Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document describes the protocol to be used on the IMS Application Level Gateway (ALG) – IMS Access Gateway (IMS-AGW) interface. The basis for this protocol is the H.248 protocol as specified in ITU-T. The IMS architecture is described in 3GPP TS 23.228 [2]. The underlying reference model and stage 2 information is described in Annex G of 3GPP TS 23.228 [2] and in 3GPP TS 23.334 [23].

This specification describes the application of H.248 on the Iq interface (see Figure 1). Required extensions use the H.248 standard extension mechanism. In addition certain aspects of the base protocol H.248 are not needed for this interface and thus excluded by this profile.

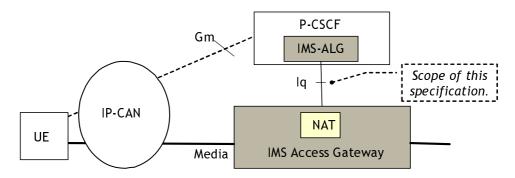

Figure 1: Reference model for IMS access

The reference model for the IMS-ALG and the IMS-AGW supporting the ATCF/ATGW function is shown in Figure 1a below.

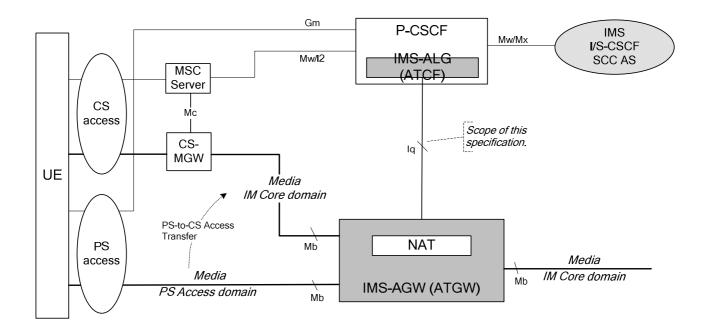

Figure 1a: Reference model for IMS-ALG/IMS-AGW with ATCF/ATGW function

See 3GPP TS 23.237 [38] clause 5.2 for a comprehensive description of the reference model.

The reference model for the P-CSCF enhanced for WebRTC (eP-CSCF) and the IMS-AGW enhanced for WebRTC (eIMS-AGW) to support WebRTC client access to IMS is shown in Figure 1b as below, see 3GPP TS 23.228 [2] Annex U for a comprehensive description of the reference model.

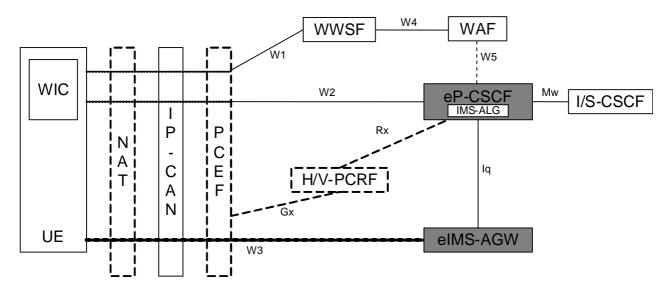

Figure 1b: Reference Architecture for eP-CSCF/eIMS-AGW supporting WebRTC access to IMS

NOTE: The presence of dashed elements in the figure depends on the configuration.

PCC functional elements are present only for EPC access with QoS.

The corresponding PCC elements for fixed access are also optionally supported but not shown.

The NAT in figure 1b is meant for non-cellular access to IMS.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

Definitions, symbols and abbreviations 3

3.1 **Definitions**

For the purposes of the present document, the following terms and definitions apply.

Address: term used for "network address" (IP address)

End-to-access edge security: media protection extending between an IMS UE and the first IMS core network node in the media path without being terminated by any intermediary node.

Port: term used for "transport port" (L4 port).

Transcoding: transcoding in general is the translation from one type of encoded media format to another different media format, e.g. G.711 A-law to μ-law or vice versa, G.729 to AMR with 4.75 rate.

NOTE 1: The definition of "transcoding" is according clause 3.10 of ITU-T Recommendation V.152 [23].

NOTE 2: Transcoding belongs to the category of "media aware" IP-to-IP interworking.

Transparent Forwarding: media gateway packet forwarding behaviour with the characteristic of Lx-PDU integrity. This is a unidirectional characteristic of an Lx-PDU flow.

NOTE 3: The definition is according clause 3.2.10 of ITU-T Recommendation H.248.88 [71].

NOTE 4: The semantic covers both traffic directions when applied on H.248 Streams (due to their inherent characteristic of bidirectionality).

Transport Address: term used for the combination of a Network Address and a Transport Port.

For the purposes of the present document, the following terms and definitions as defined in 3GPP TS 23.334 [23] apply:

ICE lite

Full ICE.

3.2 **Symbols**

For the purposes of the present document, the following symbols apply:

Iq Interface between the IMS Application Level Gateway (ALG) (IMS-ALG) and the IMS Access Gateway (IMS-AGW)

3.3 **Abbreviations**

For the purposes of the present document, the abbreviations defined in 3GPP TR 21.905 [1] apply, with the following additions. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

ABNF Augmented Backus-Naur Form Access Transfer Control Function **ATCF ATGW** Access Transfer Gateway

B-ALG Bearer Level Application-Level Gateway

BFCP Binary Floor Control Protocol Codec Control Messages CCM

CVO Coordination of Video Orientation **DSCP** Differentiated Service Code Point End-to-Access-Edge (security model) e2ae **ECN Explicit Congestion Notification**

ToS Type-of-Service

TISPAN Telecommunications and Internet converged Services and Protocols for Advanced Networking

WebRTC Web Real Time Communication

WIC WebRTC IMS Client

WWSF WebRTC Web Server Function

4 Applicability

The support of the Iq interface capability set shall be identified by the H.248 Iq profile and support of this profile shall be indicated in H.248 ServiceChange procedure (during the (re-)registration phase(s)).

4.1 Architecture

See Annex G and Annex U of 3GPP TS 23.228 [2].

5 Profile Description

5.1 Profile Identification

Table 5.1.1: Profile Identification

| Profile name: | threeglq |
|---------------|----------|
| Version: | 5 |

5.2 Summary

This Profile describes the minimum mandatory settings and procedures required to fulfil the requirements of the Iq interface (see 3GPP TS 23.334 [23]):

- allocation and translation of IP addresses and port numbers (NA(P)T and NA(P)T-PT);
- opening and closing gates (i.e. packets filtering depending on "IP address / port");
- remote NA(P)T traversal;
- policing of incoming traffic;
- QoS packet marking for outgoing traffic;
- IP realm/domain indication;
- Hanging termination detection; and
- RTCP handling;

and when ATCF/ATGW is supported:

- handover of bearer connections between PS and CS access networks:
- IP version interworking; and
- audio transcoding;

and when WebRTC is supported:

- interworking for WebRTC audio, video and optionally MSRP data between WebRTC clients and non-WebRTC user equipment; and
- optionally transparent forwarding of WebRTC bearer traffic in case of end-to-end WebRTC calls between WebRTC IMS clients.

In addition, optional settings and procedures are described which fulfil optional features and where supported, the minimum mandatory settings within the optional procedures and packages are identified that must be supported in order to support that feature.

"Optional" or "O" means that it is optional for either the sender or the receiver to implement an element. If the receiving entity receives an optional element that it has not implemented it should send an Error Code (e.g. 445 "Unsupported or Unknown Property", 501"Not Implemented", etc.). "Mandatory" or "M" means that it is mandatory for the receiver to implement an element. Whether it is mandatory for the sender to implement depends on specific functions; detail of whether elements of the core protocol are mandatory to be sent are defined in the stage 2 procedures, stage 3 procedures and/or the descriptions of individual packages.

The setting or modification of elements described in the profile under the heading "Used in Command" has the meaning that the property can be set/modified with that command. The property may be present in other commands (in order to preserve its value in accordance with ITU-T Recommendation H.248.1 [10]) when those commands are used for other procedures that affect the same descriptor.

5.3 Gateway Control Protocol Version

Version 2 (ITU-T Recommendation H.248.1 [10]) shall be used as minimum protocol version.

5.4 Connection model

Table 5.4.1: Connection Model

| Maximur | n number of contexts: | Provisioned |
|---|--|-------------------|
| Maximum number of terminations per context: 3 | | 3 |
| Allowed | terminations type combinations: | (IP,IP); |
| | | (IP,IP,IP) (NOTE) |
| NOTE: | This is only a temporary context configuration, occurring during bearer access transfer phase (between PS to CS access networks or vice versa) or during the reservation of two sets of transport addresses/resources towards the access network to support the functionalities related to the Alternate Connectivity functionality (see 3GPP TS 23.334 [23]). | |

5.5 Context attributes

Table 5.5.1: Context Attributes

| Context Attribute | Supported | Values Supported |
|-----------------------------|-------------------|------------------|
| Topology | Yes (NOTE 1) | See clause 5.7.9 |
| Priority Indicator | Optional (NOTE 2) | 0-15 (NOTE 3) |
| Emergency Indicator | Yes | YES/NO |
| IEPS Indicator | No | NA |
| ContextAttribute Descriptor | No | NA |
| ContextIdList Parameter | No | NA |
| AND/OR Context Attribute | No | NA |

- NOTE 1: Stream ID in Topology Descriptor shall not be supported (because only used for SRVCC service support, which is a monomedia type of call ("voice call").
- NOTE 2: This Context Attribute parameter is allowed in ETSI TISPAN Ia Profile version 3. It is also used for MPS as specified in 3GPP TS 22.153 [39].
- NOTE 3: Priority values 11 15 of the Priority Indicator are reserved for MPS.

5.6 Terminations

5.6.1 Termination names

5.6.1.1 IP Termination

5.6.1.1.1 ABNF Coding Overview and prose specification

The Termination ID structure shall follow the guidelines of H.248 and shall be based on four fields:

- "ip/<group>/<interface>/<id>".

The individual fields are described and defined in table 5.6.1.1.1.

Table 5.6.1.1.1.1: IP Termination Fields

| Name | Description | Values | CHOOSE Wildcard | ALL Wildcard |
|-----------|--|--|-----------------|--------------|
| lp | "ip" is a fixed prefix identifying | "ip" | No | No |
| | the termination | | | |
| Group | Group of Interface and Id | Integer (0-65535) | Yes (NOTE 5) | Yes |
| Interface | Logical or physical interface to a network to/from which the termination will be sending/receiving media. (NOTE 1, NOTE 2) | String of max 51 alphanumeric characters | Yes (NOTE 4) | Yes |
| ld | Termination specific identifier (NOTE 3) | Non-zero 32 bit integer | Yes (NOTE 4) | Yes |

- NOTE 1: A specific <Interface> may be used together with different groups.
- NOTE 2: The generic field <Interface> may relate specifically to an "IP interface", "protocol layer 2 interface" or others.
- NOTE 3: The combination of Interface and Id is unique.
- NOTE 4: The MGC shall always use CHOOSE in an ADD request command. If not, the MG shall reply with an error descriptor using error code #501 "Not Implemented".
- NOTE 5: The CHOOSE wildcard on 'Group' is not allowed in ETSI TISPAN "la Profiles".

NOTE: The IMS-ALG has the ability to choose the address space in which the IMS-AGW will allocate an IP address for the termination by using the *ipdc/realm* property defined in the ITU-T Recommendation H.248.41 IP domain connection package.

H.248 wildcarding may be applied on IP Termination Identifiers. Wildcarding is limited according the two columns on the right hand side.

The corresponding ABNF grammar is given below.

ABNF (IETF RFC 5234 [15]) is used for the syntax specification. The ABNF for TerminationID and relation to pathNAME is defined in annex B.2/ITU-T Recommendation H.248.1 [10].

```
= EphToken SLASH EPHsystem
pathNAME
EphToken
                                    ; prefix
                 = "ip"
                = WildcardALL
EPHsystem
                 / WildcardALL SLASH Interface
                 / Group SLASH WildcardALL
                 / (Group / WildcardCHOOSE) SLASH (Interface / WildcardCHOOSE) SLASH (Identifier
                 / WildcardALL / WildcardCHOOSE)
Group
                = %d0-65535
                                    ; data type: INT16
Interface
                = 1*51ALPHANUM
Identifier
                = %d1-4294967295
                                   ; data type: INT32
                = ALPHA / DIGIT
ALPHANUM
WildcardCHOOSE
                = "$"
                 = "*"
WildcardALL
```

5.6.1.1.2 ASN.1 Coding Overview and prose specification

The following general structure of termination ID shall be used:

4 octets shall be used for the termination ID. The following defines the general structure for the termination ID:

Table 5.6.1.1.2.1: ASN.1 coding

| Termination | |
|-------------|---|
| type | X |

Termination type:

Length 3 bits

Values:

000 Reserved

001 IP (Ephemeral) termination

010 Reserved (in 3GPP Mc and Mn profile used for TDM termination)

011 - 110 Reserved

111 Reserved for ROOT termination Id (ROOT Termination ID = 0xFFFFFFFF)

X:

Length 29 bits.

For IP termination, its usage is un-specified.

5.6.2 Multiplexed terminations

Table 5.6.2.1: Multiplexed terminations

| Multiplex terminations supported? | No |
|-----------------------------------|----|
| If yes then: | |

If yes, then:

Table 5.6.2.2: Multiplex Types

| Multiplex types supported | NA |
|---|----|
| Maximum number of terminations connected to | NA |
| multiplex | |

5.7 Descriptors

5.7.1 TerminationState Descriptor

Table 5.7.1.1: ServiceState property

| ServiceState property used: Yes (InService/OutofService) NOTE 1, NOTE | | Yes (InService/OutofService) NOTE 1, NOTE 2 | |
|--|---|--|--|
| NOTE 1: | This is restricted to the ROOT termination (for MGW audit). | | |
| NOTE 2: | Ephemeral H.248 Terminations have a ServiceSt | ate property according to ITU-T Recommendation H.248.1 | |
| | [10], but explicit usage of the TerminationState Descriptor ServiceState property is not required by this | | |
| | Profile. ServiceState changes can still occur, however, and can be indicated in ServiceChange Commands | | |
| | (i.e. this means that the value of the ServiceState property may be implicitly changed by ServiceChange | | |
| | procedures). | | |

Table 5.7.1.2: EventBufferControl property

| EventBufferControl property used: | No |
|-----------------------------------|----|
| | |

Table 5.7.1.3: Group semantics property

| Group semantics property used: | | Yes | |
|---|--|---|--|
| NOTE: This is restricted to ephemeral H.248 Terminations used for WebRTC service support. The property is | | s used for WebRTC service support. The property is used | |
| | in conjunction with the <i>media grouping</i> package, see clause 5.14.3.23. | | |

Table 5.7.1.4: SDPCapNeg Extensions property

| SDPCapNeg Extensions property used: | | Yes |
|-------------------------------------|---|--|
| NOTE: | The property is used in conjunction with the Enha | nced Revised Offer/Answer SDP Support package, see |
| | clause 5.14.3.x1. | |

Stream Descriptor 5.7.2

5.7.2.0 General

Table 5.7.2.1: Stream descriptors

| Maximun | n number of streams per termination type | IP | Unspecified (NOTE 1, NOTE 2) |
|---------|--|----|---------------------------------|
| NOTE 1: | NOTE 1: At least one stream for each media component (e.g. video+audio = 2 streams). If only one stream is applicable, then the IMS-ALG may omit the Stream Descriptor and the IMS-AGW shall assume that StreamID = 1. | | |
| NOTE 2: | OTE 2: An IP termination for WebRTC may carry additional H.248 (de-)aggregation streams besides the legacy H.248 component streams. | | |

Table 5.7.2.2: Stream configuration

| Stream configuration: | ALL configurations are allowed. | |
|-----------------------|--|--|
| | IP terminations for WebRTC may apply H.248 stream grouping principles, which leads to relationships of associated H.248 streams within such stream group configurations. | |

5.7.2.1 LocalControl Descriptor

Table 5.7.2.1.1: LocalControl Descriptor and Reserve properties

| | | Termination Type | Stream Type | |
|--|-----|------------------|-------------------------------|--|
| ReserveGroup used: | No | NA | NA | |
| ReserveValue used: | Yes | IP | Audio, Video (NOTE 1, NOTE 2) | |
| NOTE 1: The value of the H.248 Stream Type is given here by the SDP "m=" line element media type (in contrast to the SDP "m=" line element transport protocol in Table 5.7.2.1.2). Usage of ReserveValue implies thus media type aware Local and Remote Descriptors. | | | | |
| NOTE 2: Not used (at this profile version (see clause 5.1 for the version number)) for TCP transport (IETF RFC 793 [51]) and media types: | | | | |

a) "Message" (for MSRP (IETF RFC 4975 [18]) and
b) "Application" (for BFCP (IETF RFC 4582 [52]) and ROI FECC (IETF RFC 4573 [62]))
because the application control will not use them in context ReserveValue.

Table 5.7.2.1.2: Allowed Stream Modes

| Termination Type | Stream Type | Allowed StreamMode Values |
|------------------|-------------------------------|--|
| IP | RTP/AVP | SendOnly, RecvOnly, SendRecv, Inactive |
| | RTP/SAVP | SendOnly, RecvOnly, SendRecv, Inactive |
| | RTP/AVPF | SendOnly, RecvOnly, SendRecv, Inactive |
| | RTP/SAVPF | SendOnly, RecvOnly, SendRecv, Inactive |
| | TCP (NOTE 1) | SendRecv, Inactive |
| | TCP/MSRP (NOTE 1) | SendRecv, Inactive |
| | TCP/TLS (NOTE 1) | SendOnly, RecvOnly, SendRecv, Inactive |
| | TCP/TLS/MSRP (NOTE 1, NOTE 2) | SendOnly, RecvOnly, SendRecv, Inactive |
| | UDPTL | SendRecv, Inactive |
| | UDP | SendOnly, RecvOnly, SendRecv, Inactive |
| | UDP/DTLS | SendOnly, RecvOnly, SendRecv, Inactive |
| | UDP/DTLS/SCTP (NOTE 3) | SendOnly, RecvOnly, SendRecv, Inactive |

NOTE 1: The H.248 StreamMode does not affect protocol control information at the bearer interface. See clause 7.1.7.1.1 in ITU-T Recommendation H.248.1 [10] and:

a) TCP: ITU-T Recommendation H.248.89 [47], clause 8.6.4.1, Table "Impact of StreamMode on TCP bearer traffic at external MG interface"

b) TLS: ITU-T Recommendation H.248.90 [48], clause 8.6.4.1, Table "Impact of StreamMode on TLS bearer traffic at external MG interface".

NOTE 2: Conditional support, dependent on support of application-aware interworking.

NOTE 3: Conditional support, dependent on WebRTC service with data application(s).

NOTE 4: Conditional support, dependent on WebRTC service and DTLS-based SRTP key exchange for audio or video.

Table 5.7.2.1.3: LocalControl Descriptor and other properties

| | | Termination Type | Stream Type |
|---|-----|------------------|--------------------|
| Stream Aggregation used: | No | NA | NA |
| Stream De-aggregation used: | Yes | IP for WebRTC | WebRTC Data (NOTE) |
| NOTE: Conditional, dependent on WebRTC calls with multiple data components. | | | |

5.7.3 Events descriptor

Table 5.7.3.1: Events Descriptor

| Events settable on termination types and stream types: | Yes | | |
|--|---|------------------|----------------|
| If yes | EventID | Termination Type | Stream Type |
| <i>IJ yes</i> | Cause (g/cause, 0x0001/0x0001) - See clause 5.14.3.1 | ALL except ROOT | ANY |
| | Inactivity Timeout (it/ito, 0x0045/0x0001) – See clause 5.14.3.6 | only ROOT | Not applicable |
| | MG_Overload (ocp/mg_overload, 0x0051/0x0001) – See clause 5.14.3.8 | only ROOT | Not applicable |

| | T | 1 |
|---|-----------------|---|
| Termination Heartbeat (hangterm/thb, 0x0098/0x0001) - See | ALL except ROOT | ANY |

| Supported Error Codes defined in packages: | All error codes defined in supported packages need to be |
| | supported. |

NOTE: The error codes listed need not be supplied by the IMS-AGW to differentiate each and every error described by them. The IMS-ALG shall be able to receive the error codes listed.

5.8 Command API

5.8.1 Add

Table 5.8.1.1: Descriptors used by Command Add Request

| Descriptors used by Add request: | Media (Stream(LocalControl, Local, Remote)), Event, |
|----------------------------------|---|
| | Signals |

Table 5.8.1.2: Descriptors used by Command Add Reply

| Descriptors used by Add reply: | Media (Stream (Local)), Error |
|--------------------------------|--|
| | When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are: - The Error Descriptor |
| | SDP properties returned in "Reserve AGW Connection Point" and "Reserve and Configure AGW Connection Point" procedures, as specified in 15.17.2.2 and 15.17.2.4. |

5.8.2 Modify

Descriptors used by Modify request:

Table 5.8.2.1: Descriptors used by Command Modify Request

Media (TerminationState, Stream (LocalControl, Local,

| Bescriptors used by mounty request. | Remote)), Signals, Event |
|---|--|
| Table 5.8.2.2: Descriptors used by Command Modify Reply | |
| Descriptors used by Modify reply: | Media (Stream(Local)), Error |
| | When command request excludes an Audit Descriptor, the MGW response shall only include descriptors which contained underspecified or overspecified properties in the command request. Furthermore, only those properties that were underspecified or overspecified in the request shall be sent in the reply. Exceptions to this rule are: - The Error Descriptor |
| | - SDP properties returned in " Configure AGW Connection Point " procedure as specified in 15.17.2.3. |

5.8.3 Subtract

Table 5.8.3.1: Descriptor used by Command Subtract Request

|------------------------------------|----------------|
| | |

Table 5.8.7.2: Descriptors Used by Notify Reply

| Descriptors used by Notify Reply: | None, Error |
|-----------------------------------|-------------|

5.8.8 ServiceChange

Table 5.8.8.1: ServiceChangeMethods and ServiceChangeReasons sent by IMS-ALG:

| Service Change Methods Supported: | ServiceChange Reasons supported: | |
|--|---|--|
| Handoff (NOTE 2, NOTE 3) | "903 MGC Directed Change" (Optional, NOTE 4) | |
| Restart (NOTE 2) | "901 Cold Boot" (Optional) | |
| | "902 Warm Boot" (Optional) | |
| Forced (NOTE 2) | "905 Termination Taken Out Of Service" (Optional) | |
| Graceful (NOTE 2) | "905 Termination Taken Out Of Service" (Optional) | |
| NOTE 1: When a Service Change command on the Root termination with a method other than Graceful is sent, the | | |
| command shall always be sent as the only command in a message. The sending node shall always wait | | |
| for the reply to a Service Change command on the Root termination with a method other than Graceful | | |
| before sending further command requests. A Service Change command on the Root termination with | | |
| method Graceful may be combined with other commands in a single message. | | |

NOTE 2: ROOT Only.

NOTE 3: Not involving more than 1 IMS-ALG. This does not preclude the use of the MGCld in a ServiceChange (Handoff) scenario, nor does it change the expected IMS-AGW behaviour upon receipt of such a message, as the IMS-AGW has actually no means to differentiate whether the ServiceChangeMgcld parameter that may be received in a ServiceChange (handoff) message relates to a logical IMS-ALG inside the same IMS-ALG server or is part of another IMS-ALG.

NOTE 4: Support of this procedure is mandatory in the IMS-AGW.

Table 5.8.8.2: ServiceChangeMethods and ServiceChangeReasons sent by IMS-AGW:

| Service Change Methods Supported: | ServiceChange Reasons supported: | |
|---|--|--|
| Forced | "904 Termination Malfunction", ALL except ROOT | |
| | (Optional, NOTE 4) | |
| | "905 Termination Taken Out Of Service", ALL | |
| | (Mandatory) | |
| | "906 Loss Of Lower Layer Connectivity", ALL except | |
| | ROOT (Optional, NOTE 4) | |
| | "907 Transmission Failure", ALL except ROOT | |
| | (Optional, NOTE 4) | |
| | "908 MG Impending Failure" ROOT only (Mandatory) | |
| | "910 Media Capability Failure", ALL except ROOT | |
| | (Optional, NOTE 4) | |
| | "915 State Loss" ROOT only (Optional, NOTE 4) | |
| Graceful (NOTE 2) | "905 Termination Taken Out Of Service", (Optional, | |
| | NOTE 4) | |
| | "908 MG Impending Failure" (Optional, NOTE 4) | |
| Disconnected (NOTE 2) | "900 Service Restored" (Mandatory) | |
| | "916 Packages Change" (Optional) | |
| | "917 Capability Change" (Optional) | |
| Restart (NOTE 2) | "900 Service Restored" (Mandatory) | |
| | "901 Cold Boot" (Mandatory) | |
| | "902 Warm Boot" (Mandatory) | |
| | "916 Packages Change" (Optional) | |
| | "917 Capability Change "(Optional) | |
| Handoff (NOTE 2, NOTE 3) | "903 MGC Directed Change" (Mandatory) | |
| NOTE 1: When a Service Change command on the Root termination with a method other than Graceful is sent, the | | |
| command shall always be sent as the only command in a message. The sending node shall always wait for the reply to a Service Change command on the Root termination with a method other than Graceful | | |
| | | |
| method Graceful may be combined with o | other commands in a single message. | |
| NOTE 2: ROOT Only. | | |
| NOTE 3: In response to a IMS-ALG Ordered Re-Re | · · · · · · · · · · · · · · · · · · · | |
| NOTE 4: Support of this procedure is mandatory in | the IMS-ALG. | |

Table 5.8.8.3: Service Change Address

| ServiceChangeAddress used: | No | |

|--------------------------|-----|

5.8.9 Manipulating and auditing context attributes

Table 5.8.9.1: Manipulating and auditing context attributes

| Context Attributes Manipulated: | Emergency Indicator, Priority Indicator, Topology |
|---------------------------------|---|
| Context Attributes Audited: | None |

5.9 Generic command syntax and encoding

Table 5.9.1: Encodings

| Supporte | d Encodings: Text (NOTE 1, NOTE 2) and Binary |
|----------|--|
| NOTE 1: | The receiver shall be capable of receiving both Short Token Notation and Long Token Notation on an |
| | H.248 control association. |
| NOTE 2: | The transmitter may select between long and short token forms per H.248 control association. |
| NOTE 3: | ETSI TISPAN "la Profile" [3] uses only text encoding. |

5.10 Transactions

Table 5.10.1: Transactions per Message

| Maximum number of TransactionRequests / TransactionReplies / TransResponseAcks / Segment Replies per message: | 10 (NOTE) |
|---|-----------|
| NOTE: ETSI TISPAN "la Profile" [3] maximum is "1", this is foreseen to be the typical case. | |

Table 5.10.2: Commands per Transaction Requests

| Maximum number of commands per TransactionRequest: | Unspecified (NOTE) |
|---|-------------------------------------|
| NOTE: ETSI TISPAN "la Profile" [3] maximum is "2", this | is foreseen to be the typical case. |

Table 5.10.3: Commands per Transaction Reply

| Maximum number of commands per | Unspecified (NOTE) |
|---|-------------------------------------|
| TransactionReply: | |
| NOTE: ETSI TISPAN "la Profile" [3] maximum is "2", this | is foreseen to be the typical case. |

Table 5.10.4: Optional Commands

| Commands able to be marked "Optional": | <add, auditvalue,<="" modify,="" move,="" subtract,="" th=""></add,> |
|--|--|
| | Auditcapability, Servicechange, All, None> |

Table 5.10.5: Commands marked for Wildcarded Responses

| Wildcarded responses may be requested for: | Cubtract |
|--|----------|
| Wildcarded responses may be requested for: | Subtract |

Table 5.10.6: Procedures for Wildcarded Responses

| Procedures that make use of wildcarded | Release AGW Termination |
|--|-------------------------|
| responses: | |

Table 5.10.7: Transaction Timers

| Transaction Timer: | Value |
|----------------------------------|-------------|
| normalMGExecutionTime | Provisioned |
| normalMGCExecutionTime | Provisioned |
| MGOriginatedPendingLimit | Provisioned |
| MGCOriginatedPendingLimit | Provisioned |
| MGProvisionalResponseTimerValue | Provisioned |
| MGCProvisionalResponseTimerValue | Provisioned |

5.11 Messages

It is recommended that IMS-AGW and IMS-ALG names are in the form of fully qualified domain name. For example the domain name of the IMS-ALG may be of the form: "ALG1.whatever.net." and the name of the IMS-AGW may be of the form: "mg1.whatever.net.".

The fully qualified domain name will be used by the IMS-AGW and IMS-ALG as part of the "Message Identifier" in the H.248 messages which identifies the originator of the message.

The IMS-ALG domain name is provisioned in the IMS-AGW or retrieved from the DNS using SRV records.

The use of a domain name provides the following benefits:

- IMS-AGWs and IMS-ALGs are identified by their domain name, not their network addresses. Several addresses can be associated with a domain name. If a command cannot be forwarded to one of the network addresses, implementations shall retry the transmission using another address.

NOTE: There are then e.g. multiple numerical address entries per single MGC entity in the "MG database of MGC entries"; see Table 5 in ITU-T H.Sup7 [29].

- IMS-AGWs and IMS-ALGs may move to another platform. The association between a logical name (domain name) and the actual platform are kept in the Domain Name Service (DNS). IMS-AGW and IMS-ALG shall keep track of the record's time-to-live read from the DNS. They shall query the DNS to refresh the information if the time-to-live has expired.

The domain name may be used by IMS-ALG/IMS-AGW for authentication purposes.

5.12 Transport

Specifies what H.248 subseries transports are supported by the profile.

Table 5.12.1: Transport

| Supported transports: | 1. IPv4-based network control plane: |
|--|---|
| NOTE 1: When using SCTP as defined in IETF F "Initiation". | RFC 4960 [16] the IMS-AGW shall always be the node to perform the |

Table 5.12.2: Segmentation

| Segmentation supported: | SCTP: Inherent in Transport |
|-------------------------|-----------------------------|
| | UDP: No |

Table 5.12.3: Control Association

| Control Association Monitoring supported: | Monitoring mechanism is dependent on used H.248 transport (see above table 5.12/1): SCTP: inherent capability of SCTP. |
|---|--|
| | UDP: H.248.14 (MG-driven monitoring). Empty AuditValue on ROOT (MGC-driven monitoring). |

5.13 Security

Table 5.13.1: Security

| Support | ed Security: | None |
|---|---|--|
| NOTE: | IPsec shall not be used by the IMS-ALG or IMS- | AGW for the Iq interface. Normally the Iq interface lies |
| within a single operator's secure domain. If this is not the case then a Za interface (Security Gateway | | |
| deploying IPSec) may be required, however this is a separate logical function/entity and thus is not | | |
| | applicable to the Ig profile, the IMS-ALG or the II | MS-AGW. For further details see 3GPP TS 33.210 [27]. |

5.14 Packages

5.14.1 Mandatory Packages

Table 5.14.1.1: Mandatory Packages

| Mandatory Packages: | | | |
|---|--------------------|---------|--|
| Package Name | PackageID | Version | |
| IP NAPT traversal (ITU-T Recommendation H.248.37 [4]) | ipnapt, (0x0099) | 1 | |
| Generic (ITU-T Recommendation H.248.1 [10], annex E.1) | g, (0x0001) | 1 | |
| Base root (ITU-T Recommendation H.248.1 [10], annex E.2) | root, (0x0051) | 2 | |
| Gate management (ITU-T Recommendation H.248.43 [6], Appendix I | gm, (0x008c) | 2 | |
| Traffic management (ITU-T Recommendation H.248.53 [7]) | tman, (0x008d) | 1 | |
| IP Domain Connection (ITU-T Recommendation H.248.41 [8]) | ipdc, (0x009d) | 1 | |
| Hanging Termination Detection (ITU-T Recommendation H.248.36 [9]) | hangterm, (0x0098) | 1 | |
| Diffserv (ITU-T Recommendation H.248.52 [12]) | ds, (0x008b) | 2 | |
| RTP Control Protocol (ITU-T Recommendation H.248.57 [5]) | rtcph, (0x00b5) | 1 | |

5.14.3.7 IP Domain Connection (ipdc)

Table 5.14.3.7.1: IP domain connection package

| Properties | Mandatory/Optional | Used in command | Su | pported Values | Provisioned Value |
|---------------------|-------------------------|--------------------|---------|----------------|--------------------------|
| IP Realm Identifier | M | ADD, | | ALL | Yes |
| (ipdc/realm, | | MODIFY (NOTE 2) | | (NOTE 1) | |
| 0x009d/0x0001) | | | | | |
| Signals | Mandatory/Optional | Used in c | comma | nd | Duration |
| | | | | | Provisioned Value |
| None | - | | - | | - |
| | Signal Parameters | Mandatory/Optional | Supp | oorted Values | Duration |
| | | | | | Provisioned Value |
| | - | - | | - | - |
| Events | Mandatory/Optional | | Used | d in command | |
| None | - | | | - | |
| | Event Parameters | Mandatory/Optional | Supp | oorted Values | Provisioned Value |
| | - | - | | - | - |
| | ObservedEvent | Mandatory/Optional | Supp | oorted Values | Provisioned Value |
| | Parameters | | | | |
| | - | - | | - | - |
| Statistics | Mandatory/Optional | Used in command | d | Suppor | rted Values |
| None | - | - | • | | |
| Error Codes | | Mandatory | y/Optio | nal | |
| No | | - | - | | _ |

NOTE 1: If the MGC uses an IP Realm Identifier (*ipdc/realm*) property exceeding the maximum length limitation defined in ITU-T Recommendation H.248.41 [8], the MG shall reply with an error descriptor using error code #410: "Incorrect identifier".

NOTE 2: The MODIFY command is listed due to the fact that subsequent Streams may be "added" by MODIFY

NOTE 2: The MODIFY command is listed due to the fact that subsequent Streams may be "added" by MODIFY requests in case of multi-Stream-per-Termination structures. The subsequent Streams shall then carry the same IP Realm Identifier (*ipdc/realm*) property value as the very first Stream.

5.14.3.8 Media Gateway Overload Control Package (ocp)

Table 5.14.3.8.1: Media Gateway Overload Control Package

| Properties | Mandatory/Optional | Used in command | Supporte | ed Values | Provisioned Value |
|-------------------|--------------------------|--------------------|-------------|-------------|----------------------------|
| None | - | - | | - | - |
| Signals | Mandatory/Optional | Used in command | | | Duration Provisioned Value |
| None | - | - | | | - |
| | Signal Parameters | Mandatory/Optional | Supporte | ed Values | Duration Provisioned Value |
| | - | - | | - | - |
| Events | Mandatory/Optional | | Used i | in command | |
| MG_Overload | M | | MODIFY, N | IOTIFY (NOT | E 1) |
| (ocp/mg_overload, | Event Parameters | Mandatory/Optional | Supporte | ed Values | Provisioned Value |
| 0x0051/0x0001) | None | - | | - | - |
| (NOTE 1) | ObservedEvent Parameters | Mandatory/Optional | Supporte | ed Values | Provisioned Value |
| | None | - | | - | - |
| Statistics | Mandatory/Optional | Used in comma | nd | S | upported Values |
| None | - | - | | | - |
| Error Codes | | Manda | tory/Option | al | |
| None | | | - | | |

NOTE 1: When the MG is overloaded, overload Events may be sent **either** only following the **first ADD.request** which creates a new Context, **or** following **all ADD.request** commands (see ITU-T Recommendation H.248.11 [13] Corrigendum 1).

Those two entires result in different permalisations of the everload event rate as an indicator of the level of M.

These two options result in different normalisations of the overload event rate as an indicator of the level of MG overload.

5.14.3.9 Hanging Termination Detection (hangterm)

Table 5.14.3.9.1: Hanging Termination Detection Package

5.15 Mandatory support of SDP and Annex C information elements

Table 5.15.1: Mandatory Annex C and SDP information elements

| Information Element | Annex C Support | SDP Support |
|---------------------|-----------------|---|
| v-line | "SDP_V " | The value must always be equal to zero: v=0 |
| c-line | "SDP_C " | <nettype> <addrtype> and <connection address=""> are required. The network type shall be set to "IN". The address type may be IPv4 or IPv6. The MGC may apply parameter underspecification to the <connection address=""> subfield.</connection></connection></addrtype></nettype> |
| m-line | "SDP_M" | There are four fields (or SDP values) <media>, <port>, <pre>, <pre>cornection address> sublied.</pre> There are four fields (or SDP values) <media>, <port>, <pre>, <pre>cornection address> sublied.</pre> The "m=" line (see IETF RFC 4566 [17];NOTE 1). The "m=" line may be omitted from SDP. <media>, <port>, <pre>, <pre>cornection and <fmt-list> are required if the "m=" line is included.</fmt-list></pre> Media type <media> : The <media> field shall be set to "audio", "video", "message", "application", "text" or "-". When "-" is used for the media value then no media resources are required to be reserved at this stage (NOTE 1). If the MG does not support the requested media value it shall reject the command with error code 515. Transport port <port> The port value may be underspecified with CHOOSE wildcard. Transport protocol <pre>cproto> As in table 5.15.2. Media format <fmt> Various values may be used for media-format, dependent on the related <media> (NOTE 3). "-" may be used for the format list value if no media reservation is required at this stage. If the MG does not support the requested media format value the</media></fmt></pre></port></media></media></pre></port></media></pre></port></media></pre></port></media> |
| b-line | "SDP_B " | MG shall reject the command with error code 449. Shall not be used without a "m=" line. |
| | | The modifier values shall be "AS", "RS" and "RR". |
| | | The AS modifier implies that the bandwidth-value represents the ""maximum bandwidth" (see clause 5.8/ IETF RFC 4566 [17]). The bandwidth-value relates therefore to the peak bitrate (NOTE 2). |
| | | The bandwidth-value value defines the IP layer bandwidth for the specific H.248 Stream. |
| | | For RTP flows, where RTCP resources are reserved together with the RTP resources using the "RTP Specific Behaviour" property of the Gate Management package (gm) property, the IMS-ALG may also supply additional RTCP bandwidth modifiers (i.e. RR and RS, see IETF RFC 3556 [28]). The AS bandwidth value will include the bandwidth used by RTP. In the absence of the RTCP bandwidth modifiers the IMS-AGW shall allow an additional 5% of the AS bandwidth value for the bandwidth for RTCP, in accordance with IETF RFC 3556 [28]. |

| o-line | "SDP_O" | The origin line consists of six fields: (<username>, <sess-id>, <sess-version>, <nettype>, <addrtype> and <unicast-address>). The MGC is not required to supply this line but shall accept it (see clause 7.1.8/ITU-T Recommendation H.248.1 [10]). The MG shall return the value received from the MGC or if there is no o-line sent by the MGC, the MG shall populate this line as follows:</unicast-address></addrtype></nettype></sess-version></sess-id></username> |
|--------|---------|--|
| | | - <user name=""> should contain an hyphen - <session id=""> and <version> should contain one or mode digits as described in IETF RFC 4566 [17] - <network type=""> shall be set to IN - <address type=""> shall be set to IP4 or IP6 The Address Type shall be set to "IP4" or "IP6" depending on the addressing scheme used by the network to which the MG is connected <address> should contain the fully qualified domain name or IP address of the gateway.</address></address></network></version></session></user> |
| s-line | "SDP_S" | The session name "s=" line contains a single field s= <session name="">. The MGC is not required to supply this line but shall accept it (see clause 7.1.8/ITU-T Recommendation H.248.1 [10]). The MG shall return the value received from the MGC or if there is no s-line sent by the MGC, the MG shall populate this line as follows: - "s=-"</session> |
| t-line | "SDP_T" | The time "t=" line consists of two fields t= <start time=""> and <stop time="">. The MGC is not required to supply this line but shall accept it (see clause 7.1.8/ITU-T Recommendation H.248.1 [10]). The MG shall return the value received from the MGC or if there is no t-line sent by the MGC, the MG shall populate this line as follows: "t=0 0"</stop></start> |

NOTE 1: IETF RFC 4566 [17] enables "-" as a valid character.

NOTE 2: The unit for the bandwidth-value (peak bitrate) is "kbit/s". The "b=" line is not providing any information about the traffic characteristic, i.e. whether the traffic flow has a Constant BitRate (CBR) or Variable BitRate (VBR). The bandwidth-value is thus independent of the traffic characteristic and relates to the peak bitrate for CBR and VBR traffic.

NOTE 3: In particular, WebRTC uses value "webrtc-datachannel" in case of WebRTC data applications.

Table 5.15.2: Transport Protocol

| Transport Protocol <proto> in m-line:</proto> | If the MG does not support the requested transport protocol, it shall reject the command with error code 449. |
|---|---|
| RTP/AVP | RTP profile according IETF RFC 3551 [19]. Allow only L4 protocol = UDP (see NOTE 1). |
| RTP/AVPF | Extended RTP profile for RTCP-based Feedback (RTP/AVPF) according IETF RFC 4585 [25]. See 3GPP TS 26.114 [26]. Allow only L4 protocol = UDP (see NOTE 1). |
| RTP/SAVP | SRTP profile according IETF RFC 3711 [30] (NOTE 3). Allow only L4 protocol = UDP (see NOTE 1). |
| RTP/SAVPF | Extended SRTP profile for RTCP-based Feedback (RTP/SAVPF) according IETF RFC 5124 [31] (NOTE 3). Allow only L4 protocol = UDP (see NOTE 1). |
| TCP | Allow only L4 protocol = TCP (NOTE 2) |
| TCP/MSRP | Message service using IETF RFC 4975 [18] (NOTE 6). |
| TCP/TLS | Application agnostic indication with L4 protocol = TCP (NOTE 4). |
| TCP/TLS/MSRP | Application-specific indication with L4 protocol = TCP and TLS-based transport security (SDP codepoint see IETF RFC 4975 [18]) (NOTE 6). |
| udptl | Allow only L4 protocol = UDP |

WebRTC bearer traffic).

| udp | p Allow only L4 protocol = UDP (NOTE 1, NOTE 7). | | |
|--------------------|---|---|--|
| UDP/DTLS | | Application agnostic indication with L4 protocol = UDP and DTLS-based transport security (NOTE 5). | |
| UDP/TLS/RTP/SAVP | | Indication for WebRTC end-to-access edge transport security using DTLS-SRTP, where DTLS is used to establish keys for SRTP according to IETF RFC 5763 [60] and IETF RFC 5764 [61]. | |
| UDP/TLS | S/RTP/SAVPF | Indication for WebRTC end-to-access edge transport security using DTLS-SRTP, where DTLS is used to establish keys for extended SRTP according to IETF RFC 5763 [60] and IETF RFC 5764 [61]. | |
| UDP/DTLS/SCTP | | See IETF draft-ietf-mmusic-sctp-sdp [68]. For WebRTC data channel support (for the indication of the protocol stack segment "SCTP-over-DTLS"). | |
| NOTE 2: NOTE 3: | NOTE 1: Parameter "udp" is introduced by IETF RFC 4566 [17]. NOTE 2: Upper case TCP is defined by IETF RFC 4145 [20] and registered by IANA. NOTE 3: The IMS AGW does not need to reserve resources for end-to-access edge media (e2ae) security endecryption at this stage if RTP profile identifiers "RTP/SAVP" or "RTP/SAVPF" are signalled without the "a=crypto" property for that stream. For e2e media security either "RTP/SAVP" is signalled at all terminations in a context, or "RTP/SAVPF" is signalled at all terminations in a context and no media attribute will be signalled; the IMS AGW shall then not terminate the SRTP / SRTCP protocol, but shall pass the encrypted media and control flows (as indicated with the rtcph/rsb property) transparently. | | |
| | Parameter "TCP/TLS" is defined by IETF RFC 8122 [55] for the TLS protocol according to IETF RFC 5246 [53]. | | |
| NOTE 5: | E 5: Parameter "UDP/DTLS" is introduced by IETF draft-schwarz-mmusic-sdp-for-gw [54] (based on ITU-T Recommendation H.248.93 [50]). | | |
| NOTE 6: | Conditional support, dependent on application-aware interworking. | | |
| NOTE 7: | Codepoint used for e.g. "UDP payload transparent forwarding" (such as DTLS-encrypted end-to-end | | |

5.16 Optional support of SDP and Annex C information elements

Specifies what SDP attributes and Annex C information elements may be supported.

Table 5.16.1: Optional Annex C and SDP information elements

| Information Element | Annex C | SDP Support |
|---------------------|---------|-------------|
| | Support | |

65

a-line

"SDP A"

- 1) Application "RTCP transport address control":
- a) Default mode "without RTP/RTCP transport multiplexing": The attribute "a=rtcp" line may either contain (a=rtcp: <port>) or (a=rtcp: <port> <network type> <address type> <connection address>) when the "a=" line is used for RTCP transport port and optionally network address transmission (see IETF RFC 3605 [21]). The MGC shall supply the "a=rtcp" line in the RD when non-default RTCP network address or transport port values are used by the peer media entity.

"RTCP transport address control" should be supported by MG (NOTE 2).

b) Optional extension mode "with RTP/RTCP transport multiplexing": The attribute "a=rtcp-mux" (see IETF RFC 5761 [59]) is used for indicating RTP/RTCP transport multiplexing. Tables 4/1 to 4/5 in ITU-T Recommendation H.248.57 [5] define the appropriate RTCP port allocation rules.

2) Media related parameters in general:

The "a=" line provides the complementary information for the "m=" line with regards to a specified media type/format (e.g. an optional SDP "a=ptime" line for a particular media format).

For a dynamic RTP payload type, for each media information on the codec type shall be provided in a separate SDP "a=rtpmap"line and possibly additional SDP "a=fmtp"-line(s).

- 3) Application " Media interworking (transcoding)": See "a=" line specification in (2). Media interworking is limited to audio transcoding only (NOTE 1).
- 4) IMS media plane security related parameters:
- 4.1) SRTP-specific security parameters:

The attribute "a=crypto" (see IETF RFC 4568 [29]) shall be provided for an m-line in the local and remote descriptor of an access network termination if the IMS-ALG wants that the corresponding media is encrypted, decrypted and/or integrity protected by the IMS-AGW (IMS end-to-access-edge media plane security). For each m-line, only a single "a=crypto" attribute shall be provisioned (i.e. only information related to a single crypto suite is provisioned to the IMS-AGW). The "a=crypto" attribute may contain several master keys. An IMS-AGW supporting end-to-access-edge media plane security shall support parameters within the "a=crypto" attribute in accordance with the profile in Annex of 3GPP TS 33.328 [34].

4.2) (D)TLS-specific security parameters:

The attribute(s) "a=fingerprint" (see IETF RFC 8122 [55]) shall be provided in accordance with ITU-T Recommendation H.248.90 [48] for an "m="-line in the local and remote descriptor of an access network termination if the IMS-ALG wants that the corresponding media is encrypted, decrypted and/or integrity protected by the IMS-AGW (IMS end-to-access-edge media plane security).

5) Coordination of Video Orientation

The attribute "a=extmap" (see IETF RFC 5285 [41]) may be provided for an m-line in the local and remote descriptor if the IMS-AGW supports the extended RTP header with Coordination of Video Orientation information, see also 3GPP TS 26.114 [26].

6) Generic Image Attribute

The attribute "a=imageattr" (see IETF RFC 6236 [42]) may be provided for an m-line in the local and remote descriptor if the IMS-AGW supports the generic image attributes, see also 3GPP TS 26.114 [26]. The local descriptor indicates the image sizes which the IMS-AGW supports in the receiving direction for the selected payload type and corresponds to the "recv" keyword (see IETF RFC 6236 [42]) in the "a=imageattr" that the IMS-ALG will send within the SDP body on the Mw/Mx interface. The remote descriptor indicates the image sizes which the IMS-AGW supports in the sending direction for the selected payload type and corresponds to the "send" keyword (see IETF RFC 6236 [42]) in the "a=imageattr"

that the IMS-ALG will send within the SDP body on the Mw/Mx interface.

7) ICE support

The attributes "a=candidate", "a=ice-pwd", and "a=ice-ufrag" (see IETF RFC 5245 [44]) may be provided for an SDP m-line in the local and remote descriptor if the IMS-AGW supports ICE, see also 3GPP TS 24.229 [45]. In the local descriptor, the IMS-ALG shall provide "a=ice-pwd", and "a=ice-ufrag" with wildcard sign "\$" to request the allocation of a password and user name fragment, and the "a=candidate" of type "host" with the transport, port and priority parameters with wildcard sign "\$" to request the allocation of a host candidate. The IMS-AGW shall then reply with completed "a=ice-pwd", and "a=ice-ufrag" and "a=candidate" attributes in the local descriptor, and shall include "a=ice-lite" if it only supports ICE lite. In the remote descriptor, the IMS-ALG may provide the "a=candidate", "a=ice-pwd", and "a=ice-ufrag".

- 8) state-agnostic and state-aware TCP handling: The attribute "a=setup" (see IETF RFC 4145 [20]) shall be provided for TCP-based media, in accordance with ITU-T Recommendation H.248.84 [46], when triggering an end-to-end TCP simultaneous open (leading to a TCP merge mode in the IMS-AGW) or other TCP modes of operation.
- 9) Application-aware interworking for MSRP traffic: The attribute "a=path" (see IETF RFC 4975 [11]) shall be provided, when enabling a bearer level application gateway (B-ALG) function for MSRP traffic, according to ITU-T Recommendation H.248.78 [56].
- 10) Handling of RTCP APP messages when transcoding between EVS and non EVS codecs:

The attribute "a=3gpp_mtsi_app_adapt" (see 3GPP TS 26.114 [26]) containing the allowed RTCP APP message types shall be provided when the IMS-AGW is allowed to send RTCP APP messages.

11) Pre-defined Video Region-of-Interest (ROI):

The attribute "a=rtcp-fb" with the "Predefined ROI" type expressed by the parameter "3gpp-roi-predefined" may be provided for an m-line in the local and remote descriptor if the IMS-AGW supports the Predefined ROI mode, see also 3GPP TS 26.114 [26]. In addition, the attribute "a=extmap" (see IETF RFC 5285 [41]) may be provided for an m-line in the local and remote descriptor if the IMS-AGW supports the extended RTP header for carriage of pre-defined video Region of Interest (ROI) information in the sent video, see also 3GPP TS 26.114 [26].

12) Arbitrary Video Region of Interest (ROI):

The attribute a=rtcp-fb^T with the "Arbitrary ROI" type expressed by the parameter "3gpp-roi-arbitrary" may be provided for an m-line in the local and remote descriptor if the IMS-AGW supports the Arbitrary ROI mode, see also 3GPP TS 26.114 [26]. In addition, the attribute "a=extmap" (see IETF RFC 5285 [41]) may be provided for an m-line in the local and remote descriptor if the IMS-AGW supports the extended RTP header for carriage of arbitrary video Region of Interest (ROI) information in the sent video, see also 3GPP TS 26.114 [26].

13) WebRTC data channel:

The attributes "a=sctp-port" and "a=max-message-size" shall be provided in the remote descriptor (see IETF draft-ietf-mmusic-sctp-sdp [68]). In the local descriptor, the IMS-ALG shall provide "a=sctp-port" with omission sign "-" to indicate that the IMS-ALG shall use the same port as for UDP, and "a=max-message-size" with wildcard sign "\$". The IMS-AGW shall then reply with completed "a=sctp-port" and "a=max-message-size" attributes in the local descriptor, The attribute "a=dcmap" shall be provided in the local and remote descriptor, with the parameter "subprotocol" either set to "-" (Application-agnostic

data channel configuration) or with real value (Application-aware data channel configuration).

14) Application aware interworking of traffic within a WebRTC data channel:

The attribute "a=dcsa" may be provided in the local descriptor and/or remote descriptor (see IETF draft-ietf-mmusic-data-channel-sdpneg [69], NOTE 3).

T.140 (see ITU-T Recommendation T.140 [75]) is used for Global Text Telephony (GTT). Application aware interworking between the transport according to IETF draft-ietf-mmusic-t140-usage-data-channel [77] within WebRTC data channels and the transport according to IETF RFC 4103 [76] in the IMS core network should be applied for T.140 according to ITU-T Recommendation H.248.94 [67] Appendix 2. For application aware T.140 interworking, the "a= rtpmap" attribute shall be provided with "t140" payload type for the termination towards the IMS core network and "t140" value of the "subprotocol" parameter of the SDP "a=dcmap" attribute shall be provided for the termination towards the served WIC.

15) SDP Capability Negotiation:

The attributes of "a=acap", "a=tcap", "a=pcfg" and "a=acfg" (see IETF RFC 5939 [72]) may be provided in the local descriptor and/or remote descriptor.

16) Rate adaptation for media endpoints:

If the IMS-AGW performs media transcoding and if the rate adaptation for media endpoints using the enhanced bandwidth negotiation is supported by the IMS-AGW, attribute(s) "a=bw-info" with direction "send" or "sendrecv" may be provided for an m-line and the selected IP payload type and applicable IP version in the remote descriptor.

The following bandwidth properties, as defined in 3GPP TS 26.114 [26], clause 19, may be included in "a=bw-info" line: <payload type> <dir> <MaxSupBw>, <MaxDesBw>, <MinDesBw>, <MinSupBw> and <lpVer>.

17) "RTP-level pause and resume" signalling:

The "rtcp-fb" SDP attribute with the "ccm" feedback parameter and the "pause" ccm parameter as defined in IETF RFC 7728 [79] may be provided for an m-line in the local and remote descriptor to indicate that the IMS-AGW shall forward RTCP feedback "CCM PAUSE-RESUME" messages transparently.

18) "RTCP Codec Control Commands and Indications" signalling: The "rtcp-fb" SDP attribute with the "ccm" feedback parameter and the "fir" and/or "tmmbr" ccm parameters as defined in IETF RFC 5104 [78] may be provided for an m-line in the local and remote descriptor to indicate that the IMS-AGW shall be prepared to receive and is allowed to send, respectively, the RTCP CCM feedback messages FIR, and/or TMMBR and TMMBN.

NOTE 1: Media Interworking is optional.

NOTE 2: Table 1 in ITU-T Recommendation H.248.57 [5] provides the correspondent RTCP port allocation rules.

NOTE 3: See IETF draft-ietf-mmusic-msrp-usage-data-channel [70] for WebRTC data application 'MSRP'.

Editor's Note: The support for video transcoding is required for vSRVCC but should be changed from Rel-11, separate CRs would be required for this change.

5.17 Procedures

5.17.1 Formats and Codes

Table 5.17.1.1 shows the parameters which are required for the procedures defined in the following clauses.

The coding rules applied in ITU-T Recommendation H.248.1 [10] for the applicable coding technique shall be followed for the UMTS capability set.

The binary encoding rules which are applicable to the defined Abstract Syntaxes are the Basic Encoding Rules for Abstract Syntax Notation One, defined in ITU-T Recommendation X.690 [22]. Specifically in accordance with ITU-T Recommendation X.690 [22] clause 7.3, alternative encodings based on the definite and indefinite form of length are permitted by the basic encoding rules as a sender's option. Receivers shall support both alternatives.

Unsupported values of parameters or properties may be reported by the IMS-AGW and shall be supported by the IMS-ALG as such by using H.248.1 error code #449 "Unsupported or Unknown Parameter or Property Value". The unsupported or unknown value is included in the error text in the error descriptor.

Table 5.17.1.1: Information Elements Used in Procedures

| Signalling Object | H.248 Descriptor | Coding |
|--|--|---|
| Additional Bandwidth Properties | Remote Descriptor | The "a=bw-info" SDP attribute defined in 3GPP TS 26.114 [26], see table 5.16.1. |
| Allowed RTCP APP message types | Remote Descriptor | The "a=3gpp_mtsi_app_adapt" SDP attribute defined in 3GPP TS 26.114 [26]. |
| Alternate MGC Id | ServiceChange | The MGCIdToTry parameter in ITU-T Recommendation H.248.1 [10]. |
| Arbitrary ROI | Local Descriptor or Remote Descriptor | The "rtcp-fb" SDP attribute defined in IETF RFC 4585 [21] to indicate the "Arbitrary ROI" RTCP feedback message expressed by the "3gpp-roi-arbitrary" parameter, as described in 3GPP TS 26.114 [26]. |
| Available Realms | Termination State | According to Available Realms property in ITU-T Recommendation H.248.41 [8]. |
| Application-aware MSRP interworking request | LocalControl | This is the <i>ptbalg</i> property from ITU-T Recommendation H.248.78 [56] concerning the configuration of a B-ALG service (for MSRP traffic). |
| BNC Release | Events, ObservedEvents | As for the Events/ObservedEvents Descriptor in clause E.1.2.1/ ITU-T Recommendation H.248.1 [10] "Cause" |
| CCM BASE | Local Descriptor or Remote Descriptor | "rtcp-fb" SDP attribute (defined in IETF RFC 4585 [25]) with the "ccm" feedback parameter and the "fir" and/or "tmmbr" ccm parameters as defined in IETF RFC 5104 [78]. |
| CCM pause-resume | Local Descriptor or Remote Descriptor | "rtcp-fb" SDP attribute (defined in IETF RFC 4585 [25]) with the "ccm" feedback parameter (defined in IETF RFC 5104 [78]) and the "pause" ccm parameter as defined in IETF RFC 7728 [79]. |
| Cause | ObservedEvents | As for the ObservedEvent Parameter in clause E.1.2.1/ ITU-T Recommendation H.248.1 [10] "General cause" |
| Changed Realms | Observed Events | According to Observed Events Parameters for <i>Available Realms</i> Changed event in ITU-T Recommendation H.248.41 [8]. |
| Codec List | Local Descriptor or Remote Descriptor | <fmt list=""> in a single SDP m-line. For a static RTP payload type, the codec type should be implied by the RTP payload type, if not then each codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s). For a dynamic RTP payload type, for each codec information on the codec type shall be provided in a separate SDP "a=rtpmap"-line and possibly additional SDP "a=fmtp"-line(s).</fmt> |
| Connectivity Mode | LocalControl | ITU-T Recommendation H.248.1 [10] Mode property. Binary Encoding: Encoding as per ITU-T Recommendation H.248.1 Annex A [10] "streamMode" Textual Encoding: Encoding as per ITU-T Recommendation H.248.1 Annex B [10] "streamMode". |
| Context ID | NA | Binary Encoding: As per ITU-T Recommendation H.248.1 [10] Annex A. Textual Encoding: As per ITU-T Recommendation H.248.1 [10] Annex B. |
| Cryptographic SDES Attribute | Local Descriptor or Remote Descriptor | "crypto" attribute in SDP a-line as defined in IETF RFC 4568 [29], see 5.16 |
| Delay Variation Tolerance | LocalControl | This is the tman/dvt property from ITU-T Recommendation H.248.53 [7]. |
| Diffserv Code Point | LocalControl | Defined according to the <i>Differentiated Services Code Point</i> property in ITU-T Recommendation H.248.52 [12]. |
| Diffserv Tagging Behaviour | LocalControl | Defined according to the <i>Tagging Behaviour</i> property in ITU-T Recommendation H.248.52 [12]. |
| Discard Incoming TCP Connection Establishment Requests Indicator | LocalControl | Defined according to the <i>Incoming bearer connection</i> establishment blocking property (tcpbcc/bceb) in ITU-T Recommendation H.248.89 [47]. |
| ECN Enabled | Local Descriptor or Remote Descriptor | Defined according to the "ECN Enabled" property in ITU-T Recommendation H.248.82 [40]. |
| ECN Failure | Events, Observed Events | Defined according to the "ECN Failure" Event in ITU-T Recommendation H.248.82 [40]. |
| ECN Failure Type | ObservedEvents Descriptor | As for the ObservedEventsDescriptor Parameter "Failure Type" in ITU-T Recommendation H.248.82 [40]. |
| ECN Initiation Method | Local Descriptor or Remote Descriptor | Defined according to "Initiation Method" property in ITU-T Recommendation H.248.82 [40]. |

| Emergency Call Indication | NA | ITU-T Recommendation H.248.1 [10] 6.1.1 Emergency Call |
|---------------------------------------|---------------------------------------|---|
| | | Indicator Binary Encoding: Encoding as per ITU-T |
| | | Recommendation H.248.1 [10] Annex A "Emergency" context |
| | | attribute |
| | | Textual Encoding: Encoding as per ITU-T Recommendation |
| F-t-hi-h (D)TI Oi | 0: | H.248.1 [10] Annex B " EmergencyToken" context attribute |
| Establish (D)TLS session | Signals | Defined according to the Establish BNC signal (tlsbsc/EstBNC) in |
| Estandad Haadar Far CVO | Lacal Decementaries | ITU-T Recommendation H.248.90 [48]. |
| Extended Header For CVO | Local Descriptor or Remote Descriptor | "extmap" attribute in SDP a-line as defined in IETF RFC 5285 [41], see 5.16 |
| | Remote Descriptor | See 5.10 |
| Extended RTP Header for | Local Descriptor or | "extmap" attribute in SDP a-line to pass on the ROI extended RTP |
| Sent ROI | Remote Descriptor | header as defined by IETF RFC 5285 [41] for carriage of |
| Sent Kor | Remote Descriptor | predefined and/or arbitrary ROI information, see 5.16 |
| Forward Incoming TCP | LocalControl | Defined according to the <i>Interlinkage topology</i> property |
| Connection Establishment | Localocition | (seplink/linktopo) in ITU-T Recommendation H.248.93 [50]. |
| Requests Indicator | | (copilination in the continuous and the cool [co]. |
| Generic Image Attribute | Local Descriptor or | "imageattr" attribute in SDP a-line as defined in |
| ge / miliage / miliage | Remote Descriptor | IETF RFC 6236 [46], see table 5.16.1. |
| ICE host candidate | Local Descriptor | The "a=candidate" SDP attribute defined in IETF RFC 5245 [44] of |
| request | | type "host" with the transport, port and priority parameters with |
| 1 | | wildcard sign "\$" to request the allocation of a host candidate |
| ICE host candidate | Local Descriptor | The "a=candidate" SDP attribute defined in IETF RFC 5245 [44] |
| ICE lite indication | Local Descriptor | The "a=ice-lite" SDP attribute defined in IETF RFC 5245 [44]. |
| ICE password request | Local Descriptor | The "a=ice-pwd" SDP attribute defined in IETF RFC 5245 [44] with |
| · · · · · · · · · · · · · · · · · | | wildcard sign "\$". |
| ICE password | Local Descriptor | The "a=ice-pwd" SDP attribute defined in IETF RFC 5245 [44]. |
| ICE received candidate | Remote Descriptor | The "a=candidate" SDP attribute defined in IETF RFC 5245 [44] |
| ICE received password | Remote Descriptor | The "a=ice-pwd" SDP attribute defined in IETF RFC 5245 [44]. |
| ICE received Ufrag | Remote Descriptor | The "a=ice-ufrag" SDP attribute defined in IETF RFC 5245 [44]. |
| ICE Ufrag request | Local Descriptor | The "a=ice-ufrag" SDP attribute defined in IETF RFC 5245 [44] |
| To E on ag Toquost | 2000i 2000iipioi | with wildcard sign "\$". |
| ICE Ufrag | Local Descriptor | The "a=ice-ufrag" SDP attribute defined in IETF RFC 5245 [44]. |
| ICE Connectivity Check | Events. | Defined according to Connectivity Check Result event in ITU-T |
| Result | Observed Events | Recommendation H.248.50 [43]. |
| ICE Send Connectivity | Signals | Defined as the ostuncc/scc signal in ITU-T Recommendation |
| Check | 3 | H.248.50 [43]. |
| ICE New Peer Reflexive | Events, | Defined according to New Peer Reflexive Candidate event in ITU-T |
| Candidate | Observed Events | Recommendation H.248.50 [43], only applicable for full ICE. |
| ICE Send Additional | Signals | Defined as the ostuncc/sacc signal in ITU-T Recommendation |
| Connectivity Check | | H.248.50 [43], only applicable for full ICE. |
| Consent freshness test | Signals | Defined according to stnconfres/contest signal in ITU-T |
| request | | Recommendation H.248.50 [43]. |
| STUN consent freshness | Events, | Defined according to stnconfres/confail event in ITU-T |
| test failure | Observed Events | Recommendation H.248.50 [43]. |
| Inactivity Timer | Events, | Defined according to Inactivity Timeout event in ITU-T |
| | Observed Events | Recommendation H.248.14 [11]. |
| IP Address | Local Descriptor or | <pre><connection address=""> in SDP "c-line"</connection></pre> |
| | Remote Descriptor | |
| IP Realm | LocalControl | According to IP Realm Identifier property in ITU-T |
| | | Recommendation H.248.41 [8]. |
| IP Version | Local Descriptor or | <address type=""> in SDP "c-line", see 5.15</address> |
| | Remote Descriptor | |
| Latching | Signals | This is the ipnapt/latch signal in ITU-T Recommendation H.248.37 |
| | | [4]. |
| Local certificate fingerprint | Local Descriptor | "fingerprint" attribute in SDP "a="-line as defined in |
| | | IETF RFC 8122 [55] see table 5.16.1. |
| Local certificate fingerprint | Local Descriptor | "fingerprint" attribute in SDP "a="-line as defined in |
| Request | | IETF RFC 8122 [55] with wildcard choose "\$". |
| Local Dcmap | Local Descriptor | The SDP attribute "a=dcmap" (see IETF draft-ietf-mmusic-data- |
| | | channel-sdpneg [69]). |
| Local Dcsa | Local Descriptor | The SDP attribute "a=dcsa" (see IETF draft-ietf-mmusic-data- |
| | | channel-sdpneg [69]). |
| Local SCTP maximum | Local Descriptor | The SDP attribute "a= max-message-size" (see IETF draft-ietf- |
| message size Request | | mmusic-sctp-sdp [68]) with wilcard sign "\$". |
| Local SCTP maximum | Local Descriptor | The SDP attribute "a= max-message-size" (see IETF draft-ietf- |
| message size | | mmusic-sctp-sdp [68]) |
| | | |

| Local SCTP Port Request | Local Descriptor | The SDP attribute "a= sctp-port" (see IETF draft-ietf-mmusic-sctp-sdp [68]) with omission sign "-" to indicate that the same port as for UDPshall be used. |
|---|--|---|
| Local SCTP Port | Local Descriptor | The SDP attribute "a= sctp-port" (see IETF draft-ietf-mmusic-sctp-sdp [68]) |
| Maximum Burst Size | LocalControl | This is the tman/mbs property from ITU-T Recommendation H.248.53 [7] |
| Media Inactivity Detection | Events, Observed Events | Defined according to <i>ipstop</i> event in ITU-T Recommendation H.248.40 [24]. |
| Media Inactivity Detection Time | Events | As for the Event Parameter in ITU-T Recommendation H.248.40 [24] "Detection Time" |
| Media Inactivity Detection Direction | Events | As for the Event Parameter in ITU-T Recommendation H.248.40 [24] "Direction" |
| Media Type | Local Descriptor or Remote Descriptor | <pre><media> in SDP m-line "audio" or "video" or "-"</media></pre> |
| MSRP Path | Remote Descriptor | The "a=path" SDP attribute defined in IETF RFC 4975 [18]. |
| Notify (D)TLS session establishment Failure Event | ObservedEvents | As for the ObservedEvent Parameter in clause E.1.2.1/ ITU-T Recommendation H.248.1 [10] "General cause" |
| Notify TCP Connection Establishment Failure Event | ObservedEvents | As for the ObservedEvent Parameter in clause E.1.2.1/ ITU-T Recommendation H.248.1 [10] "General cause" |
| Overload Notification | Events, ObservedEvents | This is the chp/mgcon event from ITU-T Recommendation H.248.10 [14] or the ocp/mg_overload event from ITU-T Recommendation H.248.11 [13]. |
| Peak Data Rate | LocalControl | This is the tman/pdr property from ITU-T Recommendation H.248.53 [7]. |
| Policing Required | LocalControl | This is the tman/pol property from ITU-T Recommendation H.248.53 [7]. |
| Port | Local Descriptor or Remote Descriptor | <port> in SDP m-line.</port> |
| Predefined ROI | Local Descriptor or Remote Descriptor | The "rtcp-fb" SDP attribute defined in IETF RFC 4585 [25] to indicate the "Predefined ROI" RTCP feedback message expressed by the "3gpp-roi-predefined" parameter, as described in 3GPP TS 26.114 [26]. |
| Priority Information | NA | Priority Indicator (clause 6.1.1 of ITU-T Recommendation H.248.1 [10]) Binary Encoding: Encoding as per ITU-T Recommendation H.248.1 [10] Annex A "priority" context attribute Textual Encoding: Encoding as per ITU-T Recommendation H.248.1 [10] Annex B "priority" context attribute |
| Realm Availability Change | Events, Observed Events | According to Available Realms Changed event in ITU-T Recommendation H.248.41 [8]. |
| Received SCTP Stream Reset Request | Events, ObservedEvents | Defined according to the <i>Detect outgoing SCTP Stream reset</i> event (<i>sctpreset/detreset</i>) in ITU-T Recommendation H.248.97 [66]. |
| Received SCTP Stream Reset Response | Events, ObservedEvents | Defined according to the <i>Outgoing SCTP Stream reset result</i> event (<i>sctpreset/result</i>) in ITU-T Recommendation H.248.97 [66]. |
| Reduction | ObservedEvent Descriptor | As for the ObserverdEventDescriptor in clause 4.2.1/ ITU-T Recommendation H.248.10 [14] "MGCongestion". |
| Release (D)TLS session | Signals | Defined according to the <i>Release BNC</i> signal (<i>tlsbsc/RelBNC</i>) in ITU-T Recommendation H.248.90 [48]. |
| Remote certificate fingerprint | Remote Descriptor | "fingerprint" attribute in SDP "a="-line as defined in IETF RFC 8122 [55], see table 5.16.1. |
| Remote Dcmap | Remote Descriptor | The SDP attribute "a=dcmap" (see IETF draft-ietf-mmusic-data-channel-sdpneg [69]). |
| Remote Dcsa | Remote Descriptor | The SDP attribute "a=dcsa" (see IETF draft-ietf-mmusic-data-channel-sdpneg [69]). |
| Remote SCTP maximum message size | RemoteDescriptor | The SDP attribute "a= max-message-size" (see IETF draft-ietf-mmusic-sctp-sdp [68]) |
| Remote SCTP Port | Remote Descriptor | The SDP attribute "a= sctp-port" (see IETF draft-ietf-mmusic-sctp-sdp [68]) |
| Remote Source Address Filtering | LocalControl | Defined according to <i>Remote Source Address Filtering</i> property in ITU-T Recommendation H.248.43 [6]. |
| Remote Source Address Mask | LocalControl | Defined according to <i>Remote Source Address Mask</i> property in ITU-T Recommendation H.248.43 [6]. |

| Remote Source Port Filtering | LocalControl | Defined according to <i>Remote Source Port Filtering</i> property in ITU-T Recommendation H.248.43 [6]. |
|--|--|--|
| Remote Source Port | LocalControl | Defined according to Remote Source Port property in ITU-T Recommendation H.248.43 [6]. |
| Remote Source Port Range | LocalControl | Defined according to <i>Remote Source Port Range</i> property in ITU-T Recommendation H.248.43 [6]. |
| Reserve_Value | LocalControl | ITU-T Recommendation H.248.1 [10] Reserve property. Binary Encoding: Encoding as per ITU-T Recommendation H.248.1 [10] Annex A "reserveValue" Textual Encoding: Encoding as per ITU-T Recommendation H.248.1 [10] Annex B "reservedValueMode". |
| ROOT Properties | Termination State | The properties in clause E.2.1/ ITU-T Recommendation H.248.1 [10] |
| RTCP allocation ((NOTE 1) | Local Control | Defined according to RTCP Allocation Specific Behaviour property in ITU-T Recommendation H.248.57 [5]. |
| RTP/RTCP transport multiplexing | Local Descriptor or Remote Descriptor | The SDP attribute "a=rtcp-mux" according to IETF RFC 5761 [59]. (NOTE 2) |
| explicit RTCP transport address | Remote Descriptor | The SDP attribute "a=rtcp:" according to IETF RFC 3605 [21]. |
| RtcpbwRR | Local Descriptor or Remote Descriptor | <pre><bandwidth> in SDP "b:RR"-line. see 5.15</bandwidth></pre> |
| RtcpbwRS | Local Descriptor or Remote Descriptor | <bar> <br< td=""></br<></bar> |
| Rtpbw | Local Descriptor or Remote Descriptor | <bar> <br< td=""></br<></br></bar> |
| RTPpayload | Local Descriptor or Remote Descriptor | <pre><fmt list=""> in SDP m-line. This may be set to CHOOSE (\$) in a LD sent from the IMS-ALG toward the IMS-AGW.</fmt></pre> |
| SCTP Group Semantics | Termination State | Group Semantics (mgroup/groupse) defined in ITU-T Recommendation H.248.96 [65] with semantics "SCTP" defined in ITU-T Recommendation H.248.97 [66] |
| SCTP stream deaggregation | LocalControl | Stream Deaggregation (mgroup/strdeagg) related semantics "SCTP" defined in ITU-T Recommendation H.248.96 [65] |
| SCTP stream ID | LocalControl | SCTP StreamID (sctpbcc/sctpid) defined in ITU-T Recommendation H.248.97 [66] |
| SDPCapNeg configuration | Local Descriptor or Remote Descriptor | The SDP attributes for SDP capability negotiation as defined in IETF RFC 5939 [72]. |
| SDPCapNeg Supported Capabilities | Termination State | Defined according to SDPCapNeg Extensions property in ITU-T Recommendation H.248.80 [73]. |
| Send SCTP Association Establishment Requests Indicator | Signals | Defined according to the <i>Establish BNC</i> signal (<i>sctpbcc/EstBNC</i>) in ITU-T Recommendation H.248.97 [66]. |
| Send SCTP Stream Reset Requests Indicator | Signals | Defined according to the <i>Initiate Outgoing SCTP Stream Reset</i> signal (<i>sctpreset/initreset</i>) in ITU-T Recommendation H.248.97 [66]. |
| Send SCTP Stream Reset Response Indicator | Signals | Defined according to the <i>Outgoing SCTP Stream Reset Response</i> signal (<i>sctpreset/resetresp</i>) in ITU-T Recommendation H.248.97 [66]. |
| Send TCP Connection Establishment Requests Indicator | Signals | Defined according to the Establish BNC signal (tcpbcc/EstBNC) in ITU-T Recommendation H.248.89 [47]. |
| Stream Number | Stream | Encoding as per ITU-T Recommendation H.248.1 [10] Annex B "Stream"/"ST". For a single stream, this may be omitted by the IMS-ALG. |
| STUN server request | LocalControl | Encoding as per ITU-T Recommendation H.248.50 [43] "MG Actas STUN Server" (mgastuns) package "Act-as STUN Server" (astuns, 0x0001) property. |
| Sustainable Data Rate | LocalControl | This is the tman/sdr property from ITU-T Recommendation H.248.53 [7]. |
| TCP State-aware Handling Indicator and Setup Direction | Local Descriptor or Remote Descriptor | The "a=setup" SDP attribute as per clause 13.5.1 of ITU-T Recommendation H.248.84 [46]. |
| Termination heartbeat | Events ObservedEvents | As per <i>Termination Heartbeat</i> defined in ITU-T Recommendation H.248.36 [9] Clause 5.2.1. |
| Termination ID | NA | Binary Encoding: As per ITU-T Recommendation H.248.1 [10] Annex A. |
| | | Textual Encoding: As per ITU-T Recommendation H.248.1 [10] Annex B. |

| Transaction ID | NA | Binary Encoding: As per ITU-T Recommendation H.248.1 [10] Annex A. Textual Encoding: As per ITU-T Recommendation H.248.1 [10] Annex B. |
|--|--|--|
| Transport | Local Descriptor or Remote Descriptor | <transport> in SDP m-line, see 5.15</transport> |
| NOTE 1: Signalling element "RTCP allocation" corresponds to the stage 2 information element "RTCP handling". NOTE 2: RTP/RTCP transport multiplexing can be agreed with the served UE using the SDP attribute(s) "a=rtcp-mux" and/or "a=rtcp-mux-only" (defined in IETF draft-ietf-mmusic-mux-exclusive [74]), see 3GPP TS 23.334 [23]. However, the SDP attribute "rtcp-mux-only" is not used on Iq interface. | | |

5.17.2 Call Related Procedures

5.17.2.1 General

This clause describes the various call related procedures performed by the IMS-AGW, which are listed in table 5.17.2.1.1

Table 5.17.2.1.1: IMS-AGW Call Related Procedures

| Transaction defined in 3GPP TS 23.334 [23] | Supported | Comment |
|--|-----------|---|
| Reserve AGW Connection Point | Mandatory | See 5.17.2.2 |
| Configure AGW Connection Point | Mandatory | See 5.17.2.3 |
| Reserve and Configure AGW Connection Point | Mandatory | See 5.17.2.4 |
| Release AGW Termination | Mandatory | See 5.17.2.5 |
| Termination Heartbeat Indication | Mandatory | See 5.17.2.6 |
| IP Bearer Released | Mandatory | See 5.17.2.7 |
| Media Inactivity Notification | Optional | See 5.17.2.8 |
| Change Through Connection | Mandatory | See 5.17.2.9 |
| Change Flow Direction | Optional | See 5.17.2.10. |
| ECN Failure Indication | Optional | See 5.17.2.11 |
| LOW Failure maleador | Optional | Only applicable if ECN endpoint capability is supported |
| ICE Connectivity Check Result Notification | Optional | See 5.17.2.12 Only applicable if full ICE is supported |
| ICE New Peer Reflexive Candidate Notification | Optional | See 5.17.2.13 Only applicable if full ICE is supported |
| Notify TCP connection establishment Failure Indication | Optional | See 5.17.2.14 Only applicable if state-aware TCP handling (proxy mode) is supported |
| Notify (D)TLS session establishment Failure Indication | Optional | See 5.17.2.15 Only applicable if IMS media security for TCP and/or UDP is supported |
| Notify SCTP Stream Reset | Optional | See 5.17.2.17 Only applicable if WebRTC data channels are supported |
| Notify SCTP Stream Reset Result | Optional | See 5.17.2.18 Only applicable if WebRTC data channels are supported |

5.17.2.2 Reserve AGW Connection Point

The IMS-ALG sends an ADD request command as in Table 5.17.2.2.1.

Table 5.17.2.2.1: Reserve AGW Connection Point Request

| Address Information | Control information | Bearer information |

                                           Delay Variation Tolerance
```

If Media Inactivity Detection Required:

NotificationRequested (Event ID = x, "Media Inactivity Detection(Media Inactivity Detection Time, Media Inactivity Detection Direction) ") (NOTE 1)

If RTCP handling required: RTCP allocation

If ECN transparent support required: ECN Enable = "True" Initiation Method = "inactive"

If ECN Endpoint support required ECN Enable = "True" Initiation Method = "ECN Initiation Method" (NOTE 2)

If notification of ECN Failure Report: NotificationRequested (Event ID = x,"ECN Failure")

If ICE is applied: STUN server request

If Discard Incoming TCP connection establishment request required:
Discard Incoming TCP Connection Establishment Requests Indicator

If Forward Incoming TCP connection establishment request required: Forward Incoming TCP Connection Establishment Requests Indicator

If indication on TCP connection establishment failure requested:
NotificationRequested (Event ID = x, "TCP connection establishment failure")

If (D)TLS session establishment required:

Establish (D)TLS session

If indication on (D)TLS session establishment failure requested: NotificationRequested (Event ID = x, "(D)TLS session establishment failure")

If media is "message":
If B-ALG for MSRP required:
Application-aware MSRP
interworking request

If SCTP association for WebRTC data channels:
SCTP Group Semantics
SCTP stream deaggregation

SCTP stream ID

| | | NotificationRequested | |
|---------|---|--|---------------------------------------|
| | | (Event ID = x , | |
| | | "Received SCTP Stream Reset | |
| | | Request") | |
| NOTE 1: | The event parameters "Med | dia Inactivity Detection Time" and "Medi | a Inactivity Detection Direction" are |
| | optional. | | - |
| NOTE 2: | This shall be set to a value | other than "inactive". See Table 5.14.3. | 15.1. |
| NOTE 3: | | ne extended RTP header with Coordinat | |
| | shall pass any received extended RTP header with CVO bits on to outgoing RTP streams. If the IMS- | | |
| | AGW is transcoding between | en video payloads and it supports the ex | ktended RTP header with |
| | Coordination of Video Orier | ntation information it shall convey receiv | ed RTP header bytes on the outgoing |
| | RTP stream after transcodi | ng associated packets as specified in 30 | GPP TS 26.114 [26], clause 7.4.5. |
| NOTE 4: | The support of the generic | image attributes is optional for the IMS- | AGW. The list of image sizes per |
| | | the IMS-AGW is preconfigured in the IM | |
| | received within an SDP boo | dy on Mx/Mw interface is supported by the | he IMS-AGW then the IMS-ALG will |
| | not send the generic image | attribute parameter to the IMS-AGW. | |
| NOTE 5: | This element is optional. Th | ne RTCP port allocation rules are specifi | ied in tables 4/1 to 4/5 in ITU- |
| | T Recommendation H.248. | 57 [5]. | |

On reserving the termination, the IMS-AGW responds as in Table 5.17.2.2.2.

5.17.2.3 Configure AGW Connection Point

This procedure is used to configure the AGW connection point during session establishment or to reconfigure it during session establishment or after the session is established

The IMS-ALG sends a MODIFY request command as in Table 5.17.2.3.1.

Table 5.17.2.3.1: Configure AGW Connection Point Request

Connection Establishment Requests Indicator

If TCP connection establishment required:

Send TCP Connection Establishment Request Indicator

If indication on TCP connection establishment failure requested:
NotificationRequested (Event ID =

NotificationRequested (Event ID = x, "TCP connection establishment failure")

If (D)TLS session establishment required:

Establish (D)TLS session

If indication on (D)TLS session establishment failure requested:
NotificationRequested (Event ID = x, "(D)TLS session establishment failure")

If (D)TLS session release required: Release (D)TLS session

If media is "message":

If B-ALG for MSRP required:

RTP/RTCP transport multiplexing (NOTE 9)

If RTCP handling required: explicit RTCP transport address (NOTE 8)

If IMS media plane security required:

Cryptographic SDES Attribute If RTP-level pause and resume: CCM pause-resume

If RTCP APP messages allowed Allowed RTCP APP message Types

If RTCP Codec Control Commands and Indications: CCM BASE

If media is "message" or "application" or "-":

If IMS media plane security equired:

Remote certificate fingerprint If media is "video":

If CVO required:

Extended Header For CVO (NOTE 5)

If imageattr negotiation: Generic Image Attribute (NOTE 6)

If Predefined ROI required: RTCP feedback for Predefined ROI

Extended Header for Sent ROI
If Arbitrary ROI required:
RTCP feedback for Arbitrary ROI
Extended Header for Sent ROI

If media is "message":

If B-ALG for MSRP required:

MSRP Path

If ICE is applied:

ICE received candidate ICE received password ICE received Ufrag (NOTE 7)

If STUN consent freshness test required:

STUN consent freshness request NotificationRequested(Event ID= x, "STUN consent freshness test failure")

If TCP state-aware handling required:

TCP State-aware Handling Indicator and Setup Direction

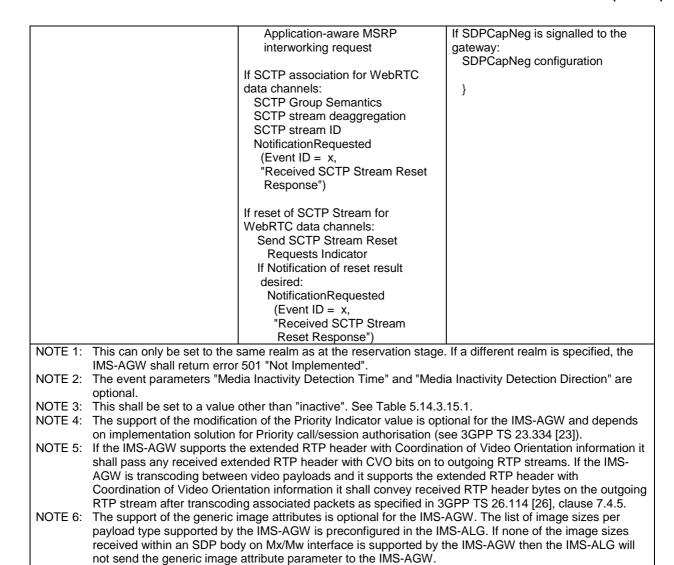

If SCTP association for WebRTC data channels:

Remote SCTP Port Remote SCTP maximum message size

Remote Dcmap
If application aware interworking
Remote Dcsa

ETSI

87

The support of ICE received candidate, ICE received password, ICE received Ufrag are optional for ICE

NOTE 8: The basic RTCP port allocation rules are defined by table 1 in ITU-T Recommendation H.248.57 [5], which summarizes all rules, with and without the "explicit RTCP transport address" element.

NOTE 9: This element is optional. The RTCP port allocation rules are specified in tables 4/1 to 4/5 in ITU-

NOTE 10: The support of rate adaptation for media endpoints using the additional bandwidth properties is optional for the IMS-AGW. If media transcoding is required the IMS-ALG may provide for the selected payload

type and the used IP version the additional bandwidth properties.

lite, as specified in 3GPP TS 23.334 [23].

T Recommendation H.248.57 [5].

failure")

If indication on (D)TLS session establishment failure requested: If media is "audio" or "video":

Codec List

RTP Payloads

Rtpbw

If rate adaptation for media endpoints:

Additional Bandwidth Properties (NOTE 8)

If RTCP bandwidth

RtcpbwRS

RtcpbwRR

If RTCP handling required: RTP/RTCP transport multiplexing

(NOTE 7)

If RTCP handling required: explicit RTCP transport address (NOTE 6)

If IMS media plane security required:

Cryptographic SDES Attribute If RTP-level pause and resume: CCM pause-resume

If RTCP APP messages allowed Allowed RTCP APP message types

If RTCP Codec Control Commands and Indications: **CCM BASE**

If media is "video":

If CVO required:

Extended Header For CVO (NOTE 3)

If imageattr negotiation: Generic Image Attribute

(NOTE 4) If Predefined ROI required:

RTCP feedback for Predefined ROI Extended Header for Sent ROI

If Arbitrary ROI required: RTCP feedback for Arbitrary ROI Extended Header for Sent ROI

If media is "message": If B-ALG for MSRP required:

If ICE is applied:

MSRP Path

ICE received candidate ICE received password

ICE received Ufrag (NOTE 5)

If STUN consent freshness test required:

STUN consent freshness request NotificationRequested(Event ID= x, "STUN consent freshness test failure")

If media is "message" or "application" or "-": If IMS media plane security

required: Remote certificate fingerprint

If TCP state-aware handling NotificationRequested (Event ID = x, "(D)TLS session establishment required: failure") TCP State-aware Handling Indicator and Setup Direction If media is "message": If B-ALG for MSRP required: If SCTP association for WebRTC Application-aware MSRP data channels: interworking request Remote SCTP Port Remote SCTP maximum message If SCTP association for WebRTC size data channels: Remote Dcmap **SCTP Group Semantics** If application aware interworking SCTP stream deaggregation Remote Dcsa SCTP stream ID NotificationRequested If SDPCapNeg is signalled to the (Event ID = x, "Received SCTP Stream Reset gateway: SDPCapNeg configuration Request")

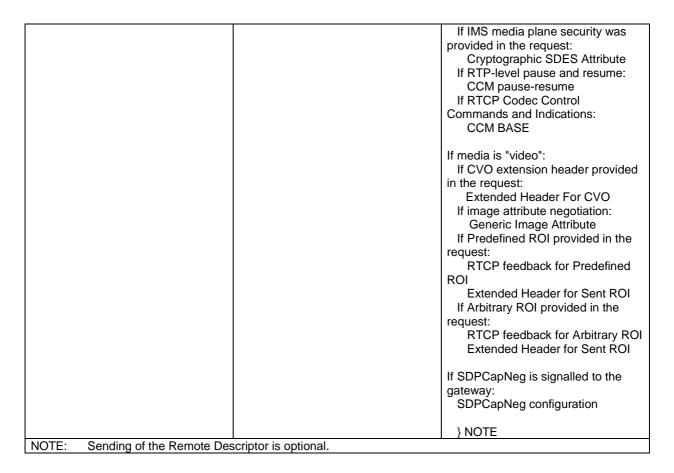

- NOTE 1: The event parameters "Media Inactivity Detection Time" and "Media Inactivity Detection Direction" are optional.
- NOTE 2: This shall be set to a value other than "inactive". See Table 5.14.3.15.1.
- NOTE 3: If the IMS-AGW supports the extended RTP header with Coordination of Video Orientation information it shall pass any received extended RTP header with CVO bits on to outgoing RTP streams. If the IMS-AGW is transcoding between video payloads and it supports the extended RTP header with Coordination of Video Orientation information it shall convey received RTP header bytes on the outgoing RTP stream after transcoding associated packets as specified in 3GPP TS 26.114 [26], clause 7.4.5.
- NOTE 4: The support of the generic image attributes is optional for the IMS-AGW. The list of image sizes per payload type supported by the IMS-AGW is preconfigured in the IMS-ALG. If none of the image sizes received within an SDP body on Mx/Mw interface is supported by the IMS-AGW then the IMS-ALG will not send the generic image attribute parameter to the IMS-AGW.
- NOTE 5: The support of ICE received candidate, ICE received password, ICE received Ufrag are optional for ICE lite, as specified in 3GPP TS 23.334 [23].
- NOTE 6: The basic RTCP port allocation rules are defined by table 1 in ITU-T Recommendation H.248.57 [5], which summarizes all rules, with and without the "explicit RTCP transport address" element.
- NOTE 7: This element is optional. The RTCP port allocation rules are specified in tables 4/1 to 4/5 in ITU-T Recommendation H.248.57 [5].
- NOTE 8: The support of rate adaptation for media endpoints using the additional bandwidth properties is optional for the IMS-AGW. If media transcoding is required the IMS-ALG may provide for the selected payload type and the used IP version the additional bandwidth properties.

The IMS-AGW responds as in Table 5.17.2.4.2.

Table 5.17.2.4.2: Reserve and Configure AGW Connection Point Request Acknowledge

                                                                               Extended Header for Sent ROI
                                                                           If ICE is applied:
                                                                             ICE host candidate
                                                                             ICE password
                                                                             ICE Ufrag
                                                                             If ICE lite implementation
                                                                               ICE lite indication
                                                                           If media is "message" or
                                                                           "application" or "-":
                                                                             If Local certificate fingerprint was
                                                                           requested:
                                                                              Local certificate fingerprint
                                                                           If SCTP association for WebRTC
                                                                           data channels:
                                                                             Local SCTP Port
                                                                             Local SCTP maximum message
                                                                           If SDPCapNeg is signalled to the
                                                                           gateway:
                                                                             SDPCapNeg configuration
                                                                           Remote Descriptor {
                                                                           If media is "audio" or "video":
                                                                             Codec List
                                                                             RTP Payloads
                                                                             Rtpbw
                                                                             If rate adaptation for media
                                                                               endpoints:
                                                                              Additional Bandwidth Properties
                                                                             If RTCP bandwidth
                                                                               RtcpbwRS
                                                                               RtcpbwRR
```

5.17.2.5 Release AGW Termination

The IMS-ALG sends a SUBTRACT command as in Table 5.17.2.5.1.

Table 5.17.2.5.1: Release AGW Termination Request

| Address Information | Control information | Bearer information |
|---------------------|---|--------------------|
| | Transaction ID = x Context ID= C1/ALL Termination ID = T1/ALL | |

On releasing the termination, the IMS-AGW responds as in Table 5.17.2.5.2

Table 5.17.2.5.2: Release AGW Termination Request Acknowledge

| Address Information | Control information | Bearer information |
|---------------------|--|--------------------|
| | Transaction ID = x Context ID = C1/ALL Termination ID = T1/ALL | |

5.17.2.6 Termination Heartbeat Indication

When the procedure "Termination heartbeat indication" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.6.1 NOT.req (Termination heartbeat)

| Address Information | Control information | Bearer information |
|---------------------|--|--------------------|
| | Transaction ID = x Context ID = C1 Termination ID = T1 | |
| | Event_ID (Event ID = x, "termination heartbeat") | |

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.6.2 NOT.resp (Termination heartbeat)

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

The IMS-ALG shall correct any detected mismatch, by subtracting hanging terminations or clearing hanging contexts.

5.17.2.7 IP Bearer Released

When the procedure "IP Bearer Released" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.7.1 NOT.req (IP Bearer Released)

| Address Information | Control information | Bearer information |
|---------------------|--|--------------------|
| | Transaction ID = x Context ID = C1 Termination ID = T1 | |
| | Event_ID (Event ID = x, "BNC Release (Cause)") | |

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.7.2 NOT.resp (IP Bearer Released)

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.8 Media Inactivity Notification

When the procedure "Media Inactivity Notification" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.8.1 NOT.req (Media Inactivity)

| Address Information | Control information | Bearer information |
|---------------------|--|--------------------|
| | Transaction ID = x Context ID = C1 Termination ID = T1 | |
| | Event_ID (Event ID = x, "Media Inactivity Detection") | |

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.8.2 NOT.resp (Media Inactivity)

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.9 Change Through Connection

The IMS-ALG sends an ADD or a MODIFY request command as in Table 5.17.2.9.1.

5.17.2.9.1 Change Through Connection Request

| Address Information | Control information | Bearer information |
|---------------------|---|--------------------|
| | Transaction ID = x If Context Requested: Context ID = \$ If Context Provided: Context ID = c1 | |
| | If Termination Requested: Termination ID = \$ If Termination Provided: Termination ID = T1 | |
| | Through-Connection = Connectivity Mode | |

The IMS-AGW responds as in Table 5.17.2.9.2.

5.17.2.9.2 Change Through Connection Request Acknowledge

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.10 Change Flow Direction

The IMS-ALG sends an ADD or a MODIFY request command as in Table 5.17.2.10.1.

5.17.2.10.1 Change Flow Direction

| Address Information | Control information | Bearer information |
|---------------------|---|--------------------|
| | Transaction ID = x If Context Requested: Context ID = \$ If Context Provided: Context ID = c1 | |
| | If Termination Requested: Termination ID = \$ If Termination Provided: Termination ID = T1 | |
| | Connection Configuration = (TerminationID= x1, TerminationID=x2, [type = x]), | |

The IMS-AGW responds as in Table 5.17.2.10.2.

5.17.2.10.2 Change Flow Direction Acknowledge

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.11 ECN Failure Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.2.11.1.

Table 5.17.2.11.1: ECN Failure Indication

| Address Information | Control information | Bearer information |
|---------------------|------------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= C1 | |
| | Termination ID = T1 | |
| | Event_ID (Event ID = x, | |
| | " ECN Failure (ECN Failure Type)") | |

The IMS-ALG responds as in Table 5.17.2.11.2

Table 5.17.2.11.2: ECN Failure Indication Ack

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.12 ICE Connectivity Check Result Notification

The IMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.12.1.

Table 5.17.2.12.1: ICE Connectivity Check Result Notification

| Address Information | Control information | Bearer information |
|---------------------|------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= C1 | |
| | Termination ID = T1 | |
| | | |
| | Event_ID (Event ID = x, | |
| | "Connectivity Check Result | |
| | (Candidate/Transport Pair)") | |

The IMS-ALG responds as defined in Table 5.17.2.12.2

Table 5.17.2.12.2: ICE Connectivity Check Result Notification Ack

| Address Information | Control information | Bearer information |
|---------------------|------------------------------------|--------------------|
| | Transaction ID = x Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.13 ICE New Peer Reflexive Candidate Notification

The IMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.13.1.

Table 5.17.2.13.1: ICE New Peer Reflexive Candidate Notification

| Address Information | Control information | Bearer information |
|---------------------|---|--------------------|
| | Transaction ID = x Context ID= C1 Termination ID = T1 | |
| | Event_ID (Event ID = x, "New Peer Reflexive Candidate (Candidate)") | |

The IMS-ALG responds as defined in Table 5.17.2.13.2

Table 5.17.2.13.2: ICE New Peer Reflexive Candidate Ack

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.14 Notify TCP connection establishment Failure Indication

When the procedure "Notify TCP connection establishment Failure Indication" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.14.1 NOT.req (TCP connection establishment Failure)

| Address Information | Control information | Bearer information |
|---------------------|-------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |
| | | |
| | Event_ID (Event ID = y, | |
| | "TCP connection establishment | |
| | Error Indication") | |

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.14.2 NOT.resp (TCP connection establishment Failure)

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.15 Notify (D)TLS session establishment Failure Indication

When the procedure "Notify (D)TLS session establishment Failure Indication" is required the following procedure is initiated: the IMS-AGW sends a NOT.req command with the following information.

5.17.2.15.1 NOT.req ((D)TLS session establishment Failure)

| Address Information | Control information | Bearer information |
|---------------------|-------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |
| | Event_ID (Event ID = y, | |
| | "(D)TLS session establishment | |
| | Error Indication") | |

When the processing of command is complete, the IMS-ALG initiates the following procedure.

5.17.2.15.2 NOT.resp ((D)TLS session establishment Failure)

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.16 STUN Consent Freshness Test Failure Notification

The eIMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.16.1.

Table 5.17.2.16.1: STUN Consent Freshness Test Failure Notification

| Address Information | Control information | Bearer information |
|---------------------|--------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= C1 | |
| | Termination ID = T1 | |
| | Event_ID (Event ID = x, | |
| | "STUN Consent Freshness Test | |
| | Failure (STUN Consent | |
| | Freshness Test Failure Type)") | |

The eP-CSCF responds as defined in Table 5.17.2.16.2

Table 5.17.2.16.2: STUN Consent Freshness Test Failure Notification Ack

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.17 Notify SCTP Stream Reset

The IMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.17.1.

Table 5.17.2.17.1: Notify SCTP Stream Reset

| Address Information | Control information | Bearer information |
|---------------------|---|--------------------|
| | Transaction ID = x Context ID= C1 Termination ID = T1 | |
| | Event_ID (Event ID = x, " Received SCTP Stream Reset Request (SCTP Stream ID)") | |

The IMS-ALG responds as defined in Table 5.17.2.17.2

Table 5.17.2.17.2: Notify SCTP Stream Reset Ack

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.2.18 Notify SCTP Stream Reset Result

The IMS-AGW sends a NOTIFY request command as defined in Table 5.17.2.18.1.

Table 5.17.2.18.1: Notify SCTP Stream Reset Result

| Address Information | Control information | Bearer information |
|---------------------|------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= C1 | |
| | Termination ID = T1 | |
| | Frent ID (Frent ID) | |
| | Event_ID (Event ID = x, | |
| | " Received SCTP Stream Reset | |
| | Result (SCTP Stream ID, | |
| | result)") | |

The IMS-ALG responds as defined in Table 5.17.2.18.2

Table 5.17.2.18.2: Notify SCTP Stream Reset Result Ack

| Address Information | Control information | Bearer information |
|---------------------|---------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1 | |
| | Termination ID = T1 | |

5.17.3 Non-Call Related Procedures

5.17.3.1 General

This clause describes the various non-call related procedures which are listed in Table 5.17.3.1.1

Table 5.17.3.1.1: IMS-AGW Non-Call Related Procedures

| Transaction in 3GPP TS 23.334 [23] | Support | Comment |
|---|----------------------|-------------------------------|
| IMS-AGW Out of service | Mandatory | 5.17.3.2 |
| IMS-AGW Communication Up | Mandatory | 5.17.3.3 |
| IMS-AGW Restoration | Mandatory | 5.17.3.4 |
| IMS-AGW Register | Mandatory | 5.17.3.5 |
| IMS-AGW Re-register | Optional | 5.17.3.6 |
| | (NOTE 3) | |
| IMS-ALG Ordered Re-register | Optional | 5.17.3.7 |
| | (NOTE 3) | |
| IMS-ALG Restoration | Optional | 5.17.3.8 |
| IMS-ALG Out of Service | Optional | 5.17.3.9 |
| Audit Value | Optional | 5.17.3.10 |
| | (NOTE 3) | |
| Command Rejected | Mandatory | The "Command Rejected" |
| | | procedure may be used in |
| | | response both to call-related |
| | | and non-call-related ITU-T |
| | | Recommendation H.248 |
| | | Commands – 5.17.3.11 |
| Capability Update | Optional | 5.17.3.12 |
| IMS-AGW Resource Congestion | Optional | 5.17.3.13 |
| Handling – Activate | | |
| IMS-AGW Resource Congestion | Optional | 5.17.3.14 |
| Handling – Indication | | |
| Inactivity timeout activation | Optional | 5.17.3.15 |
| | (NOTE 4) | |
| Inactivity timeout indication | Optional | 5.17.3.16 |
| | (NOTE 4) | |
| Realm Availability Change activation | Optional | 5.17.3.17 |
| Realm Availability Change indication | Optional | 5.17.3.18 |
| Termination Out of Service | Optional (NOTE 1) | 5.17.3.19 (NOTE 2) |
| NOTE 1: Support of this procedure is mandatory in the IMS-ALG. | | |
| NOTE 2: The "Termination Out-of-Service procedure" is also used as a call-related | | |
| H.248 command | | |
| NOTE 3: Support of this procedure is mandatory in the IMS-AGW. | | |
| | mandatory in the | e IMS-AGW if UDP transport is |
| supported. | | |

5.17.3.2 IMS-AGW Out Of Service

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.2.1.

Table 5.17.3.2.1: IMS-AGW Out Of Service Request

| Address Information | Control information | Bearer information |
|---------------------|--------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = FORCED or | |
| | GRACEFUL | |
| | SC Reason = 905 Termination | |
| | Taken OOS or 908, MG Impending | |
| | Failure, or 915 State Loss | |

The IMS-ALG responds as in Table 5.17.3.2.2.

Table 5.17.3.2.2: IMS-AGW Out Of Service Request Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

5.17.3.3 IMS-AGW Communication Up

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.3.1 to the IMS-ALG address to which the control link association was previously established.

Table 5.17.3.3.1: IMS-AGW Communication Up

| Address Information | Control information | Bearer information |
|---------------------|---------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = DISCONNECTED | |
| | SC Reason = 900 , Service | |
| | Restored | |

The IMS-ALG may respond as in table 5.17.3.3.2. If a response is received, the control link association is re-established and the inactivity timer would be restarted.

Table 5.17.3.3.2: IMS-AGW Communication Up Ack

| Address Information | Control information | Bearer information |
|---------------------|---------------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |
| | If required to register to a new IMS- | |
| | ALG: | |
| | Alternate MGC Id | |

5.17.3.4 IMS-AGW Restoration

When the IMS-AGW has recovered, the IMS-AGW sends a SERVICE CHANGE as in Table 5.17.3.4.1,

Table 5.17.3.4.1: IMS-AGW Restoration

| Address Information | Control information | Bearer information |
|---------------------|-----------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = RESTART | |
| | SC Reason = 900, Service Restored | |

The IMS-ALG responds as in Table 5.17.3.4.2.

Table 5.17.3.4.2: IMS-AGW Restoration Ack

| Address Information | Control information | Bearer information |
|---------------------|---------------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |
| | If required to register to a new IMS- | |
| | ALG: | |
| | Alternate MGC Id | |

5.17.3.5 IMS-AGW Register

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.5.1.

Table 5.17.3.5.1: IMS-AGW Register

| Address Information | Control information | Bearer information |
|---------------------|-----------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = RESTART | |
| | SC Reason =901, Cold Boot or 902, | |
| | Warm Boot | |
| | H248 Profile Identity | |
| | H248 Protocol Version | |

The IMS-ALG responds as in Table 5.17.3.5.2.

Table 5.17.3.5.2: IMS-AGW Register Ack

| Address Information | Control information | Bearer information | |
|--|--|--------------------|--|
| | Transaction ID = x | | |
| | Context ID = - | | |
| | Termination ID = ROOT | | |
| | If applicable (NOTE): | | |
| | H248 Protocol Version | | |
| | If applicable:- | | |
| | H248 Profile Identity | | |
| | If required to register to a new IMS- | | |
| | ALG: | | |
| | Alternate MGC Id | | |
| NOTE: The IMS-ALG shall include | OTE: The IMS-ALG shall include the H.248 Protocol Version if the protocol version it supports or offers is | | |
| lower than that proposed by the IMS-AGW. The IMS-ALG may include the H.248 Protocol Version if the | | | |
| protocol version it suppor | protocol version it supports or offers is the protocol version proposed by the IMS-AGW. | | |

5.17.3.6 IMS-AGW Re-Register

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.6.1.

Table 5.17.3.6.1: IMS-AGW Re-Registration

| Address Information | Control information | Bearer information |
|---------------------|-------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = Handoff | |
| | SC Reason = 903, MGC Directed | |
| | Change | |
| | H248 Profile Identity | |
| | H248 Protocol Version | |

The IMS-ALG responds as in Table 5.17.3.6.2.

Table 5.17.3.6.2: IMS-AGW Re-Registration Ack

| Address Information | Control information | Bearer information | |
|---------------------------------|---|--------------------|--|
| | Transaction ID = x | | |
| | Context ID = - | | |
| | Termination ID = ROOT | | |
| | If applicable (NOTE): | | |
| | H248 Protocol Version | | |
| | If applicable:- | | |
| | H248 Profile Identity | | |
| | If required to register to a new IMS- | | |
| | ALG: | | |
| | Alternate MGC Id | | |
| NOTE: The IMS-ALG shall include | TE: The IMS-ALG shall include the H.248 Protocol Version if the protocol version it supports or offers is | | |
| lower than that proposed h | lower than that proposed by the IMS-AGW. The IMS-ALG may include the H.248 Protocol Version if the | | |
| protocol version it support | protocol version it supports or offers is the protocol version proposed by the IMS-AGW. | | |

5.17.3.7 IMS-ALG Ordered Re-register

The IMS-ALG sends a SERVICE CHANGE request command as in Table 5.17.3.7.1.

Table 5.17.3.7.1: IMS-ALG Ordered Re-Register

| Address Information | Control information | Bearer information |
|---------------------|-------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = HANDOFF | |
| | SC Reason = 903, MGC Directed | |
| | Change | |
| | Alternate MGC Id | |

The IMS-AGW responds as in Table 5.17.3.7.2.

Table 5.17.3.7.2: IMS-ALG Ordered Re-Register Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

The IMS-AGW then performs an IMS-AGW Re-Register procedure according to Clause 5.17.3.6.

5.17.3.8 IMS-ALG Restoration

When the IMS-ALG has recovered, the IMS-ALG sends a SERVICE CHANGE as in Table 5.17.3.8.1,

Table 5.17.3.8.1: IMS-ALG Restoration

| Address Information | Control information | Bearer information |
|---------------------|-------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = RESTART | |
| | SC Reason = 901, Cold Boot OR | |
| | 902, Warm Boot | |

The IMS-AGW responds as in Table 5.17.3.8.2.

Table 5.17.3.8.2: IMS-ALG Restoration Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | ļ. |

5.17.3.9 IMS-ALG Out of Service

The IMS-ALG sends a SERVICE CHANGE request command as in Table 5.17.3.9.1.

Table 5.17.3.9.1: IMS-ALG Out Of Service

| Address Information | Control information | Bearer information |
|---------------------|------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = FORCED or | |
| | GRACEFUL | |
| | SC Reason = 905, Termination | |
| | Taken OOS | |

The IMS-AGW responds as in Table 5.17.3.9.2.

Table 5.17.3.9.2: IMS-ALG Out Of Service Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

5.17.3.10 Audit Value

The IMS-ALG sends an AUDIT VALUE request command as in Table 5.17.3.10.1.

Table 5.17.3.10.1: Audit Value

| Address Information | Control information | Bearer information | |
|----------------------------------|--|--------------------|--|
| | Transaction ID = x | | |
| | Context ID= -/ALL/C1 | | |
| | Termination ID = | | |
| | ROOT/ALL/T1/PartialWildcard | | |
| | (NOTE 4, NOTE 5) | | |
| | | | |
| | Audit Packages (NOTE 1) | | |
| | Audit Descriptor = | | |
| | IndAuditParameter:= | | |
| | IndAudMediaDescriptor:= | | |
| | IndAudTerminationStateDescriptor:= | | |
| | serviceState | | |
| | Audit Descriptor = Empty (NOTE 2) | | |
| | Audit Descriptor = | | |
| | IndAuditParameter:= | | |
| | IndAudMediaDescriptor:= | | |
| | IndAudTerminationStateDescriptor:= | | |
| | Available Realms (NOTE 3) | | |
| | Audit Descriptor = | | |
| | IndAuditParameter:= | | |
| | IndAudMediaDescriptor:= | | |
| | IndAudTerminationStateDescriptor:= | | |
| | ROOT properties (NOTE 6) | | |
| | Audit Descriptor = | | |
| | IndAuditParameter:= | | |
| | IndAudMediaDescriptor:= | | |
| | IndAudTerminationStateDescriptor:= | | |
| | SDPCapNeg Supported Capabilities | | |
| | (NOTE 7) | | |
| NOTE 1: Packages is for Null/Roo | | | |
| | Used for control association monitoring. | | |
| | Used for auditing available IP realms | | |
| | The partial wildcard termination is used for the context audit (see table 5.17.3.10.3) and specifies the | | |
| | "group" part of the termination identity (e.g. "ip/5/*"). | | |
| | Partial wildcard shall only be used when text encoding is used on the H.248 interface. | | |
| | Used for auditing ROOT properties. | | |
| NOTE /: Used for auditing SDPCa | Used for auditing SDPCapNeg Extensions when SDPCapNeg signalling to the gateway is supported. | | |

The IMS-AGW responds as in Table 5.17.3.10.2.

Table 5.17.3.10.2: Audit Value Ack

| Address Information | Control information | Bearer information |
|---------------------|--------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = -/C1 | |
| | Termination ID = ROOT/T1 | |
| | Packages List | |
| | serviceState | |
| | Available Realms | |
| | ROOT Properties | |
| | SDPCapNeg Extensions | |

Upon reception of the command in the IMS-AGW:

- The Service State returns the current Service State
- When Packages are requested, the Package Names and Versions are returned
- When realm availability is audited, the list of available realms is returned.

When root properties are audited, the values of root properties are returned.

The following table illustrates the allowed combinations that can be obtained with the AuditValue Command:

Table 5.17.3.10.3: Combinations of AuditValue Command

| ContextID | TerminationID | Information Obtained | |
|-------------------|--|--|--|
| Specific | Wildcard | Audit of matching Terminations in a Context | |
| Specific | Specific | Audit of a single Termination in a Context | |
| Null | Root | Audit of Media Gateway state and/or control association or available | |
| | | realms, or supported packages or ROOT properties. | |
| All | Specific | (Non-null) ContextID in which the Termination currently exists | |
| All | Partial Wildcard | (Non-null) ContextIDs in which the Terminations currently exist | |
| NOTE: Partial wil | NOTE: Partial wildcard shall only be used when text encoding is used on the H.248 interface. | | |

5.17.3.11 Command Rejected

When the procedure "Command Reject" is required the following procedure is initiated:

The IMS-AGW / IMS-ALG sends .a response to any command.req with the following information.

Table 5.17.3.11.1: ANYcommand.resp (command reject) IMS-AGW / IMS-ALG to IMS-ALG/ IMS-AGW

| Address Information | Control information | Bearer information |
|---------------------|---|--------------------|
| | Transaction ID = z Context ID = c1 or no context Termination ID = T1 or no termination ID | |
| | Reason=Error | |

5.17.3.12 AGW Capability Change

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.12.1.

Table 5.17.3.12.1: AGW Capability Update

| Address Information | Control information | Bearer information |
|---------------------|----------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | SC Method = RESTART or | |
| | DISCONNECTED | |
| | SC Reason = 916, Packages | |
| | Change or 917, Capability Change | |

The IMS-ALG responds as in table 5.17.3.12.2.

Table 5.17.3.12.2 AGW Capability Update Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

5.17.3.13 IMS-AGW Resource Congestion Handling – Activate

The IMS-ALG sends a MODIFY request command as in Table 5.17.3.13.1

Table 5.17.3.13.1: IMS-AGW Resource Congestion Handling – Activate

| Address Information | Control information | Bearer information |
|---------------------|---|--------------------|
| | Transaction ID = x Context ID= - Termination ID = ROOT | |
| | NotificationRequested (Event ID = x, "Overload Notification") | |

The IMS-AGW responds as in Table 5.17.3.13.2.

Table 5.17.3.13.2: IMS-AGW Resource Congestion Handling – Activate Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

5.17.3.14 IMS-AGW Resource Congestion Handling – Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.3.14.1

Table 5.17.3.14.1: IMS-AGW Resource Congestion Handling – Indication

| Address Information | Control information | Bearer information |
|---------------------|--|--------------------|
| | Transaction ID = x | |
| | Context ID= - | |
| | Termination ID = ROOT | |
| | If H.248.11 used: Event_ID (Event ID = x, "Overload Notification") | |
| | If H.248.10 used: | |
| | Event_ID (Event ID = x, " | |
| | Overload Notification (Reduction)") | |

The IMS-ALG responds as in Table 5.17.3.14.2

Table 5.17.3.14.2: IMS-AGW Resource Congestion Handling – Indication Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

5.17.3.15 Inactivity Timeout - Activation

The IMS-ALG sends a MODIFY request command as in Table 5.17.3.15.1

Table 5.17.3.15.1: Inactivity Timeout – Activation

| Address Information | Control information | Bearer information |
|---------------------|--------------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= NULL | |
| | Termination ID = ROOT | |
| | NotificationRequested (Event ID = x, | |
| | "Inactivity Timeout") | |

The IMS-AGW responds as in Table 5.17.3.15.2.

Table 5.17.3.15.2: Inactivity Timeout – Activation Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = NULL | |
| | Termination ID = ROOT | |

5.17.3.16 Inactivity Timeout – Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.3.16.1.

Table 5.17.3.16.1: Inactivity Timeout - Indication

| Address Information | Control information | Bearer information |
|---------------------|-------------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID= NULL | |
| | Termination ID = ROOT | |
| | Event_ID (Event ID = x, "Inactivity | |
| | Timeout") | |

The IMS-ALG responds as in Table 5.17.3.16.2

Table 5.17.3.16.2: Inactivity Timeout - Indication Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = NULL | |
| | Termination ID = ROOT | |

5.17.3.17 Realm Availability Change – Activation

The IMS-ALG sends a MODIFY request command as in Table 5.17.3.17.1.

Table 5.17.3.17.1: Realm Availability Change – Activation

| Address Information | Control information | Bearer information |
|---------------------|--|--------------------|
| | Transaction ID = x Context ID= - Termination ID = ROOT | |
| | NotificationRequested (Event ID = x, "Realm Availability Change") | |

The IMS-AGW responds as in Table 5.17.3.17.2.

Table 5.17.3.17.2: Realm Availability Change – Activation Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

5.17.3.18 Realm Availability Change – Indication

The IMS-AGW sends a NOTIFY request command as in Table 5.17.3.18.1.

Table 5.17.3.18.1: Realm Availability Change – Indication

| Α | ddress Information | Control information | Bearer information |
|-------|--|--|---------------------------------------|
| | | Transaction ID = x | |
| | | Context ID= - | |
| | | Termination ID = ROOT | |
| | | Event_ID (Event ID = x, | |
| | | "Realm Availability Change | |
| | | (Changed Realms)") | |
| NOTE: | The ObservedEvent Param | eters returned within the Changed Real | lms are defined as mandatory since it |
| | shall contain at minimum 1 parameter but may contain both Newly Available Realms and Newly Unavailable Realms. | | |

The IMS-ALG responds as in Table 5.17.3.18.2

Table 5.17.3.18.2: Realm Availability Change – Indication Ack

| Address Information | Control information | Bearer information |
|---------------------|-----------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = - | |
| | Termination ID = ROOT | |

5.17.3.19 Termination Out Of Service

This procedure only applies when text encoding is used on the H.248 interface.

The IMS-AGW sends a SERVICE CHANGE request command as in Table 5.17.3.19.1.

Table 5.17.3.19.1: Termination Out Of Service Request

| Address Information | Control information | Bearer information | | |
|--------------------------------------|---|--|--|--|
| | Transaction ID = x | | | |
| | Context ID= C1/ALL | | | |
| | Termination ID = T1 or Wildcarded | | | |
| | Termination (NOTE) | | | |
| | SC Method = FORCED | | | |
| | SC Reason = 904 ("Termination | | | |
| | Malfunction") or 905 ("Termination | | | |
| | Taken OOS") or 906 ("Loss of Lower | | | |
| | Layer Connectivity"), or 907 | | | |
| | ("Transmission Failure") or 910 | | | |
| | ("Media Capability Failure") | | | |
| NOTE: This is set to a specific term | nination identity or a partially wildcarded | lidentity (i.e. specifying the "interface" | | |
| part of the termination ID as ip/*). | part of the termination ID and wildcarding the "group" and "ld" parts) or a wholly wildcarded identity (i.e. ip/*). | | | |

The IMS-ALG responds as in Table 5.17.3.19.2.

Table 5.17.3.19.2: Termination Out Of Service Request Ack

| Address Information | Control information | Bearer information |
|---------------------|------------------------------|--------------------|
| | Transaction ID = x | |
| | Context ID = C1/ALL | |
| | Termination ID = As received | |
