Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

- 32.121: Advanced Alarm Management Integration Reference Point (IRP): Requirements.
- 32.122: Advanced Alarm Management Integration Reference Point (IRP): Information Service (IS).
- 32.123: Advanced Alarm Management Integration Reference Point (IRP): Common Object Request Broker Architecture (CORBA) Solution Set.

The Itf-N interface is built up by a number of IRPs and a related Name Convention, which realise the functional capabilities over this interface. The basic structure of the IRPs is defined in 3GPP TS 32.150 [1].

A single network fault may generate a large number of alarms over space and time. In a large and complex network, simultaneous network faults may occur, causing the network operator to be flooded with high volume of alarms. The high volume of alarms, typically the one received by an IRPManager via the getAlarmList or alarm notifications of Alarm IRP specification, greatly inhibits the operator ability to quickly identify and locate the responsible network faults. Advanced AlarmManagement IRP is intended to provide methods to improve this situation.

1 Scope

The purpose of Advanced Alarm Management (AAM) IRP is to define an interface through which an IRPManager can categorize alarm notifications.

The present document is the AAM IRP CORBA Solution Set, whose semantics are specified in AAM IRP Information Service (3GPP TS 32.122 [3]).

This Solution Set specification is related to TS 32.122 v9.0.0.

2 References

The following documents contain provisions that, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.
- [1] 3GPP TS 32.150: "Telecommunication management; Integration Reference Point (IRP) Concept and definitions".
- [2] 3GPP TS 32.121: "Telecommunication management; Advanced Alarm Mangement (AAM) Integration Reference Point (IRP): Requirements".
- [3] 3GPP TS 32.122: "Telecommunication management; Advanced Alarm Mangement (AAM) Integrations Reference Point (IRP); Information Service (IS)".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

IRP: See 3GPP TS 32.150 [1].

IRPAgent: See 3GPP TS 32.150 [1].

IRPManager: See 3GPP TS 32.150 [1].

Alike Alarm: Two alarms are considered alike, if the corresponding alarm notifications are issued by the same object instance with the same alarmType, same perceivedSeverity, same probableCause and same specificProblem (if present).

Lower Edge of Time Window: The point in time which determines the begin of a time span.

Upper Edge of Time Window: The point in time which determines the end of a time span.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AAM Advanced Alarm Management

AAMRule Advanced Alarm Management Rule

CM Configuration Management

EM Element Manager
IOC Information Object Class
IRP Integration Reference Point

IS Information Service

Itf-N Interface N

MIB Management Information Base

NE Network Element

4 Architectural features

The overall architectural feature of Advanced Alarm Mangement IRP is specified in 3GPP TS 32.122 [3].

5 Mapping

5.1 General mappings

Not applicable.

5.2 Operation and notification mapping

The AAM IS (3GPP TS 32.122 [3]) defines semantics of operations visible across the Itf-N. Table 5.2-1 indicates mapping of these operations and notifications to their equivalents defined in this CORBA SS.

Table 5.2-1: Mapping from IS Operation to SS equivalents

IS Operation / Notification (3GPP TS 32.122)	SS Method	Qualifier
activateAAMRule	activate_aam_rule	M
getAAMRules	get_aam_rules	M
deactivateAAMRule	deactivate_aam_rule	M

5.3 Operation parameter mapping

The AAM IS (3GPP TS 32.122 [3]) defines semantics of parameters carried in operations across the Itf-N. The following tables indicate the mapping of these parameters, as per operation, to their equivalents defined in this CORBA SS.

Table 5.3-1: Mapping from IS activate aam rule parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
aam_rule_type	AAMConstDefs::AAMRuleType	M
aam_rule_parameter_list	AAMConstDefs::	M
	AAMRuleParameterList	
filter	AdvancedAlarmManegementConstDefs::FilterType	M
status	Exceptions: AAMConstDefs::ActivateAAMRule, AAMConstDefs::AAMRuleAlreadyActive, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M
aam_rule_identifier	AAMConstDefs:: AAMRuleIdentifier	M

Table 5.3-2: Mapping from IS get_advanced_alarm_management_rules parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
aam_rule_list	AAMConstDefs::AAMRuleList	М
	Exceptions: AAMConstDefs::GetAAMRules, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, GenericIRPManagementSystem::OperationNotSupported	M

Table 5.3-3: Mapping from IS deactivate_aam_rule parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
aam_rule_identifier	AAMConstDefs::AAMRuleIdentifier	М
status	Exceptions:	M
	AAMConstDefs::DeactivateAAMRule,	
	AAMConstDefs::SpecifiedRuleNotExisting,	
	GenericIRPManagementSystem::ParameterNotSupported,	
	GenericIRPManagementSystem::InvalidParameter,	
	GenericIRPManagementSystem::ValueNotSupported,	
	GenericIRPManagementSystem::OperationNotSupported	

5.4 Notification parameter mapping

None.
