiation

The optional features in table 5.8-1 are defined for the Nsmf_EventExposure API. They shall be negotiated using the extensibility mechanism defined in subclause 6.6 of 3GPP TS 29.500 [4].

Table 5.8-1: Supported Features

Feature number	Feature Name	Description
1	DownlinkDataDeliveryStatus	This feature indicates support for the "Downlink data delivery
		status" event.
2	CommunicationFailure	This feature indicates support for the "communication failure"
		event.
3		This feature indicates support for the PDU session establishment event and enhancement (PDU session type, IP address) for the
		PDU session release event.
4	QfiAllocation	This feature indicates support for the "QFI allocation" event.
5	QosMonitoring	This feature indicates support for the "QoS Monitoring" event.

5.9 Security

As indicated in 3GPP TS 33.501 [15] and 3GPP TS 29.500 [4], the access to the Nsmf_EventExposure API may be authorized by means of the OAuth2 protocol (see IETF RFC 6749 [16]), based on local configuration, using the "Client Credentials" authorization grant, where the NRF (see 3GPP TS 29.510 [12]) plays the role of the authorization server.

If OAuth2 is used, an NF Service Consumer, prior to consuming services offered by the Nsmf_EventExposure API, shall obtain a "token" from the authorization server, by invoking the Access Token Request service, as described in 3GPP TS 29.510 [12], subclause 5.4.2.2.

NOTE: When multiple NRFs are deployed in a network, the NRF used as authorization server is the same NRF that the NF Service Consumer used for discovering the Nsmf_EventExposure service.

The Nsmf_EventExposure API defines a single scope "nsmf-event-exposure" for the entire service, and it does not define any additional scopes at resource or operation level.

Annex A (normative): OpenAPI specification

A.1 General

The present Annex contains an OpenAPI [10] specification of HTTP messages and content bodies used by the Nsmf EventExposure API.

This Annex shall take precedence when being discrepant to other parts of the specification with respect to the encoding of information elements and methods within the API.

NOTE: The semantics and procedures, as well as conditions, e.g. for the applicability and allowed combinations of attributes or values, not expressed in the OpenAPI definitions but defined in other parts of the specification also apply.

Informative copies of the OpenAPI specification file contained in this 3GPP Technical Specification are available on a Git-based repository hosted in ETSI Forge, that uses the GitLab software version control system (see clause 5B of the 3GPP TR 21.900 [19] and subclause 5.3.1 of the 3GPP TS 29.501 [5] for further information).
