On transition from RRC\_CONNECTED to RRC\_IDLE, a UE shall attempt to camp on the last cell for which it was in RRC\_CONNECTED or any cell on a frequency or frequency of RAT assigned by RRC in the state transition message.

...

### 8.1.3.10.3 Test description

#### 8.1.3.10.3.1 Pre-test conditions

System Simulator:

- 2 cells, one E-UTRA and one 1xRTT cell:
  - Cell 1 E-UTRA serving cell
  - Cell 19 suitable neighbour 1xRTT cell
  - The parameters settings and power levels for Cell 1 and Cell 19 are selected according to [18] and Table 8.1.3.10.3.2-1 so that camping on Cell 1 is guaranteed and no cell re-selection to Cell 19 can take place (1xRTT priority is lower than serving and  $S_{Cell\ 1} > Thresh_{Cell\ 1,low}$ ).
  - System information combination 6 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

- UE is not pre-registered in Cell 19.

Preamble:

- The UE is in state Generic RB Established (state 3) on cell 1 according to [18].

#### 8.1.3.10.3.2 Test procedure sequence

Table 8.1.3.10.3.2-1 shows the cell power levels after the preamble.

**Table 8.1.3.10.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 19	Remark
<b>T0</b>	Cell-specific RS EPRE	dBm/15kHz	-75	-	The power levels are such that camping on Cell 1 is guaranteed.
	$\hat{I}_{or/loc}$	dB	-	0	
	Pilot Ec/ Ior	dB	-	-7	
	loc	dBm/1.23 MHz	-	-75	
	CPICH_Ec/lo (Note 1)	dB	-	-10	

Note 1: This parameter is not directly settable, but is derived by calculation from the other parameters set by the SS.

**Table 8.1.3.10.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCCconnectionRelease</i> message.	<--	<i>RRCCconnectionRelease</i>	-	-
2	Check: Does the UE transmit an Access Probe on Cell 19 to initiate registration?	-->	<i>Access Probe</i>	1	P

}			
}			
}			
}			

#### 8.1.3.11 RRC connection release / Redirection to another E-UTRAN band

##### 8.1.3.11.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives an RRCCconnectionRelease message including an IE redirectedCarrierInfo with E-UTRA CarrierFreq on different E-UTRAN band }
  then { UE enters RRC_IDLE state on new E-UTRA frequency included in IE redirectedCarrierInfo }
}
```

### 8.1.3.11.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.8.3, 5.3.12 and TS 36.304, clauses 5.2.4.1, 5.2.7.

[TS 36.331, clause 5.3.8.3]

The UE shall:

1> delay the following actions defined in this sub-clause 60ms from the moment the *RRConnectionRelease* message was received or optionally when lower layers indicate that the receipt of the *RRConnectionRelease* message has been successfully acknowledged, whichever is earlier;

1> if the *RRConnectionRelease* message includes the *idleModeMobilityControlInfo*:

...

1> else:

2> apply the cell reselection priority information broadcast in the system information;

1> if the *releaseCause* received in the *RRConnectionRelease* message indicates ‘*loadBalancingTAURequired*’:

...

1> else:

2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause ‘other’.

[TS 36.331, clause 5.3.12]

Upon leaving RRC\_CONNECTED, the UE shall:

...

1> indicate the release of the RRC connection to upper layers together with the release cause;

1> if leaving RRC\_CONNECTED was not triggered by reception of the *MobilityFromEUTRACmd* message:

2> enter RRC\_IDLE by performing cell selection in accordance with the cell selection process, defined for the case of leaving RRC\_CONNECTED, as specified in TS 36.304 [4].

[TS 36.304, clause 5.2.4.1]

...

UE shall only perform cell reselection evaluation for E-UTRAN frequencies and inter-RAT frequencies that are given in system information and for which the UE has a priority provided.

...

[TS 36.304, clause 5.2.7]

On transition from RRC\_CONNECTED to RRC\_IDLE, UE shall select a suitable cell to camp on according to *redirectedCarrierInfo*, if included in the *RRConnectionRelease* message. Otherwise UE shall select a suitable cell on an EUTRA carrier. If no suitable cell is found, the UE shall perform a cell selection starting with Stored Information Cell Selection procedure in order to find a suitable cell to camp on.

...

### 8.1.3.11.3 Test description

#### 8.1.3.11.3.1 Pre-test conditions

System Simulator:

- 2 cells on different E-UTRA frequencies and different tracking areas:

- Cell 1 serving cell
- Cell 10 suitable neighbour inter-band cell
- Cell power levels are selected according to [18] so that camping on Cell 1 is guaranteed
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18] on cell 1.

#### 8.1.3.11.3.2 Test procedure sequence

        then { UE enters RRC_IDLE state on new E-UTRA FDD frequency included in IE redirectedCarrierInfo
    }
}

```

### 8.1.3.11a.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.8.3, 5.3.12 and TS 36.304, clauses 5.2.4.1, 5.2.7.

[TS 36.331, clause 5.3.8.3]

The UE shall:

1> delay the following actions defined in this sub-clause 60ms from the moment the *RRConnectionRelease* message was received or optionally when lower layers indicate that the receipt of the *RRConnectionRelease* message has been successfully acknowledged, whichever is earlier;

1> if the *RRConnectionRelease* message includes the *idleModeMobilityControlInfo*:

...

1> else:

2> apply the cell reselection priority information broadcast in the system information;

1> if the *releaseCause* received in the *RRConnectionRelease* message indicates ‘*loadBalancingTAURequired*’:

...

1> else:

2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause ‘other’.

[TS 36.331, clause 5.3.12]

Upon leaving RRC\_CONNECTED, the UE shall:

...

1> indicate the release of the RRC connection to upper layers together with the release cause;

1> if leaving RRC\_CONNECTED was not triggered by reception of the *MobilityFromEUTRACmd* message:

2> enter RRC\_IDLE by performing cell selection in accordance with the cell selection process, defined for the case of leaving RRC\_CONNECTED, as specified in TS 36.304 [4].

[TS 36.304, clause 5.2.4.1]

...

UE shall only perform cell reselection evaluation for E-UTRAN frequencies and inter-RAT frequencies that are given in system information and for which the UE has a priority provided.

...

[TS 36.304, clause 5.2.7]

On transition from RRC\_CONNECTED to RRC\_IDLE, UE shall select a suitable cell to camp on according to *redirectedCarrierInfo*, if included in the *RRConnectionRelease* message. Otherwise UE shall select a suitable cell on an EUTRA carrier. If no suitable cell is found, the UE shall perform a cell selection starting with Stored Information Cell Selection procedure in order to find a suitable cell to camp on.

...

8.1.3.11a.3      Test description

8.1.3.11a.3.1      Pre-test conditions

System Simulator:

- 2 cells on different E-UTRA bands which are in different E-UTRA mode (E-UTRA FDD and E-UTRA TDD) and PLMNs, both PLMNs are UE's EPLMN.

- Cell 1 is FDD cell and Cell 28 is TDD cell

- 

- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.1.3.11a.3.1-1.

**Table 8.1.3.11a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
28	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.1.3.11a.3.3-3.
- The UE is in state Generic RB Established (state 3) according to [18] on Cell 1.

## 8.1.3.11a.3.2 Test procedure sequence

**Table 8.1.3.11a.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict

### 8.1.3.12 RRC connection release / Success / With priority information / Inter-band

#### 8.1.3.12.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_IDLE state having received an RRConnectionRelease message with the
freqPriorityListEUTRA with higher priority frequency in different band}
ensure that {
  when { UE detects the cell re-selection criteria are met for the cell which belongs to the higher
priority band }
  then { UE reselects the cell which belongs to the higher priority band}
}
```

#### 8.1.3.12.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.8.3 and TS 36.304, clause 5.2.4.1, 5.2.4.2 and 5.2.4.5.

[TS 36.331, clause 5.3.8.3]

The UE shall:

1> delay the following actions defined in this sub-clause 60 ms from the moment the *RRConnectionRelease* message was received or optionally when lower layers indicate that the receipt of the *RRConnectionRelease* message has been successfully acknowledged, whichever is earlier;

1> if the *RRConnectionRelease* message includes the *idleModeMobilityControlInfo*:

2> store the cell reselection priority information provided by the *idleModeMobilityControlInfo*;

2> if the *t320* is included:

3> start timer T320, with the timer value set according to the value of *t320*;

1> else:

...

1> if the *releaseCause* received in the *RRConnectionRelease* message indicates '*loadBalancingTAURequired*':

2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'load balancing TAU required';

1> else:

2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'other';

[TS 36.304, clause 5.2.4.1]

Absolute priorities of different E-UTRAN frequencies or inter-RAT frequencies may be provided to the UE in the system information, in the *RRConnectionRelease* message, or by inheriting from another RAT at inter-RAT cell (re)selection. In the case of system information, an E-UTRAN frequency or inter-RAT frequency may be listed without providing a priority (i.e. the field *cellReselectionPriority* is absent for that frequency). If priorities are provided in dedicated signalling, the UE shall ignore all the priorities provided in system information. If UE is in *camped on any cell* state, UE shall only apply the priorities provided by system information from current cell, and the UE preserves priorities provided by dedicated signalling unless specified otherwise. When the UE in *camped normally* state, has only dedicated priorities other than for the current frequency, the UE shall consider the current frequency to be the lowest priority frequency (i.e. lower than the eight network configured values). While the UE is camped on a suitable CSG cell, the UE shall always consider the current frequency to be the highest priority frequency (i.e. higher than the eight network configured values), irrespective of any other priority value allocated to this frequency. The UE shall delete priorities provided by dedicated signalling when:

- the UE enters RRC\_CONNECTED state; or
- the optional validity time of dedicated priorities (T320) expires; or
- a PLMN selection is performed on request by NAS [5].

NOTE 1: Equal priorities between RATs are not supported.

The UE shall only perform cell reselection evaluation for E-UTRAN frequencies and inter-RAT frequencies that are given in system information and for which the UE has a priority provided.

The UE shall not consider any black listed cells as candidate for cell reselection.

The UE shall inherit the priorities provided by dedicated signalling and the remaining validity time (i.e., T320 in E-UTRA, T322 in UTRA and T3230 in GERAN), if configured, at inter-RAT cell (re)selection.

NOTE 2: The network may assign dedicated cell reselection priorities for frequencies not configured by system information.

[TS 36.304, clause 5.2.4.2]

When evaluating Srxlev and Squal of non-serving cells for reselection purposes, the UE shall use parameters provided by the serving cell.

Following rules are used by the UE to limit needed measurements:

- If the serving cell fulfils  $S_{Rxlev} > S_{IntraSearchP}$  and  $S_{Qual} > S_{IntraSearchQ}$ , the UE may choose not to perform intra-frequency measurements.
- Otherwise, the UE shall perform intra-frequency measurements.
- The UE shall apply the following rules for E-UTRAN inter-frequencies and inter-RAT frequencies which are indicated in system information and for which the UE has priority provided as defined in 5.2.4.1:
  - For an E-UTRAN inter-frequency or inter-RAT frequency with a reselection priority higher than the reselection priority of the current E-UTRA frequency the UE shall perform measurements of higher priority E-UTRAN inter-frequency or inter-RAT frequencies according to [10].
  - For an E-UTRAN inter-frequency with an equal or lower reselection priority than the reselection priority of the current E-UTRA frequency and for inter-RAT frequency with lower reselection priority than the reselection priority of the current E-UTRAN frequency:
    - If the serving cell fulfils  $S_{Rxlev} > S_{nonIntraSearchP}$  and  $S_{Qual} > S_{nonIntraSearchQ}$ , the UE may choose not to perform measurements of E-UTRAN inter-frequencies or inter-RAT frequency cells of equal or lower priority.
    - Otherwise, the UE shall perform measurements of E-UTRAN inter-frequencies or inter-RAT frequency cells of equal or lower priority according to [10].

[TS 36.304, clause 5.2.4.5]

If  $threshServingLowQ$  is provided in *SystemInformationBlockType3*, cell reselection to a cell on a higher priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- A cell of a higher priority EUTRAN or UTRAN RAT/ frequency fulfils  $S_{Qual} > Thresh_{X, HighQ}$  during a time interval  $T_{reselection_{RAT}}$ ; or
- A cell of a higher priority GERAN or CDMA2000 RAT/ frequency fulfils  $S_{Rxlev} > Thresh_{X, HighP}$  during a time interval  $T_{reselection_{RAT}}$ ; and
- More than 1 second has elapsed since the UE camped on the current serving cell.

Otherwise, cell reselection to a cell on a higher priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- A cell of a higher priority RAT/ frequency fulfils  $S_{Rxlev} > Thresh_{X, HighP}$  during a time interval  $T_{reselection_{RAT}}$ ; and

More than 1 second has elapsed since the UE camped on the current serving cell.

Cell reselection to a cell on an equal priority E-UTRAN frequency shall be based on ranking for Intra-frequency cell reselection as defined in sub-clause 5.2.4.6.

If  $threshServingLowQ$  is provided in *SystemInformationBlockType3*, cell reselection to a cell on a lower priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- The serving cell fulfils  $S_{Qual} < Thresh_{Serving, LowQ}$  and a cell of a lower priority EUTRAN or UTRAN RAT/ frequency fulfils  $S_{Qual} > Thresh_{X, LowQ}$  during a time interval  $T_{reselection_{RAT}}$ ; or
- The serving cell fulfils  $S_{Qual} < Thresh_{Serving, LowQ}$  and a cell of a lower priority GERAN or CDMA2000 RAT/ frequency fulfils  $S_{Rxlev} > Thresh_{X, LowP}$  during a time interval  $T_{reselection_{RAT}}$ ; and
- More than 1 second has elapsed since the UE camped on the current serving cell.

Otherwise, cell reselection to a cell on a lower priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- The serving cell fulfils  $S_{Rxlev} < Thresh_{Serving, LowP}$  and a cell of a lower priority RAT/ frequency fulfils  $S_{Rxlev} > Thresh_{X, LowP}$  during a time interval  $T_{reselection_{RAT}}$ ; and
- More than 1 second has elapsed since the UE camped on the current serving cell.

Cell reselection to a higher priority RAT/ frequency shall take precedence over a lower priority RAT/ frequency, if multiple cells of different priorities fulfil the cell reselection criteria.

For cdma2000 RATs, Srxlev is equal to -FLOOR(-2 x 10 x log10 Ec/Io) in units of 0.5 dB, as defined in [18], with Ec/Io referring to the value measured from the evaluated cell.

For cdma2000 RATs, Thresh<sub>X, HighP</sub> and Thresh<sub>X, LowP</sub> are equal to -1 times the values signalled for the corresponding parameters in the system information.

In all the above criteria the value of Treselection<sub>RAT</sub> is scaled when the UE is in the medium or high mobility state as defined in subclause 5.2.4.3.1. If more than one cell meets the above criteria, the UE shall reselect a cell as follows:

- If the highest-priority frequency is an E-UTRAN frequency, a cell ranked as the best cell among the cells on the highest priority frequency(ies) meeting the criteria according to section 5.2.4.6;
- If the highest-priority frequency is from another RAT, a cell ranked as the best cell among the cells on the highest priority frequency(ies) meeting the criteria of that RAT.

#### 8.1.3.12.3 Test description

##### 8.1.3.12.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 3 and Cell 10.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

NOTE 3: For Cell 10 TAI is set to TAI-2

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.1.3.12.3.2 Test procedure sequence

Table 8.1.3.12.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.1.3.12.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Cell 10	Remark
<b>T0</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	"off"	"off"	The power level values are assigned to satisfy S <sub>rxlevCell 1 &gt; S<sub>nonintrasearch</sub></sub> . (NOTE 1)
<b>T1</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	-73	-73	The power level values are assigned to satisfy both Thresh <sub>X, low &lt; S<sub>rxlevCell 3</sub></sub> and Thresh <sub>X, high &lt; S<sub>rxlevCell 10</sub></sub> .

NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.

**Table 8.1.3.12.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionRelease</i> message including the <i>freqPriorityListEUTRA</i> on Cell 1.	<--	<i>RRCConnectionRelease</i>	-	-
2	Wait for 5 s for the UE to enter E-UTRA <i>RRC_IDLE</i> state on Cell 1.	-	-	-	-
3	The SS changes Cell 1, Cell 3 and Cell 10 level according to the row "T1" in table 8.1.3.12.3.2-1.	-	-	-	-
4	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.7 indicate that the UE is camped on E-UTRAN Cell 10?	-	-	1	-

### 8.1.3.12a RRC connection release / Success / With priority information / Inter- band / Between FDD and TDD

#### 8.1.3.12a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_IDLE state in LTE FDD mode having received an RRConnectionRelease message with the freqPriorityListEUTRA with higher priority frequency on different LTE TDD band }
ensure that {
    when { UE detects the cell re-selection criteria are met for the cell which belongs to the higher priority frequency on different LTE TDD band }
    then { UE reselects the cell which belongs to the higher priority frequency on different LTE TDD band }
}
```

(2)

```
with { UE in E-UTRA RRC_IDLE state in LTE TDD mode having received an RRConnectionRelease message with the freqPriorityListEUTRA with lower priority frequency on different LTE FDD band }
ensure that {
    when { UE detects the cell re-selection criteria are met for the cell which belongs to the lower priority frequency on different LTE FDD band }
    then { UE reselects the cell which belongs to the lower priority frequency on different LTE FDD band }
}
```

#### 8.1.3.12a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.8.3 and TS 36.304, clause 5.2.4.1, 5.2.4.2 and 5.2.4.5.

[TS 36.331, clause 5.3.8.3]

The UE shall:

1> delay the following actions defined in this sub-clause 60 ms from the moment the *RRConnectionRelease* message was received or optionally when lower layers indicate that the receipt of the *RRConnectionRelease* message has been successfully acknowledged, whichever is earlier;

1> if the *RRConnectionRelease* message includes the *idleModeMobilityControlInfo*:

2> store the cell reselection priority information provided by the *idleModeMobilityControlInfo*;

2> if the *t320* is included:

3> start timer T320, with the timer value set according to the value of *t320*;

1> else:

...

1> if the *releaseCause* received in the *RRConnectionRelease* message indicates '*loadBalancingTAURequired*':

2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'load balancing TAU required';

1> else:

2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'other'.

[TS 36.304, clause 5.2.4.1]

Absolute priorities of different E-UTRAN frequencies or inter-RAT frequencies may be provided to the UE in the system information, in the *RRConnectionRelease* message, or by inheriting from another RAT at inter-RAT cell (re)selection. In the case of system information, an E-UTRAN frequency or inter-RAT frequency may be listed without providing a priority (i.e. the field *cellReselectionPriority* is absent for that frequency). If priorities are provided in dedicated signalling, the UE shall ignore all the priorities provided in system information. If UE is in *camped on any*

*cell* state, UE shall only apply the priorities provided by system information from current cell, and the UE preserves priorities provided by dedicated signalling unless specified otherwise. When the UE in *camped normally* state, has only dedicated priorities other than for the current frequency, the UE shall consider the current frequency to be the lowest priority frequency (i.e. lower than the eight network configured values). While the UE is camped on a suitable CSG cell, the UE shall always consider the current frequency to be the highest priority frequency (i.e. higher than the eight network configured values), irrespective of any other priority value allocated to this frequency. The UE shall delete priorities provided by dedicated signalling when:

- the UE enters RRC\_CONNECTED state; or
- the optional validity time of dedicated priorities (T320) expires; or
- a PLMN selection is performed on request by NAS [5].

NOTE 1: Equal priorities between RATs are not supported.

The UE shall only perform cell reselection evaluation for E-UTRAN frequencies and inter-RAT frequencies that are given in system information and for which the UE has a priority provided.

The UE shall not consider any black listed cells as candidate for cell reselection.

The UE shall inherit the priorities provided by dedicated signalling and the remaining validity time (i.e., T320 in E-UTRA, T322 in UTRA and T3230 in GERAN), if configured, at inter-RAT cell (re)selection.

NOTE 2: The network may assign dedicated cell reselection priorities for frequencies not configured by system information.

[TS 36.304, clause 5.2.4.2]

When evaluating Srxlev and Squal of non-serving cells for reselection purposes, the UE shall use parameters provided by the serving cell.

Following rules are used by the UE to limit needed measurements:

- If the serving cell fulfils  $S_{\text{rxlev}} > S_{\text{IntraSearchP}}$  and  $S_{\text{qQual}} > S_{\text{IntraSearchQ}}$ , the UE may choose not to perform intra-frequency measurements.
- Otherwise, the UE shall perform intra-frequency measurements.
- The UE shall apply the following rules for E-UTRAN inter-frequencies and inter-RAT frequencies which are indicated in system information and for which the UE has priority provided as defined in 5.2.4.1:
  - For an E-UTRAN inter-frequency or inter-RAT frequency with a reselection priority higher than the reselection priority of the current E-UTRA frequency the UE shall perform measurements of higher priority E-UTRAN inter-frequency or inter-RAT frequencies according to [10].
  - For an E-UTRAN inter-frequency with an equal or lower reselection priority than the reselection priority of the current E-UTRA frequency and for inter-RAT frequency with lower reselection priority than the reselection priority of the current E-UTRAN frequency:
    - If the serving cell fulfils  $S_{\text{rxlev}} > S_{\text{nonIntraSearchP}}$  and  $S_{\text{qQual}} > S_{\text{nonIntraSearchQ}}$ , the UE may choose not to perform measurements of E-UTRAN inter-frequencies or inter-RAT frequency cells of equal or lower priority.
    - Otherwise, the UE shall perform measurements of E-UTRAN inter-frequencies or inter-RAT frequency cells of equal or lower priority according to [10].

[TS 36.304, clause 5.2.4.5]

If  $\text{threshServingLowQ}$  is provided in *SystemInformationBlockType3*, cell reselection to a cell on a higher priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- A cell of a higher priority EUTRAN or UTRAN RAT/ frequency fulfils  $S_{\text{qQual}} > \text{Thresh}_{X, \text{HighQ}}$  during a time interval  $\text{Treselection}_{\text{RAT}}$ ; or

- A cell of a higher priority GERAN or CDMA2000 RAT/ frequency fulfils  $Srxlev > Thresh_{X, HighP}$  during a time interval  $Treselection_{RAT}$ ; and
- More than 1 second has elapsed since the UE camped on the current serving cell.

Otherwise, cell reselection to a cell on a higher priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- A cell of a higher priority RAT/ frequency fulfils  $Srxlev > Thresh_{X, HighP}$  during a time interval  $Treselection_{RAT}$ ; and

More than 1 second has elapsed since the UE camped on the current serving cell.

Cell reselection to a cell on an equal priority E-UTRAN frequency shall be based on ranking for Intra-frequency cell reselection as defined in sub-clause 5.2.4.6.

If  $threshServingLowQ$  is provided in *SystemInformationBlockType3*, cell reselection to a cell on a lower priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- The serving cell fulfils  $Squal < Thresh_{Serving, LowQ}$  and a cell of a lower priority EUTRAN or UTRAN RAT/ frequency fulfils  $Squal > Thresh_{X, LowQ}$  during a time interval  $Treselection_{RAT}$ ; or
- The serving cell fulfils  $Squal < Thresh_{Serving, LowQ}$  and a cell of a lower priority GERAN or CDMA2000 RAT/ frequency fulfils  $Srxlev > Thresh_{X, LowP}$  during a time interval  $Treselection_{RAT}$ ; and
- More than 1 second has elapsed since the UE camped on the current serving cell.

Otherwise, cell reselection to a cell on a lower priority E-UTRAN frequency or inter-RAT frequency than the serving frequency shall be performed if:

- The serving cell fulfils  $Srxlev < Thresh_{Serving, LowP}$  and a cell of a lower priority RAT/ frequency fulfils  $Srxlev > Thresh_{X, LowP}$  during a time interval  $Treselection_{RAT}$ ; and
- More than 1 second has elapsed since the UE camped on the current serving cell.

Cell reselection to a higher priority RAT/ frequency shall take precedence over a lower priority RAT/ frequency, if multiple cells of different priorities fulfil the cell reselection criteria.

For cdma2000 RATs,  $Srxlev$  is equal to  $-FLOOR(-2 \times 10 \times \log_{10} Ec/Io)$  in units of 0.5 dB, as defined in [18], with  $Ec/Io$  referring to the value measured from the evaluated cell.

For cdma2000 RATs,  $Thresh_{X, HighP}$  and  $Thresh_{X, LowP}$  are equal to -1 times the values signalled for the corresponding parameters in the system information.

In all the above criteria the value of  $Treselection_{RAT}$  is scaled when the UE is in the medium or high mobility state as defined in subclause 5.2.4.3.1. If more than one cell meets the above criteria, the UE shall reselect a cell as follows:

- If the highest-priority frequency is an E-UTRAN frequency, a cell ranked as the best cell among the cells on the highest priority frequency(ies) meeting the criteria according to section 5.2.4.6;
- If the highest-priority frequency is from another RAT, a cell ranked as the best cell among the cells on the highest priority frequency(ies) meeting the criteria of that RAT.

#### 8.1.3.12a.3 Test description

#### 8.1.3.12a.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2 are FDD cell and Cell 10 is TDD cell
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

NOTE 1: For Cell 10 TAI is set to TAI-2

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.1.3.12a.3.2 Test procedure sequence

Table 8.1.3.12a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.1.3.12a.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Cell 10	Remark
<b>T0</b>	Cell-specific RS EPRE	dBm/15k Hz	-79	"off"	"off"	The power level values are assigned to satisfy $S_{\text{rxlev}_{\text{Cell } 1}} > S_{\text{intraresrch.}}$ (NOTE 1)
<b>T1</b>	Cell-specific RS EPRE	dBm/15k Hz	-79	-73	-73	The power level values are assigned to satisfy $S_{\text{rxlev}_{\text{Cell } 10}} > \text{Thresh}_{x, \text{high}}$ when reselect to higher priority Cell 10 from lower priority Cell 1
<b>T2</b>	Cell-specific RS EPRE	dBm/15k Hz	-79	-73	-85	The power level values are assigned to satisfy both $S_{\text{rxlev}_{\text{Cell } 2}} > \text{Thresh}_{x, \text{low}}$ (good enough) and $S_{\text{rxlev}_{\text{Cell } 10}} < \text{Thresh}_{\text{serving}, \text{low}}$ (bad enough)

NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.

**Table 8.1.3.12a.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionRelease</i> message including the <i>freqPriorityListEUTRA</i> on Cell 1.	<--	<i>RRCConnectionRelease</i>	-	-

### 8.1.3.12b RRC connection release / Success / With priority information / Inter-band (Single frequency operation in source band)

The scope and description of the present TC is the same as test case 8.1.3.12 with the following differences:

- Cell configuration: Cell 28 with frequency f6 replaces Cell 3 with frequency f2.

## 8.2 RRC connection reconfiguration

### 8.2.1 Radio bearer establishment

8.2.1.1 RRC connection reconfiguration / Radio bearer establishment for transition from RRC\_IDLE to RRC\_CONNECTED / Success / Default bearer / Early bearer establishment

8.2.1.1.1 Test Purpose (TP)

(1)

```
with { UE having completed the RRC connection establishment procedure }
ensure that {
  when { SS sends in sequence a SecurityModeCommand and an RRCCConnectionReconfiguration message }
    then { UE establishes the initial security configuration in accordance with the received
          securityConfigSMC included in SecurityModeCommand and successfully completes the connection
          reconfiguration }
}
```

(2)

```

with { UE in RRC_CONNECTED state}
ensure that {
    when { UE receives an RRConnectionRelease message }
        then { UE releases the signalling connection, the established EPS bearer and all radio resources
        and enters in RRC_IDLE state }
    }

```

### 8.2.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.1.2, 5.3.1.1, 5.3.5.3, 5.3.10.1, 5.3.10.3, 5.3.8.3 and 5.3.12. The following represent an extraction of the requirements relevant to the test purpose.

[TS 36.331, clause 5.1.2]

The UE shall:

- 1> process the received messages in order of reception by RRC, i.e. the processing of a message shall be completed before starting the processing of a subsequent message;

NOTE: 1 E-UTRAN may initiate a subsequent procedure prior to receiving the UEs response of a previously initiated procedure.

[TS 36.331, clause 5.3.1.1]

After having initiated the initial security activation procedure, E-UTRAN initiates the establishment of SRB2 and DRBs, i.e. E-UTRAN may do this prior to receiving the confirmation of the initial security activation from the UE. In any case, E-UTRAN will apply both ciphering and integrity protection for the RRC connection reconfiguration messages used to establish SRB2 and DRBs.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> if this is the first *RRConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:

...

- 1> else:

2> If the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

- 3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 2: If the *RRConnectionReconfiguration* message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the *SecurityModeComplete* message.

...

- 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.1]

The UE shall:

- 1> for each *srб-Identity* value included in the *srб-ToAddModList* that is not part of the current UE configuration (SRB establishment):

- 2> apply the specified configuration defined in 9.1.2 for the corresponding SRB;

- 2> establish a PDCP entity and configure it with the current security configuration, if applicable;
- 2> establish an RLC entity in accordance with the received *rlc-Config*;
- 2> establish a DCCH logical channel in accordance with the received *logicalChannelConfig* and with the logical channel identity set in accordance with 9.1.2

[TS 36.331, clause 5.3.10.3]

The UE shall:

- 1> for each *drb-Identity* value included in the *drb-ToAddModList* that is not part of the current UE configuration (DRB establishment):
  - 2> establish a PDCP entity and configure it with the current security configuration and in accordance with the received *pdcp-Config*;
  - 2> establish an RLC entity in accordance with the received *rlc-Config*;
  - 2> establish a DTCH logical channel in accordance with the received *logicalChannelIdentity* and the received *logicalChannelConfig*;
- 1> indicate the establishment of the DRB(s) and the *eps-BearerIdentity* of the established DRB(s) to upper layers;

[TS 36.331, clause 5.3.8.3]

The UE shall:

- 1> delay the following actions defined in this sub-clause 60ms from the moment the *RRConnectionRelease* message was received or optionally when lower layers indicate that the receipt of the *RRConnectionRelease* message has been successfully acknowledged, whichever is earlier;
- ...
- 1> if the *releaseCause* received in the *RRConnectionRelease* message indicates ‘*loadBalancingTAURequired*’:
  - 2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause ‘load balancing TAU required’;
- 1> else:
  - 2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause ‘other’.

[TS 36.331, clause 5.3.12]

Upon leaving RRC\_CONNECTED, the UE shall:

- 1> reset MAC;
- 1> stop all timers that are running except T320;
- 1> release all radio resources, including release of the RLC entity, the MAC configuration and the associated PDCP entity for all established RBs;
- 1> indicate the release of the RRC connection to upper layers together with the release cause;
- 1> if leaving RRC\_CONNECTED was not triggered by reception of the *MobilityFromEUTRACCommand* message:
  - 2> enter RRC\_IDLE by performing cell selection in accordance with the cell selection process, defined for the case of leaving RRC\_CONNECTED, as specified in TS 36.304 [4].

#### 8.2.1.1.3 Test description

##### 8.2.1.1.3.1 Pre-test conditions

System Simulator:

- Cell 1

UE:

None.

Preamble:

- The UE is in state Registered, Idle mode (state 2) according to [18].

#### 8.2.1.1.3.2 Test procedure sequence

**Table 8.2.1.1.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS sends a <i>Paging</i> message to the UE on the appropriate paging block, and including the UE identity in one entry of the IE <i>pagingRecordLists</i> .	<--	<i>Paging</i>	-	-

### 8.2.1.2 Void

### 8.2.1.3 RRC connection reconfiguration / Radio bearer establishment / Success / Dedicated bearer

#### 8.2.1.3.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { SS sends an RRConnectionReconfiguration message including a drb-Identity that is not part
          of the current UE configuration and a dedicatedInfoNASList}
    then { UE successfully establish the radio bearer according to IE radioResourceConfigDedicated }
}
```

#### 8.2.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.3.5.3 and 5.3.10.3.

The following represent an extraction of the requirements relevant to the test purpose.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInformation* and the UE is able to comply with the configuration included in this message, the UE shall:

1> if this is the first *RRConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:

...

1> else:

2> If the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 2: If the *RRConnectionReconfiguration* message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the *SecurityModeComplete* message.

1> if the *RRConnectionReconfiguration* message includes the *dedicatedInfoNASList*:

2> forward each element of the *dedicatedInfoNASList* to upper layers;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3]

The UE shall:

1> for each *drb-Identity* value included in the *drb-ToAddModList* that is not part of the current UE configuration (DRB establishment):

2> establish a PDCP entity and configure it with the current security configuration and in accordance with the received *pdcp-Config*;

2> establish an RLC entity in accordance with the received *rlc-Config*;

2> establish a DTCH logical channel in accordance with the received *logicalChannelIdentity* and the received *logicalChannelConfig*;

1> indicate the establishment of the DRB(s) and the *eps-BearerIdentity* of the established DRB(s) to upper layers;

8.2.1.3.3 Test description

### 8.2.1.4 Void

8.2.1.5 RRC connection reconfiguration / Radio bearer establishment for transition from RRC\_Idle to RRC\_CONNECTED / Success / Latency check

#### 8.2.1.5.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_IDLE state and has sent an RRConnectionRequest message }
ensure that {
    when { UE receive a RRConnectionSetup message and 16 subframes later receives an UL grant }
    then { UE successfully transmit RRConnectionSetupComplete message }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receive a SecurityModeCommand message and 11 subframes later receives an UL grant }
    then { UE successfully establish the initial AS security activation according to IE
          securityConfigSMC }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receive a RRConnectionReconfiguration message including a drb-Identity that is not part
          of the current UE configuration and a nas-DedicatedInformation and 16 subframes later receives an UL
          grant }
    then { UE successfully establish the radio bearer according to IE radioResourceConfiguration }
}
```

(4)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives an UECapabilityEnquiry message after AS security is activated and at 11
          subframes later receives an UL grant }
    then { UE successfully transmits an UECapabilityInformation message including UE radio access
          capability information corresponding to the ue-RadioAccessCapRequest variable }
}
```

#### 8.2.1.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.3.4, 5.3.4.3, 5.3.5.3, 5.6.3.3 and 11.2.

[TS 36.331, clause 5.3.3.4]

The UE shall:

- 1> perform the radio resource configuration procedure in accordance with the received *radioResourceConfigDedicated* and as specified in 5.3.10;
- 1> if stored, discard the cell reselection priority information provided by the *idleModeMobilityControlInfo* or inherited from another RAT;
- 1> stop timer T300;
- 1> stop timer T302, if running;
- 1> stop timer T303, if running;
- 1> stop timer T305, if running;
- 1> perform the actions as specified in 5.3.3.7;

- 1> stop timer T320, if running;
- 1> enter RRC\_CONNECTED;
- 1> stop the cell re-selection procedure;
- 1> set the content of *RRCConnectionSetupComplete* message as follows:
  - 2> set the *selectedPLMN-Identity* to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]) from the PLMN(s) included in the *plmn-IdentityList* in *SystemInformationBlockType1*;
  - 2> if upper layers provide the ‘Registered MME’, include and set the *registeredMME* as follows:
    - 3> if the PLMN identity of the ‘Registered MME’ is different from the PLMN selected by the upper layers:
      - 4> include the *plmnIdentity* in the *registeredMME* and set it to the value of the PLMN identity in the ‘Registered MME’ received from upper layers;
      - 3> set the *mmei* and the *mmeec* to the value received from upper layers;
    - 2> set the *dedicatedInfoNAS* to include the information received from upper layers;
    - 2> submit the *RRCConnectionSetupComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.3.4.3]

The UE shall:

- 1> derive the  $K_{eNB}$  key, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm* indicated in the *SecurityModeCommand* message, as specified in TS 33.401 [32];
- 1> request lower layers to verify the integrity protection of the *SecurityModeCommand* message, using the algorithm indicated by the *integrityProtAlgorithm* as included in the *SecurityModeCommand* message and the  $K_{RRCint}$  key;
- 1> if the *SecurityModeCommand* message passes the integrity protection check:
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm* indicated in the *SecurityModeCommand* message, as specified in TS 33.401 [32];
  - 2> configure lower layers to apply integrity protection using the indicated algorithm and the  $K_{RRCint}$  key immediately, i.e. integrity protection shall be applied to all subsequent messages received and sent by the UE, including the *SecurityModeComplete* message;
  - 2> configure lower layers to apply ciphering using the indicated algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key after completing the procedure, i.e. ciphering shall be applied to all subsequent messages received and sent by the UE, except for the *SecurityModeComplete* message which is sent unciphered;
  - 2> consider AS security to be activated;
  - 2> submit the *SecurityModeComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> if this is the first *RRCConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:
  - ...
- 1> else:

2> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 2: If the *RRConnectionReconfiguration* message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the *SecurityModeComplete* message.

1> if the *RRConnectionReconfiguration* message includes the *dedicatedInfoNASList*:

2> forward each element of the *dedicatedInfoNASList* to upper layers;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.6.3.3]

The UE shall:

1> set the contents of *UECapabilityInformation* message as follows:

2> if the ue-CapabilityRequest includes ‘eutra’:

3> include the *UE-EUTRA-Capability* within a *ue-CapabilityRAT-Container* and with the *rat-Type* set to ‘eutra’;

2> if the *ue-CapabilityRequest* includes ‘geran-cs’ and if the UE supports GERAN CS domain:

3> include the UE radio access capabilities for GERAN CS within a *ue-CapabilityRAT-Container* and with the *rat-Type* set to ‘geran-cs’;

2> if the *ue-CapabilityRequest* includes ‘geran-ps’ and if the UE supports GERAN PS domain:

3> include the UE radio access capabilities for GERAN PS within a *ue-CapabilityRAT-Container* and with the *rat-Type* set to ‘geran-ps’;

2> if the *ue-CapabilityRequest* includes ‘utra’ and if the UE supports UTRA:

3> include the UE radio access capabilities for UTRA within a *ue-CapabilityRAT-Container* and with the *rat-Type* set to ‘utra’;

...

1> submit the *UECapabilityInformation* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 11.2]

The UE performance requirements for RRC procedures are specified in the following table, by means of a value N:

N = the number of 1ms subframes from the end of reception of the E-UTRAN -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> E-UTRAN response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation).

Figure 11.2-1: Illustration of RRC procedure delay

Table 11.2-1: Procedures

Procedure title:	E-UTRAN -> UE	UE -> E-UTRAN	N	Notes
<b>RRC Connection Control Procedures</b>				
RRC connection establishment	<i>RRCCConnectionSetup</i>	<i>RRCCConnectionSetupComplete</i>	15	
RRC connection re-configuration (radio resource configuration)	<i>RRCCConnectionReconfiguration</i>	<i>RRCCConnectionReconfigurationComplete</i>	15	
Initial security activation	<i>SecurityModeCommand</i>	<i>SecurityModeCommandComplete/SecurityModeCommandFailure</i>	10	
<b>Other procedures</b>				
UE capability transfer	<i>UECapabilityEnquiry</i>	<i>UECapabilityInformation</i>	10	

8.2.1.5.3 Test description

8.2.1.5.3.1 Pre-test conditions

System Simulator:

- Cell 1
- Uplink and downlink bandwidth set to the maximum bandwidth for the E-UTRA Band under test as specified in Table 5.6.1-1 in [31] (to enable allocation of Nprb up to maximum value to avoid segmentation of *UECapabilityInformation* message).

UE:

None.

Preamble:

- The UE is in state Registered, Idle mode (state 2) according to [18].

## 8.2.1.5.3.2 Test procedure sequence

**Table 8.2.1.5.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS sends a <i>Paging</i> message to the UE on the appropriate paging block, and including the UE identity in one entry of the IE <i>pagingRecordList</i> .	<--	<i>Paging</i>	-	-
2	The UE transmits an <i>RRCCconnectionRequest</i> message.	-->	<i>RRCCconnectionRequest</i>	-	-
3	The SS transmit an <i>RRCCconnectionSetup</i> message. (Note 3)	<--	<i>RRCCconnectionSetup</i>		
4	Check: Does the UE transmit an <i>RRCCconnectionSetupComplete</i> message within 20 (FDD)/23 (TDD) subframes after successful completion of step 3? (Note 2)	-->	<i>RRCCconnectionSetupComplete</i>	1	P
5	The SS transmits a <i>SecurityModeCommand</i> message to activate AS security. (Note 3)	<--	<i>SecurityModeCommand</i>		
6	Check: Does the UE transmit a <i>SecurityModeComplete</i> message within 15 (FDD)/18 (TDD) subframes after successful completion of step 5? (Note 2)	-->	<i>SecurityModeComplete</i>	2	P
7	The SS transmits an <i>RRCCconnectionReconfiguration</i> message to establish a data radio bearer. (Note 3)	<--	<i>RRCCconnectionReconfiguration</i>	-	-
8	Check: Does the UE transmit an <i>RRCCconnectionReconfigurationComplete</i> message within 20 (FDD)/23 (TDD) subframes after successful completion of step 7? (Note 2)	-->	<i>RRCCconnectionReconfigurationComplete</i>	3	P
9	The SS transmits a <i>UECapabilityEnquiry</i> message to request UE radio access capability information for E UTRA only. (Note 3)	<--	<i>UECapabilityEnquiry</i>	-	-
10	Check: Does the UE transmit a <i>UECapabilityInformation</i> message within 15 (FDD)/18 (TDD) subframes after successful completion of step 9? (Note 2)	-->	<i>UECapabilityInformation</i>	4	P
Note 1: The SS is configured for RRC procedure delay testing according to TS 36.523-3 clause 7.12.1. Note 2: 5 (FDD) / 8 (TDD) subframes is added on top of RRC processing delay requirement, because UL grant is allocated for the next subframe after RRC procedure delay and because of transmission delay after UL grant. For TDD, consider the max 7 TTI transmission delay after UL grant. Note 3: The DL resource allocation sent on PDCCH is big enough to guarantee transmission of all DL RRC PDU in single TTI.

8.2.1.6 RRC connection reconfiguration / Radio bearer establishment for transition from RRC\_Idle to RRC CONNECTED / Success / Latency check / SecurityModeCommand and RRCCConnectionReconfiguration transmitted in the same TTI

8.2.1.6.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE received SecurityModeCommand message and RRCCConnectionReconfiguration message including a drb-Identity that is not part of the current UE configuration and a nas-DedicatedInformation in the same TTI and 21 subframes later receives an UL grant }
        then { UE successfully establish the initial AS security activation according to IE securityConfigSMC and the radio bearer according to IE radioResourceConfiguration }
}
```

8.2.1.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.4.3, 5.3.5.3 and 11.2.

[TS 36.331, clause 5.3.4.3]

The UE shall:

- 1> derive the  $K_{eNB}$  key, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm* indicated in the *SecurityModeCommand* message, as specified in TS 33.401 [32];
- 1> request lower layers to verify the integrity protection of the *SecurityModeCommand* message, using the algorithm indicated by the *integrityProtAlgorithm* as included in the *SecurityModeCommand* message and the  $K_{RRCint}$  key;
- 1> if the *SecurityModeCommand* message passes the integrity protection check:
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm* indicated in the *SecurityModeCommand* message, as specified in TS 33.401 [32];
  - 2> configure lower layers to apply integrity protection using the indicated algorithm and the  $K_{RRCint}$  key immediately, i.e. integrity protection shall be applied to all subsequent messages received and sent by the UE, including the *SecurityModeComplete* message;
  - 2> configure lower layers to apply ciphering using the indicated algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key after completing the procedure, i.e. ciphering shall be applied to all subsequent messages received and sent by the UE, except for the *SecurityModeComplete* message which is sent unciphered;
  - 2> consider AS security to be activated;
  - 2> submit the *SecurityModeComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.3.5.3]

If the *RRCCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> if this is the first *RRCCConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:
  - ...;
- 1> else:
  - 2> if the *RRCCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 2: If the *RRConnectionReconfiguration* message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the *SecurityModeComplete* message.

1> if the *RRConnectionReconfiguration* message includes the *dedicatedInfoNASList*:

2> forward each element of the *dedicatedInfoNASList* to upper layers;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 11.2]

The UE performance requirements for RRC procedures are specified in the following table, by means of a value N:

N = the number of 1ms subframes from the end of reception of the E-UTRAN -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> E-UTRAN response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation).

- The UE is in state Registered, Idle mode (state 2) according to [18].

## 8.2.1.6.3.2 Test procedure sequence

**Table 8.2.1.6.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS sends a <i>Paging</i> message to the UE on the appropriate paging block, and including the UE identity in one entry of the IE <i>pagingRecordList</i> .	<--	<i>Paging</i>	-	-
2	The UE transmits an <i>RRCConnectionRequest</i> message.	-->	<i>RRCConnectionRequest</i>	-	-
3	The SS transmits an <i>RRCConnectionSetup</i> message.	<--	<i>RRCConnectionSetup</i>	-	-
4	The UE transmits an <i>RRCConnectionSetupComplete</i> message.	-->	<i>RRCConnectionSetupComplete</i>	-	-
5	The SS transmits a <i>SecurityModeCommand</i> message to activate AS security. (Note 3)	<--	<i>SecurityModeCommand</i>	-	-
6	The SS transmits a <i>RRCConnectionReconfiguration</i> message to establish a data radio bearer. (Note 3)	<--	<i>RRCConnectionReconfiguration</i>	-	-
7	Check: Does the UE transmit an <i>SecurityModeComplete</i> message within 25 (FDD)/28 (TDD) subframes after successful completion of step 5? (Note 2)	-->	<i>SecurityModeComplete</i>	1	P
8	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message within 25 (FDD)/28 (TDD) subframes after successful completion of step 6? (Note 2)	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P

Note 1: The SS is configured for RRC procedure delay testing according to TS 36.523-3 clause 7.12.1.  
 Note 2: 5 (FDD) / 8 (TDD) subframes is added on top of RRC processing delay requirement, because UL grant is allocated for the next subframe after RRC procedure delay and because of transmission delay after UL grant. For TDD, consider the max 7 TTI transmission delay after UL grant.  
 Note 3: The DL resource allocation sent on PDCCH is big enough to guarantee transmission of all DL RRC PDU in single TTI.

## 8.2.1.7 RRC connection reconfiguration / Radio bearer establishment / Success / SRB2

### 8.2.1.7.1 Test Purpose (TP)

```
with { UE in E-UTRA RRC_CONNECTED state without SRB2 }
ensure that {
  when { SS sends an RRConnectionReconfiguration message including SRB2 configuration }
```

```

    then { UE successfully establish the signalling radio bearer }
}

```

### 8.2.1.7.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.3.5.3, and 5.3.10.1.

The following represent an extraction of the requirements relevant to the test purpose.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> if this is the first *RRConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:

...

1> else:

2> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 2: If the *RRConnectionReconfiguration* message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the *SecurityModeComplete* message.

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.1]

The UE shall:

1> for each *srB-Identity* value included in the *srB-ToAddModList* that is not part of the current UE configuration (SRB establishment):

2> apply the specified configuration defined in 9.1.2 for the corresponding SRB;

2> establish a PDCP entity and configure it with the current security configuration, if applicable;

2> establish an RLC entity in accordance with the received *rlc-Config*;

2> establish a DCCH logical channel in accordance with the received *logicalChannelConfig* and with the logical channel identity set in accordance with 9.1.2;

### 8.2.1.7.3 Test description

#### 8.2.1.7.3.1 Pre-test conditions

System Simulator:

## 8.2.1.8 RRC connection reconfiguration / Radio bearer establishment / Success / Dedicated bearer / ROHC configured

### 8.2.1.8.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives an RRConnectionReconfiguration message including IE headerCompression set to
"rohc" }
  then { UE transmits an RRConnectionReconfigurationComplete message }
}
```

### 8.2.1.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, clause 5.3.10.0, clause 5.3.10.3, TS 36.323, clause 5.5.1, 5.5.2 and TS 36.306, clause 4.3.1.1.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> if this is the first *RRConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:

...

1> else:

2> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

[TS 36.331, clause 5.3.10.0]

The UE shall:

...

1> if the received *radioResourceConfigDedicated* includes the *drb-ToAddModList*:

2> perform DRB addition or reconfiguration as specified in 5.3.10.3;

[TS 36.331, clause 5.3.10.3]

The UE shall:

- 1> for each *drb-Identity* value included in the *drb-ToAddModList* that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):
- 2> establish a PDCP entity and configure it with the current security configuration and in accordance with the received *pdcn-Config*;

[TS 36.323, clause 5.5.1]

The header compression protocol is based on the Robust Header Compression (ROHC) framework [7]. There are multiple header compression algorithms, called profiles, defined for the ROHC framework. Each profile is specific to the particular network layer, transport layer or upper layer protocol combination e.g. TCP/IP and RTP/UDP/IP.

The detailed definition of the ROHC channel is specified as part of the ROHC framework in RFC 4995 [7]. This includes how to multiplex different flows (header compressed or not) over the ROHC channel, as well as how to associate a specific IP flow with a specific context state during initialization of the compression algorithm for that flow.

The implementation of the functionality of the ROHC framework and of the functionality of the supported header compression profiles is not covered in this specification.

In this version of the specification the support of the following profiles is described:

**Table 5.5.1.1: Supported header compression protocols and profiles**

Profile Identifier	Usage:	Reference
0x0000	No compression	RFC 4995
0x0001	RTP/UDP/IP	RFC 3095, RFC 4815
0x0002	UDP/IP	RFC 3095, RFC 4815
0x0003	ESP/IP	RFC 3095, RFC 4815
0x0004	IP	RFC 3843, RFC 4815
0x0006	TCP/IP	RFC 4996
0x0101	RTP/UDP/IP	RFC 5225
0x0102	UDP/IP	RFC 5225
0x0103	ESP/IP	RFC 5225
0x0104	IP	RFC 5225

[TS 36.323, clause 5.5.2]

PDCP entities associated with DRBs can be configured by upper layers [3] to use header compression.

[TS 36.306, clause 4.3.1.1]

This field defines which ROHC profiles from the list below are supported by the UE.

- 0x0000 ROHC uncompressed (RFC 4995)
  - 0x0001 ROHC RTP (RFC 3095, RFC 4815)
  - 0x0002 ROHC UDP (RFC 3095, RFC 4815)
- ...

'IMS capable UEs supporting voice' shall support ROHC profiles 0x0000, 0x0001, 0x0002 and be able to compress and decompress headers of PDCP SDUs at a PDCP SDU rate corresponding to supported IMS voice codecs.

## 8.2.2 Radio resource reconfiguration

### 8.2.2.1 RRC connection reconfiguration / Radio resource reconfiguration / Success

#### 8.2.2.1.1 Test Purpose (TP)

(1)

```

with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives an RRCCConnectionReconfiguration message including a
radioResourceConfigDedicated with SRB, DRB, transport channel and physical channel reconfiguration }
  then { UE reconfigures the data and signalling radio bearers and sends an
RRCCConnectionReconfigurationComplete message }
}

```

### 8.2.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331 clause 5.3.5.3, 5.3.10.1, 5.3.10.3, 5.3.10.4 and 5.3.10.6.

The following represent an extraction of the requirements relevant to the test purpose.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> if this is the first *RRConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:

...

- 1> else:

2> If the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

- 3> perform the radio resource configuration procedure as specified in 5.3.10;

...

- 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.1]

The UE shall:

...

- 1> for each *srб-Identity* value included in the *srб-ToAddModList* that is part of the current UE configuration (SRB reconfiguration):

2> reconfigure the RLC entity in accordance with the received *rlc-Config*;

2> reconfigure the DCCH logical channel in accordance with the received *logicalChannelConfig*;

[TS 36.331, clause 5.3.10.3]

...

- 1> for each *drб-Identity* value included in the *drб-ToAddModList* that is part of the current UE configuration (DRB reconfiguration):

2> if the *pdcp-Config* is included:

3> reconfigure the PDCP entity in accordance with the received *pdcp-Config*;

2> if the *rlc-Config* is included:

3> reconfigure the RLC entity or entities in accordance with the received *rlc-Config*;

2> if the *logicalChannelConfig* is included:

3> reconfigure the DTCH logical channel in accordance with the received *logicalChannelConfig*;

NOTE: Removal and addition of the same *drб-Identity* in single *radioResourceConfiguration* is not supported.

[TS 36.331, clause 5.3.10.4]

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

## 8.2.2.2 RRC connection reconfiguration / SRB/DRB reconfiguration / Success

### 8.2.2.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state}
ensure that {
  when { UE receives an RRCConnectionReconfiguration message containing SRB reconfiguration }
    then { UE reconfigures affected SRBs and sends an RRCConnectionReconfigurationComplete message }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state}
ensure that {
  when { UE receives an RRCConnectionReconfiguration message containing DRB reconfiguration }
    then { UE reconfigures affected DRBs and sends an RRCConnectionReconfigurationComplete message }
```

### 8.2.2.2.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.1 and 5.3.10.3.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> else:

2> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3>perform the Radio resource configuration procedure as specified in 5.3.10;

[TS 36.331, clause 5.3.10.1]

The UE shall:

...

1> for each *srbi-Identity* value included in the *srbi-ToAddModList* that is part of the current UE configuration (SRB reconfiguration):

2> reconfigure the RLC entity in accordance with the received *rlc-Config*;

2> reconfigure the DCCH logical channel in accordance with the received *logicalChannelConfig*;

[TS 36.331, clause 5.3.10.3]

The UE shall:

...

1> for each *drbi-Identity* value included in the *drbi-ToAddModList* that is part of the current UE configuration (DRB reconfiguration):

2> if the *pdcp-Config* is included:

- 3> reconfigure the PDCP entity in accordance with the received *pdcpc-Config*;
- 2> if the *rlc-Config* is included:
- 3> reconfigure the RLC entity or entities in accordance with the received *rlc-Config*;
- 2> if the *logicalChannelConfig* is included:
- 3> reconfigure the DTCH logical channel in accordance with the received *logicalChannelConfig*;

NOTE: Removal and addition of the same *drb-Identity* in single *radioResourceConfiguration* is not supported.

**8.2.2.3.1 CA / RRC connection reconfiguration / SCell addition/modification/release / Success / Intra-band Contiguous CA**

**8.2.2.3.1 Test Purpose (TP)**

**(1)**

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives an RRCCofiguration message containing sCellToAddModList with a
          SCell addition }
        then { UE adds the new SCell, configures lower layers to consider the SCell to be in deactivated
              state and sends an RRCCofigurationComplete message within 25 (FDD)/28 (TDD) subframes }
}
```

**(2)**

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives an RRCCofiguration message containing sCellToAddModList with SCell
          modification }
        then { UE modifies the affected SCell dedicated configurations and sends an
              RRCCofigurationComplete message }
}
```

**(3)**

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives an RRCCofiguration message containing sCellToReleaseList with a
          sCellIndex equalling to one of the current UE SCell configuration }
        then { UE releases this SCell and sends an RRCCofigurationComplete message within
              25 (FDD)/28 (TDD) subframes }
}
```

#### **8.2.2.3.1.2 Conformance requirements**

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.3a, 5.3.10.3b and 11.2. Unless otherwise stated these are Rel-10 requirements.

[TS 36.331, clause 5.3.5.3]

If the *RRCCofiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRCCofiguration* includes the *sCellToReleaseList*:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received *RRCCofiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRCCofigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3a]

The UE shall:

- 1> if the release is triggered by reception of the *sCellToReleaseList*:
    - 2> for each *sCellIndex* value included in the *sCellToReleaseList*:
      - 3> if the current UE configuration includes an SCell with value *sCellIndex*:
        - 4> release the SCell;
- 1> if the release is triggered by RRC connection re-establishment:
    - 2> release all SCells that are part of the current UE configuration;

[TS 36.331, clause 5.3.10.3b]

The UE shall:

- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is not part of the current UE configuration (SCell addition):  
    - 2> add the SCell, corresponding to the *cellIdentification*, in accordance with the received *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*;
  - 2> configure lower layers to consider the SCell to be in deactivated state;
- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is part of the current UE configuration (SCell modification):  
    - 2> modify the SCell configuration in accordance with the received *radioResourceConfigDedicatedSCell*;

[TS 36.331, clause 11.2]

The UE performance requirements for RRC procedures are specified in the following table, by means of a value N:

N = the number of 1ms subframes from the end of reception of the E-UTRAN -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> E-UTRAN response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation) where N=20 (Ref. TS 36.331 Fig. 11.2-1).

#### 8.2.2.3.1.3 Test Description

##### 8.2.2.3.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.2.2.3.1.3.2 Test procedure sequence

**Table 8.2.2.3.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1-4	Void	-	-	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing an <i>sCellToAddModList</i> with SCell Cell 3 addition.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message within 25 (FDD)/28 (TDD) subframes?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
7	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing an <i>sCellToAddModList</i> with SCell Cell 3 modification.	<--	<i>RRCConnectionReconfiguration</i>	-	-
8	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message?	-->	<i>RRCConnectionReconfigurationComplete</i>	2	P
9	Void	-	-	-	-
10	Void	-	-	-	-
11	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing an <i>sCellToReleaseList</i> with an <i>sCellIndex</i> equalling to the Cell 3 cell index in the current UE configuration.	<--	<i>RRCConnectionReconfiguration</i>	-	-
12	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message within 25 (FDD)/28 (TDD) subframes?	-->	<i>RRCConnectionReconfigurationComplete</i>	3	P
13	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 1?	-	-	1	-
Note 1: The SS is configured for RRC procedure delay testing according to TS 36.523-3 clause 7.12.1. Note 2: 5 (FDD) / 8 (TDD) subframes is added on top of RRC processing delay requirement, because UL grant is allocated for the next subframe after RRC procedure delay and because of transmission delay after UL grant. For TDD, consider the max 7 TTI transmission delay after UL grant.					

## 8.2.2.3.1.3.3 Specific message contents

**Table 8.2.2.3.1.3.3-0: Conditions for specific message contents  
in Tables 8.2.2.3.1.3.3-2 and 8.2.2.3.1.3.3-3, 8.2.2.3.1.3.3-7, 8.2.2.3.1.3.3-8 and 8.2.2.3.1.3.3-11**

**8.2.2.3.2** CA / RRC connection reconfiguration / SCell addition/modification/release / Success / Inter-Band CA

**8.2.2.3.2.1** Test Purpose (TP)

Same as TC 8.2.2.3.1 but applied to Inter-band CA case.

**8.2.2.3.2.2** Conformance requirements

Same as TC 8.2.2.3.1 but applied to Inter-band CA case.

**8.2.2.3.2.3** Test description

**8.2.2.3.2.3.1** Pre-test conditions

Same as test case 8.2.2.3.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3
- Cell 10 is an Inactive SCell according to [18] cl. 6.3.4

**8.2.2.3.2.3.2** Test procedure sequence

Same as test case 8.2.2.3.1 with the following differences:

- CA configuration: Inter-band CA replaces Inter-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3.

**8.2.2.3.3** CA / RRC connection reconfiguration / SCell addition/ modification/release / Success / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.2.3.1 with the following differences:

- CA configuration Intra-band non-contiguous CA replaces Intra-band Contiguous CA

### 8.2.2.4 CA / RRC connection reconfiguration / SCell SI change / Success

#### 8.2.2.4.1 CA / RRC connection reconfiguration / SCell SI change / Success / Intra-band Contiguous CA

##### 8.2.2.4.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state with SCell(s) configured }
ensure that {
    when { UE receives an RRCCConnectionReconfiguration message including sCellToReleaseList and
           sCellToAddModList with the same concerned SCell to release and add, and with the change of the
           relevant system information of the configured SCell }
    then { UE first releases the concerned SCell and then adds the concerned SCell, configures lower
          layers to consider the concerned SCell to be in deactivated state and sends an
          RRCCConnectionReconfigurationComplete message }
}
```

##### 8.2.2.4.1.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.2.1.1, clauses 5.3.5.3, 5.3.10.3a and 5.3.10.3b.

[TS 36.331, clause 5.2.1.1]

The UE applies the system information acquisition and change monitoring procedures for the PCell only. For an SCell, E-UTRAN provides, via dedicated signalling, all system information relevant for operation in RRC\_CONNECTED when adding the SCell. Upon change of the relevant system information of a configured SCell, E-UTRAN releases and subsequently adds the concerned SCell, which may be done with a single *RRCCConnectionReconfiguration* message.

NOTE 2: E-UTRAN may configure via dedicated signalling different parameter values than the ones broadcast in the concerned SCell.

[TS 36.331, clause 5.3.5.3]

If the *RRCCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRCCConnectionReconfiguration* includes the *sCellToReleaseList*:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received *RRCCConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRCCConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3a]

The UE shall:

1> if the release is triggered by reception of the *sCellToReleaseList*:

2> for each *sCellIndex* value included in the *sCellToReleaseList*:

3> if the current UE configuration includes an SCell with value *sCellIndex*:

4> release the SCell;

1> if the release is triggered by RRC connection re-establishment:

2> release all SCells that are part of the current UE configuration;

[TS 36.331, clause 5.3.10.3b]

The UE shall:

1> for each *sCellIndex* value included in the *sCellToAddModList* that is not part of the current UE configuration (SCell addition):

2> add the SCell, corresponding to the *cellIdentification*, in accordance with the received *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*;

2> configure lower layers to consider the SCell to be in deactivated state;

1> for each *sCellIndex* value included in the *sCellToAddModList* that is part of the current UE configuration (SCell modification):

2> modify the SCell configuration in accordance with the received *radioResourceConfigDedicatedSCell*;

#### 8.2.2.4.1.3 Test Description

##### 8.2.2.4.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.2.4.1.3.2 Test procedure sequence

**Table 8.2.2.4.1.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCCConnectionReconfiguration</i> message containing a <i>sCellToAddModList</i> with Cell 3 as SCell addition.	<--	<i>RRCCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCCConnectionReconfigurationComplete</i> message	-->	<i>RRCCConnectionReconfigurationComplete</i>	-	-
3	The SS transmits an <i>RRCCConnectionReconfiguration</i> message containing a <i>sCellToReleaseList</i> with a SCell release and a <i>sCellToAddModList</i> with a SCell addition for SCell relevant system information changes, the <i>SCellIndex-r10</i> in both IEs indicate the same SCell as configured in step 1.	<--	<i>RRCCConnectionReconfiguration</i>	-	-
4	Check: Does the UE transmit an <i>RRCCConnectionReconfigurationComplete</i> message?	-->	<i>RRCCConnectionReconfigurationComplete</i>	1	P

### 8.2.2.4.2 CA / RRC connection reconfiguration / SCell SI change / Success / Inter-Band CA

The scope and description of the present TC is the same as test case 8.2.2.4.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3
- Cell 10 is an Inactive SCell according to [18] cl. 6.3.4

### 8.2.2.4.3 CA / RRC connection reconfiguration / SCell SI change / Success / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.2.4.1 with the following differences:

- CA configuration Intra-band non-contiguous CA replaces Intra-band Contiguous CA

### 8.2.2.5 CA / RRC connection reconfiguration / SCell addition without UL / Success

#### 8.2.2.5.1 CA / RRC connection reconfiguration / SCell addition without UL / Success / Intra-band Contiguous CA

##### 8.2.2.5.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives an RRConnectionReconfiguration message containing sCellToAddModList with SCell
addition without UL carrier }
  then { UE adds the new SCell and sends an RRConnectionReconfigurationComplete message }
}
```

##### 8.2.2.5.1.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.3b.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3b]

The UE shall:

1> for each *sCellIndex* value included in the *sCellToAddModList* that is not part of the current UE configuration (SCell addition):

2> add the SCell, corresponding to the *cellIdentification*, in accordance with the received *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*;

2> configure lower layers to consider the SCell to be in deactivated state;

1> for each *sCellIndex* value included in the *sCellToAddModList* that is part of the current UE configuration (SCell modification):

2> modify the SCell configuration in accordance with the received *radioResourceConfigDedicatedSCell*;

#### 8.2.2.5.1.3 Test Description

##### 8.2.2.5.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.2.5.1.3.2 Test procedure sequence

**Table 8.2.2.5.1.3.2-1: Main behaviour**

**8.2.2.5.2** CA / RRC connection reconfiguration / SCell addition without UL / Success / Inter-band CA

The scope and description of the present TC is the same as test case 8.2.2.5.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3

**8.2.2.5.3** CA / RRC connection reconfiguration / SCell addition without UL / Success / Intra-band non-Contiguous CA

The scope and description of the present TC is the same as test case 8.2.2.5.1 with the following differences:

- CA configuration: Intra-band non-Contiguous CA replaces Intra-band Contiguous CA

**8.2.2.5a** CA / RRC connection reconfiguration / TDD SCell addition without UL

**8.2.2.5a.1** CA / RRC connection reconfiguration / TDD SCell addition without UL / SRS configuration / Periodic / multi-SRS switching

**8.2.2.5a.1.1** Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives an RRConnectionReconfiguration message containing sCellToAddModList with a TDD SCell addition without UL carrier, and srs-SwitchFromServCellIndex is configured for the TDD SCell, and SoundingRS-UL-ConfigDedicated is configured for the TDD SCell for UL subframe as SRS trigger type 0. }
    then { the UE transmit SRS on the TDD SCell periodically using the resource on UL subframe configured in SoundingRS-UL-ConfigDedicated }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-SwitchFromServCellIndex }
ensure that {
```

```

when { UE receives an RRConnectionReconfiguration message containing sCellToAddModList, and
SoundingRS-UL-ConfigDedicated is configured for the TDD SCell for special subframe as SRS trigger
type 0. }
    then { the UE transmit SRS on the TDD SCell periodically using the resource on special subframe
configured in SoundingRS-UL-ConfigDedicated }
}

```

(3)

```

with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-
SwitchFromServCellIndex }
ensure that {
    when { UE receives an RRConnectionReconfiguration message containing sCellToAddModList, and
SoundingRS-UL-ConfigDedicated is configured for the TDD SCell for multi-symbols of special subframe
as SRS trigger type 0. }
        then { the UE transmit SRS on the TDD SCell periodically using the resource on multi-symbols of
special subframe configured in SoundingRS-UL-ConfigDedicated }
}

```

#### 8.2.2.5a.1.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.3b, TS 36.213, clause 8.2.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3b]

The UE shall:

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is not part of the current UE configuration (SCell addition):

2> add the SCell, corresponding to the *cellIdentification*, in accordance with the *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*, both included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

2> configure lower layers to consider the SCell to be in deactivated state;

2> for each *measId* included in the *measIdList* within *VarMeasConfig*:

3> if SCells are not applicable for the associated measurement; and

3> if the concerned SCell is included in *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*:

4> remove the concerned SCell from *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is part of the current UE configuration (SCell modification):

2> modify the SCell configuration in accordance with the *radioResourceConfigDedicatedSCell*, included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

[TS 36.213, clause 8.2]

A UE shall transmit Sounding Reference Symbol (SRS) on per serving cell SRS resources based on two trigger types:

- trigger type 0: higher layer signalling
  - trigger type 1: DCI formats 0/0A/0B/4/4A/4B/1A/6-0A/6-1A for FDD, TDD, and frame structure type 3 and DCI formats 2B/2C/2D/3B for TDD, and frame structure type 3.
- ...

A UE may be configured with SRS parameters for trigger type 0 and trigger type 1 on each serving cell. A BL/CE UE configured with CEModeB is not expected to be configured with SRS parameters for trigger type 0 and trigger type 1. The following SRS parameters are serving cell specific and semi-statically configurable by higher layers for trigger type 0 and for trigger type 1.

- Number of combs  $K_{TC}$  as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1, if configured
- srs-UpPtsAdd: two or four additional SC-FDMA symbols in UpPTS as defined in [11] for trigger type 0 and trigger type 1, if configured
- Transmission comb  $\bar{k}_{TC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1
- Starting physical resource block assignment  $n_{RRC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $n_{RRC} = 0$ .
- *duration*: single or indefinite (until disabled), as defined in [11] for trigger type 0
- *srs-ConfigIndex*  $I_{SRS}$  for SRS periodicity  $T_{SRS}$  and SRS subframe offset  $T_{offset}$ , as defined in Table 8.2-1 and Table 8.2-2 for trigger type 0 and SRS periodicity  $T_{SRS,1}$  and SRS subframe offset  $T_{offset,1}$ , as defined in Table 8.2-4 and Table 8.2-5 trigger type 1 for a serving cell that is not a LAA SCell
- SRS bandwidth  $B_{SRS}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $B_{SRS} = 0$ .
- Frequency hopping bandwidth,  $b_{hop}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0
- Cyclic shift  $n_{SRS}^{cs}$ , as defined in Subclause 5.5.3.1 of [3] for trigger type 0 and each configuration of trigger type 1
- Number of antenna ports  $N_p$  for trigger type 0 and each configuration of trigger type 1
- SRS subframe for each configuration of trigger type 1 for a serving cell that is a LAA SCell and DCI format 4B

For a TDD serving cell,

- If the serving cell not configured for PUSCH/PUCCH transmission, or if the UE supports *ce-srsEnhancement-r14*
  - For trigger type 0, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedUpPtsExt* and/or *SoundingRS-UL-ConfigDedicated*, and the SRS parameters in each of the configurations shall be used.
  - For trigger type 1, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedAperiodicUpPtsExt* and/or *SoundingRS-UL-ConfigDedicatedAperiodic*, and the SRS parameters in each of the configurations shall be used.

...

For a TDD serving cell not configured for PUSCH/PUCCH transmission, and trigger type 1, a SRS request field [4] shall be included in DCI format 3B if the value of the higher layer parameter *fieldTypeFormat3B* is set to 3 or 4. If the UE is configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, a single SRS request field is included in DCI format 3B for a set of the TDD serving cells without PUSCH/PUCCH transmission as given in Table 8.2-0C; otherwise one or more SRS request fields is included in DCI format 3B each corresponding to a TDD serving cell without PUSCH/PUCCH transmission as configured by higher layers. If the UE is configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, and the UE does not support transmit antenna selection or multi-antenna transmission, the SRS request field [4] in DCI format 3B is 1-bit, 2-bits otherwise. For the 1-bit SRS request field [4] in DCI format 3B, a type 1 SRS is triggered if the value of the SRS request field is set to '1' with SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling. For the 2-bit SRS request field [4] in DCI format 3B, and UE configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, the SRS request field indicates the SRS parameter set given in Table 8.1-1 with the three sets of SRS parameters, *srs-ConfigApDCI-Format4*, configured by higher layer signalling. For the 2-bit SRS request field [4] in Table 8.2-0C and DCI format 3B, and UE configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling for the associated serving cell, is used if a type 1 SRS is triggered.

#### 8.2.2.5a.1.3 Test description

##### 8.2.2.5a.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.2.2.5a.1.3.2 Test procedure sequence

**Table 8.2.2.5a.1.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing a <i>sCellToAddModList</i> with SCell Cell 3 addition without UL carrier, and setup an SRS configuration on the last symbol of 4 <sup>th</sup> subframe every radio frame in SCell Cell3.	<--	<i>RRCConnectionReconfiguration</i>	-	-

## 8.2.2.5a.2 CA / RRC connection reconfiguration / TDD SCell addition without UL / SRS configuration / Aperiodic

### 8.2.2.5a.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives an RRCConnectionReconfiguration message containing sCellToAddModList with a TDD SCell addition without UL carrier, and srs-SwitchFromServCellIndex is configured for the TDD SCell, and SoundingRS-UL-AperiodicConfigDedicated is configured for the TDD SCell for UL subframe as SRS trigger type 1, and a SRS request is received in DCI 1A on the TDD SCell.}
    then { the UE transmit SRS on the TDD SCell using the resource on UL subframe configured in SoundingRS-UL-AperiodicConfigDedicated }
  }
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-SwitchFromServCellIndex }
ensure that {
  when { UE is configured with SoundingRS-UL-AperiodicConfigDedicated for the TDD SCell for UL subframe as SRS trigger type 1, and a SRS request is received in DCI 3B on the TDD SCell.}
    then { the UE transmit SRS on the TDD SCell using the resource on UL subframe configured in SoundingRS-UL-AperiodicConfigDedicated }
  }
```

(3)

```

with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-
SwitchFromServCellIndex }
ensure that {
  when { UE is configured with SoundingRS-UL-AperiodicConfigDedicated for the TDD SCell for special
subframe as SRS trigger type 1, and a SRS request is received in DCI 1A on the TDD SCell.}}
  then { the UE transmit SRS on the TDD SCell using the resource on special subframe configured in
SoundingRS-UL-AperiodicConfigDedicated }
}

```

(4)

```

with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-
SwitchFromServCellIndex }
ensure that {
  when { UE is configured with SoundingRS-UL-AperiodicConfigDedicated for the TDD SCell for special
subframe as SRS trigger type 1, and a SRS request is received in DCI 3B on the TDD SCell.}}
  then { the UE transmit SRS on the TDD SCell using the resource on special subframe configured in
SoundingRS-UL-AperiodicConfigDedicated }
}

```

#### 8.2.2.5a.2.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.3b, TS 36.213, clause 8.2.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3b]

The UE shall:

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is not part of the current UE configuration (SCell addition):

2> add the SCell, corresponding to the *cellIdentification*, in accordance with the *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*, both included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

2> configure lower layers to consider the SCell to be in deactivated state;

2> for each *measId* included in the *measIdList* within *VarMeasConfig*:

3> if SCells are not applicable for the associated measurement; and

3> if the concerned SCell is included in *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*:

4> remove the concerned SCell from *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is part of the current UE configuration (SCell modification):

2> modify the SCell configuration in accordance with the *radioResourceConfigDedicatedSCell*, included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

[TS 36.213, clause 8.2]

A UE shall transmit Sounding Reference Symbol (SRS) on per serving cell SRS resources based on two trigger types:

- trigger type 0: higher layer signalling
  - trigger type 1: DCI formats 0/0A/0B/4/4A/4B/1A/6-0A/6-1A for FDD, TDD, and frame structure type 3 and DCI formats 2B/2C/2D/3B for TDD, and frame structure type 3.
- ...

A UE may be configured with SRS parameters for trigger type 0 and trigger type 1 on each serving cell. A BL/CE UE configured with CEModeB is not expected to be configured with SRS parameters for trigger type 0 and trigger type 1. The following SRS parameters are serving cell specific and semi-statically configurable by higher layers for trigger type 0 and for trigger type 1.

- Number of combs  $K_{TC}$  as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1, if configured
- srs-UpPtsAdd: two or four additional SC-FDMA symbols in UpPTS as defined in [11] for trigger type 0 and trigger type 1, if configured
- Transmission comb  $\bar{k}_{TC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1
- Starting physical resource block assignment  $n_{RRC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $n_{RRC} = 0$ .
- *duration*: single or indefinite (until disabled), as defined in [11] for trigger type 0
- *srs-ConfigIndex*  $I_{SRS}$  for SRS periodicity  $T_{SRS}$  and SRS subframe offset  $T_{offset}$ , as defined in Table 8.2-1 and Table 8.2-2 for trigger type 0 and SRS periodicity  $T_{SRS,1}$  and SRS subframe offset  $T_{offset,1}$ , as defined in Table 8.2-4 and Table 8.2-5 trigger type 1 for a serving cell that is not a LAA SCell
- SRS bandwidth  $B_{SRS}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $B_{SRS} = 0$ .
- Frequency hopping bandwidth,  $b_{hop}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0
- Cyclic shift  $n_{SRS}^{cs}$ , as defined in Subclause 5.5.3.1 of [3] for trigger type 0 and each configuration of trigger type 1
- Number of antenna ports  $N_p$  for trigger type 0 and each configuration of trigger type 1
- SRS subframe for each configuration of trigger type 1 for a serving cell that is a LAA SCell and DCI format 4B

For a TDD serving cell,

- If the serving cell not configured for PUSCH/PUCCH transmission, or if the UE supports *ce-srsEnhancement-r14*
  - For trigger type 0, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedUpPTsExt* and/or *SoundingRS-UL-ConfigDedicated*, and the SRS parameters in each of the configurations shall be used.

- For trigger type 1, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedAperiodicUpPTsExt* and/or *SoundingRS-UL-ConfigDedicatedAperiodic*, and the SRS parameters in each of the configurations shall be used.
- ...

For trigger type 1 and DCI format 4/4A/4B three sets of SRS parameters, *srs-ConfigApDCI-Format4*, are configured by higher layer signalling. The 2-bit SRS request field [4] in DCI format 4/4A/4B indicates the SRS parameter set given in Table 8.1-1. For trigger type 1 and DCI format 0/0A/0B /6-0A, a single set of SRS parameters, *srs-ConfigApDCI-Format0*, is configured by higher layer signalling. For trigger type 1 and DCI formats 1A/2B/2C/2D/6-1A, a single common set of SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, is configured by higher layer signalling. For a serving cell that is not a LAA SCell, the SRS request field is 1 bit [4] for DCI formats 0/1A/2B/2C/2D/6-0A/6-1A, with a type 1 SRS triggered if the value of the SRS request field is set to '1'. For a serving cell that is a LAA SCell, the SRS timing offset field is 3 bits [4] for DCI formats 1A/2B/2C/2D, with a type 1 SRS triggered if the value of the SRS timing offset field is not set to '000'. The SRS request field is 1 bit [4] for DCI formats 0A, with a type 1 SRS triggered if the value of the SRS request field is set to '1'. The 2-bit SRS request field [4] in DCI format 0B indicates the type 1 SRS triggering and PUSCH subframe (as determined in Subclause 8.0) with SRS as given in Table 8.2-0A.

...

For a TDD serving cell not configured for PUSCH/PUCCH transmission, and trigger type 1, a SRS request field [4] shall be included in DCI format 3B if the value of the higher layer parameter *fieldTypeFormat3B* is set to 3 or 4. If the UE is configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, a single SRS request field is included in DCI format 3B for a set of the TDD serving cells without PUSCH/PUCCH transmission as given in Table 8.2-0C; otherwise one or more SRS request fields is included in DCI format 3B each corresponding to a TDD serving cell without PUSCH/PUCCH transmission as configured by higher layers. If the UE is configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, and the UE does not support transmit antenna selection or multi-antenna transmission, the SRS request field [4] in DCI format 3B is 1-bit, 2-bits otherwise. For the 1-bit SRS request field [4] in DCI format 3B, a type 1 SRS is triggered if the value of the SRS request field is set to '1' with SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling. For the 2-bit SRS request field [4] in DCI format 3B, and UE configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, the SRS request field indicates the SRS parameter set given in Table 8.1-1 with the three sets of SRS parameters, *srs-ConfigApDCI-Format4*, configured by higher layer signalling. For the 2-bit SRS request field [4] in Table 8.2-0C and DCI format 3B, and UE configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling for the associated serving cell, is used if a type 1 SRS is triggered.

#### 8.2.2.5a.2.3 Test description

##### 8.2.2.5a.2.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.2.2.5a.2.3.2 Test procedure sequence

**Table 8.2.2.5a.2.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing a <i>sCellToAddModList</i> with SCell Cell 3 addition without UL carrier, and setup an aperiodic SRS configuration on the last symbol of 4 <sup>th</sup> and 9 <sup>th</sup> subframe of every radio frame in SCell Cell3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-

### 8.2.2.5a.3 CA / RRC connection reconfiguration / TDD SCell addition without UL / SRS configuration / Collision handling / Priority

#### 8.2.2.5a.3.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED }
ensure that {
  when { UE in configured with SRS trigger type 0 in PCell, and UE receives an
  RRConnectionReconfiguration message containing sCellToAddModList with a TDD SCell addition without
  UL carrier, and srs-SwitchFromServCellIndex is configured for the TDD SCell, and SoundingRS-UL-
  ConfigDedicated is configured for the TDD SCell for UL subframe as SRS trigger type 0, and the SRS
  transmission in PCell overlaps in the same symbol with SRS transmission in TDD SCell }
  then { the UE transmit SRS in TDD SCell, but doesn't transmit SRS in PCell }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-
SwitchFromServCellIndex }
ensure that {
  when { UE receives a MAC PDU retransmission for DRB in PCell, and corresponding HARQ-ACK
  transmission overlaps in the same symbol with the SRS transmission in TDD SCell }
  then { the UE transmit HARQ-ACK in PCell, but doesn't transmit SRS in TDD SCell }
}
```

(3)

```

with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-
SwitchFromServCellIndex }
ensure that {
    when { UE receives UL grant triggering the aperiodic CSI reporting in PCell, and corresponding CSI
reporting overlaps in the same symbol with the SRS transmission type 0 in TDD SCell }
    then { the UE transmit aperiodic CSI reporting in PCell, but doesn't transmit SRS in TDD SCell }
}

```

### 8.2.2.5a.3.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.3b, TS 36.213, clause 8.2.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3b]

The UE shall:

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is not part of the current UE configuration (SCell addition):

2> add the SCell, corresponding to the *cellIdentification*, in accordance with the *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*, both included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

2> configure lower layers to consider the SCell to be in deactivated state;

2> for each *measId* included in the *measIdList* within *VarMeasConfig*:

3> if SCells are not applicable for the associated measurement; and

3> if the concerned SCell is included in *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*:

4> remove the concerned SCell from *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is part of the current UE configuration (SCell modification):

2> modify the SCell configuration in accordance with the *radioResourceConfigDedicatedSCell*, included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

[TS 36.213, clause 8.2]

A UE shall transmit Sounding Reference Symbol (SRS) on per serving cell SRS resources based on two trigger types:

- trigger type 0: higher layer signalling

- trigger type 1: DCI formats 0/0A/0B/4/4A/4B/1A/6-0A/6-1A for FDD, TDD, and frame structure type 3 and DCI formats 2B/2C/2D/3B for TDD, and frame structure type 3.
- ...

A UE may be configured with SRS parameters for trigger type 0 and trigger type 1 on each serving cell. A BL/CE UE configured with CEModeB is not expected to be configured with SRS parameters for trigger type 0 and trigger type 1. The following SRS parameters are serving cell specific and semi-statically configurable by higher layers for trigger type 0 and for trigger type 1.

- Number of combs  $K_{TC}$  as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1, if configured
- srs-UpPtsAdd: two or four additional SC-FDMA symbols in UpPTS as defined in [11] for trigger type 0 and trigger type 1, if configured
- Transmission comb  $\bar{k}_{TC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1
- Starting physical resource block assignment  $n_{RRC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $n_{RRC} = 0$ .
- *duration*: single or indefinite (until disabled), as defined in [11] for trigger type 0
- *srs-ConfigIndex*  $I_{SRS}$  for SRS periodicity  $T_{SRS}$  and SRS subframe offset  $T_{offset}$ , as defined in Table 8.2-1 and Table 8.2-2 for trigger type 0 and SRS periodicity  $T_{SRS,1}$  and SRS subframe offset  $T_{offset,1}$ , as defined in Table 8.2-4 and Table 8.2-5 trigger type 1 for a serving cell that is not a LAA SCell
- SRS bandwidth  $B_{SRS}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $B_{SRS} = 0$ .
- Frequency hopping bandwidth,  $b_{hop}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0
- Cyclic shift  $n_{SRS}^{cs}$ , as defined in Subclause 5.5.3.1 of [3] for trigger type 0 and each configuration of trigger type 1
- Number of antenna ports  $N_p$  for trigger type 0 and each configuration of trigger type 1
- SRS subframe for each configuration of trigger type 1 for a serving cell that is a LAA SCell and DCI format 4B

For a TDD serving cell,

- If the serving cell not configured for PUSCH/PUCCH transmission, or if the UE supports *ce-srsEnhancement-r14*
    - For trigger type 0, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedUpPTsExt* and/or *SoundingRS-UL-ConfigDedicated*, and the SRS parameters in each of the configurations shall be used.
    - For trigger type 1, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedAperiodicUpPTsExt* and/or *SoundingRS-UL-ConfigDedicatedAperiodic*, and the SRS parameters in each of the configurations shall be used.
- ...

For trigger type 1 and DCI format 4/4A/4B three sets of SRS parameters, *srs-ConfigApDCI-Format4*, are configured by higher layer signalling. The 2-bit SRS request field [4] in DCI format 4/4A/4B indicates the SRS parameter set given in Table 8.1-1. For trigger type 1 and DCI format 0/0A/0B /6-0A, a single set of SRS parameters, *srs-ConfigApDCI-Format0*, is configured by higher layer signalling. For trigger type 1 and DCI formats 1A/2B/2C/2D/6-1A, a single

common set of SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, is configured by higher layer signalling. For a serving cell that is not a LAA SCell, the SRS request field is 1 bit [4] for DCI formats 0/1A/2B/2C/2D/6-0A/6-1A, with a type 1 SRS triggered if the value of the SRS request field is set to '1'. For a serving cell that is a LAA SCell, the SRS timing offset field is 3 bits [4] for DCI formats 1A/2B/2C/2D, with a type 1 SRS triggered if the value of the SRS timing offset field is not set to '000'. The SRS request field is 1 bit [4] for DCI formats 0A, with a type 1 SRS triggered if the value of the SRS request field is set to '1'. The 2-bit SRS request field [4] in DCI format 0B indicates the type 1 SRS triggering and PUSCH subframe (as determined in Subclause 8.0) with SRS as given in Table 8.2-0A.

...

For a TDD serving cell not configured for PUSCH/PUCCH transmission, and trigger type 1, a SRS request field [4] shall be included in DCI format 3B if the value of the higher layer parameter *fieldTypeFormat3B* is set to 3 or 4. If the UE is configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, a single SRS request field is included in DCI format 3B for a set of the TDD serving cells without PUSCH/PUCCH transmission as given in Table 8.2-0C; otherwise one or more SRS request fields is included in DCI format 3B each corresponding to a TDD serving cell without PUSCH/PUCCH transmission as configured by higher layers. If the UE is configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, and the UE does not support transmit antenna selection or multi-antenna transmission, the SRS request field [4] in DCI format 3B is 1-bit, 2-bits otherwise. For the 1-bit SRS request field [4] in DCI format 3B, a type 1 SRS is triggered if the value of the SRS request field is set to '1' with SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling. For the 2-bit SRS request field [4] in DCI format 3B, and UE configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, the SRS request field indicates the SRS parameter set given in Table 8.1-1 with the three sets of SRS parameters, *srs-ConfigApDCI-Format4*, configured by higher layer signalling. For the 2-bit SRS request field [4] in Table 8.2-0C and DCI format 3B, and UE configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling for the associated serving cell, is used if a type 1 SRS is triggered.

...

If a UE is not configured with multiple TAGs and the UE is not configured with the parameter *srs-UpPtsAdd* for trigger type 1, or if a UE is not configured with multiple TAGs and the UE is not configured with more than one serving cell of different CPs, the UE shall not transmit SRS whenever SRS transmission on any serving cells and PUCCH transmission carrying HARQ-ACK and/or positive SR using normal PUCCH format as defined in Subclauses 5.4.1 and 5.4.2A of [3] happen to coincide in the same subframe.

...

For a TDD serving cell  $d$  not configured for PUSCH/PUCCH transmission, denote as  $s_0(d)$  the corresponding serving cell whose UL transmissions may be interrupted as signalled by *srs-SwitchFromServCellIndex*. Define the set  $S(d) = \{s_0(d), \dots, s_{N-1}(d)\}$  as the set of serving cells that meet all the following conditions:

- $\{s_0(d), \dots, s_{N-1}(d)\}$  are in the same band as  $s_0(d)$ .
- $\{s_0(d), \dots, s_{N-1}(d)\}$  have the same CP as  $s_0(d)$ .
- $\{s_0(d), \dots, s_{N-1}(d)\}$  are in the same TAG as  $s_0(d)$ .

The following prioritization rules shall be applied when transmitting SRS over serving cell  $d$  when the simultaneous transmission of SRS and other signal/channel would result in uplink transmissions beyond the UE's indicated uplink carrier aggregation capability included in the *UE-EUTRA-Capability* [12]:

- If PUSCH/PUCCH transmission carrying HARQ-ACK/positive SR/RI/PTI/CRI and/or PRACH on a serving cell in set  $S(d)$  overlaps in the same symbol with the SRS transmission (including any interruption due to uplink or downlink RF retuning time [10]) on serving cell  $d$ , then the UE shall not transmit SRS. Otherwise,
- if PUSCH transmission carrying aperiodic CSI on a serving cell in set  $S(d)$  overlaps in the same symbol with the SRS transmission (including any interruption due to uplink or downlink RF retuning time [10]) in serving cell  $d$ , and if the SRS transmission is a type 0 SRS transmission, then the UE shall not transmit the type 0 SRS. Otherwise,
- if PUSCH transmission on a serving cell in set  $S(d)$  overlaps in more than one symbol with the SRS transmission (including any interruption due to uplink or downlink RF retuning time [10]) in serving cell  $d$ , then the UE shall drop the PUSCH transmission. If PUCCH/SRS transmission on a serving cell in set  $S(d)$  overlaps in the same

symbol with the SRS transmission (including any interruption due to uplink or downlink RF retuning time [10]) on serving cell  $d$ , the UE shall drop the PUCCH/SRS transmission.

#### 8.2.2.5a.3.3 Test description

##### 8.2.2.5a.3.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.2.5a.3.3.2 Test procedure sequence

**Table 8.2.2.5a.3.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message. The <i>RRCConnectionReconfiguration</i> contains <i>sCellToAddModList</i> with SCell Cell 3 addition without UL carrier, and setup a periodic SRS configuration on the last symbol of 4 <sup>th</sup> subframe of every radio frame in SCell Cell 3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit SRS in PCell Cell 1 on the last symbol of 4 <sup>th</sup> subframe in radio frame k1? (Note 1)	-->	SRS	1	F
4	Check: Does the UE transmit SRS in SCell Cell 3 on the last symbol of 4 <sup>th</sup> subframe in radio frame k1? (Note 1)	-->	SRS	1	P
5	The SS indicates a new transmission on PDCCH and transmits a MAC PDU (containing an RLC PDU) in PCell Cell 1 on 10 <sup>th</sup> subframe of radio frame k2, with content set so that UE could not successfully decode the data from its soft buffer.	<--	MAC PDU		
6	Check: Does the UE transmit a HARQ NACK in PCell Cell 1 on 4 <sup>th</sup> subframe of radio frame k2+1?	-->	HARQ NACK	2	P
7	Check: Does the UE transmit SRS on the last symbol of 4 <sup>th</sup> subframe of radio frame k2+1 in SCell Cell3?	-->	SRS	2	F
8	After 1 second of step 5, the SS sends an UL grant to trigger aperiodic CSI reporting in PCell Cell 1 on 10 <sup>th</sup> subframe of radio frame k3.	<--	(UL Grant)	-	-
9	Check: Does the UE perform aperiodical CQI reporting in PCell Cell 1 on 4 <sup>th</sup> subframe of radio frame k3+1?	-->	(CQI)	3	P
10	Check: Does the UE transmit SRS on the last symbol of 4 <sup>th</sup> subframe of radio frame k3+1 in SCell Cell3?	-->	SRS	3	F

Note 1: Radio frame k1 is randomly selected after step 2.

8.2.2.5a.4 CA / RRC connection reconfiguration / TDD SCell addition without UL / SRS configuration / Collision handling / flexible SRS transmitting

8.2.2.5a.4.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state with a TDD SCell without UL carrier and configured with srs-SwitchFromServCellIndex }
ensure that {
    when { UE is configured with soundingRS-FlexibleTiming-r14 and UE is configured with SoundingRS-UL-AperiodicConfigDedicated for the TDD SCell for UL subframe as SRS trigger type 1, and a SRS request is received in DCI 3B on the TDD SCell, and the SRS transmission in subframe n+k happens to overlap with a HARQ-ACK transmission }
    then { the UE transmit SRS in a later subframe n+k+l, where l=max(5, TSRS,1) }
}
```

8.2.2.5a.4.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.3b, TS 36.213, clause 8.2.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRCConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3b]

The UE shall:

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is not part of the current UE configuration (SCell addition):

2> add the SCell, corresponding to the *cellIdentification*, in accordance with the *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*, both included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

2> configure lower layers to consider the SCell to be in deactivated state;

2> for each *measId* included in the *measIdList* within *VarMeasConfig*:

3> if SCells are not applicable for the associated measurement; and

3> if the concerned SCell is included in *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*:

4> remove the concerned SCell from *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

1> for each *sCellIndex* value included either in the *sCellToAddModList* or in the *sCellToAddModListSCG* that is part of the current UE configuration (SCell modification):

2> modify the SCell configuration in accordance with the *radioResourceConfigDedicatedSCell*, included either in the *sCellToAddModList* or in the *sCellToAddModListSCG*;

[TS 36.213, clause 8.2]

A UE shall transmit Sounding Reference Symbol (SRS) on per serving cell SRS resources based on two trigger types:

- trigger type 0: higher layer signalling
  - trigger type 1: DCI formats 0/0A/0B/4/4A/4B/1A/6-0A/6-1A for FDD, TDD, and frame structure type 3 and DCI formats 2B/2C/2D/3B for TDD, and frame structure type 3.
- ...

A UE may be configured with SRS parameters for trigger type 0 and trigger type 1 on each serving cell. A BL/CE UE configured with CEModeB is not expected to be configured with SRS parameters for trigger type 0 and trigger type 1. The following SRS parameters are serving cell specific and semi-statically configurable by higher layers for trigger type 0 and for trigger type 1.

- Number of combs  $K_{TC}$  as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1, if configured
- srs-UpPtsAdd: two or four additional SC-FDMA symbols in UpPTS as defined in [11] for trigger type 0 and trigger type 1, if configured
- Transmission comb  $\bar{k}_{TC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1
- Starting physical resource block assignment  $n_{RRC}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $n_{RRC} = 0$ .
- *duration*: single or indefinite (until disabled), as defined in [11] for trigger type 0
- *srs-ConfigIndex*  $I_{SRS}$  for SRS periodicity  $T_{SRS}$  and SRS subframe offset  $T_{offset}$ , as defined in Table 8.2-1 and Table 8.2-2 for trigger type 0 and SRS periodicity  $T_{SRS,1}$  and SRS subframe offset  $T_{offset,1}$ , as defined in Table 8.2-4 and Table 8.2-5 trigger type 1 for a serving cell that is not a LAA SCell
- SRS bandwidth  $B_{SRS}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0 and each configuration of trigger type 1 for a serving cell that is not a LAA SCell. For a serving cell that is a LAA SCell,  $B_{SRS} = 0$ .
- Frequency hopping bandwidth,  $b_{hop}$ , as defined in Subclause 5.5.3.2 of [3] for trigger type 0
- Cyclic shift  $n_{SRS}^{cs}$ , as defined in Subclause 5.5.3.1 of [3] for trigger type 0 and each configuration of trigger type 1
- Number of antenna ports  $N_p$  for trigger type 0 and each configuration of trigger type 1
- SRS subframe for each configuration of trigger type 1 for a serving cell that is a LAA SCell and DCI format 4B

For a TDD serving cell,

- If the serving cell not configured for PUSCH/PUCCH transmission, or if the UE supports *ce-srsEnhancement-r14*
    - For trigger type 0, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedUpPtsExt* and/or *SoundingRS-UL-ConfigDedicated*, and the SRS parameters in each of the configurations shall be used.
    - For trigger type 1, the UE can be configured with more than one configuration of *SoundingRS-UL-ConfigDedicatedAperiodicUpPtsExt* and/or *SoundingRS-UL-ConfigDedicatedAperiodic*, and the SRS parameters in each of the configurations shall be used.
- ...

For trigger type 1 and DCI format 4/4A/4B three sets of SRS parameters, *srs-ConfigApDCI-Format4*, are configured by higher layer signalling. The 2-bit SRS request field [4] in DCI format 4/4A/4B indicates the SRS parameter set given in Table 8.1-1. For trigger type 1 and DCI format 0/0A/0B /6-0A, a single set of SRS parameters, *srs-ConfigApDCI-Format0*, is configured by higher layer signalling. For trigger type 1 and DCI formats 1A/2B/2C/2D/6-1A, a single common set of SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, is configured by higher layer signalling. For a serving cell that is not a LAA SCell, the SRS request field is 1 bit [4] for DCI formats 0/1A/2B/2C/2D/6-0A/6-1A, with a type 1 SRS triggered if the value of the SRS request field is set to '1'. For a serving cell that is a LAA SCell, the SRS timing offset field is 3 bits [4] for DCI formats 1A/2B/2C/2D, with a type 1 SRS triggered if the value of the SRS timing offset field is not set to '000'. The SRS request field is 1 bit [4] for DCI formats 0A, with a type 1 SRS triggered if the value of the SRS request field is set to '1'. The 2-bit SRS request field [4] in DCI format 0B indicates the type 1 SRS triggering and PUSCH subframe (as determined in Subclause 8.0) with SRS as given in Table 8.2-0A.

...

For a TDD serving cell not configured for PUSCH/PUCCH transmission, and trigger type 1, a SRS request field [4] shall be included in DCI format 3B if the value of the higher layer parameter *fieldTypeFormat3B* is set to 3 or 4. If the UE is configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, a single SRS request field is included in DCI format 3B for a set of the TDD serving cells without PUSCH/PUCCH transmission as given in Table 8.2-0C; otherwise one or more SRS request fields is included in DCI format 3B each corresponding to a TDD serving cell without PUSCH/PUCCH transmission as configured by higher layers. If the UE is configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, and the UE does not support transmit antenna selection or multi-antenna transmission, the SRS request field [4] in DCI format 3B is 1-bit, 2-bits otherwise. For the 1-bit SRS request field [4] in DCI format 3B, a type 1 SRS is triggered if the value of the SRS request field is set to '1' with SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling. For the 2-bit SRS request field [4] in DCI format 3B, and UE configured with no more than 5 TDD serving cells without PUSCH/PUCCH transmission, the SRS request field indicates the SRS parameter set given in Table 8.1-1 with the three sets of SRS parameters, *srs-ConfigApDCI-Format4*, configured by higher layer signalling. For the 2-bit SRS request field [4] in Table 8.2-0C and DCI format 3B, and UE configured with more than 5 TDD serving cells without PUSCH/PUCCH transmission, SRS parameters, *srs-ConfigApDCI-Format1a2b2c*, configured by higher layer signalling for the associated serving cell, is used if a type 1 SRS is triggered.

...

For a serving cell that is not a LAA SCell, a non-BL/CE UE configured for type 1 triggered SRS transmission on serving cell  $c$  upon detection of a positive SRS request in subframe/slot  $n$  of serving cell  $c$  shall commence SRS transmission in the first subframe satisfying  $n + k, k \geq k_p$ , and

- $k_p = \left\lceil \frac{n+4}{2} \right\rceil$  if the positive SRS request in PDCCH/SPDCCH with DCI format 7-0A/7-1A is detected in slot  $n$ , for TDD
- $k_p = 3$  if the UE is configured with higher layer parameter *shortProcessingTime* and the corresponding PDCCH with DCI format other than DCI format 7-0A/7-1A is in the UE-specific search space,
- $k_p = 4$  otherwise, and

$(10 \cdot n_f + k_{SRS} - T_{offset,1}) \bmod T_{SRS,1} = 0$  for TDD serving cell  $c$  with  $T_{SRS,1} > 2$  and for FDD serving cell  $c$ ,

$(k_{SRS} - T_{offset,1}) \bmod 5 = 0$  for TDD serving cell  $c$  with  $T_{SRS,1} = 2$

where for FDD serving cell  $c$   $k_{SRS} = \{0,1,\dots,9\}$  is the subframe index within the frame  $n_f$ , for TDD serving cell  $c$ , if the UE is configured with the parameter *srs-UpPtsAdd* for trigger type 1,  $k_{SRS}$  is defined in Table 8.2-6; otherwise  $k_{SRS}$  is defined in Table 8.2-3. For a TDD serving cell not configured for PUSCH/PUCCH transmission and the positive SRS request detected in PDCCH/EPDCCH scheduling PDSCH and the UE configured with *soundingRS-FlexibleTiming-r14* by higher layer signalling, if the SRS transmission (including any interruption due to uplink or downlink RF retuning time [10]) in the first subframe  $n + k, k \geq 4$  happens to overlap with a HARQ-ACK transmission for any serving cell, the UE shall commence SRS transmission in subframe  $n + k + l$ , where  $l = \max(5, T_{SRS,1})$ .

8.2.2.5a.4.3 Test description

8.2.2.5a.4.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.2.2.5a.4.3.2 Test procedure sequence

**Table 8.2.2.5a.4.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing a <i>sCellToAddModList</i> with SCell Cell 3 addition without UL carrier, and setup an aperiodic SRS configuration on the last symbol of 3 <sup>rd</sup> and 8 <sup>th</sup> subframe of every radio frame in SCell Cell3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS transmits DCI format 1A on 1 <sup>st</sup> subframe in one radio frame in SCell Cell3, and a MAC PDU is transmitted. The corresponding HARQ-ACK is expected to be in 8 <sup>th</sup> subframe.	<--	DCI: (DCI Format 1A defined in TS 36.508 Table 4.3.6.1.3-1 with following exceptions: RBA( $N_{PRB}$ )= 5, $I_{MCS}$ = 5, SRS request = '0'.)	-	-
4	The SS transmits an SRS request by using DCI format 3B on 2 <sup>nd</sup> subframe in the same radio frame in SCell Cell3. The corresponding SRS transmission is expected to be in 8 <sup>th</sup> subframe.		DCI: (DCI Format 3B defined in TS 36.508 Table 4.3.6.1.6A-1)		
5	Check: Does the UE transmit SRS on the last symbol of 8 <sup>th</sup> subframe in the same radio frame in SCell Cell3?	-->	SRS	1	F
6	Check: Does the UE transmit SRS on the last symbol of 3 <sup>rd</sup> subframe in the next radio frame in SCell Cell3?	-->	SRS	1	P

#### 8.2.2.6 RRC connection reconfiguration/ UE Assistance Information

8.2.2.6.1 RRC connection reconfiguration/ UE Assistance Information/power preference indication setup and release

#### 8.2.2.6.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and it is not configured to provide power preference  
indications }  
ensure that {
```

```

when { UE is caused to send UEAssistanceInformation message indicating "normal" }
  then { the UE does not transmit a UEAssistanceInformation message }
}

```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state and it is configured to provide power preference indications
with T340 set to 0s}
ensure that {
  when { UE prefers a configuration primarily optimised for power saving and sends the message
UEAssistanceInformation}
    then { the UE includes powerPrefIndication set to lowPowerConsumption in the message
UEAssistanceInformation }
}

```

(3)

```

with { UE in E-UTRA RRC_CONNECTED state and it is configured to provide power preference indications
and it has previously sent UEAssistanceInformation message indicating "lowPowerConsumption" }
ensure that {
  when { UE is caused to send UEAssistanceInformation message indicating "lowPowerConsumption" }
    then { the UE does not transmit a UEAssistanceInformation message with powerPrefIndication set
to lowPowerConsumption }
}

```

(4)

```

with { UE in E-UTRA RRC_CONNECTED state and it is configured to provide power preference indications
}
ensure that {
  when { UE receives an RRCConnectionReconfiguration message containing a otherConfig that includes
the powerPrefIndicationConfig set to Release }
    then { the UE does not transmit any more UEAssistanceInformation message }
}

```

### 8.2.2.6.1.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.10.9, 5.6.10.2, 5.6.10.3 and 6.3.6. Unless otherwise stated these are Rel-11 requirements.

[TS 36.331, clause 5.3.10.9]

The UE shall:

...

- 1> if the received *otherConfig* includes the *powerPrefIndicationConfig*:
- 2> if *powerPrefIndicationConfig* is set to *setup*:
  - 3> consider itself to be configured to provide power preference indications in accordance with 5.6.10;
- 2> else:
  - 3> consider itself not to be configured to provide power preference indications;

[TS 36.331, clause 5.6.10.2]

A UE capable of providing power preference indications in RRC\_CONNECTED may initiate the procedure in several cases including upon being configured to provide power preference indications and upon change of power preference.

Upon initiating the procedure, the UE shall:

- 1> if configured to provide power preference indications:
- 2> if the UE did not transmit a *UEAssistanceInformation* message since it was configured to provide power preference indications; or
- 2> if the current power preference is different from the one indicated in the last transmission of the *UEAssistanceInformation* message and timer T340 is not running:

3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.6.10.3;

[TS 36.331, clause 5.6.10.3]

The UE shall set the contents of the *UEAssistanceInformation* message:

1> if the UE prefers a configuration primarily optimised for power saving:

2> set *powerPrefIndication* to *lowPowerConsumption*;

1> else:

2> start or restart timer T340 with the timer value set to the *powerPrefIndicationTimer*;

2> set *powerPrefIndication* to *normal*;

The UE shall submit the *UEAssistanceInformation* message to lower layers for transmission.

[TS 36.331, clause 6.3.6]

#### ***powerPrefIndicationTimer***

Prohibit timer for Power Preference Indication reporting. Value in seconds. Value s0 means prohibit timer is set to 0 second or not set, value s0dot5 means prohibit timer is set to 0.5 second, value s1 means prohibit timer is set to 1 second and so on.

8.2.2.6.1.3              Test Description

8.2.2.6.1.3.1              Pre-test conditions

System Simulator:

- Cell 1

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.2.2.6.1.3.2 Test procedure sequence

**Table 8.2.2.6.1.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "normal". (Note 2)			-	-
2	Check: Does the UE send a <i>UEAssistanceInformation</i> message within the next 20s?	-->	<i>UEAssistanceInformation</i>	1	F
3	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing a <i>otherConfig</i> includes the <i>powerPrefIndicationConfig</i> set to <i>Setup</i>	<--	<i>RRCConnectionReconfiguration</i>		
4	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
4A	The SS starts Timer T340  EXCEPTION: Steps 4Ba1 to 4Bb1 describes a transaction that depends on the UE behaviour; the "lower case letter" identifies a step sequence that takes place if a specific behaviour happens.				
4B a1	The UE transmits a <i>UEAssistanceInformation</i> message.	-->	<i>UEAssistanceInformation</i>	-	-
4B a2	Wait for the Timer T340 Expiry to ensure that T340 timer has expired on the device.				
4B b1	The SS waits for the T340 expiry				
5	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note 1)			-	-
6	Check: Does the UE transmit a <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> set to <i>lowPowerConsumption</i> ?	-->	<i>UEAssistanceInformation</i>	2	P
7	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note 1)				
8	Check: Does the UE send a <i>UEAssistanceInformation</i> message within the next 20s?	-->	<i>UEAssistanceInformation</i>	3	F
9	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing a <i>otherConfig</i> includes the <i>powerPrefIndicationConfig</i> set to <i>Release</i> .	<--	<i>RRCConnectionReconfiguration</i>	-	-
10	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
11	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "normal". (Note 2)			-	-
12	Check: Does the UE send a <i>UEAssistanceInformation</i> message within the next 20s?	-->	<i>UEAssistanceInformation</i>	4	F
13	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note 1)			-	-
14	Check: Does the UE send a <i>UEAssistanceInformation</i> message within the next 20s?	-->	<i>UEAssistanceInformation</i>	4	F

Note 1: This indication may be triggered with the AT command +CEPPI/+CNMPSD or any alternative way.  
 Note 2: This indication may be triggered with the AT command +CEPPI or any alternative way.

```

## 8.2.2.6.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331 clause 5.6.10.1, 5.6.10.2, 5.6.10.3 and 5.3.7.2. Unless otherwise stated these are Rel-11 requirements.

[TS 36.331 clause 5.6.10.1]

**Figure 5.6.10.1-1: UE Assistance Information**

The purpose of this procedure is to inform E-UTRAN of the UE's power saving preference. Upon configuring the UE to provide power preference indications E-UTRAN may consider that the UE does not prefer a configuration primarily optimised for power saving until the UE explicitly indicates otherwise.

[TS 36.331 clause 5.6.10.2]

A UE capable of providing power preference indications in RRC\_CONNECTED may initiate the procedure in several cases including upon being configured to provide power preference indications and upon change of power preference.

Upon initiating the procedure, the UE shall:

- 1> if configured to provide power preference indications:
- 2> if the UE did not transmit a *UEAssistanceInformation* message since it was configured to provide power preference indications; or
- 2> if the current power preference is different from the one indicated in the last transmission of the *UEAssistanceInformation* message and timer T340 is not running;
- 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.6.10.3;

[TS 36.331 clause 5.6.10.3]

The UE shall set the contents of the *UEAssistanceInformation* message:

- 1> if the UE prefers a configuration primarily optimised for power saving:
- 2> set powerPrefIndication to lowPowerConsumption;
- 1> else:
- 2> start or restart timer T340 with the timer value set to the *powerPrefIndicationTimer*;
- 2> set powerPrefIndication to normal;

The UE shall submit the *UEAssistanceInformation* message to lower layers for transmission.

[TS 36.331 clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

- 1> upon detecting radio link failure, in accordance with 5.3.11; or
- 1> upon handover failure, in accordance with 5.3.5.6; or
- 1> upon mobility from E-UTRA failure, in accordance with 5.4.3.5; or
- 1> upon integrity check failure indication from lower layers; or
- 1> upon an RRC connection reconfiguration failure, in accordance with 5.3.5.5;

Upon initiation of the procedure, the UE shall:

- 1> stop timer T310, if running;
- 1> stop timer T312, if running;
- 1> start timer T311;
- 1> suspend all RBs except SRB0;
- 1> reset MAC;
- 1> release the SCell(s), if configured, in accordance with 5.3.10.3a;
- 1> apply the default physical channel configuration as specified in 9.2.4;
- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> release *powerPrefIndicationConfig*, if configured and stop timer T340, if running;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> release *obtainLocationConfig*, if configured;
- 1> release *idc-Config*, if configured;
- 1> release *measSubframePatternPCell*, if configured;
- 1> if connected as an RN and configured with an RN subframe configuration:
  - 2> release the RN subframe configuration;
- 1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

#### 8.2.2.6.2.3                  Test description

##### 8.2.2.6.2.3.1                  Pre-test conditions

System Simulator:

- Cell 1 & Cell 2.
- System information combination 2 as defined in TS 36.508[18] clause 4.4.3.1 is used in E-UTRA Cell 1.

UE:

- None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.2.6.2.3.2                  Test procedure sequence

Table 8.2.2.6.2.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.2.6.2.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 2</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M3) satisfy exit condition for event A3 ( $M3 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M3) satisfy entry condition for event A3 ( $M3 > M1$ ).
T2	Cell-specific RS EPRE	dBm/15kHz	-85	"Off"	The power level values are assigned to satisfy $SrxlevCell 2 < 0$ such that selecting Cell 1 is guaranteed (NOTE 1).
NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.					

Table 8.2.2.6.2.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
0	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "normal". (Note 2)			-	-
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup intra frequency measurement on Cell 1 & to configure power preference indication.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
2A	SS Starts Timer T340  EXCEPTION: Steps 2Ba1 to 2Bb1 describes a transaction that depends on the UE behaviour; the "lower case letter" identifies a step sequence that takes place if a specific behaviour happens.				
2B a1	The UE transmits a <i>UEAssistanceInformation</i> message.	-->	<i>UEAssistanceInformation</i>	-	-
2B a2	Wait for the Timer T340 Expiry to ensure that T340 timer has expired on the device.				
2B b1	The SS Waits for the T340 Timer Expiry.				
3	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note1).	-	-	-	-
4	UE transmits <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> IE set to <i>lowPowerConsumption</i> .	-->	<i>UEAssistanceInformation</i>	-	-
5	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "normal"(Note2).	-	-	-	-
6	UE transmits <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> IE set to <i>normal</i> and starts timer T340 with the timer value set to the <i>powerPrefIndicationTimer</i> .	-->	<i>UEAssistanceInformation</i>	-	-
7	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in table 8.2.2.6.2.3.2-1.	-	-	-	-
8	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 2.	-->	<i>MeasurementReport</i>	-	-
9	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
-	EXCEPTION: In parallel to the events described in step 10 the steps specified in Table 8.2.2.6.2.3.2-3 should take place.	-	-	-	-
10	The SS changes Cell 1 and Cell 2 parameters according to the row "T2" in table 8.2.2.6.2.3.2-1.	-	-	-	-
11	The UE releases the configured <i>powerPrefIndicationConfig</i> , stops timer T340 and transmit an <i>RRCConnectionReestablishmentRequest</i> message on Cell 1.	-->	<i>RRCConnectionReestablishmentRequest</i>	-	-
12	The SS transmits an <i>RRCConnectionReestablishment</i> message to resume SRB1 operation and re-activate security on Cell 1.	<--	<i>RRCConnectionReestablishment</i>	-	-
13	The UE transmits an <i>RRCConnectionReestablishmentComplete</i>	-->	<i>RRCConnectionReestablishmentComplete</i>	-	-

	message on Cell 1.				
14	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note1).	-	-	-	-
15	Check: Does the UE transmit <i>UEAssistanceInformation</i> message within the next 20s? (Note 3).	-->	<i>UEAssistanceInformation</i>	2	F
16	The SS transmits an <i>RRCConnectionReconfiguration</i> message to resume existing radio bearer on Cell 1 & to configure power preference indication.	<--	<i>RRCConnectionReconfiguration</i>	-	-
17	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
17 A	SS Starts Timer T340				
	EXCEPTION: Steps 17Ba1 to 17Bb1 describes a transaction that depends on the UE behaviour; the "lower case letter" identifies a step sequence that takes place if a specific behaviour happens.				
17 Ba 1	The UE transmits a <i>UEAssistanceInformation</i> message.	-->	<i>UEAssistanceInformation</i>	-	-
17 Ba 2	Wait for the Timer T340 Expiry to ensure that T340 timer has expired on the device.				
17 Bb 1	The SS Waits for the T340 Timer Expiry.				
18	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note1).	-	-	-	-
19	Check: Does the UE transmit <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> IE set to <i>lowPowerConsumption</i> ? (Note 4).	-->	<i>UEAssistanceInformation</i>	1	P
<p>Note 1: This indication may be triggered with the AT command +CEPPI/+CNMPSD or any alternative way.</p> <p>Note 2: This indication may be triggered with the AT command +CEPPI or any alternative way.</p> <p>Note 3: This is a negative check for TP2 to make sure that the UE has released the configured <i>powerPrefIndicationConfig</i> at step 11.</p> <p>Note 4: The total time to execute step 6 – step 19 should be less than the T340 timer value <i>powerPrefIndicationTimer</i> configured at step 1 and started at step 6. This is to make sure that timer T340 has been stopped successfully at step 11 and only then UE will initiate <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> IE set to <i>lowPowerConsumption</i> at step 19.</p>					

Table 8.2.2.6.2.3.2-3: Parallel behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
-	EXCEPTION: The steps 1 and 2 below are repeated for the duration of T304.	-	-	-	-
1	The UE attempts to perform the intra frequency handover using MAC Random Access Preamble on Cell 2.	-	-	-	-
2	The SS does not respond.	-	-	-	-

### 8.2.2.6.3 RRC connection reconfiguration/ UE Assistance Information/T340 running

#### 8.2.2.6.3.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and T340 is running }
ensure that {
    when { UE is caused to send UEAssistanceInformation message }
        then { the UE does not transmit a UEAssistanceInformation message }
    }
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and the UE has received a new value for
powerPrefIndicationTimer}
ensure that {
    when { UE is caused to send UEAssistanceInformation message indicating "lowPowerConsumption" after
T340 expired }
        then { the UE does transmits a UEAssistanceInformation message with powerPrefIndication set to
lowPowerConsumption}
    }
```

#### 8.2.2.6.3.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.6.10.2 and 5.6.10.3. Unless otherwise stated these are Rel-11 requirements.

[TS 36.331, clause 5.6.10.2]

A UE capable of providing power preference indications in RRC\_CONNECTED may initiate the procedure in several cases including upon being configured to provide power preference indications and upon change of power preference.

Upon initiating the procedure, the UE shall:

- 1> if configured to provide power preference indications:
- 2> if the UE did not transmit a *UEAssistanceInformation* message since it was configured to provide power preference indications; or
- 2> if the current power preference is different from the one indicated in the last transmission of the *UEAssistanceInformation* message and timer T340 is not running:
  - 3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.6.10.3;

[TS 36.331, clause 5.6.10.3]

The UE shall set the contents of the *UEAssistanceInformation* message:

- 1> if the UE prefers a configuration primarily optimised for power saving:
- 2> set *powerPrefIndication* to *lowPowerConsumption*;
- 1> else:

- 2> start or restart timer T340 with the timer value set to the *powerPrefIndicationTimer*;
- 2> set *powerPrefIndication* to *normal*;

The UE shall submit the *UEAssistanceInformation* message to lower layers for transmission.

8.2.2.6.3.3            Test Description

8.2.2.6.3.3.1        Pre-test conditions

System Simulator:

- Cell 1

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.2.2.6.3.3.2 Test procedure sequence

**Table 8.2.2.6.3.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
0	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "normal". (Note 2)			-	-
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing a <i>otherConfig</i> includes the <i>powerPrefIndicationConfig</i> set to <i>Setup</i>	<--	<i>RRCConnectionReconfiguration</i>		
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
2A	SS starts Timer T340				
	EXCEPTION: Steps 2Ba1 to 2Bb1 describes a transaction that depends on the UE behaviour; the "lower case letter" identifies a step sequence that takes place if a specific behaviour happens.				
2B a1	The UE transmits a <i>UEAssistanceInformation</i> message.	-->	<i>UEAssistanceInformation</i>	-	
2B a2	Wait for the T340 Timer Expiry to ensure that T340 timer has expired on the device side.				
2B b1	SS waits for the T340 Timer Expiry.				
3	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note 1)			-	-
4	The UE transmits a <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> set to <i>lowPowerConsumption</i> .	-->	<i>UEAssistanceInformation</i>	-	-
5	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "normal". (Note 2)			-	-
6	The UE transmits a <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> set to <i>normal</i> . The UE starts T340.	-->	<i>UEAssistanceInformation</i>	-	-
7	Before T340 expires, cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note 1)			-	-
8	Check: Does the UE send a <i>UEAssistanceInformation</i> message before T340 expires?	-->	<i>UEAssistanceInformation</i>	1	F
9- 10	Void			-	-
-	EXCEPTION: Steps 10Aa1 describes a transaction that depends on the UE behaviour; the "lower case letter" identifies a step sequence that takes place if a specific behaviour happens.	-	-	-	-
10 Aa 1	The UE transmits a <i>UEAssistanceInformation</i> message within 5s with <i>powerPrefIndication</i> set to <i>lowPowerConsumption</i>	-->	<i>UEAssistanceInformation</i>	-	-
11	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing a <i>otherConfig</i> includes the <i>powerPrefIndicationConfig</i> set to <i>Setup</i> and a new value for <i>powerPrefIndicationTimer</i> .	<--	<i>RRCConnectionReconfiguration</i>		
12	The UE transmits an <i>RRCConnectionReconfigurationComplete</i>	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-

	message.				
12 A	SS starts Timer T340				
	EXCEPTION: Steps 12Ba1 to 12Bb1 describes a transaction that depends on the UE behaviour; the "lower case letter" identifies a step sequence that takes place if a specific behaviour happens.				
12 Ba 1	The UE transmits a <i>UEAssistanceInformation</i> message.	-->	<i>UEAssistanceInformation</i>	-	-
12 Ba 2	Wait for the T340 Timer Expiry to ensure that T340 timer has expired on the device side.				
12 Bb 1	SS Waits for the T340 Timer Expiry				
13	Cause the UE to send <i>UEAssistanceInformation</i> message indicating "normal". (Note 2)			-	-
14	The UE transmits a <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> set to <i>normal</i> . The UE starts T340. Start timer T=300s(this is the same value as the <i>powerPrefIndicationTimer</i> value set in Step 1).	-->	<i>UEAssistanceInformation</i>	-	-
15	After T340 expires but before T expires cause the UE to send <i>UEAssistanceInformation</i> message indicating "lowPowerConsumption". (Note 1)			-	-
16	Check: Does the UE send a <i>UEAssistanceInformation</i> message with <i>powerPrefIndication</i> set to <i>lowPowerConsumption</i> ?	-->	<i>UEAssistanceInformation</i>	2	P
Note 1: This indication may be triggered with the AT command +CEPPI/+CNMPSD or any alternative way. Note 2: This indication may be triggered with the AT command +CEPPI or any alternative way.

           sCellIndex equalling to one of the current UE SCell configuration and stag-ToReleaseList to release
           the empty sTAG after the last SCell is removed from this sTAG }
        then { UE releases this SCell and sTAG and sends an RRCConectionReconfigurationComplete message
    }
}

```

8.2.2.7.1.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.3a, 5.3.10.4 and 6.3.2. Unless otherwise stated these are Rel-11 requirements.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> else:

2> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 3: If the *RRConnectionReconfiguration* message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the *SecurityModeComplete* message.

1> if the received *RRConnectionReconfiguration* includes the *sCellToReleaseList*:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received *RRConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.3a]

The UE shall:

1> if the release is triggered by reception of the *sCellToReleaseList*:

2> for each *sCellIndex* value included in the *sCellToReleaseList*:

3> if the current UE configuration includes an SCell with value *sCellIndex*:

4> release the SCell;

[TS 36.331, clause 5.3.10.4]

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig* other than *stag-ToReleaseList* and *stag-ToAddModList*;

1> if the received *mac-MainConfig* includes the *stag-ToReleaseList*:

2> for each *STAG-Id* value included in the *stag-ToReleaseList* that is part of the current UE configuration:

3> release the STAG indicated by *STAG-Id*;

1> if the received *mac-MainConfig* includes the *stag-ToAddModList*:

2> for each *stag-Id* value included in *stag-ToAddModList* that is not part of the current UE configuration (STAG addition):

3> add the STAG, corresponding to the *stag-Id*, in accordance with the received *timeAlignmentTimerSTAG*;

2> for each *stag-Id* value included in *stag-ToAddModList* that is part of the current UE configuration (STAG modification):

3> reconfigure the STAG, corresponding to the *stag-Id*, in accordance with the received *timeAlignmentTimerSTAG*;

[TS 36.331, clause 6.3.2]

<b><i>MAC-MainConfig</i> field descriptions</b>	
...	
<b><i>stag-Id</i></b>	Indicates the TAG of an SCell, see TS 36.321 [6]. If the field is not configured for an SCell (e.g. absent in <i>MAC-MainConfigSCell</i> ), the SCell is part of the PTAG.
<b><i>stag-ToAddModList</i>, <i>stag-ToReleaseList</i></b>	Used to configure one or more STAGs. E-UTRAN ensures that a STAG contains at least one SCell with configured uplink. If, due to SCell release a reconfiguration would result in an 'empty' TAG, E-UTRAN includes release of the concerned TAG.
<b><i>timeAlignmentTimerSTAG</i></b>	Indicates the value of the time alignment timer for an STAG, see TS 36.321 [6].
...	

8.2.2.7.1.3              Test Description

8.2.2.7.1.3.1              Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.2.2.7.1.3.2 Test procedure sequence

**Table 8.2.2.7.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing <i>stag-ToAddModList</i> with a sTAG addition and <i>sCellToAddModList</i> with SCell Cell 3 addition which is associated with the added sTAG.	<--	<i>RRCConnectionReconfiguration</i>	-	-

### 8.2.2.7.2 CA / RRC connection reconfiguration / sTAG addition/modification/release / Success / Inter-Band CA

The scope and description of the present TC is the same as test case 8.2.2.7.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3
- Cell 10 is an Inactive SCell according to [18] cl. 6.3.4

### 8.2.2.7.3 CA / RRC connection reconfiguration / sTAG addition/modification/release / Success / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.2.7.1 with the following differences:

- CA configuration: Intra-band non-contiguous CA replaces Intra-band Contiguous CA

### 8.2.2.8 RRC connection reconfiguration / SIB1 information / Success

#### 8.2.2.8.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state}
ensure that {
  when { UE receives an RRCConnectionReconfiguration message containing SIB1 information with a
change of TAI }
  then { UE reads the SIB1 information and sends an RRCConnectionReconfigurationComplete message
followed by TRACKING AREA UPDATE REQUEST message to update the registration of the actual tracking
area }
}
```

### 8.2.2.8.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.2.2.7, and 5.3.5.3. Unless otherwise stated these are Rel-11 requirements

[TS 36.331, clause 5.2.2.7]

Upon receiving the *SystemInformationBlockType1* either via broadcast or via dedicated signalling, the UE shall:

- 1> if in RRC\_CONNECTED while T311 is not running, and the UE supports multi-band cells as defined by bit 31 in *featureGroupIndicators*:
  - 2> disregard the *freqBandIndicator* and *multiBandInfoList*, if received, while in RRC\_CONNECTED;
  - 2> forward the *cellIdentity* to upper layers;
  - 2> forward the *trackingAreaCode* to upper layers;
- 1> else:
  - 2> if the frequency band indicated in the *freqBandIndicator* is part of the frequency bands supported by the UE;
    - or
  - 2> if the UE supports *multiBandInfoList*, and if one or more of the frequency bands indicated in the *multiBandInfoList* are part of the frequency bands supported by the UE:
    - 3> forward the *cellIdentity* to upper layers;
    - 3> forward the *trackingAreaCode* to upper layers;
  - 2> else:
    - 3> consider the cell as barred in accordance with TS 36.304 [4]; and
    - 3> perform barring as if *intraFreqReselection* is set to *notAllowed*, and as if the *csg-Indication* is set to *FALSE*;

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received *RRCConnectionReconfiguration* includes the *systemInformationBlockType1Dedicated*:
  - 2> perform the actions upon reception of the *SystemInformationBlockType1* message as specified in 5.2.2.7;
  - ...
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

### 8.2.2.8.3 Test Description

#### 8.2.2.8.3.1 Pre-test conditions

System Simulator:

- Cell 1

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

## 8.2.2.8.3.2 Test procedure sequence

**Table 8.2.2.8.3.2-1: Main behaviour**

### 8.2.2.9 Dual Connectivity / RRC connection reconfiguration

#### 8.2.2.9.1 RRC connection reconfiguration / PSCell addition and SCG release / SCG / DRB

##### 8.2.2.9.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives an RRCConectionReconfiguration message containing SCG-Configuration-r12 with
radioResourceConfigDedicatedSCG, drb-ToAddModListSCG and the drb-Identity is not part of the current
UE configuration }
    then { UE configures the PSCell and sends an RRCConectionReconfigurationComplete message }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state}
ensure that {
    when { UE receives an RRCConectionReconfiguration message containing SCG-Configuration-r12 with
release }
    then { UE reconfigures affected DRBs and sends an RRCConectionReconfigurationComplete message }
}
```

##### 8.2.2.9.1.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.10, 5.3.10.11 and 5.3.10.3a1.

[TS 36.331, clause 5.3.5.3]

If the *RRCConectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received *RRCConectionReconfiguration* includes the *scg-Configuration*; or
- 1> if the current UE configuration includes one or more split DRBs and the received *RRCConectionReconfiguration* includes *radioResourceConfigDedicated* including *drb-ToAddModList*:

2> perform SCG reconfiguration as specified in 5.3.10.10;

[TS 36.331, clause 5.3.10.10]

- 1> if the received *scg-Configuration* is set to *release*:
- 2> release the entire SCG configuration, except for the DRB configuration (i.e. as configured by *drb-ToAddModListSCG*);
- 2> stop timer T313, if running;
- 2> stop timer T307, if running;
- 1> else:

...

- 2> if the received *scg-ConfigPartSCG* includes the *radioResourceConfigDedicatedSCG*:
- 3> reconfigure the dedicated radio resource configuration for the SCG as specified in 5.3.10.11;

[TS 36.331, clause 5.3.10.11]

The UE shall:

- 1> if the received *radioResourceConfigDedicatedSCG* includes the *drb-ToAddModListSCG*:

2> for each *drb-Identity* value included in the *drb-ToAddModListSCG* perform the DC specific DRB addition or reconfiguration as specified in 5.3.10.3a1

[TS 36.331, clause 5.3.10.3a1]

For the *drb-Identity* value for which this procedure is initiated, the UE shall:

1> if *drb-ToAddModListSCG* is received and includes the *drb-Identity* value; and *drb-Identity* value is not part of the current UE configuration (i.e. DC specific DRB establishment):

...

2> else (i.e. add SCG DRB):

3> establish a PDCP entity and configure it with the current SCG security configuration and in accordance with the *pdcn-Config* included in *drb-ToAddModListSCG*;

3> establish an SCG RLC entity or entities and an SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG* included in *drb-ToAddModListSCG*;

2> indicate the establishment of the DRB(s) and the *eps-BearerIdentity* of the established DRB(s) to upper layers;

8.2.2.9.3 RRC connection reconfiguration / SCG change without handover / SCG DRB to MCG DRB and SCG DRB modification

8.2.2.9.3.1 Test Purpose (TP)

(1)

```
With { UE in connected mode with SCG activated with one MCG DRB and two SCG DRBs established }
ensure that {
    when { UE is receiving a RRCCConnectionReconfiguration message including the IE scg-Configuration
    to change one of the SCG DRBs on the PSCell to a MCG DRB on the PCell }
    then { UE responds with a RRCCConnectionReconfigurationComplete message }
}
```

(2)

```
With { UE in connected mode with SCG activated with one MCG DRB and two SCG DRBs established has
performed a SCH changing one of the SCG DRBs on the PSCell to a MCG DRB on the PCell }
ensure that {
    when { uplink data are submitted for transmission on the MCG/SCG DRBs }
    then { UE transmits the uplink data on the MCG/SCG DRBs respectively }
}
```

8.2.2.9.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.3.10.10 and 5.3.10.12. Unless otherwise stated these are Rel-12 requirements.

[TS 36.331, clause 5.3.5.3]

If the *RRCCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received RRCCConnectionReconfiguration includes the scg-Configuration; or
- 1> if the current UE configuration includes one or more split DRBs and the received RRCCConnectionReconfiguration includes *radioResourceConfigDedicated* including *drb-ToAddModList*:
- 2> perform SCG reconfiguration as specified in 5.3.10.10;

...

[TS 36.331, clause 5.3.10.10]

The UE shall:

- 1> if the received *scg-Configuration* is set to *release* or includes the *mobilityControlInfoSCG* (i.e. SCG release/ change):
- 2> if *mobilityControlInfo* is not received (i.e. SCG release/ change without HO):
  - 3> reset SCG MAC, if configured;
  - 3> for each *drb-Identity* value that is part of the current UE configuration:
    - 4> if the DRB indicated by *drb-Identity* is an SCG DRB:
      - 5> re-establish the PDCP entity and the SCG RLC entity or entities;
    - 4> if the DRB indicated by *drb-Identity* is a split DRB:
      - 5> perform PDCP data recovery and re-establish the SCG RLC entity;
    - 4> if the DRB indicated by *drb-Identity* is an MCG DRB; and

4> *drb-ToAddModListSCG* is received and includes the *drb-Identity* value, while for this entry *drb-Type* is included and set to *scg* (i.e. MCG to SCG):

5> re-establish the PDCP entity and the MCG RLC entity or entities;

3> configure lower layers to consider the SCG SCell(s), except for the PSCell, to be in deactivated state;

...

NOTE 2: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

[TS 36.331, clause 5.3.10.12]

The UE shall:

1> for each split or SCG DRBs that is part of the current configuration:

2> if the corresponding *drb-Identity* value is included in the received *drb-ToAddModList*; and:

2> if the corresponding *drb-Identity* value is not included in the received *drb-ToAddModListSCG* (i.e. reconfigure split, split to MCG or SCG to MCG):

3> perform the DC specific DRB addition or reconfiguration as specified in 5.3.10.3a1;

#### 8.2.2.9.3.3 Test description

##### 8.2.2.9.3.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, and Cell 10 is the PSCell.

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1 and Cell 10.

UE:

Preamble:

- The UE is in state DC MCG/SCG DRB Loopback Activated (state 6A) on Cell 1 and Cell 10 according to [18] UE has 4 DRBs configured. DRB 1(Default bearer, not used in the test sequence) , DRB 2(dedicated bearer) as MCG DRB's and DRB 3(dedicated bearer) as SCG#1 bearer, DRB 4 (dedicated bearer) as SCG#2 bearer.

### 8.2.2.10.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331 clause 5.3.5.3, 5.3.10.0 and 5.3.10.6.

The following represent an extraction of the requirements relevant to the test purpose.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> if this is the first *RRConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:

...

1> else:

2> If the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.0]

The UE shall:

...

1> if the received *radioResourceConfigDedicated* includes the *physicalConfigDedicated*:

2> reconfigure the physical channel configuration as specified in 5.3.10.6.

...

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

## 8.2.3 Radio bearer release

### 8.2.3.1 RRC connection reconfiguration / Radio bearer release / Success

#### 8.2.3.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives an RRCCConnectionReconfiguration message including a drb-ToReleaseList }
        then { for each drb-Identity release the PDCP entity and RLC entity and DTCH logical channel
               and indicate release of the DRB(s) to upper layers }
}
```

#### 8.2.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clause 5.3.5.3 and 5.3.10.2.

[TS 36.331, clause 5.3.5.3]

If the *RRCCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

2> if this is the first *RRCCConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:

...

1> else:

2> If the *RRCCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

3> perform the radio resource configuration procedure as specified in 5.3.10;

...

1> submit the *RRCCConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 36.331, clause 5.3.10.2]

The UE shall:

1> for each *drb-Identity* value included in the *drb-ToReleaseList* that is part of the current UE configuration (DRB release):

2> release the PDCP entity;

2> release the RLC entity;

2> release the DTCH logical channel;

1> indicate the release of the DRB(s) and the *eps-BearerIdentity* of the released DRB(s) to upper layers;

## 8.2.4 Handover

### 8.2.4.1 RRC connection reconfiguration / Handover / Success / Dedicated preamble

#### 8.2.4.1.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and performed the intra frequency measurement }
ensure that {
  when { UE receives an RRCCofiguration message including a mobilityControlInfo with a
rach-ConfigDedicated }
  then { UE transmits an RRCCofigurationComplete message }
}
```

(2)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and performed the intra frequency measurement }
ensure that {
  when { UE receives an RRCCofiguration message including a nextHopChainingCount which
is different from the NCC associated with the currently active KeNB }
  then { UE derives new KeNB key from the nextHopChainingCount }
}
```

(3)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and performed the intra frequency measurement }
ensure that {
  when { UE receives an RRCCofiguration message including a nextHopChainingCount which
is same as the NCC associated with the currently active KeNB }
  then { UE derives new KeNB key from the currently active KeNB }
}
```

#### 8.2.4.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRCCofiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;

1> if the *carrierFreq* is included:

2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;

1> else:

2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target cell by acquiring system information from that cell before performing RACH access in the target cell.

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;
- 1> if the *antennaInfo* is included and set to '*explicitValue*':
  - 2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

8.2.4.1.3                  Test description

8.2.4.1.3.1                Pre-test conditions

System Simulator:

- Cell 1, Cell 4 and Cell 11.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.2.4.1.3.2 Test procedure sequence

Table 8.2.4.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", and "T3" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 4	Cell 11	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 4 (M4) satisfy exit condition for event A3 (M4 < M1)(NOTE 1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 4 (M4) satisfy entry condition for event A3 (M4 > M1)(NOTE 1).
T2	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 4 (M4) satisfy entry condition for event A3 (M1 > M4)(NOTE 1).
T3	Cell-specific RS EPRE	dBm/15k Hz	-85	"Off"	-79	The power level value are such that measurement results for Cell 1 (M1) and Cell 11 (M11) satisfy entry condition for event A3 (M11 > M1).

NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.

**Table 8.2.4.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup intra frequency measurement on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1, Cell 4 and Cell 11 parameters according to the row "T1" in table 8.2.4.1.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message to report event A3 on Cell 1 with the measured RSRP, RSRQ value for Cell 4.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message to order the UE to perform intra frequency handover to Cell 4.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 4 using dedicated preamble to confirm the successful completion of the intra frequency handover? Check2: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> using the security key derived from the currently active K <sub>eNB</sub> ?	-->	<i>RRCConnectionReconfigurationComplete</i>	1,3	P
-	EXCEPTION: Steps 6a1 to 6a2 describe behaviour that depends on the UE capability; the "lower case letter" identifies a step sequence that takes place if a capability is supported.	-	-	-	-
6a1	IF pc_intraFreq-CE-NeedForGaps THEN the SS transmits an <i>RRCConnectionReconfiguration</i> message to activate the measurement gaps on Cell 4	<-	<i>RRCConnectionReconfiguration</i>	-	-
6a2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the activation of the measurement gaps on Cell 4	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
7	The SS changes Cell 1, Cell 4 and Cell 11 parameters according to the row "T2" in table 8.2.4.1.3.2-1.	-	-	-	-
8	The UE transmits a <i>MeasurementReport</i> message to report event A3 on Cell 4 with the measured RSRP, RSRQ value for Cell 1.	-->	<i>MeasurementReport</i>	-	-
9	The SS transmits an <i>RRCConnectionReconfiguration</i> message to order the UE to perform intra frequency handover to Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
10	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1 using dedicated preamble to confirm the successful completion of the intra frequency handover? Check2: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> using the security key derived from the nextHopChainingCount?	-->	<i>RRCConnectionReconfigurationComplete</i>	1,2	P
-	EXCEPTION: Steps 10a1 to 10a2 describe behaviour that depends on the UE capability; the "lower case letter" identifies a step sequence that takes place if a capability is supported.	-	-	-	-
10a1	IF pc_intraFreq-CE-NeedForGaps THEN the SS transmits an	<-	<i>RRCConnectionReconfiguration</i>	-	-

	<i>RRCConnectionReconfiguration</i> message to activate the measurement gaps on Cell 1				
10a2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the activation of the measurement gaps on Cell 1	->	<i>RRCConnectionReconfigurationComplete</i>	-	-

## 8.2.4.2 RRC connection reconfiguration / Handover / Success / Common preamble

### 8.2.4.2.1 Test Purpose (TP)

(1)

```

with { UE having completed the radio bearer establishment and initial security activation procedure
and performed the intra frequency measurement }
ensure that {
    when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo without
a rach-ConfigDedicated }
    then { UE transmits an RRConnectionReconfigurationComplete message }
}

```

}

### 8.2.4.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the K<sub>eNB</sub> key based on the fresh K<sub>ASME</sub> key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

- 1> else:
  - 2> update the K<sub>eNB</sub> key based on the current K<sub>eNB</sub> or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

- 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
  - 1> else:
    - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
    - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
  - 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> perform the measurement related actions as specified in 5.5.6.1;
  - 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
  - 1> if MAC successfully completes the random access procedure:
    - 2> stop timer T304;
    - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
    - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;
- NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.
- 2> the procedure ends;
- ...

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;
- 1> if the *antennaInfo* is included and set to '*explicitValue*':
  - 2> if the configured *transmissionMode* is not 'tm3' or 'tm4' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

8.2.4.2.3 Test description

8.2.4.2.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.2.4.2.3.2 Test procedure sequence

Table 8.2.4.2.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.2.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy exit condition for event A3 ( $M2 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 ( $M2 > M1$ ).

**Table 8.2.4.2.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to setup intra frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in table 8.2.4.2.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 2.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 2 using common preamble to confirm the successful completion of the intra frequency handover?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
7	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 2?	-	-	1	-

## 8.2.4.3 RRC connection reconfiguration / Handover / Success / Intra-cell / Security reconfiguration

### 8.2.4.3.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
}
ensure that {
    when { UE receives an RRCCofiguration message including a securityConfigHO }
        then { UE transmits an RRCCofigurationComplete message }
}
```

### 8.2.4.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4.

[TS 36.331, clause 5.3.5.4]

If the *RRCCofiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *eutra-CarrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity*; as the C-RNTI

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
- 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
- 2> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
- 2> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key to which the current  $K_{eNB}$  is associated, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
- 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
- 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRConnectionReconfiguration* message includes the *measConfig*:
- 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
- 2> stop timer T304;
  - 2> apply the parts of the configuration that do not require the UE to know the SFN of the target cell;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;
  - 2> the procedure ends;
- ...

#### 8.2.4.3.3 Test description

##### 8.2.4.3.3.1 Pre-test conditions

System Simulator:

- Cell 1.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.2.4.4 RRC connection reconfiguration / Handover / Failure / Intra-cell / Security reconfiguration

### 8.2.4.4.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and after receiving an RRCConnectionReconfiguration message including a SecurityConfigHO }
ensure that {
    when { UE detects handover failure and the initial cell is selectable }
        then { UE performs an RRC connection re-establishment procedure and remains in the E-UTRA
RRC_CONNECTED state }
}
```

### 8.2.4.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.3.5.4, 5.3.5.6, 5.3.7.4 and 5.3.7.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> if this is the first *RRCConnectionReconfiguration* message after successful completion of the RRC Connection Re-establishment procedure:
- 2> re-establish PDCP for SRB2 and for all DRBs that are established, if any;
- 2> re-establish RLC for SRB2 and for all DRBs that are established, if any;
- 2> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

  - 3> perform the radio resource configuration procedure as specified in 5.3.10;
  - 2> resume SRB2 and all DRBs that are suspended, if any;

NOTE 1: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

...

[TS 36.331, clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;

1> if the *carrierFreq* is included:

2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;

1> else:

2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

...

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;
- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRCConnectionReestablishmentRequest* message as follows:

- 1> set the *ue-Identity* as follows:
  - 2> set the *c-RNTI* to the C-RNTI used in the source cell (handover and mobility from E-UTRA failure) or used in the cell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *physCellId* to the physical cell identity of the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:
    - 3> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) *VarShortMAC-Input*;
    - 3> with the  $K_{RRC_{int}}$  key and integrity protection algorithm that was used in the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases); and
    - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;

- 1> set the *reestablishmentCause* as follows:
  - 2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):
    - 3> set the *reestablishmentCause* to the value '*reconfigurationFailure*';
  - 2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
    - 3> set the *reestablishmentCause* to the value '*handoverFailure*';
  - 2> else:
    - 3> set the *reestablishmentCause* to the value '*otherFailure*';

The UE shall submit the *RRConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.5]

NOTE: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

- 1> stop timer T301;
- 1> re-establish PDCP for SRB1;
- 1> re-establish RLC for SRB1;
- 1> perform the radio resource configuration procedure in accordance with the received *radioResourceConfigDedicated* and as specified in 5.3.10;
- 1> resume SRB1;
- 1> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key to which the current  $K_{eNB}$  is associated, using the *nextHopChainingCount* value indicated in the *RRConnectionReestablishment* message, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> derive the  $K_{RRCint}$  key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to activate integrity protection using the previously configured algorithm and the  $K_{RRCint}$  key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply ciphering using the previously configured algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> submit the *RRConnectionReestablishmentComplete* message to lower layers for transmission, upon which the procedure ends;

#### 8.2.4.4.3 Test description

##### 8.2.4.4.3.1 Pre-test conditions

System Simulator:

- Cell 1.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

#### 8.2.4.4.3.2 Test procedure sequence

**Table 8.2.4.4.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCCoNnectionReconfiguration</i> message to perform intra cell handover and security reconfiguration.	<--	<i>RRCCoNnectionReconfiguration</i>	-	-

## 8.2.4.5 RRC connection reconfiguration / Handover / All parameters included

### 8.2.4.5.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and performed the intra frequency measurement }
ensure that {
  when { UE receives an RRCCoNNECTIONReconfiguration message including a mobilityControlInfo is
provided with all parameters included }
  then { UE transmits an RRCCoNNECTIONReconfigurationComplete message }
}
```

### 8.2.4.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the RRCCoNNECTIONReconfiguration message includes the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

- 1> start timer T304 with the timer value set to  $t_{304}$ , as included in the *mobilityControlInfo*;
  - 1> if the *carrierFreq* is included:
    - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
  - 1> else:
    - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
  - 1> start synchronising to the DL of the target cell;
- NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.
- 1> reset MAC;
  - 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
  - 1> apply the value of the *newUE-Identity* as the C-RNTI;
  - 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
  - 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
  - 1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
    - 2> perform the radio resource configuration procedure as specified in 5.3.10;
  - 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
    - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
  - 1> else:
    - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
  - 1> store the *nextHopChainingCount* value;
  - 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
    - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
    - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
  - 1> else:
    - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
    - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> perform the measurement related actions as specified in 5.5.6.1;

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;

1> if MAC successfully completes the random access procedure:

2> stop timer T304;

2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> the procedure ends;

...

[TS 36.331, clause 5.3.10.4]

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

1> if the *antennaInfo* is included and set to '*explicitValue*':

2> if the configured *transmissionMode* is not 'tm3' or 'tm4' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

1> else if the *antennaInfo* is included and set to '*defaultValue*':

2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.5.3 Test description

#### 8.2.4.5.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.5.3.2 Test procedure sequence

Table 8.2.4.5.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.5.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy exit condition for event A3 ( $M2 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 ( $M2 > M1$ ).

**Table 8.2.4.5.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to setup intra frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1 to confirm the setup of intra frequency measurement.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in table 8.2.4.5.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP and RSRQ values for Cell 2.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 2 to confirm the successful completion of the intra frequency handover?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
7	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA <i>RRC_CONNECTED</i> state on Cell 2?	-	-	1	-

### 8.2.4.6 RRC connection reconfiguration / Handover / Success / Inter-frequency

#### 8.2.4.6.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and performed the inter frequency measurement }
ensure that {
    when { UE receives an RRCCofiguration message including a mobilityControlInfo
indicating a different E-UTRA frequency}
    then { UE transmits an RRCCofigurationComplete message }
}
```

#### 8.2.4.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRCCofiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRCCofiguration* message includes the *radioResourceConfigDedicated*:

- 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

...

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received physicalConfigDedicated;
- 1> if the antennaInfo is included and set to 'explicitValue':
  - 2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

##### 8.2.4.6.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 3.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.6.3.2 Test procedure sequence

Table 8.2.4.6.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.6.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy exit condition for event A3 (M3 < M1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M3 > M1).

**Table 8.2.4.6.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to setup inter frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 3 parameters according to the row "T1" in table 8.2.4.6.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 3.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform inter frequency handover to Cell 3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 3 to confirm the successful completion of the inter frequency handover?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
7	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicates that the UE is in E-UTRA RRC_CONNECTED state on Cell 3?	-	-	1	-

### 8.2.4.7 RRC connection reconfiguration / Handover / Failure / Re-establishment successful

#### 8.2.4.7.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure  

and after receiving an RRCConnectionReconfiguration message including a mobilityControlInfo  

indicating a different E-UTRA cell having attempted intra frequency handover }  

ensure that {  

    when { UE detects handover failure and the initial cell is selectable }  

        then { UE performs an RRC connection re-establishment procedure and remains in the E-UTRA  

    RRC_CONNECTED state }  

}
```

(2)

```
with { UE having transmitted an RRCConnectionReestablishmentRequest message }  

ensure that {  

    when { UE receives an RRCConnectionReestablishment message with a nextHopChainingCount which is  

different from the NCC associated with the currently active KeNB }  

        then { UE derives new KeNB from the nextHopChainingCount }  

}
```

(3)

```
with { UE having transmitted an RRCConnectionReestablishmentRequest message }  

ensure that {  

    when { UE receives an RRCConnectionReestablishment message with a nextHopChainingCount which is  

same as the NCC associated with the currently active KeNB }  

        then { UE derives new KeNB from the currently active KeNB }  

}
```

#### 8.2.4.7.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.5.6, 5.3.7.2, 5.3.7.4, 5.3.7.5, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> the procedure ends;

...

[TS 36.331, clause 5.3.5.6]

The UE shall:

1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;

2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

...

1> upon handover failure, in accordance with 5.3.5.6; or

...

Upon initiation of the procedure, the UE shall:

1> stop timer T310, if running;

1> start timer T311;

1> suspend all RBs except SRB0;

1> reset MAC;

1> apply the default physical channel configuration as specified in 9.2.4;

1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;

1> apply the default MAC main configuration as specified in 9.2.2;

1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRCCConnectionReestablishmentRequest* message as follows:

1> set the *ue-Identity* as follows:

2> set the *c-RNTI* to the C-RNTI used in the source cell (handover and mobility from E-UTRA failure) or used in the cell in which the trigger for the re-establishment occurred (other cases);

2> set the *physCellId* to the physical cell identity of the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases);

2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:

- 3> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) *VarShortMAC-Input*;
  - 3> with the  $K_{RRCint}$  key and integrity protection algorithm that was used in the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases); and
  - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
- 1> set the *reestablishmentCause* as follows:
- 2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):
    - 3> set the *reestablishmentCause* to the value '*reconfigurationFailure*';  - 2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
    - 3> set the *reestablishmentCause* to the value '*handoverFailure*';
- ...

The UE shall submit the *RRCConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.5]

NOTE: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

- 1> stop timer T301;
- 1> re-establish PDCP for SRB1;
- 1> re-establish RLC for SRB1;
- 1> perform the radio resource configuration procedure in accordance with the received *radioResourceConfigDedicated* and as specified in 5.3.10;
- 1> resume SRB1;
- 1> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key to which the current  $K_{eNB}$  is associated, using the *nextHopChainingCount* value indicated in the *RRCConnectionReestablishment* message, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> derive the  $K_{RRCint}$  key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to activate integrity protection using the previously configured algorithm and the  $K_{RRCint}$  key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply ciphering using the previously configured algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> submit the *RRCConnectionReestablishmentComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.3.10.4]

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

1> if the *antennaInfo* is included and set to '*explicitValue*':

2> if the configured *transmissionMode* is not 'tm3' or 'tm4' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

1> else if the *antennaInfo* is included and set to '*defaultValue*':

2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.7.3 Test description

##### 8.2.4.7.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 4 and Cell 11.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.4.7.3.2 Test procedure sequence

Table 8.2.4.7.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3", "T4", "T5" and "T6" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.7.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 4</b>	<b>Cell 11</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-91	-91	The power level values are such that measurement results for Cell 1 (M1) Cell 4 (M4) and Cell 11(M11) satisfy exit condition for event A3 ( $M4 < M1$ and $M11 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 4 (M4) satisfy entry condition for event A3 ( $M4 > M1$ ).
T2	Cell-specific RS EPRE	dBm/15kHz	"Off"	-79	"Off"	The power level values are assigned to satisfy $SrxlevCell 1 < 0$ and $SrxlevCell 11 < 0$ such that selecting Cell 4 is guaranteed (NOTE 1).
T3	Cell-specific RS EPRE	dBm/15kHz	-73	-79	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 4 (M4) satisfy entry condition for event A3 ( $M1 > M4$ ). (NOTE 1).
T4	Cell-specific RS EPRE	dBm/15kHz	-73	"Off"	"Off"	The power level values are assigned to satisfy $SrxlevCell 4 < 0$ and $SrxlevCell 11 < 0$ such that selecting Cell 1 is guaranteed. (NOTE 1).
T5	Cell-specific RS EPRE	dBm/15kHz	-73	"Off"	-67	The power level values are such that measurement results for Cell 1 (M1) and Cell 11 (M11) satisfy entry condition for event A3 ( $M11 > M1$ ). (NOTE 1).
T6	Cell-specific RS EPRE	dBm/15kHz	"Off"	"Off"	-67	The power level values are assigned to satisfy $SrxlevCell 1 < 0$ and $SrxlevCell 4 < 0$ such that selecting Cell 11 is guaranteed. (NOTE 1).

NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.

## 8.2.4.8 RRC connection reconfiguration / Handover / Failure / Re-establishment failure

### 8.2.4.8.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and after receiving an RRConnectionReconfiguration message including an IE
mobilityControlInformation indicating a different E-UTRA cell having attempted intra frequency
handover }
ensure that {
```

```

when { UE detects handover failure and fails an RRC connection re-establishment procedure }
  then { UE enters the E-UTRA RRC_IDLE state and trigger TAU procedure in order to recover RRC
connection }
}

```

#### 8.2.4.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.3.5.4, 5.3.5.6, 5.3.7.2, 5.3.7.3, 5.3.7.4, 5.3.7.7 and 5.3.12.

[TS 36.331, clause 5.3.5.4]

...

If the *RRConnectionReconfiguration* message includes the *mobilityControlInformation* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to t304, as included in the *mobilityControlInformation*;
- 1> request PDCP to initiate the PDCP Re-establishment procedure for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the L2 re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in [8].

- 1> reset MAC and re-establish RLC for all RBs that are established;
- 1> If the *RRConnectionReconfiguration* message includes the *radioResourceConfiguration*:
  - 2> perform the Radio resource configuration procedure as specified in 5.3.10;
  - 1> set the C-RNTI to the value of the *newUE-Identity*;
  - 1> if the *eutra-CarrierFreq* is included:
    - 2> consider the target cell to be one on the frequency indicated by the *eutra-CarrierFreq* with a physical cell identity indicated by the *targetCellIdentity*;
  - 1> else:
    - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetCellIdentity*;
  - 1> if the *dl-Bandwidth* is included:
    - 2> for the target cell, apply the downlink bandwidth indicated by the *dl-Bandwidth*;
  - 1> else:
    - 2> for the target cell, apply the same downlink bandwidth as for the current cell;
  - 1> if the *ul-Bandwidth* is included:
    - 2> for the target cell, apply the uplink bandwidth indicated by the *ul-Bandwidth*;
  - 1> else:
    - 2> for the target cell, apply the same uplink bandwidth as for the current cell;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> If the *RRConnectionReconfiguration* message includes the *securityConfiguration*:
  - 2> apply the AS-derived keys associated with the AS-base key indicated by the *keyIndicator*;

- 2> configure lower layers to apply the indicated integrity protection algorithm, i.e. the indicated integrity protection configuration shall be applied to all subsequent messages received and sent by the UE in the target cell, including the message used to indicate the successful completion of the procedure;
  - 2> configure lower layers to apply the indicated ciphering algorithm, i.e. the indicated ciphering configuration shall be applied to all subsequent messages received and sent by the UE in the target cell, including the message used to indicate the successful completion of the procedure;
  - 1> If the *RRConnectionReconfiguration* message includes the *measurementConfiguration*:
    - 2> perform the Measurement configuration procedure as specified in 5.5.2;
    - 1> synchronise to the DL of the target cell;
    - 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration;
    - 1> If MAC successfully completes the random access procedure:
      - 2> stop timer T304;
      - 2> If the *physicalConfigDedicated* is included in the *RRConnectionReconfiguration* message:
        - 3> If the UE needs the SFN of the target cell to apply the PUCCH and Sounding RS configuration:
          - 4> apply the new PUCCH and Sounding RS configuration upon acquiring the SFN of the target cell;
        - 3> else:
          - 4> apply the new PUCCH and Sounding RS configuration;
      - 2> indicate to PDCP to complete the PDCP Re-establishment procedure for all DRBs that are established, if any;
      - 2> the procedure ends.
- ...

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> If T304 expires (handover failure):

NOTE 1: Following T304 expiry dedicated preambles, if provided within the *rach-ConfigDedicated*, are not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the physical layer configuration;

NOTE 2: The UE reverts to the RRC configuration as well as the layer 2 configuration (PDCP/RLC/MAC) used in the source cell.

- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends.

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when security has been activated. The UE initiates the procedure when one of the following conditions is met:

- ...
- 1> upon handover failure, in accordance with 5.3.5.6; or
- ...

Upon initiation of the procedure, the UE shall:

...

1> start timer T311;

1> request PDCP to initiate the PDCP Re-establishment procedure for all RBs that are established;

NOTE 1: The handling of the radio bearers after the successful completion of the L2 re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in [8].

1> reset MAC and re-establish RLC for all RBs that are established;

1> select a suitable cell in accordance with the cell selection process as specified in [4];

[TS 36.331, clause 5.3.7.3]

...

2> initiate transmission of the *RRConnectionReestablishmentRequest* message in accordance with 5.3.7.4;

...

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRConnectionReestablishmentRequest* message as follows:

1> set the IE *ue-Identity* as follows:

2> set the *c-RNTI* to the C-RNTI used in the source cell (handover failure case) or used in the cell in which the trigger for the re-establishment occurred (other cases);

2> set the *cellIdentity* to the Physical layer identity of the source cell (handover failure case) or of the cell in which the trigger for the re-establishment occurred (other cases);

2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:

3> over the concatenation of the ASN.1 encoded *CellIdentity* of the current cell, *PhysicalCellIdentity* of the cell the UE was connected to prior to the failure and C-RNTI that the UE had in the cell it was connected to prior to the failure;

3> with the integrity protection key and integrity protection algorithm that was used in the cell the UE was connected to prior to the failure; and

3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones.

1> set the IE *reestablishmentCause* as follows:

...

2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):

3> set the *reestablishmentCause* to the value '*handoverFailure*';

...

The UE shall submit the *RRConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.7]

Upon T311 expiry, the UE shall:

1> perform the actions upon moving from RRC\_CONNECTED to RRC\_IDLE as specified in 5.3.12.

...

[TS 36.331, clause 5.3.12]

Upon moving from RRC\_CONNECTED to RRC\_IDLE, the UE shall:

1> reset MAC and re-establish RLC for all RBs that are established;

...

1> stop all timers that are running except T320;

1> release all radio resources, including release of the RLC entity and the associated PDCP entity for all established RBs;

1> indicate the release of the RRC connection to upper layers;

1> enter RRC\_IDLE.

#### 8.2.4.8.3 Test description

##### 8.2.4.8.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.8.3.2 Test procedure sequence

Table 8.2.4.8.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.8.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M1 > M2)
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1)
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	The power level values are such that $Srxlev_{Cell\ 1} > Srxlev_{Cell\ 2}$ and $Srxlev_{Cell\ 2} < 0$ . (NOTE 1).

NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.

**Table 8.2.4.8.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup intra frequency measurement on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in table 8.2.4.8.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP and RSRQ value for Cell 2.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
-	EXCEPTION: In parallel to the events described in step 6 the steps specified in Table 8.2.4.8.3.2-3 should take place.	-	-	-	-
6	The SS changes Cell 1 and Cell 2 parameters according to the row "T2" in table 8.2.4.8.3.2-1.	-	-	-	-
7	The UE transmits an <i>RRCConnectionReestablishmentRequest</i> message on Cell 1.	-->	<i>RRCConnectionReestablishmentRequest</i>	-	-
8	The SS does not respond to any <i>RRCConnectionReestablishmentRequest</i> message and waits for 1s to ensure that T301 expires and the UE goes to RRC_IDLE state on Cell 1.	-	-	-	-
9-13	The UE will perform TAU procedure based on steps 1 to 5 of subclause 6.4.2.7 in TS 36.508 on Cell 1. NOTE: The UE performs a TAU procedure due to NAS signalling connection recovery.	-	-	-	-
14	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 1?	-	-	1	-
-	At the end of this test procedure sequence, the UE is in end state E-UTRA connected (E2_T3440) according to TS 36.508.	-	-	-	-

## 8.2.4.9 RRC connection reconfiguration / Handover / Inter-band blind handover / Success

### 8.2.4.9.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
}
ensure that {
    when { UE receives an RRCConnectionReconfiguration message including a mobilityControlInfo
           indicating an E-UTRA frequency on different frequency band }
    then { UE transmits an RRCConnectionReconfigurationComplete message }
}
```

### 8.2.4.9.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

- 1> start timer T304 with the timer value set to  $t_{304}$ , as included in the *mobilityControlInfo*;
  - 1> if the *carrierFreq* is included:
    - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
  - 1> else:
    - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
  - 1> start synchronising to the DL of the target cell;
- NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.
- 1> reset MAC;
  - 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
  - 1> apply the value of the *newUE-Identity* as the C-RNTI;
  - 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

...

- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRC_{int}}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRC_{int}}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRC_{int}}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

...

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

- 1> if the *antennaInfo* is included and set to '*explicitValue*':
  - 2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.9.3 Test description

#### 8.2.4.9.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 10.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

mobilityControlInformation with FDD configuration parameters included }
    then { UE transmits an RRCCoNnectionReconfigurationComplete message }
}

```

#### 8.2.4.10.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRCCoNnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRCCoNnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:

- 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target cell by acquiring system information from that cell before performing RACH access in the target cell.

[TS 36.331, clause 5.3.10.4]

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

1> if the *antennaInfo* is included and set to '*explicitValue*';

2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

1> else if the *antennaInfo* is included and set to '*defaultValue*':

2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

### 8.2.4.12.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.3.5.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;

...

1> else:

2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323.

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

...

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

...

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

...

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

- 2> derive the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRC_{int}}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- ...
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target cell by acquiring system information from that cell before performing RACH access in the target cell.

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;
- 1> if the *antennaInfo* is included and set to '*explicitValue*':
  - 2> if the configured *transmissionMode* is not 'tm3' or 'tm4' or 'tm8':
    - 3> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
  - 2> if the configured *transmissionMode* is 'tm8' and *pmi-RI-Report* is not present:
    - 3> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.12.3 Test description

##### 8.2.4.12.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2 (2 antenna ports MIMO)

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on cell 1 according to [18].

#### 8.2.4.12.3.2 Test procedure sequence

Table 8.2.4.12.3.2-0 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.12.3.2-0: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2
T0	Cell-specific RS EPRE	dBm/15k Hz	-91	-85
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-91

**Table 8.2.4.12.3.2-1: Main behaviour**

## 8.2.4.13 RRC connection reconfiguration / Handover / Success (with measurement) / Inter-band

### 8.2.4.13.1 Test Purpose (TP)

(1)

```

with { UE having completed the radio bearer establishment and initial security activation procedure
and performed the inter-band measurement }
ensure that {
  when { UE receives an RRCConnectionReconfiguration message including a mobilityControlInfo
indicating an E-UTRA frequency on different frequency band }
  then { UE transmits an RRCConnectionReconfigurationComplete message }
}

```

### 8.2.4.13.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> if the *RRConnectionReconfiguration* message includes the *fullConfig*:
  - 2> perform the radio configuration procedure as specified in section 5.3.5.8;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:

- 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
- 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> if the *RRCConnectionReconfiguration* message includes the *reportProximityConfig*:
  - 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;
- 1> if the *antennaInfo* is included and set to '*explicitValue*':
  - 2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' or '*tm8*':
    - 3> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
  - 2> if the configured *transmissionMode* is '*tm8*' and *pmi-RI-Report* is not present:
    - 3> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

8.2.4.13.3 Test description

8.2.4.13.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 10.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.2.4.13.3.2 Test procedure sequence

Table 8.2.4.13.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.13.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 10	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy exit condition for event A3 ( $M10 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 ( $M10 > M1$ ).

**Table 8.2.4.13.3.2-2: Main behaviour**

### 8.2.4.13a RRC connection reconfiguration / Handover / Success (with measurement) / Inter-band / Between FDD and TDD

#### 8.2.4.13a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and having completed the radio bearer establishment and initial security activation procedure and performed the inter band LTE TDD measurement }
ensure that {
    when { UE receives an RRCConectionReconfiguration message including a mobilityControlInfo indicating a different E-UTRA TDD frequency }
    then { UE transmits an RRCConectionReconfigurationComplete message }
}
```

(2)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and having completed the radio bearer establishment and initial security activation procedure and performed the inter band LTE FDD measurement }
ensure that {
    when { UE receives an RRCConectionReconfiguration message including a mobilityControlInfo indicating a different E-UTRA FDD frequency }
    then { UE transmits an RRCConectionReconfigurationComplete message }
}
```

#### 8.2.4.13a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRCConectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
  - 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
    - 2> perform the radio resource configuration procedure as specified in 5.3.10;
  - 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
    - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
  - 1> else:
    - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
  - 1> store the *nextHopChainingCount* value;
  - 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
    - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
    - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
  - 1> else:
    - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
    - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
  - 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> perform the measurement related actions as specified in 5.5.6.1;
  - 1> if the *RRConnectionReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;
  - 1> if MAC successfully completes the random access procedure:
    - 2> stop timer T304;
    - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
    - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;
- NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.
- 2> the procedure ends;
  - ...

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

- 1> if the *antennaInfo* is included and set to '*explicitValue*':

- 2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

- 1> else if the *antennaInfo* is included and set to '*defaultValue*':

- 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.13a.3 Test description

##### 8.2.4.13a.3.1 Pre-test conditions

System Simulator:

- Cell 1 is FDD cell and Cell 28 is TDD cell.
- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.2.4.13a.3.1-1.

**Table 8.2.4.13a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
28	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.2.4.13a.3.3-9.
- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.13a.3.2 Test procedure sequence

Table 8.2.4.13a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.13a.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 28</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy exit condition for event A3 (M28 < M1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 (M28 > M1).
T2	Cell-specific RS EPRE	dBm/15k Hz	-73	-85	The power level values are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 (M1 > M28).

**Table 8.2.4.13a.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict

## 8.2.4.14 RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band

### 8.2.4.14.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and after receiving an RRConnectionReconfiguration message including a mobilityControlInfo
indicating a different E-UTRA cell having attempted inter-band handover }
ensure that {
    when { UE detects handover failure and the target cell is selectable }
        then { UE performs an RRC connection re-establishment procedure and remains in the E-UTRA
RRC_CONNECTED state }
}
```

### 8.2.4.14.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.5.6, 5.3.7.2, 5.3.7.4, 5.3.7.5, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> if the *RRCConnectionReconfiguration* message includes the *fullConfig*:
  - 2> perform the radio configuration procedure as specified in section 5.3.5.8;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> if the *RRCConnectionReconfiguration* message includes the *reportProximityConfig*:
  - 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;

- 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
- 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> if T304 expires (handover failure):

NOTE 4: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;
- 2> store the following handover failure information in *VarRLF-Report* by setting its fields as follows:
  - 3> clear the information included in *VarRLF-Report*, if any;
  - 3> set the *plmn-IdentityList* to include the list of EPLMNs stored by the UE (i.e. includes the RPLMN);
  - 3> set the *measResultLastServCell* to include the RSRP and RSRQ, if available, of the PCell based on measurements collected up to the moment the UE detected handover failure;

...

- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

...

- 1> upon handover failure, in accordance with 5.3.5.6; or

...

Upon initiation of the procedure, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T311;
- 1> suspend all RBs except SRB0;
- 1> reset MAC;
- 1> apply the default physical channel configuration as specified in 9.2.4;
- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRConnectionReestablishmentRequest* message as follows:

- 1> set the *ue-Identity* as follows:
    - 2> set the *c-RNTI* to the C-RNTI used in the source cell (handover and mobility from E-UTRA failure) or used in the cell in which the trigger for the re-establishment occurred (other cases);
    - 2> set the *physCellId* to the physical cell identity of the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases);
    - 2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:
      - 3> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) *VarShortMAC-Input*;
      - 3> with the  $K_{RRCint}$  key and integrity protection algorithm that was used in the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases); and
      - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
  - 1> set the *reestablishmentCause* as follows:
    - 2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):
      - 3> set the *reestablishmentCause* to the value '*reconfigurationFailure*';
    - 2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
      - 3> set the *reestablishmentCause* to the value '*handoverFailure*';
- ...

The UE shall submit the *RRConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.5]

NOTE 5: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

- 1> stop timer T301;
- 1> re-establish PDCP for SRB1;
- 1> re-establish RLC for SRB1;
- 1> perform the radio resource configuration procedure in accordance with the received *radioResourceConfigDedicated* and as specified in 5.3.10;
- 1> resume SRB1;

NOTE 6: E-UTRAN should not transmit any message on SRB1 prior to receiving the *RRConnectionReestablishmentComplete* message.

- 1> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key to which the current  $K_{eNB}$  is associated, using the *nextHopChainingCount* value indicated in the *RRConnectionReestablishment* message, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> derive the  $K_{RRCint}$  key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to activate integrity protection using the previously configured algorithm and the  $K_{RRCint}$  key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> configure lower layers to apply ciphering using the previously configured algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> set the content of *RRConnectionReestablishmentComplete* message as follows:

2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:

3> include the *rlf-InfoAvailable*;

...

1> perform the measurement related actions as specified in 5.5.6.1;

1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;

1> submit the *RRConnectionReestablishmentComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.3.10.4]

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

1> if the *antennaInfo* is included and set to '*explicitValue*':

2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' or '*tm8*':

3> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

2> if the configured *transmissionMode* is '*tm8*' and *pmi-RI-Report* is not present:

3> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

1> else if the *antennaInfo* is included and set to '*defaultValue*':

2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.14.3 Test description

##### 8.2.4.14.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 10.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.14.3.2 Test procedure sequence

Table 8.2.4.14.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.14.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 10	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy exit condition for event A3 (M10 < M1).
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M1).
T2	Cell-specific RS EPRE	dBm/15kHz	"Off"	-79	The power level values are assigned to satisfy SrxlevCell 1 < 0 such that selecting Cell 10 is guaranteed (NOTE 1).
NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.					

**Table 8.2.4.14.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup inter-band measurement on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 10 parameters according to the row "T1" in table 8.2.4.14.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 10.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform inter-band handover to Cell 10.	<--	<i>RRCConnectionReconfiguration</i>	-	-
-	EXCEPTION: In parallel to the events described in step 6 the steps specified in Table 8.2.4.14.3.2-3 should take place.	-	-	-	-
6	The SS changes Cell 1 and Cell 10 parameters according to the row "T2" in table 8.2.4.14.3.2-1.	-	-	-	-
7	Check: Does the UE transmit an <i>RRCConnectionReestablishmentRequest</i> message on Cell 10?	-->	<i>RRCConnectionReestablishment Request</i>	1	P
8	The SS transmits an <i>RRCConnectionReestablishment</i> message to resume SRB1 operation and re-activate security on Cell 10.	<--	<i>RRCConnectionReestablishment</i>	-	-
9	The UE transmits an <i>RRCConnectionReestablishmentComplete</i> message on Cell 10.	-->	<i>RRCConnectionReestablishment Complete</i>	-	-
10	The SS transmits an <i>RRCConnectionReconfiguration</i> message to resume existing radio bearer on Cell 10.	<--	<i>RRCConnectionReconfiguration</i>	-	-
11	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 10.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
12	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 10?	-	-	1	-

**Table 8.2.4.14.3.2-3: Parallel behaviour**

### 8.2.4.14a RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band / Between FDD and TDD

#### 8.2.4.14a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and having completed the radio bearer establishment and initial security activation procedure and after receiving an RRCCConnectionReconfiguration message including a mobilityControlInfo indicating a different E-UTRA TDD cell having attempted inter-mode handover }
ensure that {
    when { UE detects handover failure and the initial E-UTRA TDD cell is selectable }
    then { UE performs an RRC connection re-establishment procedure and remains in the E-UTRA RRC_CONNECTED state on the E-UTRA TDD cell }
}
```

(2)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and having transmitted an RRCCConnectionReestablishmentRequest message on E-UTRA TDD cell }
ensure that {
    when { UE receives an RRCCConnectionReestablishment message with a nextHopChainingCount which is same as the NCC associated with the currently active KeNB }
    then { UE derives new KeNB from the currently active KeNB }
}
```

(3)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and having completed the radio bearer establishment and initial security activation procedure and after receiving an RRCCConnectionReconfiguration message including a mobilityControlInfo indicating a different E-UTRA FDD cell having attempted inter-mode handover }
ensure that {
    when { UE detects handover failure and the initial E-UTRA FDD cell is selectable }
    then { UE performs an RRC connection re-establishment procedure and remains in the E-UTRA RRC_CONNECTED state on the E-UTRA FDD cell }
}
```

(4)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and having transmitted an RRCCConnectionReestablishmentRequest message on E-UTRA FDD cell }
ensure that {
    when { UE receives an RRCCConnectionReestablishment message with a nextHopChainingCount which is different from the NCC associated with the currently active KeNB }
    then { UE derives new KeNB from the nextHopChainingCount }
}
```

#### 8.2.4.14a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.5.6, 5.3.7.2, 5.3.7.4, 5.3.7.5, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the RRCCConnectionReconfiguration message includes the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the mobilityControlInfo;
- 1> if the carrierFreq is included:
  - 2> consider the target cell to be one on the frequency indicated by the carrierFreq with a physical cell identity indicated by the targetPhysCellId;
- 1> else:

2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> perform the measurement related actions as specified in 5.5.6.1;

1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:

- 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

...

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;
- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

...

- 1> upon handover failure, in accordance with 5.3.5.6; or

...

Upon initiation of the procedure, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T311;
- 1> suspend all RBs except SRB0;
- 1> reset MAC;
- 1> apply the default physical channel configuration as specified in 9.2.4;
- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRConnectionReestablishmentRequest* message as follows:

- 1> set the *ue-Identity* as follows:
    - 2> set the *c-RNTI* to the C-RNTI used in the source cell (handover and mobility from E-UTRA failure) or used in the cell in which the trigger for the re-establishment occurred (other cases);
    - 2> set the *physCellId* to the physical cell identity of the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases);
    - 2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:
      - 3> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) *VarShortMAC-Input*;
      - 3> with the  $K_{RRCint}$  key and integrity protection algorithm that was used in the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases); and
      - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
  - 1> set the *reestablishmentCause* as follows:
    - 2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):
      - 3> set the *reestablishmentCause* to the value '*reconfigurationFailure*';
    - 2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
      - 3> set the *reestablishmentCause* to the value '*handoverFailure*';
- ...

The UE shall submit the *RRConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.5]

NOTE 5: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

- 1> stop timer T301;
- 1> re-establish PDCP for SRB1;
- 1> re-establish RLC for SRB1;
- 1> perform the radio resource configuration procedure in accordance with the received *radioResourceConfigDedicated* and as specified in 5.3.10;
- 1> resume SRB1;

NOTE 6: E-UTRAN should not transmit any message on SRB1 prior to receiving the *RRConnectionReestablishmentComplete* message.

- 1> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key to which the current  $K_{eNB}$  is associated, using the *nextHopChainingCount* value indicated in the *RRConnectionReestablishment* message, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> derive the  $K_{RRCint}$  key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to activate integrity protection using the previously configured algorithm and the  $K_{RRCint}$  key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> configure lower layers to apply ciphering using the previously configured algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> set the content of *RRCConnectionReestablishmentComplete* message as follows:

2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:

3> include the *rlf-InfoAvailable*;

...

1> perform the measurement related actions as specified in 5.5.6.1;

1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;

1> submit the *RRCConnectionReestablishmentComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.3.10.4]

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

1> if the *antennaInfo* is included and set to '*explicitValue*':

2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

1> else if the *antennaInfo* is included and set to '*defaultValue*':

2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

8.2.4.14a.3            Test description

8.2.4.14a.3.1        Pre-test conditions

System Simulator:

- Cell 1 is FDD cell and Cell 28 is TDD cell.
- Cell 28 has a valid UE context
- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.2.4.14a.3.1-1.

**Table 8.2.4.14a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
28	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.2.4.14a.3.3-15.
- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.14a.3.2 Test procedure sequence

Table 8.2.4.14a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3" and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.14a.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 28	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy exit condition for event A3 (M28 < M1).
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 (M28 > M1).
T2	Cell-specific RS EPRE	dBm/15kHz	"Off"	-73	The power level values are assigned to satisfy SrxlevCell 1 < 0 such that selecting Cell 28 is guaranteed (NOTE 1).
T3	Cell-specific RS EPRE	dBm/15kHz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 (M1 > M28).
T4	Cell-specific RS EPRE	dBm/15kHz	-85	"Off"	The power level values are assigned to satisfy SrxlevCell 28 < 0 such that selecting Cell 1 is guaranteed. (NOTE 1).
NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.					

Table 8.2.4.14a.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup inter-band measurement on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 28 power level according to the row "T1" in table 8.2.4.14a.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 28.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform inter-band handover to Cell 28.	<--	<i>RRCConnectionReconfiguration</i>	-	-
-	EXCEPTION: In parallel to the events described in step 6 the steps specified in Table 8.2.4.14a.3.2-3 should take place.	-	-	-	-
6	The SS changes Cell 1 power level according to the row "T2" in table 8.2.4.14a.3.2-1.	-	-	-	-
7	Check: Does the UE transmit an <i>RRCConnectionReestablishmentRequest</i> message on Cell 28?	-->	<i>RRCConnectionReestablishmentRequest</i>	1	P
8	The SS transmits an <i>RRCConnectionReestablishment</i> message to resume SRB1 operation and re-activate security on Cell 28.	<--	<i>RRCConnectionReestablishment</i>	-	-
9	Check: Does the UE transmit an <i>RRCConnectionReestablishmentComplete</i> message using the security key derived from the currently active K <sub>eNB</sub> on Cell 28?	-->	<i>RRCConnectionReestablishmentComplete</i>	2	P
10	The SS transmits an <i>RRCConnectionReconfiguration</i> message to resume existing radio bearer on Cell 28.	<--	<i>RRCConnectionReconfiguration</i>	-	-
11	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 28.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
11A	The UE transmits a TRACKING AREA UPDATE REQUEST message on Cell 28.	-	-	-	-
11B	SS responds with a TRACKING AREA UPDATE ACCEPT message. NOTE: The TAU is accepted with PLMN1 listed as an Equivalent PLMN	-	-	-	-
11C	The UE transmits a TRACKING AREA UPDATE COMPLETE message.	-	-	-	-
12	The SS changes Cell 1 and Cell 28 power levels according to the row "T3" in table 8.2.4.14a.3.2-1.	-	-	-	-
13	The UE transmits a <i>MeasurementReport</i> message on Cell 28 to report event A3 with the measured RSRP, RSRQ value for Cell 1.	-->	<i>MeasurementReport</i>	-	-
14	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 28 to order the UE to perform inter-band handover to Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
-	EXCEPTION: In parallel to the events described in step 15 the steps specified in Table 8.2.4.14a.3.2-4 should take place.	-	-	-	-

**8.2.4.15 RRC connection reconfiguration / Handover / Failure / Re-establishment failure / Inter-band**

**8.2.4.15.1 Test Purpose (TP)**

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and after receiving an RRCCofiguration message including an IE
mobilityControlInformation indicating a different E-UTRA cell having attempted inter-band handover }
ensure that {
    when { UE detects handover failure and fails an RRC connection re-establishment procedure }
        then { UE enters the E-UTRA RRC_IDLE state and trigger TAU procedure in order to recover RRC
connection }
}
```

**8.2.4.15.2 Conformance requirements**

References: The conformance requirements covered in the present TC are specified in: TS 36.331 clauses 5.3.5.4, 5.3.5.6, 5.3.7.2, 5.3.7.3, 5.3.7.4, 5.3.7.7 and 5.3.12

[TS 36.331, clause 5.3.5.4]

If the RRCCofiguration message includes the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

1> start timer T304 with the timer value set to t304, as included in the mobilityControlInfo;

1> if the carrierFreq is included:

2> consider the target cell to be one on the frequency indicated by the carrierFreq with a physical cell identity indicated by the targetPhysCellId;

1> else:

2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the targetPhysCellId;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> if the *RRCConnectionReconfiguration* message includes the *fullConfig*:

2> perform the radio configuration procedure as specified in section 5.3.5.8;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> perform the measurement related actions as specified in 5.5.6.1;

1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> release *reportProximityConfig* and clear any associated proximity status reporting timer;

1> if the *RRCConnectionReconfiguration* message includes the *reportProximityConfig*:

- 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target cell by acquiring system information from that cell before performing RACH access in the target cell.

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> if T304 expires (handover failure):

NOTE 5: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;
- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

...

- 1> upon handover failure, in accordance with 5.3.5.6; or

...

Upon initiation of the procedure, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T311;
- 1> suspend all RBs except SRB0;
- 1> reset MAC;
- 1> apply the default physical channel configuration as specified in 9.2.4;
- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331, clause 5.3.7.3]

Upon selecting a suitable E-UTRA cell, the UE shall:

- 1> stop timer T311;
- 1> start timer T301;
- 1> apply the *timeAlignmentTimerCommon* included in *SystemInformationBlockType2*;
- 1> initiate transmission of the *RRConnectionReestablishmentRequest* message in accordance with 5.3.7.4;

NOTE 6: This procedure applies also if the UE returns to the source cell.

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRConnectionReestablishmentRequest* message as follows:

- 1> set the *ue-Identity* as follows:
  - 2> set the *c-RNTI* to the C-RNTI used in the source cell (handover and mobility from E-UTRA failure) or used in the cell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *physCellId* to the physical cell identity of the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:
    - 3> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) *VarShortMAC-Input*;
    - 3> with the  $K_{RRCint}$  key and integrity protection algorithm that was used in the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases); and
    - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
- 1> set the *reestablishmentCause* as follows:
  - 2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):
    - 3> set the *reestablishmentCause* to the value '*reconfigurationFailure*';
  - 2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
    - 3> set the *reestablishmentCause* to the value '*handoverFailure*';
  - 2> else:
    - 3> set the *reestablishmentCause* to the value '*otherFailure*';

The UE shall submit the *RRConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.6]

Upon T311 expiry, the UE shall:

- 1> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';

[TS 36.331, clause 5.3.12]

Upon leaving RRC\_CONNECTED, the UE shall:

- 1> reset MAC;
- 1> stop all timers that are running except T320;

1> release all radio resources, including release of the RLC entity, the MAC configuration and the associated PDCP entity for all established RBs;

1> indicate the release of the RRC connection to upper layers together with the release cause;

1> if leaving RRC\_CONNECTED was not triggered by reception of the *MobilityFromEUTRACCommand* message:

2> enter RRC\_IDLE and perform procedures as specified in TS 36.304 [4, 5.2.7];

#### 8.2.4.15.3 Test description

##### 8.2.4.15.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 10
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.4.15.3.2 Test procedure sequence

Table 8.2.4.15.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.15.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 10	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy exit condition for event A3 (M1 > M10)
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M1)
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	The power level values are such that $Srxlev_{Cell\ 1} > Srxlev_{Cell\ 10}$ and $Srxlev_{Cell\ 10} < 0$ . (NOTE 1)
NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.					

**Table 8.2.4.15.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup inter-band measurement on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 10 parameters according to the row "T1" in table 8.2.4.15.3.2-1.	-	-	-	-

## 8.2.4.15a RRC connection reconfiguration / Handover / Failure / Re-establishment failure / Inter-band / Between FDD and TDD

### 8.2.4.15a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and having completed the radio bearer establishment and initial security activation procedure on E-UTRA FDD cell and after receiving an RRCCoNNECTIONReconfiguration message including an IE mobilityControlInfo indicating a different E-UTRA TDD cell having attempted inter-mode handover }
ensure that {
  when { UE detects handover failure and fails an RRC connection re-establishment procedure }
    then { UE enters the E-UTRA FDD RRC_IDLE state and trigger TAU procedure in order to recover RRC connection on E-UTRA FDD cell }
}
```

(2)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and having completed the radio bearer establishment and initial security activation procedure on E-UTRA TDD cell and after receiving an RRCCoNNECTIONReconfiguration message including an IE mobilityControlInfo indicating a different E-UTRA FDD cell having attempted inter-mode handover }
ensure that {
  when { UE detects handover failure and fails an RRC connection re-establishment procedure }
    then { UE enters the E-UTRA TDD RRC_IDLE state and trigger TAU procedure in order to recover RRC connection on E-UTRA TDD cell }
}
```

### 8.2.4.15a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.3.5.4, 5.3.5.6, 5.3.7.2, 5.3.7.3, 5.3.7.4, 5.3.7.7 and 5.3.12.

[TS 36.331, clause 5.3.5.4]

...

If the RRCCoNNECTIONReconfiguration message includes the mobilityControlInformation and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

1> start timer T304 with the timer value set to t304, as included in the *mobilityControlInformation*;

1> request PDCP to initiate the PDCP Re-establishment procedure for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the L2 re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in [8].

1> reset MAC and re-establish RLC for all RBs that are established;

1> If the *RRConnectionReconfiguration* message includes the *radioResourceConfiguration*:

2> perform the Radio resource configuration procedure as specified in 5.3.10;

1> set the C-RNTI to the value of the *newUE-Identity*;

1> if the *eutra-CarrierFreq* is included:

2> consider the target cell to be one on the frequency indicated by the *eutra-CarrierFreq* with a physical cell identity indicated by the *targetCellIdentity*;

1> else:

2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetCellIdentity*;

1> if the *dl-Bandwidth* is included:

2> for the target cell, apply the downlink bandwidth indicated by the *dl-Bandwidth*;

1> else:

2> for the target cell, apply the same downlink bandwidth as for the current cell;

1> if the *ul-Bandwidth* is included:

2> for the target cell, apply the uplink bandwidth indicated by the *ul-Bandwidth*;

1> else:

2> for the target cell, apply the same uplink bandwidth as for the current cell;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> If the *RRConnectionReconfiguration* message includes the *securityConfiguration*:

2> apply the AS-derived keys associated with the AS-base key indicated by the *keyIndicator*;

2> configure lower layers to apply the indicated integrity protection algorithm, i.e. the indicated integrity protection configuration shall be applied to all subsequent messages received and sent by the UE in the target cell, including the message used to indicate the successful completion of the procedure;

2> configure lower layers to apply the indicated ciphering algorithm, i.e. the indicated ciphering configuration shall be applied to all subsequent messages received and sent by the UE in the target cell, including the message used to indicate the successful completion of the procedure;

1> If the *RRConnectionReconfiguration* message includes the *measurementConfiguration*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

1> synchronise to the DL of the target cell;

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration;

1> If MAC successfully completes the random access procedure:

2> stop timer T304;

- 2> If the *physicalConfigDedicated* is included in the *RRConnectionReconfiguration* message:
    - 3> If the UE needs the SFN of the target cell to apply the PUCCH and Sounding RS configuration:
      - 4> apply the new PUCCH and Sounding RS configuration upon acquiring the SFN of the target cell;
    - 3> else:
      - 4> apply the new PUCCH and Sounding RS configuration;
  - 2> indicate to PDCP to complete the PDCP Re-establishment procedure for all DRBs that are established, if any;
  - 2> the procedure ends.
- ...

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> If T304 expires (handover failure):

NOTE 1: Following T304 expiry dedicated preambles, if provided within the *rach-ConfigDedicated*, are not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the physical layer configuration;

NOTE 2: The UE reverts to the RRC configuration as well as the layer 2 configuration (PDCP/RLC/MAC) used in the source cell.

- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends.

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when security has been activated. The UE initiates the procedure when one of the following conditions is met:

...

- 1> upon handover failure, in accordance with 5.3.5.6; or
- ...

Upon initiation of the procedure, the UE shall:

...

- 1> start timer T311;

- 1> request PDCP to initiate the PDCP Re-establishment procedure for all RBs that are established;

NOTE 1: The handling of the radio bearers after the successful completion of the L2 re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in [8].

- 1> reset MAC and re-establish RLC for all RBs that are established;

- 1> select a suitable cell in accordance with the cell selection process as specified in [4];

[TS 36.331, clause 5.3.7.3]

...

- 2> initiate transmission of the *RRConnectionReestablishmentRequest* message in accordance with 5.3.7.4;
- ...

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRConnectionReestablishmentRequest* message as follows:

- 1> set the IE *ue-Identity* as follows:
  - 2> set the *c-RNTI* to the C-RNTI used in the source cell (handover failure case) or used in the cell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *cellIdentity* to the Physical layer identity of the source cell (handover failure case) or of the cell in which the trigger for the re-establishment occurred (other cases);
  - 2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:
    - 3> over the concatenation of the ASN.1 encoded *CellIdentity* of the current cell, *PhysicalCellIdentity* of the cell the UE was connected to prior to the failure and C-RNTI that the UE had in the cell it was connected to prior to the failure;
    - 3> with the integrity protection key and integrity protection algorithm that was used in the cell the UE was connected to prior to the failure; and
    - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones.
- 1> set the IE *reestablishmentCause* as follows:
  - ...  
2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
    - 3> set the *reestablishmentCause* to the value '*handoverFailure*';  
...

The UE shall submit the *RRConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.7]

Upon T311 expiry, the UE shall:

- 1> perform the actions upon moving from RRC\_CONNECTED to RRC\_IDLE as specified in 5.3.12.  
...

[TS 36.331, clause 5.3.12]

Upon moving from RRC\_CONNECTED to RRC\_IDLE, the UE shall:

- 1> reset MAC and re-establish RLC for all RBs that are established;  
...
- 1> stop all timers that are running except T320;
- 1> release all radio resources, including release of the RLC entity and the associated PDCP entity for all established RBs;
- 1> indicate the release of the RRC connection to upper layers;
- 1> enter RRC\_IDLE.

#### 8.2.4.15a.3            Test description

#### 8.2.4.15a.3.1        Pre-test conditions

System Simulator:

- Cell 1 is an LTE FDD cell, Cell 10 and Cell 30 are LTE TDD cells.

- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.2.4.15 a.3.1-1.

**Table 8.2.4.15 a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
10	PLMN1
30	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.2.4.15a.3.3-13.
- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.15a.3.2 Test procedure sequence

Table 8.2.4.15a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions, while columns marked "T1", "T2", "T3", "T4" and "T5" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.15a.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 10	Cell 30	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy exit condition for event A3 (M10 < M1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M1).
T2	Cell-specific RS EPRE	dBm/15k Hz	-85	"Off"	"Off"	The power level values are assigned to satisfy SrxlevCell 10 < 0 such that selecting Cell 1 is guaranteed (NOTE 1).
T3	Cell-specific RS EPRE	dBm/15k Hz	-85	"Off"	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 30 (M30) satisfy entry condition for event A3 (M30 > M1). (NOTE 1).
T4	Cell-specific RS EPRE	dBm/15k Hz	-73	"Off"	-85	The power level values are such that measurement results for Cell 30 (M30) satisfy entry condition for event A3 (M1 > M30). (NOTE 1).
T5	Cell-specific RS EPRE	dBm/15k Hz	"Off"	"Off"	-85	The power level values are assigned to satisfy SrxlevCell 1 < 0 such that selecting Cell 30 is guaranteed (NOTE 1).

NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.

Table 8.2.4.15a.3.2-2: Main behaviour

## 8.2.4.16 CA / RRC connection reconfiguration / Setup and Change of MIMO

8.2.4.16.1 CA / RRC connection reconfiguration / Setup and Change of MIMO / Intra-band Contiguous CA

8.2.4.16.1.1 Test Purpose (TP)

(1)

with { UE having completed the radio bearer establishment and initial security activation procedure and configured an Scell }

```

ensure that {
    when { UE receives an RRConnectionReconfiguration message indicating PCell and Scell TM
modification}
        then { UE sends an RRConnectionReconfigurationComplete message and changes transmission mode of
the Pcell and SCell}
    }
}

```

#### 8.2.4.16.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.10.6.

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> if the *antennaInfo-r10* is included in the received *physicalConfigDedicated* and the previous version of this field that was received by the UE was *antennaInfo* (without suffix i.e. the version defined in REL-8):
  - 2> apply the default antenna configuration as specified in section 9.2.4;
- 1> if the *cqi-ReportConfig-r10* is included in the received *physicalConfigDedicated* and the previous version of this field that was received by the UE was *cqi-ReportConfig* (without suffix i.e. the version defined in REL-8):
  - 2> apply the default CQI reporting configuration as specified in 9.2.4;

NOTE: Application of the default configuration involves release of all extensions introduced in REL-9 and later.

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

1> if the *antennaInfo* is included and set to *explicitValue*:

- 2> if the configured *transmissionMode* is not *tm3* or *tm4* or *tm8* or *tm9*; or
- 2> if the configured *transmissionMode* is *tm8* and *pmi-RI-Report* is not present; or
- 2> if the configured *transmissionMode* is *tm9* and *pmi-RI-Report* is not present; or
- 2> if the configured *transmissionMode* is *tm9* and *pmi-RI-Report* is present and *antennaPortsCount* within *csi-RS* is set to *an1*:

3> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

1> else if the *antennaInfo* is included and set to *defaultValue*:

2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.16.1.3 Test description

##### 8.2.4.16.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 3
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18], with TM2 configured.

##### 8.2.4.16.1.3.2 Test procedure sequence

Table 8.2.4.16.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.16.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-107
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-91

**Table 8.2.4.16.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS changes Cell 1 and Cell 3 parameters according to the row "T1" in table 8.2.4.16.1.3.2-1.				
2	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to reconfigure Cell 3 as a SCell and reconfiguring transmission mode for both PCell and SCell.	<--	<i>RRCConnectionReconfiguration</i>	-	-
3	Check: Does the UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
4	The SS transmits an <i>RRCConnectionReconfiguration</i> message to reconfigure transmission mode on both PCell and SCell.	<--	<i>RRCConnectionReconfiguration</i>	-	-
5	Check: Does the UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P

## 8.2.4.16.2 CA / RRC connection reconfiguration / Setup and Change of MIMO / Inter-band CA

The scope and description of the present TC is the same as test case 8.2.4.16.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA.
- Cells configuration: Cell 10 replaces Cell 3.

## 8.2.4.16.3 CA / RRC connection reconfiguration / Setup and Change of MIMO / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.4.16.1 with the following differences:

- CA configuration: Intra-band non-contiguous CA replaces Intra-band contiguous CA

#### 8.2.4.17 CA / RRC connection reconfiguration / Handover / Success / PCell Change and SCell addition

##### 8.2.4.17.1 CA / RRC connection reconfiguration / Handover / Success / PCell Change and SCell addition / Intra-band Contiguous CA

###### 8.2.4.17.1.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure  
and performed the inter frequency measurement }  
ensure that {  
    when { UE receives an RRCCofigurationReconfiguration message including a mobilityControlInfo  
    indicating a different E-UTRA frequency to be handover to one of the SCell and sCellToAddModList  
    with an SCell addition }  
    then { UE transmits an RRCCofigurationReconfigurationComplete message }  
}
```

###### 8.2.4.17.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4

[TS 36.331, clause 5.3.5.4]

If the *RRCCofigurationReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> configure lower layers to consider the SCell(s), if configured, to be in deactivated state;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> if the *RRCCofigurationReconfiguration* message includes the *fullConfig*:
  - 2> perform the radio configuration procedure as specified in section 5.3.5.8;

- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> if connected as an RN:
    - 3> derive the  $K_{UPint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> if connected as an RN:
    - 3> derive the  $K_{UPint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> if connected as an RN:
  - 2> configure lower layers to apply the integrity protection algorithm and the  $K_{UPint}$  key, for current or subsequently established DRBs that are configured to apply integrity protection, if any;
- 1> if the received *RRConnectionReconfiguration* includes the *sCellToReleaseList*:
  - 2> perform SCell release as specified in 5.3.10.3a;
- 1> if the received *RRConnectionReconfiguration* includes the *sCellToAddModList*:
  - 2> perform SCell addition or modification as specified in 5.3.10.3b;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

- 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> if the *RRCConnectionReconfiguration* message includes the *reportProximityConfig*:
  - 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
- 1> set the content of *RRCConnectionReconfigurationComplete* message as follows:
  - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and *plmn-Identity* stored in *VarRLF-Report* is equal to the RPLMN:
    - 3> include *rlf-InfoAvailable*;
  - 2> if the UE has logged measurements available for E-UTRA and *plmn-Identity* stored in *VarLogMeasReport* is equal to the RPLMN:
    - 3> include the *logMeasAvailable*;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

#### 8.2.4.17.1.3 Test description

##### 8.2.4.17.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell and Cell 3 SCell
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.17.1.3.2 Test procedure sequence

Table 8.2.4.17.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.17.1.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 3</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	Off	The power level values are such that camping on Cell 1 is guaranteed.
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	Power levels are such that entry condition for event A3 (measId 1) is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + C$

**Table 8.2.4.17.1.3.2-2: Main behaviour**

<b>St</b>	<b>Procedure</b>	<b>Message Sequence</b>		<b>TP</b>	<b>Verdict</b>
		<b>U - S</b>	<b>Message</b>		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including sCellToAddModList with Cell 3 as SCell addition.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-

**8.2.4.17.2** CA / RRC connection reconfiguration / Handover / Success / PCell Change and SCell addition / Inter-band CA

The scope and description of the present TC is the same as test case 8.2.4.17.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3

**8.2.4.17.3** CA / RRC connection reconfiguration / Handover / Success / PCell Change and SCell addition / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.4.17.1 with the following differences:

- CA configuration: Intra-band non-contiguous CA replaces Intra-band Contiguous CA.

**8.2.4.18** CA / RRC connection reconfiguration / Handover / Success / SCell release

**8.2.4.18.1** CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra-band Contiguous CA

**8.2.4.18.1.1** Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure,
performed the intra-frequency measurement and configured an SCell }
ensure that {
  when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo and
including sCellToReleaseList with an sCellIndex set to the configured SCell }
  then { UE sends an RRConnectionReconfigurationComplete message }
}
```

**8.2.4.18.1.2** Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4 and 5.3.10.3a.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:

2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> configure lower layers to consider the SCell(s), if configured, to be in deactivated state;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> if the *RRCConnectionReconfiguration* message includes the *fullConfig*:

2> perform the radio configuration procedure as specified in section 5.3.5.8;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> if connected as an RN:

3> derive the  $K_{UPint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> if connected as an RN:

3> derive the  $K_{UPint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

- 2> derive the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
  - 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRC_{int}}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> if connected as an RN:
    - 2> configure lower layers to apply the integrity protection algorithm and the  $K_{UP_{int}}$  key, for current or subsequently established DRBs that are configured to apply integrity protection, if any;
  - 1> if the received *RRCConnectionReconfiguration* includes the *sCellToReleaseList*:
    - 2> perform SCell release as specified in 5.3.10.3a;
  - 1> if the received *RRCConnectionReconfiguration* includes the *sCellToAddModList*:
    - 2> perform SCell addition or modification as specified in 5.3.10.3b;
  - 1> perform the measurement related actions as specified in 5.5.6.1;
  - 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
  - 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
  - 1> if the *RRCConnectionReconfiguration* message includes the *reportProximityConfig*:
    - 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
  - 1> set the content of *RRCConnectionReconfigurationComplete* message as follows:
    - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and *plmn-Identity* stored in *VarRLF-Report* is equal to the RPLMN:
      - 3> include *rlf-InfoAvailable*;
    - 2> if the UE has logged measurements available for E-UTRA and *plmn-Identity* stored in *VarLogMeasReport* is equal to the RPLMN:
      - 3> include the *logMeasAvailable*;
  - 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
  - 1> if MAC successfully completes the random access procedure:
    - 2> stop timer T304;
    - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;
    - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;
- NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.
- 2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

[TS 36.331, clause 5.3.10.3a]

The UE shall:

- 1> if the release is triggered by reception of the *sCellToReleaseList*:
- 2> for each *sCellIndex* value included in the *sCellToReleaseList*:
  - 3> if the current UE configuration includes an SCell with value *sCellIndex*:
    - 4> release the SCell;

8.2.4.18.1.3            Test description

8.2.4.18.1.3.1        Pre-test conditions

System Simulator:

- Cell 1 is PCell, Cell 2 is intra-frequency cell of PCell, and Cell 3 is SCell to be added
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.2.4.18.1.3.2        Test procedure sequence

Table 8.2.4.18.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.18.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Cell 3	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) do not satisfy entry condition for event A3 (M2 < M1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1).

## 8.2.4.18.2 CA / RRC connection reconfiguration / Handover / Success / SCell release / Inter-band CA

The scope and description of the present TC is the same as test case 8.2.4.18.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3
- Cell 10 is an Inactive SCell according to [18] cl. 6.3.4

### 8.2.4.18.2.1 Specific message contents

Same as test case 8.2.4.18.1 with the following differences.

**Table 8.2.4.18.2.1-1: Conditions for specific message contents in Table 8.2.4.18.2.1-2**

Condition	Explanation
Band > 64	If band > 64 is selected

**Table 8.2.4.18.2.1-1: MeasConfig (Table 8.2.4.18.1.3.3-4)**

Derivation Path: 36.508, Table 4.6.6-1			
Information Element	Value/remark	Comment	Condition

8.2.4.18.3 CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.4.18.1 with the following differences:

- CA configuration: Intra-band non-contiguous CA replaces Intra-band Contiguous CA

### 8.2.4.19 CA / RRC connection reconfiguration / Handover / Success / PCell Change / SCell no Change

#### 8.2.4.19.1 CA / RRC connection reconfiguration / Handover / Success / PCell Change / SCell no Change / Intra-band Contiguous CA

##### 8.2.4.19.1.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure,
performed the inter-frequency measurement and configured an SCell }
ensure that {
    when { UE receives an RRCCofiguration message including mobilityControlInfo
           indicating change of the PCell and sCellToAddModList with an SCell same from configured SCell
           representing an intra-band contiguous CA }
    then { UE sends an RRCCofigurationComplete message and does not change SCell }
}
```

##### 8.2.4.19.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in TS 36.331, clauses 5.3.5.4 and 5.3.10.3b.

[TS 36.331, clause 5.3.5.4]

If the *RRCCofiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> configure lower layers to consider the SCell(s), if configured, to be in deactivated state;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> if the *RRCCofiguration* message includes the *fullConfig*:
  - 2> perform the radio configuration procedure as specified in section 5.3.5.8;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> if connected as an RN:
    - 3> derive the  $K_{UPint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> if connected as an RN:
    - 3> derive the  $K_{UPint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> if connected as an RN:
  - 2> configure lower layers to apply the integrity protection algorithm and the  $K_{UPint}$  key, for current or subsequently established DRBs that are configured to apply integrity protection, if any;
- 1> if the received *RRCConnectionReconfiguration* includes the *sCellToReleaseList*:
  - 2> perform SCell release as specified in 5.3.10.3a;
- 1> if the received *RRCConnectionReconfiguration* includes the *sCellToAddModList*:
  - 2> perform SCell addition or modification as specified in 5.3.10.3b;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;

- 1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> if the *RRCConnectionReconfiguration* message includes the *reportProximityConfig*:
  - 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
- 1> set the content of *RRCConnectionReconfigurationComplete* message as follows:
  - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and *plmn-Identity* stored in *VarRLF-Report* is equal to the RPLMN:
    - 3> include *rlf-InfoAvailable*;
  - 2> if the UE has logged measurements available for E-UTRA and *plmn-Identity* stored in *VarLogMeasReport* is equal to the RPLMN:
    - 3> include the *logMeasAvailable*;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

[TS 36.331, clause 5.3.10.3b]

The UE shall:

- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is not part of the current UE configuration (SCell addition):
  - 2> add the SCell, corresponding to the *cellIdentification*, in accordance with the received *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*;
  - 2> configure lower layers to consider the SCell to be in deactivated state;
- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is part of the current UE configuration (SCell modification):
  - 2> modify the SCell configuration in accordance with the received *radioResourceConfigDedicatedSCell*;

8.2.4.19.1.3            Test description

8.2.4.19.1.3.1        Pre-test conditions

System Simulator:

- Cell 3 is the PCell, Cell 1 is the SCell to be added and Cell 6 is the inter-frequency neighbour cell.
- Cell 1 is an Inactive SCell according to [18] cl. 6.3.4

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 3 according to [18].

#### 8.2.4.19.1.3.2 Test procedure sequence

Table 8.2.4.19.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.19.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Cell 6	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-91	-85	-97	The power level values are such that measurement results for Cell 3 (M1) and Cell 1 (M2) do not satisfy entry condition for event A3 (M2 < M1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-91	-85	-79	The power level values are such that measurement results for Cell 3 (M1) and Cell 6 (M3) satisfy entry condition for event A3 (M3 > M1).

**Table 8.2.4.19.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict

### 8.2.4.19.2 CA / RRC connection reconfiguration / Handover / Success / PCell Change / SCell no Change / Inter-band CA

The scope and description of the present TC is the same as test case 8.2.4.19.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 1& Cell 1 replaces Cell 6.
- Cell 10 is an Inactive SCell according to [18] cl. 6.3.4

#### 8.2.4.19.2.1 Specific message contents

Same as test case 8.2.4.19.1 with the following differences

**Table 8.2.4.19.2.1-1: Conditions for specific message contents in Table 8.2.4.19.2.1-2**

Condition	Explanation
Band > 64	If band > 64 is selected

### 8.2.4.19.3 CA / RRC connection reconfiguration / Handover / Success / PCell Change / SCell no Change / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.4.19.1 with the following differences:

- CA configuration: Intra-band non-contiguous CA replaces Intra-band Contiguous CA.

### 8.2.4.20 CA / RRC connection reconfiguration / Handover / Success / SCell Change

#### 8.2.4.20.1 CA / RRC connection reconfiguration / Handover / Success / SCell Change / Intra-band Contiguous CA

##### 8.2.4.20.1.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure and performed the inter frequency measurement }
ensure that {
    when { UE receives an RRCConnectionReconfiguration message including a mobilityControlInfo and sCellToAddModList with an SCell different from configured SCell }
        then { UE sends an RRCConnectionReconfigurationComplete message and changes SCell }
}
```

##### 8.2.4.20.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.10.3b.

[TS 36.331, clause 5.3.10.3b]

The UE shall:

- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is not part of the current UE configuration (SCell addition):
  - 2> add the SCell, corresponding to the *cellIdentification*, in accordance with the received *radioResourceConfigCommonSCell* and *radioResourceConfigDedicatedSCell*;
  - 2> configure lower layers to consider the SCell to be in deactivated state;
- 1> for each *sCellIndex* value included in the *sCellToAddModList* that is part of the current UE configuration (SCell modification):
  - 2> modify the SCell configuration in accordance with the received *radioResourceConfigDedicatedSCell*;

##### 8.2.4.20.1.3 Test description

###### 8.2.4.20.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added and Cell 12 is the intra-frequency neighbour cell of Cell 3.
- Cell 3 is Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.
- 3 E-UTRA Cells with the same PLMN.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.4.20.1.3.2 Test procedure sequence

Table 8.2.4.20.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.20.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Cell 12	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	-97	The power level values are such that measurement results for Cell 12 (M12) and Cell 3 (M2) do not satisfy entry condition for event A6.
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-85	-79	The power level values are such that measurement results for Cell 12 (M12) and Cell 3 (M3) satisfy entry condition for event A6.

**Table 8.2.4.20.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Wait 1 s to allow for the switching of cells.	-	-	-	-
2	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to configure Cell 3 as an SCell.	<--	<i>RRCConnectionReconfiguration</i>	-	-
3	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
	EXCEPTION: If UE does not support FGI bit 111, i.e. Event A6, the following step 4 to step 7 except step 6 should not be executed				
4	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup intra-frequency measurement reporting for event A6 on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
5	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
6	The SS changes power level according to row "T1" in Table 8.2.4.20.1.3.2-1.	-	-	-	-
7	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A6.	-->	<i>MeasurementReport</i>	-	-
8	The SS transmits an <i>RRCConnectionReconfiguration</i> message to perform inter-frequency handover to Cell 12 with original SCell Cell 3 release and new SCell Cell1addition.	<--	<i>RRCConnectionReconfiguration</i>	-	-
9	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 12?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
10	The UE transmits a TRACKING AREA UPDATE REQUEST message to update the registration of the actual tracking area.	-	-	-	-
11	The SS responds with TRACKING AREA UPDATE ACCEPT message.	-	-	-	-
12	The UE transmits a TRACKING AREA UPDATE COMPLETE.	-	-	-	-
13	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicates that the UE is in E-UTRA RRC_CONNECTED state on Cell 12?	-	-	1	-

#### 8.2.4.20.2 CA / RRC connection reconfiguration / Handover / Success / SCell Change / Inter-band CA

The scope and description of the present TC is the same as test case 8.2.4.20.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3& Cell 30 replaces Cell 12.
- Cell 10 is Inactive SCell according to [18] cl. 6.3.4.
- Cell 1, Cell 10 and Cell 30 with the same PLMN.

#### 8.2.4.20.3 CA / RRC connection reconfiguration / Handover / Success / SCell Change Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.2.4.20.1 with the following differences:

- CA configuration: Intra-band non contiguous CA replaces Intra-band Contiguous CA.

#### 8.2.4.21 CA / RRC connection reconfiguration / Handover / Success / SCell release

##### 8.2.4.21.1 CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra-band Contiguous CA

###### 8.2.4.21.1.1 Test Purpose (TP)

(1)

with { UE having completed the radio bearer establishment and initial security activation procedure, performed the inter-frequency measurement and configured an SCell }

```

ensure that {
    when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo and
           including sCellToReleaseList with an sCellIndex set to the configured SCell }
        then { UE sends an RRConnectionReconfigurationComplete message }
    }
}

```

#### 8.2.4.21.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4 and 5.3.10.3a.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> configure lower layers to consider the SCell(s), if configured, to be in deactivated state;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> if the *RRConnectionReconfiguration* message includes the *fullConfig*:
  - 2> perform the radio configuration procedure as specified in section 5.3.5.8;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

- 2> update the K<sub>eNB</sub> key based on the fresh K<sub>ASME</sub> key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> if connected as an RN:
    - 3> derive the  $K_{UPint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> if connected as an RN:
    - 3> derive the  $K_{UPint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> if connected as an RN:
  - 2> configure lower layers to apply the integrity protection algorithm and the  $K_{UPint}$  key, for current or subsequently established DRBs that are configured to apply integrity protection, if any;
- 1> if the received *RRCConnectionReconfiguration* includes the *sCellToReleaseList*:
  - 2> perform SCell release as specified in 5.3.10.3a;
- 1> if the received *RRCConnectionReconfiguration* includes the *sCellToAddModList*:
  - 2> perform SCell addition or modification as specified in 5.3.10.3b;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> if the *RRCConnectionReconfiguration* message includes the *reportProximityConfig*:
  - 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
- 1> set the content of *RRCConnectionReconfigurationComplete* message as follows:
  - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and *plmn-Identity* stored in *VarRLF-Report* is equal to the RPLMN:

- 3> include *rlf-InfoAvailable*;
- 2> if the UE has logged measurements available for E-UTRA and *plmn-Identity* stored in *VarLogMeasReport* is equal to the RPLMN:
  - 3> include the *logMeasAvailable*;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

[TS 36.331, clause 5.3.10.3a]

The UE shall:

- 1> if the release is triggered by reception of the *sCellToReleaseList*:
- 2> for each *sCellIndex* value included in the *sCellToReleaseList*:
  - 3> if the current UE configuration includes an SCell with value *sCellIndex*:
    - 4> release the SCell;
- 1> if the release is triggered by RRC connection re-establishment:
  - 2> release all SCells that are part of the current UE configuration;

#### 8.2.4.21.1.3      Test description

#### 8.2.4.21.1.3.1      Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added and Cell 6 is the inter-frequency neighbour cell of PCell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.21.1.3.2      Test procedure sequence

Table 8.2.4.21.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.21.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Cell 6	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 6 (M6) do not satisfy entry condition for event A5.
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 6 (M6) satisfy entry condition for event A5.

**Table 8.2.4.21.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message

## 8.2.4.21.2 CA / RRC connection reconfiguration / Handover / Success / SCell release / Inter-band CA

The scope and description of the present TC is the same as test case 8.2.4.21.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration:
- Cell 10 replaces Cell 3, and then
- If f6 is supported as per TS 36.508 Table 6.2.3.2-2 by the band combination in which the test case is executed, then Cell 28 replaces Cell 6; otherwise Cell 3 replaces Cell 6. When Cell 28 is used its PLMN shall be set to PLMN 1.

### 8.2.4.21.3 CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra-band non-Contiguous CA

The scope and description of the present TC is the same as test case 8.2.4.21.1 with the following differences:

- CA configuration: Intra-band non-Contiguous CA replaces Intra-band Contiguous CA
- Cells configuration:

### 8.2.4.22 Void

### 8.2.4.23 CA / RRC connection reconfiguration / Handover / Failure / Re-establishment successful

#### 8.2.4.23.1 CA / RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Intra-band Contiguous CA

##### 8.2.4.23.1.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and after receiving an RRCCofiguration message including a mobilityControlInfo
indicating a different E-UTRA cell and including sCellToReleaseList with an sCellIndex set to the
configured SCell }
ensure that {
    when { UE detects handover failure and the source PCell is selectable }
    then { UE successfully performs an RRC connection re-establishment procedure on source PCell }
}
```

(2)

```
with { UE having completed the radio bearer establishment and initial security activation procedure
and after receiving an RRCCofiguration message including a mobilityControlInfo
indicating a different E-UTRA cell and including sCellToReleaseList with an sCellIndex set to the
configured SCell }
ensure that {
    when { UE detects handover failure and the initial SCell is selectable }
    then { UE successfully performs an RRC connection re-establishment procedure on original SCell
and the original SCell becomes the PCell }
}
```

##### 8.2.4.23.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.1.3, 5.3.5.4, 5.3.5.6, 5.3.7.2, 5.3.7.4, 5.3.7.5, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.1.3]

...

The source eNB should, for some time, maintain a context to enable the UE to return in case of handover failure. After having detected handover failure, the UE attempts to resume the RRC connection either in the source PCell or in another cell using the RRC re-establishment procedure. This connection resumption succeeds only if the accessed cell is prepared, i.e. concerns a cell of the source eNB or of another eNB towards which handover preparation has been performed. The cell in which the re-establishment procedure succeeds becomes the PCell while SCells and STAGs, if configured, are released..

[TS 36.331, clause 5.3.5.4]

If the RRCCofiguration message includes the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to t304, as included in the mobilityControlInfo;
- 1> if the carrierFreq is included:

2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;

1> else:

2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> perform the measurement related actions as specified in 5.5.6.1;

1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;

1> if MAC successfully completes the random access procedure:

2> stop timer T304;

2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> the procedure ends;

...

[TS 36.331, clause 5.3.5.6]

The UE shall:

1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;

2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

...

1> upon handover failure, in accordance with 5.3.5.6; or

...

Upon initiation of the procedure, the UE shall:

1> stop timer T310, if running;

1> start timer T311;

1> suspend all RBs except SRB0;

1> reset MAC;

1> apply the default physical channel configuration as specified in 9.2.4;

- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331, clause 5.3.7.4]

The UE shall set the contents of *RRConnectionReestablishmentRequest* message as follows:

- 1> set the *ue-Identity* as follows:
    - 2> set the *c-RNTI* to the C-RNTI used in the source cell (handover and mobility from E-UTRA failure) or used in the cell in which the trigger for the re-establishment occurred (other cases);
    - 2> set the *physCellId* to the physical cell identity of the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases);
    - 2> set the *shortMAC-I* to the 16 least significant bits of the MAC-I calculated:
      - 3> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) *VarShortMAC-Input*;
      - 3> with the  $K_{RRCint}$  key and integrity protection algorithm that was used in the source cell (handover and mobility from E-UTRA failure) or of the cell in which the trigger for the re-establishment occurred (other cases); and
      - 3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
  - 1> set the *reestablishmentCause* as follows:
    - 2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):
      - 3> set the *reestablishmentCause* to the value '*reconfigurationFailure*';
    - 2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
      - 3> set the *reestablishmentCause* to the value '*handoverFailure*';
- ...

The UE shall submit the *RRConnectionReestablishmentRequest* message to lower layers for transmission.

[TS 36.331, clause 5.3.7.5]

NOTE: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

- 1> stop timer T301;
- 1> re-establish PDCP for SRB1;
- 1> re-establish RLC for SRB1;
- 1> perform the radio resource configuration procedure in accordance with the received *radioResourceConfigDedicated* and as specified in 5.3.10;
- 1> resume SRB1;
- 1> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key to which the current  $K_{eNB}$  is associated, using the *nextHopChainingCount* value indicated in the *RRConnectionReestablishment* message, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;

- 1> derive the  $K_{RRCint}$  key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to activate integrity protection using the previously configured algorithm and the  $K_{RRCint}$  key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply ciphering using the previously configured algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> submit the *RRConnectionReestablishmentComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;
- 1> if the *antennaInfo* is included and set to '*explicitValue*':
  - 2> if the configured *transmissionMode* is not 'tm3' or 'tm4' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.23.1.3 Test description

##### 8.2.4.23.1.3.1.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell and Cell 3 is the SCell
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.4.23.1.3.2 Test procedure sequence

Table 8.2.4.23.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3" and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.23.1.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 3</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy exit condition for event A3 ( $M3 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 ( $M3 > M1$ ).
T2	Cell-specific RS EPRE	dBm/15kHz	-85	"Off"	The power level values are assigned to satisfy $SrxlevCell 3 < 0$ such that selecting Cell 1 is guaranteed (NOTE 1).
T3	Cell-specific RS EPRE	dBm/15kHz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 ( $M3 > M1$ ). (NOTE 1).
T4	Cell-specific RS EPRE	dBm/15kHz	"Off"	-79	The power level values are assigned to satisfy $SrxlevCell 1 < 0$ such that selecting Cell 3 is guaranteed. (NOTE 1).

NOTE 1: Power level "Off" is defined in TS36.508 Table 6.2.2.1-1.

**8.2.4.23.2 CA / RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band CA**

The scope and description of the present TC is the same as test case 8.2.4.23.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3.
- Cell 10 is Inactive SCells according to [18] cl. 6.3.4

**8.2.4.23.3 CA / RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Intra-band non-Contiguous CA**

The scope and description of the present TC is the same as test case 8.2.4.23.1 with the following differences:

- CA configuration: Intra-band non-Contiguous CA replaces Intra-band Contiguous CA

**8.2.4.24 Void**

**8.2.4.25 Dual Connectivity / RRC connection reconfiguration / Handover**

**8.2.4.25.1 RRC connection reconfiguration / Intra-MeNB Handover / MCG DRB to MCG DRB and MCG DRB to/from SCG DRB**

**8.2.4.25.1.1 Test Purpose (TP)**

(1)

```
with { UE in connected mode with SCG activated with a MCG DRB and a SCG DRB established }
ensure that {
    when { the UE receives a RRConnectionReconfiguration message including mobilityControlInfo
           indicating a different E-UTRA frequency }
    then { the UE responds with a RRConnectionReconfigurationComplete message }
}
```

(2)

```
with { UE in connected mode with SCG activated has performed handover to another PCell keeping the
UE context for the MCG DRB and SCG DRB }
ensure that {
    when { uplink data are submitted for transmission on the MCG/SCG DRBs }
    then { the UE transmits the uplink data on the radio bearer associated with the MCG/SCG DRBs
           respectively }
}
```

(3)

```
with { UE in connected mode with SCG activated with a MCG DRB and a SCG DRB established }
ensure that {
    when { the UE receives a RRConnectionReconfiguration message including mobilityControlInfo
           indicating a different E-UTRA frequency and to change of one of the MCG DRBs to a SCG DRB }
    then { the UE responds with a RRConnectionReconfigurationComplete message }
}
```

(4)

```
with { UE in connected mode with SCG activated has performed handover to another PCell and has re-
configured a MCG DRB to a SCG DRB }
ensure that {
    when { uplink data are submitted for transmission on the MCG/SCG DRBs }
    then { the UE transmits the uplink data on the radio bearer associated with the MCG/SCG DRBs
           respectively }
}
```

(5)

```
with { UE in connected mode with SCG activated with a MCG DRB and two SCG DRBs established }
ensure that {
```

```

when { the UE receives a RRConnectionReconfiguration message including mobilityControlInfo
indicating a different E-UTRA frequency and to change of one of the SCG DRBs to a MCG DRB }
then { the UE responds with a RRConnectionReconfigurationComplete message }
}

```

(6)

```

with { UE in connected mode with SCG activated has performed handover to another PCell and has re-
configured a SCG DRB to a MCG DRB }
ensure that {
when { uplink data are submitted for transmission on the MCG/SCG DRBs }
then { the UE transmits the uplink data on the radio bearer associated with the MCG/SCG DRBs
respectively }
}

```

#### 8.2.4.25.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.3a1, 5.3.10.12. Unless otherwise stated these are Rel-12 requirements.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received *RRConnectionReconfiguration* includes the *scg-Configuration*; or
- 1> if the current UE configuration includes one or more split DRBs and the received *RRConnectionReconfiguration* includes *radioResourceConfigDedicated* including *drb-ToAddModList*:
- 2> perform SCG reconfiguration as specified in 5.3.10.10;

...

[TS 36.331, clause 5.3.10.3a1]

For the *drb-Identity* value for which this procedure is initiated, the UE shall:

- 1> if *drb-ToAddModListSCG* is received and includes the *drb-Identity* value; and *drb-Identity* value is not part of the current UE configuration (i.e. DC specific DRB establishment):
- 2> if *drb-ToAddModList* is received and includes the *drb-Identity* value (i.e. add split DRB):
  - 3> establish a PDCP entity and configure it with the current MCG security configuration and in accordance with the *pdcn-Config* included in *drb-ToAddModList*;
  - 3> establish an MCG RLC entity and an MCG DTCH logical channel in accordance with the *rlc-Config*, *logicalChannelIdentity* and *logicalChannelConfig* included in *drb-ToAddModList*;
  - 3> establish an SCG RLC entity and an SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG* included in *drb-ToAddModListSCG*;
- 2> else (i.e. add SCG DRB):
  - 3> establish a PDCP entity and configure it with the current SCG security configuration and in accordance with the *pdcn-Config* included in *drb-ToAddModListSCG*;
  - 3> establish an SCG RLC entity or entities and an SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG* included in *drb-ToAddModListSCG*;
- 2> indicate the establishment of the DRB(s) and the *eps-BearerIdentity* of the established DRB(s) to upper layers;
- 1> else (i.e. DC specific DRB modification; *drb-ToAddModList* and/ or *drb-ToAddModListSCG* received):

2> if the DRB indicated by *drb-Identity* is a split DRB:

3> if *drb-ToAddModList* is received and includes the *drb-Identity* value, while for this entry *drb-TypeChange* is included and set to *toMCG* (i.e. split to MCG):

4> release the SCG RLC entity and the SCG DTCH logical channel;

4> reconfigure the PDCP entity in accordance with the *pdcp-Config*, if included in *drb-ToAddModList*;

4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

3> else (i.e. reconfigure split):

4> reconfigure the PDCP entity in accordance with the *pdcp-Config*, if included in *drb-ToAddModList*;

4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

4> reconfigure the SCG RLC entity and/ or the SCG DTCH logical channel in accordance with the *rlc-ConfigSCG* and *logicalChannelConfigSCG*, if included in *drb-ToAddModListSCG*;

2> if the DRB indicated by *drb-Identity* is an SCG DRB:

3> if *drb-ToAddModList* is received and includes the *drb-Identity* value, while for this entry *drb-TypeChange* is included and set to *toMCG* (i.e. SCG to MCG):

4> reconfigure the PDCP entity with the current MCG security configuration and in accordance with the *pdcp-Config*, if included in *drb-ToAddModList*;

4> reconfigure the SCG RLC entity or entities and the SCG DTCH logical channel to be an MCG RLC entity or entities and an MCG DTCH logical channel;

4> reconfigure the MCG RLC entity or entities and/ or the MCG DTCH logical channel in accordance with the *rlc-Config*, *logicalChannelIdentity* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

3> else (i.e. *drb-ToAddModListSCG* is received and includes the *drb-Identity* value i.e. reconfigure SCG):

4> reconfigure the PDCP entity in accordance with the *pdcp-Config*, if included in *drb-ToAddModListSCG*;

4> reconfigure the SCG RLC entity or entities and/ or the SCG DTCH logical channel in accordance with the *rlc-ConfigSCG* and *logicalChannelConfigSCG*, if included in *drb-ToAddModListSCG*;

2> if the DRB indicated by *drb-Identity* is an MCG DRB:

3> if *drb-ToAddModListSCG* is received and includes the *drb-Identity* value, while for this entry *drb-Type* is included and set to *split* (i.e. MCG to split):

4> reconfigure the PDCP entity in accordance with the *pdcp-Config*, if included in *drb-ToAddModList*;

4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

4> establish an SCG RLC entity and an SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG*, included in *drb-ToAddModListSCG*;

3> else (i.e. *drb-Type* is included and set to *scg* i.e. MCG to SCG):

4> reconfigure the PDCP entity with the current SCG security configuration and in accordance with the *pdcp-Config*, if included in *drb-ToAddModListSCG*;

4> reconfigure the MCG RLC entity or entities and the MCG DTCH logical channel to be an SCG RLC entity or entities and an SCG DTCH logical channel;

4> reconfigure the SCG RLC entity or entities and/ or the SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG*, if included in *drb-ToAddModListSCG*;

[TS 36.331, clause 5.3.10.12]

The UE shall:

- 1> for each split or SCG DRBs that is part of the current configuration:
- 2> if the corresponding *drb-Identity* value is included in the received *drb-ToAddModList*; and:
- 2> if the corresponding *drb-Identity* value is not included in the received *drb-ToAddModListSCG* (i.e. reconfigure split, split to MCG or SCG to MCG):
- 3> perform the DC specific DRB addition or reconfiguration as specified in 5.3.10.3a1;

#### 8.2.4.25.1.3 Test description

##### 8.2.4.25.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the interfrequency neighbour cell and Cell 10 is the PSCell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1 cell 3 and Cell 10.

UE:

Preamble:

- The UE is in state DC MCG/SCG DRB Loopback Activated (state 6A) on Cell 1 and Cell 10 according to [18], UE has 3 DRBs configured. DRB 1(Default bearer) and DRB 2(dedicated bearer) as MCG DRB's and DRB 3 (dedicated bearer) as SCG bearer.

##### 8.2.4.25.1.3.2 Test procedure sequence

Table 8.2.4.6.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1, T2" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.25.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Cell 10	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-73	-97	-75	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy exit condition for event A3 (M3 < M1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	-75	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M3 > M1).
T2	Cell-specific RS EPRE	dBm/15k Hz	-73	-85	-75	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M3 > M1).

Table 8.2.4.25.1.3.2-2: Main behaviour

(1)

```
with { UE in connected mode }
ensure that {
  when { the UE receives a RRConnectionReconfiguration message including mobilityControlInfo
  indicating a different E-UTRA frequency and to change from the MCG DRB to a Split DRB }
  then { the UE responds with a RRConnectionReconfigurationComplete message }
}
```

(2)

```
with { UE in connected mode with SCG activated has performed handover to another PCell and has re-
configured a MCG DRB to a Split DRB }
ensure that {
  when { uplink data are submitted for transmission on the MCG/Split DRBs }
  then { the UE transmits the uplink data on the radio bearer associated with the MCG/Split DRBs
  respectively }
}
```

(3)

```
with { UE in connected mode with SCG activated with a MCG DRB split DRB established }
ensure that {
  when { the UE receives a RRConnectionReconfiguration message including mobilityControlInfo
  indicating a different E-UTRA frequency and to change from the Split DRB to a MCG DRB }
  then { the UE responds with a RRConnectionReconfigurationComplete message }
}
```

(4)

```
with { UE in connected mode with SCG activated has performed handover to another PCell and has re-
configured a Split DRB to a MCG/SCG DRB }
ensure that {
  when { uplink data are submitted for transmission on the MCG/Split DRBs }
  then { the UE transmits the uplink data on the radio bearer associated with the MCG/Split DRBs
  respectively }
}
```

**8.2.4.25.2.2 Conformance requirements**

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.3a1, 5.3.10.12. Unless otherwise stated these are Rel-12 requirements.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received *RRConnectionReconfiguration* includes the *scg-Configuration*; or
- 1> if the current UE configuration includes one or more split DRBs and the received *RRConnectionReconfiguration* includes *radioResourceConfigDedicated* including *drb-ToAddModList*:
- 2> perform SCG reconfiguration as specified in 5.3.10.10;

...

[TS 36.331, clause 5.3.10.3a1]

For the *drb-Identity* value for which this procedure is initiated, the UE shall:

- 1> if *drb-ToAddModListSCG* is received and includes the *drb-Identity* value; and *drb-Identity* value is not part of the current UE configuration (i.e. DC specific DRB establishment):
  - 2> if *drb-ToAddModList* is received and includes the *drb-Identity* value (i.e. add split DRB):
    - 3> establish a PDCP entity and configure it with the current MCG security configuration and in accordance with the *pdcpc-Config* included in *drb-ToAddModList*;
    - 3> establish an MCG RLC entity and an MCG DTCH logical channel in accordance with the *rlc-Config*, *logicalChannelIdentity* and *logicalChannelConfig* included in *drb-ToAddModList*;
    - 3> establish an SCG RLC entity and an SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG* included in *drb-ToAddModListSCG*;
  - 2> else (i.e. add SCG DRB):
    - 3> establish a PDCP entity and configure it with the current SCG security configuration and in accordance with the *pdcpc-Config* included in *drb-ToAddModListSCG*;
    - 3> establish an SCG RLC entity or entities and an SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG* included in *drb-ToAddModListSCG*;
  - 2> indicate the establishment of the DRB(s) and the *eps-BearerIdentity* of the established DRB(s) to upper layers;
- 1> else (i.e. DC specific DRB modification; *drb-ToAddModList* and/ or *drb-ToAddModListSCG* received):
  - 2> if the DRB indicated by *drb-Identity* is a split DRB:
    - 3> if *drb-ToAddModList* is received and includes the *drb-Identity* value, while for this entry *drb-TypeChange* is included and set to MCG (i.e. split to MCG):
      - 4> release the SCG RLC entity and the SCG DTCH logical channel;
      - 4> reconfigure the PDCP entity in accordance with the *pdcpc-Config*, if included in *drb-ToAddModList*;
      - 4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;
    - 3> else (i.e. reconfigure split):
      - 4> reconfigure the PDCP entity in accordance with the *pdcpc-Config*, if included in *drb-ToAddModList*;
      - 4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;
      - 4> reconfigure the SCG RLC entity and/ or the SCG DTCH logical channel in accordance with the *rlc-ConfigSCG* and *logicalChannelConfigSCG*, if included in *drb-ToAddModListSCG*;

2> if the DRB indicated by *drb-Identity* is an SCG DRB:

3> if *drb-ToAddModList* is received and includes the *drb-Identity* value, while for this entry *drb-TypeChange* is included and set to *toMCG* (i.e. SCG to MCG):

4> reconfigure the PDCP entity with the current MCG security configuration and in accordance with the *pdcn-Config*, if included in *drb-ToAddModList*;

4> reconfigure the SCG RLC entity or entities and the SCG DTCH logical channel to be an MCG RLC entity or entities and an MCG DTCH logical channel;

4> reconfigure the MCG RLC entity or entities and/ or the MCG DTCH logical channel in accordance with the *rlc-Config*, *logicalChannelIdentity* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

3> else (i.e. *drb-ToAddModListSCG* is received and includes the *drb-Identity* value i.e. reconfigure SCG):

4> reconfigure the PDCP entity in accordance with the *pdcn-Config*, if included in *drb-ToAddModListSCG*;

4> reconfigure the SCG RLC entity or entities and/ or the SCG DTCH logical channel in accordance with the *rlc-ConfigSCG* and *logicalChannelConfigSCG*, if included in *drb-ToAddModListSCG*;

2> if the DRB indicated by *drb-Identity* is an MCG DRB:

3> if *drb-ToAddModListSCG* is received and includes the *drb-Identity* value, while for this entry *drb-Type* is included and set to *split* (i.e. MCG to split):

4> reconfigure the PDCP entity in accordance with the *pdcn-Config*, if included in *drb-ToAddModList*;

4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

4> establish an SCG RLC entity and an SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG*, included in *drb-ToAddModListSCG*;

3> else (i.e. *drb-Type* is included and set to *scg* i.e. MCG to SCG):

4> reconfigure the PDCP entity with the current SCG security configuration and in accordance with the *pdcn-Config*, if included in *drb-ToAddModListSCG*;

4> reconfigure the MCG RLC entity or entities and the MCG DTCH logical channel to be an SCG RLC entity or entities and an SCG DTCH logical channel;

4> reconfigure the SCG RLC entity or entities and/ or the SCG DTCH logical channel in accordance with the *rlc-ConfigSCG*, *logicalChannelIdentitySCG* and *logicalChannelConfigSCG*, if included in *drb-ToAddModListSCG*;

[TS 36.331, clause 5.3.10.12]

The UE shall:

1> for each split or SCG DRBs that is part of the current configuration:

2> if the corresponding *drb-Identity* value is included in the received *drb-ToAddModList*; and:

2> if the corresponding *drb-Identity* value is not included in the received *drb-ToAddModListSCG* (i.e. reconfigure split, split to MCG or SCG to MCG):

3> perform the DC specific DRB addition or reconfiguration as specified in 5.3.10.3a1;

8.2.4.25.2.3            Test description

8.2.4.25.2.3.1        Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the interfrequency neighbour cell and Cell 10 is the PSCell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1 cell 3 and Cell 10.

UE:

Preamble:

- The UE is in state DC Loopback Activated (state 6) on Cell 1 according to [18], UE has 2 DRBs configured. DRB 1(Default bearer) and DRB 2(dedicated bearer) as MCG DRB.

#### 8.2.4.25.2.3.2 Test procedure sequence

Table 8.2.4.6.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1, T2" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.25.2.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Cell 10	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-73	-97	-75	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy exit condition for event A3 ( $M3 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	-75	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 ( $M3 > M1$ ).
T2	Cell-specific RS EPRE	dBm/15k Hz	-73	-85	-75	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 ( $M3 > M1$ ).

**Table 8.2.4.25.2.3.2-2: Main behaviour**

1	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to setup inter frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 3 parameters according to the row "T1" in table 8.2.4.25.2.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 3.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform inter frequency handover to Cell 3 and to change from the MCG DRB to a Split DRB.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 3 to confirm the successful completion of the inter frequency handover?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
7	The SS transmits one IP packet to the UE on Cell 3 on each 2 DRB's.	<--	IP packets	-	-
8	Check: Does the UE loop back the IP packet on Cell 3 on each of 2 DRB's?	(NOT E)-->	IP packets	2	P
8A	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 3 to setup inter frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
8B	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 3.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
9	The SS changes Cell 1 and Cell 3 parameters according to the row "T2" in table 8.2.4.25.2.3.2-1.	-	-	-	-
10	The UE transmits a <i>MeasurementReport</i> message on Cell 3 to report event A3 with the measured RSRP, RSRQ value for Cell 1.	-->	<i>MeasurementReport</i>	-	-
11	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 3 to order the UE to perform inter frequency handover to Cell 1 and to change from the Split DRB to a MCG DRB.	<--	<i>RRCConnectionReconfiguration</i>	-	-
12	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1 to confirm the successful completion of the inter frequency handover?	-->	<i>RRCConnectionReconfigurationComplete</i>	3	P
13	The SS transmits one IP packet to the UE on Cell 1 on all each 2 DRB's.	<--	IP packets	-	-
14	Check: Does the UE loop back the IP packet on Cell1 on each of 2 DRB's?	-->	IP packets	4	P

NOTE: The UE loops back the IP packet via Cell 10 (PSCell) at PHY/MAC/RLC level, which is then routed within the SS to the PCell's PDCP entity. UE's lower layer transmission on Cell 10 (PSCell) is implicitly tested by assigning an UL Grant only on Cell 10.

8.2.4.25.3            RRC connection reconfiguration / Intra-MeNB Handover / Split DRB to Split DRB

8.2.4.25.3.1        Test Purpose (TP)

(1)

With { UE in connected mode with SCG activated with a Split DRB established }  
**ensure that {**

```

when { the UE is receiving a RRConnectionReconfiguration message including mobilityControlInfo
indicating a different E-UTRA frequency for the PCell and keeping the current PSCell and the Split
DRB }
then { the UE responds with a RRConnectionReconfigurationComplete message }
}

```

(2)

```

With { UE in connected mode with SCG activated has performed handover to another PCell keeping the
PSCell and the Split DRB }
ensure that {
when { uplink data are submitted for transmission on the Split DRB }
then { the UE transmits the uplink data on the radio bearer associated with the Split DRB }
}

```

#### 8.2.4.25.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.10 and 5.3.10.12. Unless otherwise stated these are Rel-12 requirements.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> stop timer T312, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> ...;
- 1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MCG MAC and SCG MAC, if configured;

- 1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

- 1> re-establish MCG RLC and SCG RLC, if configured, for all RBs that are established;

- 1> configure lower layers to consider the SCell(s) other than the PSCell, if configured, to be in deactivated state;

- 1> apply the value of the *newUE-Identity* as the C-RNTI;

- 1> if the *RRConnectionReconfiguration* message includes the *fullConfig*:

- 2> ...;

- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;

1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> ...;

1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

2> update the  $K_{eNB}$  key based on the  $K_{ASME}$  key taken into use with the latest successful NAS SMC procedure, as specified in TS 33.401 [32];

1> else:

2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

1> store the *nextHopChainingCount* value;

1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:

2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> if connected as an RN:

3> derive the  $K_{UPint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];

1> else:

2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> if connected as an RN:

3> derive the  $K_{UPint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];

2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1> if connected as an RN:

2> ...;

1> if the received *RRCConnectionReconfiguration* includes the *sCellToReleaseList*:

2> ...;

1> if the received *RRCConnectionReconfiguration* includes the *sCellToAddModList*:

2> ...;

1> if the received *RRCConnectionReconfiguration* includes the *scg-Configuration*; or

1> if the current UE configuration includes one or more split DRBs and the received *RRCConnectionReconfiguration* includes *radioResourceConfigDedicated* including *drb-ToAddModList*:

2> perform SCG reconfiguration as specified in 5.3.10.10;

- 1> if the received *RRCConnectionReconfiguration* includes the *systemInformationBlockType1Dedicated*:
  - 2> perform the actions upon reception of the *SystemInformationBlockType1* message as specified in 5.2.2.7;
  - 1> perform the measurement related actions as specified in 5.5.6.1;
  - 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
  - 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
  - 1> if the *RRCConnectionReconfiguration* message includes the *otherConfig*:
    - 2> perform the other configuration procedure as specified in 5.3.10.9;
  - 1> if the *RRCConnectionReconfiguration* message includes the *sl-DiscConfig* or *sl-CommConfig*:
    - 2> ...;
  - 1> if the *RRCConnectionReconfiguration* message includes *wlan-OffloadInfo*:
    - 2> ...;
  - 1> set the content of *RRCConnectionReconfigurationComplete* message as follows:
    - 2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:
      - 3> ...;
    - 2> if the UE has MBSFN logged measurements available for E-UTRA and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport* and if T330 is not running:
      - 3> ...;
    - 2> else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:
      - 3> include the *logMeasAvailable*;
    - 2> if the UE has connection establishment failure information available in *VarConnEstFailReport* and if the RPLMN is equal to *plmn-Identity* stored in *VarConnEstFailReport*:
      - 3> ...;
  - 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
  - 1> if MAC successfully completes the random access procedure:
    - 2> stop timer T304;
    - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;
    - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;
- NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.
- 2> if the UE is configured to provide IDC indications:
    - 3> ...:

2> if the UE is configured to provide power preference indications:

3> ...;

2> if *SystemInformationBlockType15* is broadcast by the PCell:

3> ...;

2> if *SystemInformationBlockType18* is broadcast by the target PCell; and the UE transmitted a *SidelinkUEInformation* message including *commRxInterestedFreq* or *commTxResourceReq* during the last 1 second preceding reception of the *RRConnectionReconfiguration* message including *mobilityControlInfo*; or

2> if *SystemInformationBlockType19* is broadcast by the target PCell; and the UE transmitted a *SidelinkUEInformation* message including *discRxInterest* or *discTxResourceReq* during the last 1 second preceding reception of the *RRConnectionReconfiguration* message including *mobilityControlInfo*:

3> ...;

2> the procedure ends;

NOTE 4: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

[TS 36.331, clause 5.3.10.10]

The UE shall:

1> if the received *scg-Configuration* is set to *release* or includes the *mobilityControlInfoSCG* (i.e. SCG release/ change):

2> if *mobilityControlInfo* is not received (i.e. SCG release/ change without HO):

3> ...;

1> if the received *scg-Configuration* is set to *release*:

2> ...;

1> else:

2> if the received *scg-ConfigPartMCG* includes the *scg-Counter*:

3> update the S-K<sub>eNB</sub> key based on the K<sub>eNB</sub> key and using the received *scg-Counter* value, as specified in TS 33.401 [32];

3> derive the K<sub>UPenc</sub> key associated with the *cipheringAlgorithmSCG* included in *mobilityControlInfoSCG* within the received *scg-ConfigPartSCG*, as specified in TS 33.401 [32];

3> configure lower layers to apply the ciphering algorithm and the K<sub>UPenc</sub> key;

2> if the received *scg-ConfigPartSCG* includes the *radioResourceConfigDedicatedSCG*:

3> reconfigure the dedicated radio resource configuration for the SCG as specified in 5.3.10.11;

2> if the current UE configuration includes one or more split or SCG DRBs and the received *RRConnectionReconfiguration* message includes *radioResourceConfigDedicated* including *drb-ToAddModList*:

3> reconfigure the SCG or split DRB by *drb-ToAddModList* as specified in 5.3.10.12;

2> if the received *scg-ConfigPartSCG* includes the *pSCellToAddMod*:

3> perform PSCell addition or modification as specified in 5.3.10.3c;

2> if the received *scg-ConfigPartSCG* includes the *sCellToReleaseListSCG*:

3> ...;

- 2> if the received *scg-ConfigPartSCG* includes the *sCellToAddModListSCG*:
  - 3> perform SCell addition or modification as specified in 5.3.10.3b;
  - 2> configure lower layers in accordance with *mobilityControlInfoSCG*, if received;
  - 2> if the received *scg-ConfigPartSCG* includes the *mobilityControlInfoSCG* (i.e. SCG change):
    - 3> ...;

NOTE 2: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

[TS 36.331, clause 5.3.10.12]

The UE shall:

- 1> for each split or SCG DRBs that is part of the current configuration:
  - 2> if the corresponding *drb-Identity* value is included in the received *drb-ToAddModList*; and:
  - 2> if the corresponding *drb-Identity* value is not included in the received *drb-ToAddModListSCG* (i.e. reconfigure split, split to MCG or SCG to MCG):
    - 3> perform the DC specific DRB addition or reconfiguration as specified in 5.3.10.3a1;

8.2.4.25.3.3 Test description

8.2.4.25.3.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the source PCell, Cell 3 is the target PCell and Cell 10 is the PSCell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1, Cell 3 and Cell 10.

UE:

Preamble:

- The UE is in state DC Split DRB Loopback Activated (state 6B) on Cell 1 and Cell 10 according to [18]

8.2.4.25.3.3.2 Test procedure sequence

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConectionReconfiguration</i> message including <i>mobilityControlInfo</i> (handover).	<--	<i>RRCConectionReconfiguration</i>	-	-
2	Check: Does the UE transmit an <i>RRCConectionReconfigurationComplete</i> message on Cell 3?	-->	<i>RRCConectionReconfigurationComplete</i>	1	P
3	The SS transmits one IP packet to the UE on Cell 3 on the DRB associated with the Split DRB.	<--	IP packet	-	-
4	Check: Does the UE loop back the IP packet on Cell 3 on the Split DRB (NOTE)?	-->	IP packet	2	P

NOTE: The UE loops back the IP packet via Cell 10 (PSCell) at PHY/MAC/RLC level, which is then routed within the SS to the PCell's PDCP entity. UE's lower layer transmission on Cell 10 (PSCell) is implicitly tested by assigning an UL Grant only on Cell 10

## 8.2.4.25.3.3.3 Specific message contents

**Table 8.2.4.25.3.3.3-1: RRCCoNNECTIONReconfiguration (step 1, Table 8.2.4.25.3.3.2-1)**

Derivation Path: 36.508, Table 4.6.1-8, condition HO
--

8.2.4.25.4 RRC connection reconfiguration / Handover with SCG release / MCG/SCG DRBs to MCG DRB

8.2.4.25.4.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state with SCG activated with a MCG DRB and a SCG DRB established
}
ensure that {
    when { UE receives an RRCCoNNECTIONReconfiguration message containing mobilityControlInfo and SCG-
Configuration-r12 with release }
    then { UE sends an RRCCoNNECTIONReconfigurationComplete message }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state}
ensure that {
    when { uplink data are submitted for transmission on the radio bearer of the target PCell UE }
    then { UE transmits the uplink data on the radio bearer associated with the dedicated EPS bearer
context }
}
```

8.2.4.25.4.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.4 and 5.3.10.10.

[TS 36.331, clause 5.3.5.4]

If the *RRCCoNNECTIONReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received *RRCCoNNECTIONReconfiguration* includes the *scg-Configuration*; or
- 1> if the current UE configuration includes one or more split DRBs and the received *RRCCoNNECTIONReconfiguration* includes *radioResourceConfigDedicated* including *drb-ToAddModList*:
- 2> perform SCG reconfiguration as specified in 5.3.10.10;

[TS 36.331, clause 5.3.10.10]

- 1> if the received *scg-Configuration* is set to *release*:

2> release the entire SCG configuration, except for the DRB configuration (i.e. as configured by *drb-ToAddModListSCG*);

...

- 2> stop timer T313, if running;
- 2> stop timer T307, if running;

## 8.2.4.25.4.3 Test Description

## 8.2.4.25.4.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the target PCell and Cell 10 is the PSCell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1, Cell 3 and Cell 10.

UE:

None.

Preamble:

- The UE is in state DC MCG/SCG DRB Loopback Activation (to state 6A).

## 8.2.4.25.4.3.2 Test procedure sequence

**Table 8.2.4.25.4.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing <i>mobilityControlInfo</i> and <i>SCG-Configuration-r12</i> with <i>release</i> . <i>RRCConnectionReconfiguration</i> message contains the DEACTIVATE EPS BEARER CONTEXT REQUEST message	<--	<i>RRCConnectionReconfiguration</i>	-	-

(2)

```
with { UE in E-UTRA RRC_CONNECTED state}
ensure that {
  when { uplink data are submitted for transmission on the radio bearer of the target PCell UE }
  then { UE transmits the uplink data on the radio bearer associated with the dedicated EPS bearer context }
}
```

#### 8.2.4.25.5.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.3a1 and 5.3.10.10.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received *RRConnectionReconfiguration* includes the *scg-Configuration*; or
- 1> if the current UE configuration includes one or more split DRBs and the received *RRConnectionReconfiguration* includes *radioResourceConfigDedicated* including *drb-ToAddModList*:
- 2> perform SCG reconfiguration as specified in 5.3.10.10;

[TS 36.331, clause 5.3.10.3a1]

For the *drb-Identity* value for which this procedure is initiated, the UE shall:

...

- 1> else (i.e. DC specific DRB modification; *drb-ToAddModList* and/ or *drb-ToAddModListSCG* received):
- 2> if the DRB indicated by *drb-Identity* is a split DRB:
  - 3> if *drb-ToAddModList* is received and includes the *drb-Identity* value, while for this entry *drb-TypeChange* is included and set to *toMCG* (i.e. split to MCG):
    - 4> release the SCG RLC entity and the SCG DTCH logical channel;
    - 4> reconfigure the PDCP entity in accordance with the *pdcp-Config*, if included in *drb-ToAddModList*;
    - 4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

[TS 36.331, clause 5.3.10.10]

- 1> if the received *scg-Configuration* is set to *release*:
- 2> release the entire SCG configuration, except for the DRB configuration (i.e. as configured by *drb-ToAddModListSCG*);

...

- 2> stop timer T313, if running;
- 2> stop timer T307, if running;

#### 8.2.4.25.5.3 Test Description

##### 8.2.4.25.5.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the target PCell and Cell 10 is the PSCell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1, Cell 3 and Cell 10.

UE:

None.

Preamble:

- The UE is in state DC Split DRB Loopback Activation (to state 6B).

#### 8.2.4.25.5.3.2 Test procedure sequence

```

#### 8.2.4.25.7.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.10 and 5.3.10.3a1.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

- 1> if the received *RRConnectionReconfiguration* includes the *scg-Configuration*; or
- 1> if the current UE configuration includes one or more split DRBs and the received *RRConnectionReconfiguration* includes *radioResourceConfigDedicated* including *drb-ToAddModList*:
- 2> perform SCG reconfiguration as specified in 5.3.10.10;

[TS 36.331, clause 5.3.10.10]

- 1> else:

...

- 2> if the received *scg-ConfigPartSCG* includes the *radioResourceConfigDedicatedSCG*:
  - 3> reconfigure the dedicated radio resource configuration for the SCG as specified in 5.3.10.11;
- 2> if the current UE configuration includes one or more split or SCG DRBs and the received *RRConnectionReconfiguration* message includes *radioResourceConfigDedicated* including *drb-ToAddModList*:
  - 3> reconfigure the SCG or split DRB by *drb-ToAddModList* as specified in 5.3.10.12;
- ...
- 2> if the received *scg-ConfigPartSCG* includes the *pSCellToAddMod*:
  - 3> perform PSCell addition or modification as specified in 5.3.10.3c;

[TS 36.331, clause 5.3.10.3a1]

For the *drb-Identity* value for which this procedure is initiated, the UE shall:

...

- 1> else (i.e. DC specific DRB modification; *drb-ToAddModList* and/ or *drb-ToAddModListSCG* received):
  - 2> if the DRB indicated by *drb-Identity* is a split DRB:
    - ...
    - 3> else (i.e. reconfigure split):
      - 4> reconfigure the PDCP entity in accordance with the *pdcp-Config*, if included in *drb-ToAddModList*;
      - 4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the *rlc-Config* and *logicalChannelConfig*, if included in *drb-ToAddModList*;

4> reconfigure the SCG RLC entity and/ or the SCG DTCH logical channel in accordance with the *rlc-ConfigSCG* and *logicalChannelConfigSCG*, if included in *drb-ToAddModListSCG*;

#### 8.2.4.25.7.3 Test Description

##### 8.2.4.25.7.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the target PCell and Cell 10 is the PSCell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1, Cell 3 and Cell 10.

UE:

None.

Preamble:

- The UE is in state DC Split DRB Loopback Activation (to state 6B).

##### 8.2.4.25.7.3.2 Test procedure sequence

**Table 8.2.4.25.7.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message containing <i>mobilityControlInfo</i> and <i>SCG-Configuration-r12</i> with <i>split-r12</i> .	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 3?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
3	Void	-	-	-	-
4	The SS transmits one IP packet to the UE on Cell 3 on the DRB associated with the Split DRB.	<--	IP packet	-	-
5	Check: Does the UE loops back the IP packet on Cell 3? (NOTE)	-->	IP packet	2	P

NOTE: The UE loops back the IP packet via Cell 10 (PSCell) at PHY/MAC/RLC level, which is then routed within the SS to the PCell's PDCP entity. UE's lower layer transmission on Cell 10 (PSCell) is implicitly tested by assigning an UL Grant only on Cell 10.

#### 8.2.4.26 eIMTA / RRC connection reconfiguration / Handover / Success

#### 8.2.4.26.1 Test Purpose (TP)

(1)

```

        with { UE having completed the radio bearer establishment and initial security activation procedure
    }
    ensure that {
        when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo
    indicating a different E-UTRA frequency}
        then { UE transmits an RRConnectionReconfigurationComplete message }
    }
}

```

### 8.2.4.26.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
  - 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;

- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];

- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];

- 2> derive the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRC_{int}}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
  - 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRC_{int}}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRC_{enc}}$  key and the  $K_{UP_{enc}}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> perform the measurement related actions as specified in 5.5.6.1;
  - 1> if the *RRConnectionReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;
  - 1> if MAC successfully completes the random access procedure:
    - 2> stop timer T304;
    - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
    - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

...

[TS 36.331, clause 5.3.10.4]

The UE shall:

- 1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

- 1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;
- 1> if the *antennaInfo* is included and set to '*explicitValue*':
  - 2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;
- 1> else if the *antennaInfo* is included and set to '*defaultValue*':
  - 2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

### 8.2.4.26.3 Test description

#### 8.2.4.26.3.1 Pre-test conditions

System Simulator:

- Cell 1(TDD) is not supported eIMTA and Cell 3(TDD) is supported eIMTA.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.4.26.3.2 Test procedure sequence

Table 8.2.4.26.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.26.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy exit condition for event A3 ( $M3 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 ( $M3 > M1$ ).

**Table 8.2.4.26.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to setup inter frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 3 parameters according to the row "T1" in table 8.2.4.26.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 3.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform inter frequency handover to Cell 3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 3 to confirm the successful completion of the inter frequency handover?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
7	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicates that the UE is in E-UTRA <i>RRC_CONNECTED</i> state on Cell 3?	-	-	1	-

## 8.2.4.27 RRC connection reconfiguration / Handover / Success / Intra-frequency in Enhanced Coverage

### 8.2.4.27.1 Test Purpose (TP)

(1)

**Void**

(2)

```
with { UE supporting CE Mode A in E-UTRA RRC_CONNECTED state supports eventA3 for intra-frequency neighbouring cells and measurement configured for event A3 with event based periodical reporting }
ensure that {
    when { Neighbour becomes offset better than serving }
    then { UE sends MeasurementReport with correct measId for event A3 }
}
```

(3)

```
with { UE supporting CE Mode A in E-UTRA RRC_CONNECTED state supports intra-frequency handover and UE having completed the radio bearer establishment and initial security activation procedure and performed the intra frequency measurement }
ensure that {
    when { UE receives an RRCCofiguration message including a mobilityControlInfo }
    then { UE transmits an RRCCofigurationComplete message }
}
```

### 8.2.4.27.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.306, clauses 4.3.29.1, 4.3.29.3, 4.3.29.5.

[TS 36.306, clause 4.3.29.1]

*ce-ModeA-r13*

This field defines whether the UE supports operation in coverage enhancement mode A, as specified in TS 36.211 [17], TS 36.213 [22] and TS 36.331 [5], and PRACH CE levels 0 and 1 at Random Access, as specified in TS 36.321 [4]. It is mandatory for UEs of DL category M1 and UL category M1.

[TS 36.306, clause 4.3.29.3]

*intraFreqA3-CE-ModeA-r13*

This field defines whether the UE when operating in CE Mode A supports *eventA3* for intra-frequency neighbouring cells in normal coverage and CE Mode A, as specified in TS 36.331 [5] and TS 36.133 [16]. It is mandatory for UEs of this release if *ce-ModeA-r13* is supported.

[TS 36.306, clause 4.3.29.5]

#### *intraFreqHO-CE-ModeA-r13*

This field defines whether the UE when operating in CE Mode A supports intra-frequency handover to target cell in normal coverage and CE Mode A, as specified in TS 36.331 [5] and TS 36.133 [16]. It is mandatory for UEs of this release if *ce-ModeA-r13* is supported.

#### 8.2.4.27.3 Test description

##### 8.2.4.27.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.
- System information combination 1 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3-CE) on Cell 1 according to [18].

#### 8.2.4.27.3.2 Test procedure sequence

Table 8.2.4.27.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.27.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy exit condition for event A3 ( $M2 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 ( $M2 > M1$ ).

**Table 8.2.4.27.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message

## 8.2.4.28 eCall Only mode / RRC connection reconfiguration / Inter-frequency Handover / Success

### 8.2.4.28.1 Test Purpose (TP)

(1)

```
with { UE in eCall Only mode and an eCall over IMS is ongoing }
ensure that {
    when { UE receives an RRCCofiguration message including a mobilityControlInfo
           indicating a different E-UTRA frequency }
        then { UE transmits an RRCCofigurationComplete message }
    }
```

### 8.2.4.28.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.4 and 5.3.10.6. Unless otherwise stated these are Rel-14 requirements.

[TS 36.331, clause 5.3.5.4]

If the *RRCCofiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;

- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:
  - 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
- 1> else:
  - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
  - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> else:
  - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
  - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> perform the measurement related actions as specified in 5.5.6.1;
- 1> if the *RRConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;
- 1> if MAC successfully completes the random access procedure:
  - 2> stop timer T304;
  - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
  - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

...

[TS 36.331, clause 5.3.10.4]

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received *mac-MainConfig*;

[TS 36.331, clause 5.3.10.6]

The UE shall:

1> reconfigure the physical channel configuration in accordance with the received *physicalConfigDedicated*;

1> if the *antennaInfo* is included and set to '*explicitValue*':

2> if the configured *transmissionMode* is not '*tm3*' or '*tm4*' release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

1> else if the *antennaInfo* is included and set to '*defaultValue*':

2> release *ri-ConfigIndex* in *cqi-ReportPeriodic*, if previously configured;

#### 8.2.4.28.3 Test description

##### 8.2.4.28.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 3 both supports eCall over IMS.
- System information combination 5 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

- The eCall capable UE is equipped with 'eCall only' enabled USIM configured as per TS 36.508 [18] Table 4.9.3.5-2.

Preamble:

- The UE has established an eCall over IMS according to [18] subclause 4.5A.27 by executing steps 1 to 25.

##### 8.2.4.28.3.2 Test procedure sequence

Table 8.2.4.28.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.28.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy exit condition for event A3 (M3 < M1).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M3 > M1).

#### 8.2.4.29 UDC/ RRC connection reconfiguration / Handover / Success

#### 8.2.4.29.1 Test Purpose (TP)

(1)

```

with { UE in E-UTRA RRC_CONNECTED state with UDC configuration}
ensure that {
    when { UE receives an RRCCconnectionReconfiguration message including a mobilityControlInfo }

```

```
then { UE release the configured uplinkDataCompression and re-establish PDCP for all RBs
configured with pdcp-config that are established }
}
```

### 8.2.4.29.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in TS 36.331, clauses 5.3.5.4.

[TS 36.331 clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> stop timer T312, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> stop timer T370, if running;
- 1> if the *carrierFreq* is included:
  - 2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> if BL UE or UE in CE:
  - 2> if *sameSFN-Indication* is not present in *mobilityControlInfo*:
    - 3> acquire the *MasterInformationBlock* in the target PCell;
- 1> if *makeBeforeBreak* is configured:
  - 2> perform the remainder of this procedure including and following resetting MAC after the UE has stopped the uplink transmission/downlink reception with the source cell(s);

NOTE 1a: It is up to UE implementation when to stop the uplink transmission/ downlink reception with the source cell(s) to initiate re-tuning for connection to the target cell [16], if *makeBeforeBreak* is configured.

- 1> reset MCG MAC and SCG MAC, if configured;
- 1> release *uplinkDataCompression*, if configured;
- 1> re-establish PDCP for all RBs configured with *pdcp-config* that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

### 8.2.4.29.3 Test description

#### 8.2.4.29.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2

UE:

None.

Preamble:

- The UE is in state Loopback Activated (state 4) according to [18].
- The condition UDC is used for PDCP-Config in step 8 in 4.5.3.3 according to [18].

#### 8.2.4.29.3.2 Test procedure sequence

Table 8.2.4.29.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.4.29.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy exit condition for event A3 ( $M2 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 ( $M2 > M1$ ).

Table 8.2.4.29.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS creates 3 PDCP Data PDUs and the Next_PDCP_TX_SN is set to "0".	-	-	-	-
2	The SS sends the PDCP Data PDU#0 via RLC-AM RB with the following content to the UE: D/C field = 1 (PDCP Data PDU) and PDCP SN = 0. After having sent a PDU, the SS set Next_PDCP_TX_SN= 1.	<--	PDCP PDU DATA #0	-	-
3	The UE sends the PDCP Data PDU#0 via RLC-AM RB with the following content to the UE: D/C field = 1 (PDCP Data PDU) , PDCP SN = 0, FU = 1, FR = 0, Checksum = 1111. Data is previously received data from PDU #0 after decompression.	-->	PDCP PDU DATA #0	-	-
4	The SS sends the PDCP Data PDU#1 via RLC-AM RB with the following content to the UE: D/C field = 1 (PDCP Data PDU) and PDCP SN = 1. After having sent a PDU, the SS set Next_PDCP_TX_SN= 2.	<--	PDCP PDU DATA #1	-	-
5	The UE sends the PDCP Data PDU#1 via RLC-AM RB with the following content to the UE: D/C field = 1 (PDCP Data PDU) , PDCP SN = 1, FU = 1, FR = 0, the value of Checksum is checked (Note 1). Data is previously received data from PDU #1 after decompression.	-->	PDCP PDU DATA #1	-	-
6	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to setup intra frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
7	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
8	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in table 8.2.4.2.3.2-1.	-	-	-	-
9	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3 with the measured RSRP, RSRQ value for Cell 2.	-->	<i>MeasurementReport</i>	-	-
10	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
11	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
12	The SS sends the PDCP Data PDU#0 via RLC-AM RB with the following content to the UE: D/C field = 1 (PDCP Data PDU) and PDCP SN = 0.	<--	PDCP PDU DATA #0	-	-
13	Check: Does the UE sends the PDCP Data PDU#0 via RLC-AM RB with the following content to the UE: D/C field = 1 (PDCP Data PDU) , PDCP SN = 0, FU = 1, FR = 1, Checksum = 1111. Data is previously received data from PDU #0 after decompression.	-->	PDCP PDU DATA #0	1	P

Note 1: The SS compares the received value of Checksum and calculated value of Checksum based on the compression buffer.

### 8.2.5 LWA / LWIP / LWI

8.2.5.1 LWA / WLAN Release / WLAN Association / EUTRA RRC\_Connected to WLAN (Event W2)

#### 8.2.5.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W2 reporting }
ensure that {
    when { UE detects entering condition for Event W2 is met }
        then { UE transmits a measurement report }
    }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and configured with a WLAN mobility set }
ensure that {
    when { UE receives RRConnectionReconfiguration including wlanToReleaseList and wlanToAddList }
        then { UE releases the WLAN association and adds the new WLAN identifiers to the WLAN mobility
set and sends RRConnectionReconfigurationComplete }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives RRConnectionReconfiguration that changes the WLAN mobility set and if
successReportRequested-r13 is included in IE WLAN-MobilityConfig-r13 }
        then { after successfully associating with any WLAN identifier in the new WLAN mobility set, UE
transmits WLANConnectionStatusReport with WLAN-Status-r13 set to successfulAssociation }
}
```

### 8.2.5.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.12, 5.6.14.2, 5.6.15.2.2 and 5.6.15.2.3.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the *RRConnectionReconfiguration* message includes *lwa-Configuration*:

2> perform the LWA configuration procedure as specified in 5.6.14.2;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends

[TS 36.331, clause 5.5.4.12]

The UE shall:

1> consider the entering condition for this event to be satisfied when both conditions W2-1 and W2-2 as specified below are fulfilled;

...

Inequality W2-1 (Entering condition 1)

$Ms + Hys < Thresh1$

Inequality W2-2 (Entering condition 2)

$Mn - Hys > Thresh2$

[TS 36.331, clause 5.6.14.2]

Upon reception of LWA configuration, the UE shall:

1> if the received *lwa-Configuration* is set to *release*:

1> else:

...

2> if the received *lwa-Config* includes *lwa-MobilityConfig*:

3> if the received *lwa-MobilityConfig* includes *wlanToReleaseList*:

4> for each *WLAN-Identifiers* included in *wlanToReleaseList*:

5> remove *WLAN-Identifiers* if already part of the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;

3> if the received *lwa-MobilityConfig* includes *wlanToAddList*:

4> for each *WLAN-Identifiers* included in *wlanToAddList*:

5> add *WLAN-Identifiers* to the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;

3> if the received *lwa-MobilityConfig* includes *associationTimer*:

4> start or restart timer T351 with the timer value set to the *associationTimer*;

3> if the received *lwa-MobilityConfig* includes *successReportRequested*:

4> set *successReportRequested* in *VarWLAN-MobilityConfig* to the value of *successReportRequested*;

3> start WLAN Status Monitoring as described in 5.6.15.4;

[TS 36.331, clause 5.6.15.2.2]

The UE in RRC\_CONNECTED initiates the WLAN status reporting procedure when it connects successfully to a WLAN inside WLAN mobility set while T351 is running after a WLAN mobility set change (if success report is requested by the eNB) or its connection or connection attempt to all WLAN(s) inside WLAN mobility set fails in accordance with WLAN Status Monitoring described in 5.6.15.4 or when T351 expires.

Upon initiating the procedure, the UE shall:

1> initiate transmission of the *WLANConnectionStatusReport* message in accordance with 5.6.15.2.3;

[TS 36.331, clause 5.6.15.2.3]

The UE shall set the contents of the *WLANConnectionStatusReport* message as follows:

1> set *wlan-status* to *status* in *VarWLAN-Status*;

1> submit the *WLANConnectionStatusReport* message to lower layers for transmission, upon which the procedure ends;

8.2.5.1.3                  Test description

8.2.5.1.3.1                Pre-test conditions

System Simulator:

- EUTRA Cell 1, WLAN Cell 27 and WLAN Cell 27a

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.2.5.1.3.2 Test procedure sequence

Table 8.2.5.1.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 27 and Cell 27a at various time instants of the test execution. Rows marked "T1" and "T2" and "T3" are to be applied in the test procedure. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.5.1.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 27	Cell 27a	Remark
T1	Cell-specific RS EPRE	dBm/15kHz	-60	-	-	WLAN Cell 27 is switched on
	RSRQ	dB	-4.15	-	-	
	BeaconRSSI		-	-60	-	
T2	Cell-specific RS EPRE	dBm/15kHz	-60	-	-	The power level values are such that conditions for entering Event W1 is met
	RSRQ	dB	-4.15	-	-	
	BeaconRSSI		-	-50	-	
T3	Cell-specific RS EPRE	dBm/15kHz	-60	-	-	The power level values are such that conditions for entering Event W2 is met
	RSRQ	dB	-4.15	-	-	
	BeaconRSSI		-	-80	-50

## 8.2.5.2 LWA / WLAN Release Success / EUTRA RRC\_Connected from WLAN (Event W3)

### 8.2.5.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W3 reporting }
ensure that {
    when { UE detects entering condition for Event W3 is met }
        then { UE transmits a measurement report }
    }
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and configured with a WLAN mobility set }
ensure that {
    when { UE receives RRCCofiguration including wlanToReleaseList that includes WLAN Identifiers that are part of the current WLAN mobility set }
        then { UE releases the WLAN association and sends RRCCofigurationComplete }
    }
```

### 8.2.5.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.13 and 5.6.14.2

[TS 36.331, clause 5.3.5.3]

If the *RRCCofiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall

...

1> if the *RRCCofiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the *RRCCofiguration* message includes *lwa-Configuration*:

2> perform the LWA configuration procedure as specified in 5.6.14.2;

...

1> submit the *RRCCofigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends

[TS 36.331, clause 5.5.4.13]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition W3-1, as specified below, is fulfilled;

...

Inequality W3-1 (Entering condition)

$Ms + Hys < Thresh$

...

The variables in the formula are defined as follows:

$Ms$  is the measurement result of WLAN(s) which matches all WLAN identifiers of at least one entry within *wlan-MobilitySet* in *VarWLAN-MobilityConfig*, not taking into account any offsets.

*Hys* is the hysteresis parameter for this event.

**Thresh** is the threshold parameter for this event (i.e. *w3-Threshold* as defined within *reportConfigInterRAT* for this event).

**Ms** is expressed in dBm.

*Hys* is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.6.14.2]

Upon reception of LWA configuration, the UE shall:

1> if the received *lwa-Configuration* is set to *release*:

...

1> else:

...

2> if the received *lwa-Config* includes *lwa-MobilityConfig*:

3> if the received *lwa-MobilityConfig* includes *wlanToReleaseList*:

4> for each *WLAN-Identifiers* included in *wlanToReleaseList*:

5> remove *WLAN-Identifiers* if already part of the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;

8.2.5.2.3                  Test description

8.2.5.2.3.1                Pre-test conditions

System Simulator:

- EUTRA Cell 1 and WLAN Cell 27

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.2.5.2.3.2                Test procedure sequence

Table 8.2.5.2.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 27 at various time instants of the test execution. Rows marked "T1", "T2" and "T3" are to be applied in the test procedure. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.5.2.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 27	Remark
T1	Cell-specific RS EPRE	dBm/15kHz	-60	-	WLAN Cell 27 is switched on
	RSRQ	dB	-4.15	-	
	BeaconRSSI		-	-60	
T2	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values are such that condition for entering Event W1 is met
	RSRQ	dB	-4.15	-	
	BeaconRSSI		-	-50	
T3	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values are such that condition for entering Event W3 is met
	RSRQ	dB	-4.15	-	
	BeaconRSSI		-	-80	

**Table 8.2.5.2.3.2-2: Main behaviour**

## 8.2.5.3

### 8.2.5.4 LWA / WLAN Association Success / EUTRA RRC\_Connected to WLAN (Event W1)

#### 8.2.5.4.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W1 reporting }
ensure that {
  when { UE detects entering condition for Event W1 is met }
  then { UE transmits a measurement report }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and configured with a WLAN mobility set }
ensure that {
  when { UE receives RRCConnectionReconfiguration including wlanToAddList }
  then { UE adds the new WLAN identifiers to the WLAN mobility set and sends
RRCConnectionReconfigurationComplete }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives RRCConnectionReconfiguration that changes the WLAN mobility set and if
successReportRequested-r13 is included in IE WLAN-MobilityConfig-r13 }
  then { after successfully associating with any WLAN identifier in the new WLAN mobility set, UE
transmits WLANConnectionStatusReport with WLAN-Status-r13 set to successfulAssociation }
}
```

#### 8.2.5.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.11, 5.6.14.2, 5.6.15.2.2 and 5.6.15.2.3.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the *RRConnectionReconfiguration* message includes *lwa-Configuration*:

2> perform the LWA configuration procedure as specified in 5.6.14.2;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends

[TS 36.331, clause 5.5.4.11]

The UE shall:

1> consider the entering condition for this event to be satisfied when *wlan-MobilitySet* within *VarWLAN-MobilityConfig* does not contain any entries and condition W1-1, as specified below, is fulfilled;

...

Inequality W1-1 (Entering condition)

$Mn - Hys > Thresh$

...

The variables in the formula are defined as follows:

**Mn** is the measurement result of WLAN(s) configured in the measurement object, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event.

**Thresh** is the threshold parameter for this event (i.e. *wl-Threshold* as defined within *reportConfigInterRAT* for this event).

**Mn** is expressed in dBm.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.6.14.2]

Upon reception of LWA configuration, the UE shall:

...

1> else:

...

2> if the received *lwa-Config* includes *lwa-MobilityConfig*:

...

3> if the received *lwa-MobilityConfig* includes *wlanToAddList*:

4> for each *WLAN-Identifiers* included in *wlanToAddList*:

5> add *WLAN-Identifiers* to the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;

3> if the received lwa-MobilityConfig includes associationTimer:

- 4> start or restart timer T351 with the timer value set to the *associationTimer*;
- 3> if the received Iwa-MobilityConfig includes successReportRequested:
- 4> set *successReportRequested* in *VarWLAN-MobilityConfig* to the value of *successReportRequested*;
- 3> start WLAN Status Monitoring as described in 5.6.15.4;

[TS 36.331, clause 5.6.15.2.2]

The UE in RRC\_CONNECTED initiates the WLAN status reporting procedure when it connects successfully to a WLAN inside WLAN mobility set while T351 is running after a WLAN mobility set change (if success report is requested by the eNB) or its connection or connection attempt to all WLAN(s) inside WLAN mobility set fails in accordance with WLAN Status Monitoring described in 5.6.15.4 or when T351 expires.

Upon initiating the procedure, the UE shall:

- 1> initiate transmission of the *WLANConnectionStatusReport* message in accordance with 5.6.15.2.3;

[TS 36.331, clause 5.6.15.2.3]

The UE shall set the contents of the *WLANConnectionStatusReport* message as follows:

- 1> set *wlan-status* to *status* in *VarWLAN-Status*;
- 1> submit the *WLANConnectionStatusReport* message to lower layers for transmission, upon which the procedure ends;

**8.2.5.4.3** Test description

**8.2.5.4.3.1** Pre-test conditions

System Simulator:

- EUTRA Cell 1 and WLAN Cell 27

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

**8.2.5.4.3.2** Test procedure sequence

Table 8.2.5.4.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 27 at various time instants of the test execution. Rows marked "T0" and "T1" are to be applied in the test procedure. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.5.4.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 27	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-60	-	WLAN Cell 27 is switched on
	RSRQ	dB	-4.15	-	
	WLANRSSI		-	-60	
T1	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values for entering Event W1
	RSRQ	dB	-4.15	-	
	WLANRSSI		-	-50	

**Table 8.2.5.4.3.2-2: Main behaviour**

Step	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS changes Cell parameters according to the row "T0" in table 8.2.5.4.3.2-1	-	-	-	-

## 8.2.5.5 LWIP / WLAN Association Success / EUTRA RRC\_Connected to WLAN (Event W1)

### 8.2.5.5.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W1 reporting }
ensure that {
  when { UE detects entering condition for Event W1 is met }
  then { UE transmits a measurement report }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and configured with a WLAN mobility set }
ensure that {
  when { UE receives RRConnectionReconfiguration including wlanToAddList }
  then { UE adds the new WLAN identifiers to the WLAN mobility set and sends
RRConnectionReconfigurationComplete }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives RRConnectionReconfiguration that changes the WLAN mobility set and if
successReportRequested-r13 is included in IE WLAN-MobilityConfig-r13 }
  then { after successfully associating with any WLAN identifier in the new WLAN mobility set, UE
transmits WLANConnectionStatusReport with WLAN-Status-r13 set to successfulAssociation }
}
```

### 8.2.5.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.11, 5.6.17.2, 5.6.15.2.2 and 5.6.15.2.3.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the *RRConnectionReconfiguration* message includes *lwip-Configuration*:

2> perform the LWIP reconfiguration procedure as specified in 5.6.17.2;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends

[TS 36.331, clause 5.5.4.11]

The UE shall:

1> consider the entering condition for this event to be satisfied when *wlan-MobilitySet* within *VarWLAN-MobilityConfig* does not contain any entries and condition W1-1, as specified below, is fulfilled;

...

Inequality W1-1 (Entering condition)

$Mn - Hys > Thresh$

...

The variables in the formula are defined as follows:

***Mn*** is the measurement result of WLAN(s) configured in the measurement object, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event.

***Thresh*** is the threshold parameter for this event (i.e. *wl-Threshold* as defined within *reportConfigInterRAT* for this event).

***Mn*** is expressed in dBm.

***Hys*** is expressed in dB.

***Thresh*** is expressed in the same unit as ***Mn***.

[TS 36.331, clause 5.6.17.2]

The UE shall:

...

1> else:

2> if *lwip-MobilityConfig* is included:

...

3> if the received *lwip-MobilityConfig* includes *wlan-ToAddList*:

4> for each *WLAN-Identifiers* included in *wlan-ToAddList*:

5> add the *WLAN-Identifiers* to the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;

3> if the received *lwip-MobilityConfig* includes *associationTimer*:

4> start timer T351 with the timer value set according to the value of *associationTimer*;

3> if the received *lwip-MobilityConfig* includes *successReportRequested*:

- 4> set *successReportRequested* in *VarWLAN-MobilityConfig* to the value of *successReportRequested*;
- 2> if *tunnelConfigLWIP* is included:
- 3> indicate to higher layers to configure the LWIP tunnel according to the received *tunnelConfigLWIP* [32];
- 3> if *lwip-Counter* is included:
- 4> determine the LWIP-PSK based on the  $K_{eNB}$  key and received *lwip-Counter* value, as specified in TS 33.401 [32];
- 4> forward the LWIP-PSK to upper layers for LWIP tunnel establishment;
- 2> start WLAN Status Monitoring as described in 5.6.15.4;

[TS 36.331, clause 5.6.15.2.2]

The UE in RRC\_CONNECTED initiates the WLAN status reporting procedure when it connects successfully to a WLAN inside WLAN mobility set while T351 is running after a WLAN mobility set change (if success report is requested by the eNB) or its connection or connection attempt to all WLAN(s) inside WLAN mobility set fails in accordance with WLAN Status Monitoring described in 5.6.15.4 or when T351 expires.

Upon initiating the procedure, the UE shall:

- 1> initiate transmission of the *WLANConnectionStatusReport* message in accordance with 5.6.15.2.3;

[TS 36.331, clause 5.6.15.2.3]

The UE shall set the contents of the *WLANConnectionStatusReport* message as follows:

- 1> set *wlan-status* to *status* in *VarWLAN-Status*;

- 1> submit the *WLANConnectionStatusReport* message to lower layers for transmission, upon which the procedure ends;

**8.2.5.5.3**                  Test description

**8.2.5.5.3.1**                  Pre-test conditions

System Simulator:

- EUTRA Cell 1 and WLAN Cell 27

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

**8.2.5.5.3.2**                  Test procedure sequence

Table 8.2.5.5.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 27 at various time instants of the test execution. Rows marked "T0" and "T1" are to be applied in the test procedure. The exact instants on which these values shall be applied are described in the texts in this clause.

## 8.2.5.6 LWIP / WLAN Release / WLAN Association / EUTRA RRC\_Connected to WLAN (Event W2)

### 8.2.5.6.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W2 reporting }
ensure that {
  when { UE detects entering condition for Event W2 is met }
    then { UE transmits a measurement report }
  }
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and configured with a WLAN mobility set }
ensure that {
  when { UE receives RRConnectionReconfiguration including wlanToReleaseList and wlanToAddList }
    then { UE releases the WLAN association and adds the new WLAN identifiers to the WLAN mobility set and sends RRConnectionReconfigurationComplete }
  }
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives RRConnectionReconfiguration that changes the WLAN mobility set and if successReportRequested-r13 is included in IE WLAN-MobilityConfig-r13 }
    then { after successfully associating with any WLAN identifier in the new WLAN mobility set, UE transmits WLANConnectionStatusReport with WLAN-Status-r13 set to successfulAssociation }
  }
```

(4)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W2 reporting }
```

```

ensure that {
    when { UE detects leaving condition for Event W2 is met }
        then { UE stops sending MeasurementReport message }
    }
}

```

### 8.2.5.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.12, 5.6.17.2, 5.6.15.2.2 and 5.6.15.2.3.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the *RRConnectionReconfiguration* message includes *lwip-Configuration*:

2> perform the LWIP reconfiguration procedure as specified in 5.6.17.2;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends

[TS 36.331, clause 5.5.4.12]

The UE shall:

1> consider the entering condition for this event to be satisfied when both conditions W2-1 and W2-2 as specified below are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition W2-3 or condition W2-4, i.e. at least one of the two, as specified below is fulfilled;

Inequality W2-1 (Entering condition 1)

$Ms + Hys < Thresh1$

Inequality W2-2 (Entering condition 2)

$Mn - Hys > Thresh2$

Inequality W2-3 (Leaving condition 1)

$Ms - Hys > Thresh1$

Inequality W2-4 (Leaving condition 2)

$Mn + Hys < Thresh2$

[TS 36.331, clause 5.6.17.2]

The UE shall:

1> if the received *lwip-Configuration* is set to *release*:

2> release the LWIP configuration, if configured, as described in 5.6.17.3;

1> else:

- 2> if *lwip-MobilityConfig* is included:
  - 3> if the received *lwip-MobilityConfig* includes *wlan-ToReleaseList*:
    - 4> for each *WLAN-Identifiers* included in *wlan-ToReleaseList*:
      - 5> remove the *WLAN-Identifiers* if already part of the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;
  - 3> if the received *lwip-MobilityConfig* includes *wlan-ToAddList*:
    - 4> for each *WLAN-Identifiers* included in *wlan-ToAddList*:
      - 5> add the *WLAN-Identifiers* to the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;
  - 3> if the received *lwip-MobilityConfig* includes *associationTimer*:
    - 4> start timer T351 with the timer value set according to the value of *associationTimer*;
  - 3> if the received *lwip-MobilityConfig* includes *successReportRequested*:
    - 4> set *successReportRequested* in *VarWLAN-MobilityConfig* to the value of *successReportRequested*;
  - 3> start WLAN Status Monitoring as described in 5.6.15.4;
- 2> if *tunnelConfigLWIP* is included:
  - 3> indicate to higher layers to configure the LWIP tunnel according to the received *tunnelConfigLWIP* [32];
- 2> if *lwip-Counter* is included:
  - 3> determine the LWIP-PSK based on the K<sub>eNB</sub> key and received *lwip-Counter* value, as specified in TS 33.401 [32];
  - 3> forward the LWIP-PSK to upper layers for LWIP tunnel establishment;

[TS 36.331, clause 5.6.15.2.2]

The UE in RRC\_CONNECTED initiates the WLAN status reporting procedure when it connects successfully to a WLAN inside WLAN mobility set while T351 is running after a WLAN mobility set change or after a *lwa-WT-Counter* update (if success report is requested by the eNB) or its connection or connection attempts to all WLAN(s) inside WLAN mobility set fails in accordance with WLAN Status Monitoring described in 5.6.15.4 or when T351 expires.

Upon initiating the procedure, the UE shall:

- 1> initiate transmission of the *WLANConnectionStatusReport* message in accordance with 5.6.15.2.3;

[TS 36.331, clause 5.6.15.2.3]

The UE shall set the contents of the *WLANConnectionStatusReport* message as follows:

- 1> set *wlan-status* to *status* in *VarWLAN-Status*;

- 1> submit the *WLANConnectionStatusReport* message to lower layers for transmission, upon which the procedure ends;

8.2.5.6.3            Test description

8.2.5.6.3.1        Pre-test conditions

System Simulator:

- EUTRA Cell 1, WLAN Cell 27 and WLAN Cell 27a

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.2.5.6.3.2 Test procedure sequence

Table 8.2.5.6.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 27 and Cell 27a at various time instants of the test execution. Rows marked "T1" and "T2" and "T3" and "T4" are to be applied in the test procedure. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.5.6.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 27	Cell 27a	Remark
T1	Cell-specific RS EPRE	dBm/15kHz	-60	-	-	WLAN Cell 27 is switched on
	RSRQ	dB	-4.15	-	-	
	BeaconRSSI		-	-60	-	
T2	Cell-specific RS EPRE	dBm/15kHz	-60	-	-	The power level values are such that conditions for entering Event W1 is met
	RSRQ	dB	-4.15	-	-	
	BeaconRSSI		-	-50	-	
T3	Cell-specific RS EPRE	dBm/15kHz	-60	-	-	The power level values are such that conditions for entering Event W2 is met
	RSRQ	dB	-4.15	-	-	
	BeaconRSSI		-	-80	-50	
T4	Cell-specific RS EPRE	dBm/15kHz	-60	-	-	The power level values are such that conditions for leaving Event W2 is met
	RSRQ	dB	-4.15	-	-	
	BeaconRSSI		-	-60	-50

## 8.2.5.7 LWIP / WLAN Release Success / EUTRA RRC\_Connected from WLAN (Event W3)

### 8.2.5.7.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W3 reporting }
ensure that {
  when { UE detects entering condition for Event W3 is met }
  then { UE transmits a measurement report }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and configured with a WLAN mobility set }
```

```

ensure that {
    when { UE receives RRConnectionReconfiguration including wlanToReleaseList that includes WLAN
Identifiers that are part of the current WLAN mobility set }
        then { UE releases the WLAN association and sends RRConnectionReconfigurationComplete }
    }
}

```

#### 8.2.5.7.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.13 and 5.6.17.2

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the *RRConnectionReconfiguration* message includes *lwa-Configuration*:

2> perform the LWIP reconfiguration procedure as specified in 5.6.17.2;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends

[TS 36.331, clause 5.5.4.13]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition W3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition W3-2, as specified below, is fulfilled;

Inequality W3-1 (Entering condition)

$$Ms + Hys < Thresh$$

Inequality W3-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of WLAN(s) which matches all WLAN identifiers of at least one entry within *wlan-MobilitySet* in *VarWLAN-MobilityConfig*, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event.

**Thresh** is the threshold parameter for this event (i.e. *w3-Threshold* as defined within *reportConfigInterRAT* for this event).

**Ms** is expressed in dBm.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.6.17.2]

The UE shall:

- 1> if the received *lwip-Configuration* is set to *release*:
  - 2> release the LWIP configuration, if configured, as described in 5.6.17.3;
- 1> else:
  - 2> if *lwip-MobilityConfig* is included:
    - 3> if the received *lwip-MobilityConfig* includes *wlan-ToReleaseList*:
      - 4> for each *WLAN-Identifiers* included in *wlan-ToReleaseList*:
        - 5> remove the *WLAN-Identifiers* if already part of the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;
    - 3> if the received *lwip-MobilityConfig* includes *wlan-ToAddList*:
      - 4> for each *WLAN-Identifiers* included in *wlan-ToAddList*:
        - 5> add the *WLAN-Identifiers* to the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;
    - 3> if the received *lwip-MobilityConfig* includes *associationTimer*:
      - 4> start timer T351 with the timer value set according to the value of *associationTimer*;
    - 3> if the received *lwip-MobilityConfig* includes *successReportRequested*:
      - 4> set *successReportRequested* in *VarWLAN-MobilityConfig* to the value of *successReportRequested*;
    - 3> start WLAN Status Monitoring as described in 5.6.15.4;
  - 2> if *tunnelConfigLWIP* is included:
    - 3> indicate to higher layers to configure the LWIP tunnel according to the received *tunnelConfigLWIP* [32];
  - 2> if *lwip-Counter* is included:
    - 3> determine the LWIP-PSK based on the  $K_{eNB}$  key and received *lwip-Counter* value, as specified in TS 33.401 [32];
    - 3> forward the LWIP-PSK to upper layers for LWIP tunnel establishment;

#### 8.2.5.7.3                  Test description

##### 8.2.5.7.3.1              Pre-test conditions

System Simulator:

- EUTRA Cell 1 and WLAN Cell 27

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.2.5.7.3.2              Test procedure sequence

Table 8.2.5.7.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 27 at various time instants of the test execution. Rows marked "T1", "T2" and "T3" are to be applied in the test procedure. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.5.7.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 27	Remark
T1	Cell-specific RS EPRE	dBm/15kHz	-60	-	WLAN Cell 27 is switched on
	RSRQ	dB	-4.15	-	
	BeaconRSSI		-	-60	
T2	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values are such that condition for entering Event W1 is met
	RSRQ	dB	-4.15	-	
	BeaconRSSI		-	-50	
T3	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values are such that condition for entering Event W3 is met
	RSRQ	dB	-4.15	-	
	BeaconRSSI		-	-80	

**Table 8.2.5.7.3.2-2: Main behaviour**

## 8.2.5.8 LWA / T351 Expiry

### 8.2.5.8.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured for Event W1 reporting }
ensure that {
  when { UE detects entering condition for Event W1 is met }
  then { UE transmits a measurement report }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and configured with a WLAN mobility set }
ensure that {
  when { UE receives RRConnectionReconfiguration including wlanToAddList }
  then { UE adds the new WLAN identifiers to the WLAN mobility set and sends
RRConnectionReconfigurationComplete }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives RRConnectionReconfiguration that changes the WLAN mobility set and if
successReportRequested-r13 is included in IE WLAN-MobilityConfig-r13 }
  then { after T351 expiry not being able to successfully associate with any WLAN identifier in
the new WLAN mobility set, the UE transmits WLANConnectionStatusReport with WLAN-Status-r13 set to
failureTimeout }
}
```

### 8.2.5.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.11, 5.6.14.2, 5.6.15.2.2 and 5.6.15.2.3.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the RRConnectionReconfiguration message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the RRConnectionReconfiguration message includes *lwa-Configuration*:

2> perform the LWA configuration procedure as specified in 5.6.14.2;

...

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration, upon which the procedure ends

[TS 36.331, clause 5.5.4.11]

The UE shall:

1> consider the entering condition for this event to be satisfied when *wlan-MobilitySet* within *VarWLAN-MobilityConfig* does not contain any entries and condition W1-1, as specified below, is fulfilled;

...

Inequality W1-1 (Entering condition)

$Mn - Hys > Thresh$

...

The variables in the formula are defined as follows:

**Mn** is the measurement result of WLAN(s) configured in the measurement object, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event.

**Thresh** is the threshold parameter for this event (i.e. *wI-Threshold* as defined within *reportConfigInterRAT* for this event).

**Mn** is expressed in dBm.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.6.14.2]

Upon reception of LWA configuration, the UE shall:

...

1> else:

...

2> if the received *lwa-Config* includes *lwa-MobilityConfig*:

...

3> if the received *lwa-MobilityConfig* includes *wlanToAddList*:

4> for each WLAN-Identifiers included in *wlanToAddList*:

5> add WLAN-Identifiers to the current *wlan-MobilitySet* in *VarWLAN-MobilityConfig*;

3> if the received *lwa-MobilityConfig* includes *associationTimer*:

4> start or restart timer T351 with the timer value set to the *associationTimer*;

3> if the received *lwa-MobilityConfig* includes *successReportRequested*:

4> set *successReportRequested* in *VarWLAN-MobilityConfig* to the value of *successReportRequested*;

3> start WLAN Status Monitoring as described in 5.6.15.4;

[TS 36.331, clause 5.6.15.2.2]

The UE in RRC\_CONNECTED initiates the WLAN status reporting procedure when it connects successfully to a WLAN inside WLAN mobility set while T351 is running after a WLAN mobility set change (if success report is requested by the eNB) or its connection or connection attempt to all WLAN(s) inside WLAN mobility set fails in accordance with WLAN Status Monitoring described in 5.6.15.4 or when T351 expires.

Upon initiating the procedure, the UE shall:

1> initiate transmission of the *WLANConnectionStatusReport* message in accordance with 5.6.15.2.3;

[TS 36.331, clause 5.6.15.2.3]

The UE shall set the contents of the *WLANConnectionStatusReport* message as follows:

1> set *wlan-status* to status in *VarWLAN-Status*;

1> submit the *WLANConnectionStatusReport* message to lower layers for transmission, upon which the procedure ends;

[TS 36.331, clause 5.6.15.3]

Upon T351 expiry, the UE shall:

1> set the status in *VarWLAN-Status* to *failureTimeout*;

1> perform WLAN connection status reporting procedure in 5.6.15.2;

1> stop WLAN status monitoring and WLAN connection attempts;

8.2.5.8.3            Test description

8.2.5.8.3.1        Pre-test conditions

System Simulator:

- EUTRA Cell 1 and WLAN Cell 27

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.2.5.8.3.2 Test procedure sequence

Table 8.2.5.8.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 27 at various time instants of the test execution. Rows marked "T0" and "T1" are to be applied in the test procedure. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.2.5.8.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 27	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-60	-	WLAN Cell 27 is switched on
	RSRQ	dB	-4.15	-	
	WLANRSSI		-	-60	
T1	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values for entering Event W1
	RSRQ	dB	-4.15	-	
	WLANRSSI		-	-50	

**Table 8.2.5.8.3.2-2: Main behaviour**

Step	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS changes Cell parameters according to the row "T0" in table 8.2.5.8.3.2-1	-	-	-	-
2	The SS transmits an <i>RRCConnectionReconfiguration</i> message to configure WLAN measurement (Event W1)	<--	<i>RRCConnectionReconfiguration</i>	-	-
3	The UE transmits an <i>RRCConnectionReconfigurationComplete</i>	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
4	The SS changes Cell parameters according to the row "T1" in table 8.2.5.8.3.2-1.	-	-	-	-
5	Check: UE transmits a <i>MeasurementReport</i> message to report the Event W1	-->	<i>MeasurementReport</i>	1	P
6	The SS transmits an <i>RRCConnectionReconfiguration</i> message including an invalid WLAN ssid in IE <i>wlanToAddList</i>	<--	<i>RRCConnectionReconfiguration</i>	-	-
7	Check: The UE transmits an <i>RRCConnectionReconfigurationComplete</i>	-->	<i>RRCConnectionReconfigurationComplete</i>	2	P
8	Check: Does the UE transmit <i>WLANConnectionStatusReport</i> with <i>WLAN-Status-r13</i> set to <i>failureTimeout</i> after T351 expiry?	-->	<i>WLANConnectionStatusReport</i>	3	P

## 8.3 Measurement configuration control and reporting

### 8.3.1 Intra E-UTRAN measurements

#### 8.3.1.1 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1

##### 8.3.1.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A1 with event based
periodical reporting }
ensure that {
    when { Serving cell becomes better than absolute threshold plus hysteresis }
    then { UE sends MeasurementReport message at regular intervals while entering conditions for
event A1 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A1
ongoing}
ensure that {
    when { Serving cell becomes worse than absolute threshold minus hysteresis }
    then { UE stops sending MeasurementReport message }
}
```

##### 8.3.1.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.2 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

...

3> if the corresponding *measObject* concerns EUTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one

or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an entry for this *measId* (a first cell triggers the event):

- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the triggerType is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during of *timeToTrigger* defined within the *VarMeasurementConfiguration* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to TRUE for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
- 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 4> stop the periodical reporting timer for this *measId*, if running;
- ...
- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- ...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘event’ or to ‘periodical’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.2]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A1-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A1-2, as specified below, is fulfilled;

InequalityA1-1 (Entering condition)

$$Ms - Hys > Thresh$$

InequalityA1-2 (Leaving condition)

$$Ms + Hys < Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a1-Threshold* as defined within *reportConfigEUTRA* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.5.5]

...

For the measId for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*;

2> start the periodical reporting timer with the value of *reportInterval* as defined within the *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

### 8.3.1.1.3 Test description

#### 8.3.1.1.3.1 Pre-test conditions

System Simulator:

- Cell 1

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

#### 8.3.1.1.3.2 Test procedure sequence

Table 8.3.1.1.3.2-1 illustrates the downlink power levels to be applied for Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.1.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Remark</b>
<b>T0</b>	Cell-specific RS EPRE	dBm/15 kHz	-85	Power level is such that $Ms + Hys < Thresh$
<b>T1</b>	Cell-specific RS EPRE	dBm/15 kHz	-59	Power level is such that entry condition for event A1 is satisfied $Ms - Hys > Thresh$
<b>T2</b>	Cell-specific RS EPRE	dBm/15 kHz	-85	Power level is such that exit condition for event A1 is satisfied $Ms + Hys < Thresh$
Note:	The total test tolerance used is the sum of downlink signal level uncertainty (TS 36.508 clause 6.2.2.1) and absolute UE measurement accuracy (TS 36.133 clause 9).			

**Table 8.3.1.1.3.2-2: Main behaviour**

<b>St</b>	<b>Procedure</b>	<b>Message Sequence</b>		<b>TP</b>	<b>Verdict</b>
		<b>U - S</b>	<b>Message</b>		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup intra LTE measurement and reporting for event A1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.1.3.2-1.	-	-	-	-
4	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A1 with the measured RSRP and RSRQ value for Cell 1?	-->	<i>MeasurementReport</i>	1	P
-	EXCEPTION: Step 5 below is repeated until 3 <i>MeasurementReport</i> messages are received from the UE	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message, with the measured RSRP and RSRQ value for Cell 1?	-->	<i>MeasurementReport</i>	1	P
6	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.1.3.2-1.	-	-	-	-
7	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cell 1 and UE measurement.	-	-	-	-
8	Check: Does the UE attempt to transmit an uplink message within the next 10s?	-	-	2	F

### 8.3.1.1.3.3 Specific message contents

### 8.3.1.2 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A2

#### 8.3.1.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event based
periodical reporting }
ensure that {
  when { Serving cell becomes worse than absolute threshold minus hysteresis }
    then { UE sends MeasurementReport message at regular intervals while entering conditions for
event A2 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A2
ongoing}
ensure that {
  when { Serving cell becomes better than absolute threshold plus hysteresis }
    then { UE stops sending MeasurementReport message }
}
```

#### 8.3.1.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.3 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns EUTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* while the *VarMeasReportList* does not include a measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to TRUE for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

...

[TS 36.331, clause 5.5.4.3]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

InequalityA2-1 (Entering condition)

$$Ms + Hys < Thresh$$

InequalityA2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

***Ms*** is the measurement result of the serving cell, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within the *reportConfigEUTRA* for this event).

***Thresh*** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within the *reportConfigEUTRA* for this event).

***Ms*** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

***Hys*** is expressed in dB.

***Thresh*** is expressed in the same unit as ***Ms***.

[TS 36.331, clause 5.5.5]

...

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - ...
  - 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
  - 1> stop the periodical reporting timer, if running;
  - 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId* :
    - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
  - ...
  - 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

8.3.1.2.3 Test description

8.3.1.2.3.1 Pre-test conditions

System Simulator:

- Cell 1

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

8.3.1.2.3.2 Test procedure sequence

Table 8.3.1.2.3.2-1 illustrates the downlink power levels to be applied for Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.2.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-70	Power level is such that $Ms > Thresh + Hys$
T1			-96	Power level is such that entry condition for event A2 is satisfied $Ms + Hys < Thresh$
T2			-70	Power level is such that exit condition for event A2 is satisfied $Ms > Thresh + Hys$
Note: The total tolerance used is the sum of downlink signal level uncertainty (TS 36.508 clause 6.2.2.1) and absolute UE measurement accuracy (TS 36.133 clause 9).

### 8.3.1.3 Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (intra and inter-frequency measurements)

#### 8.3.1.3.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for two event A3 at the same time}
ensure that {
  when { Entry condition for event A3 is not met }
  then { UE does not send MeasurementReport }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for two event A3 at the same time}
ensure that {
  when { Neighbour becomes offset better than serving }
  then { UE sends MeasurementReport with correct measId for event A3 }
}
```

#### 8.3.1.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:
    - 3> consider any neighbouring cell detected on the associated frequency to be applicable;
  - 2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:
    - 3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;
  - 2> else:
    - 3> if the corresponding *measObject* concerns E-UTRA:
      - 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
    - 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
      - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
    - 3> else if the corresponding *measObject* concerns GERAN:
      - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
  - 2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to ‘*event*’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
    - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> stop timer T321;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the T321 for this *measId*:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.4]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Ms + Ofc + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofs** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofs, Ocs, Hys, Off** are expressed in dB.

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
- 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
  - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
    - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
  - 5> else:
    - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
- 3> else if the *purpose* is set to ‘*reportCGI*’:
  - 4> if the mandatory present fields of the *cellGlobalId* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
    - 5> include the *cgi-Info* containing all the fields that have been successfully acquired;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘*periodical*’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- 1> if the measured results are for CDMA2000 HRPD:
  - 2> set the *preRegistrationStatusHRPD* to the UE’s CDMA2000 upper layer’s HRPD *preRegistrationStatus*;
- 1> if the measured results are for CDMA2000 1xRTT:
  - 2> set the *preRegistrationStatusHRPD* to ‘*FALSE*’;
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.1.3.3 Test description

#### 8.3.1.3.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2 and Cell 3
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.3.3.2 Test procedure sequence

Table 8.3.1.3.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 2 and Cell 3 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.3.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 3 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-91	Off	Power levels are such that entry condition for event A3 (measId 1 & 2) is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79	Off	Power levels are such that entry condition for event A3 (measId 1) is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
T2	Cell-specific RS EPRE	dBm/15kHz	-85	Off	-73	Power levels are such that entry condition for event A3 (measId 2) is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.1.3.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message

#### **8.3.1.3a.1 Test Purpose (TP)**

(1)

```

with { UE in E-UTRA RRC_CONNECTED state, measurements configured for two event A3 at the same time
and triggerQuantity set to rsrq }
ensure that {
  when { Entry condition for event A3 is not met }
  then { UE does not send MeasurementReport }
}

```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state, measurements configured for two event A3 at the same time
and triggerQuantity set to rsrq }
ensure that {
    when { Neighbour becomes offset better than serving }
        then { UE sends MeasurementReport with correct measId for event A3 }
    }
}

```

#### **8.3.1.3a.2 Conformance requirements**

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, 5.5.4.1, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

24

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to '*reportStrongestCellsForSON*':

3> consider any neighbouring cell detected on the associated frequency to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to '*reportCGI*':

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the *csg-allowedReportingCells* within the *VarMeasConfig* for this *measId*, if configured in the corresponding *measObjectUTRA* (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).

3> else if the corresponding *measObject* concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;

2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

- 2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to '*event*' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
- 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:
- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.
- 2> upon expiry of the periodical reporting timer for this *measId*:
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> stop timer T321;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> upon expiry of the T321 for this *measId*:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.4]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition):

$$Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$$

Inequality A3-2 (Leaving condition):

$$Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofs** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofs, Ocs, Hys, Off** are expressed in dB.

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to '*event*':
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

**NOTE:** The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
    - 5> else:
      - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 *pilotStrength*, i.e. the best cell is included first;
  - 3> else if the *purpose* is set to '*reportCGI*':
    - 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
      - 5> if the cell broadcasts a CSG identity:
        - 6> include the *csg-Identity*;
        - 6> include the *csg-MemberStatus* and set it to '*member*' if the cell is a CSG member cell;
      - 5> if the '*si-RequestForHO*' is configured within the *reportConfig* associated with this *measId*:
        - 6> include the *cgi-Info* containing all the fields that have been successfully acquired, except for the *plmn-IdentityList*;
      - 5> else:
        - 6> include the *cgi-Info* containing all the fields that have been successfully acquired;
    - 1> if the *ue-RxTxTimeDiffPeriodical* is configured within the corresponding *reportConfig* for this *measId*;

- 2> set the *ue-RxTxTimeDiffResult* to the measurement result provided by lower layers;
- 2> set the *currentSFN*;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to '*periodical*':
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- 1> if the measured results are for CDMA2000 HRPD:
  - 2> set the *preRegistrationStatusHRPD* to the UE's CDMA2000 upper layer's HRPD *preRegistrationStatus*;
- 1> if the measured results are for CDMA2000 1xRTT:
  - 2> set the *preRegistrationStatusHRPD* to '*FALSE*';
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.1.3a.3            Test description

8.3.1.4 Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra and inter-frequency measurements)

#### 8.3.1.4.1 Test Purpose (TP)

(1)

```

with { UE in E-UTRA RRC_CONNECTED state and measurement configured for periodic reporting of intra
frequency cells and inter frequency cells on specified frequency }
ensure that {
    when { The UE receives reference signal power for cells on the serving frequency and cells on the
frequency where measurements are configured }
        then { UE sends MeasurementReport message at regular intervals for these cells }
}

```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state and a MeasurementReport message for a configured periodic
measurement reporting of intra and inter frequency cells was sent }
ensure that {
    when { A previously reported cell become unavailable or the UE receives reference signal power on
a reported frequency for a cell which was previously not reported }
        then { UE sends MeasurementReport message at regular intervals for the available intra and inter
frequency cells }
}

```

```

}

(3)

with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting ongoing}
ensure that {
    when { The UE receives a RRConnectionReconfiguration message removing measIds for periodic
reporting }
    then { UE stops sending MeasurementReport messages for these measIds }
}

```

### 8.3.1.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* value included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:

2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

...

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measuredResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to ‘*event*’:

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to ‘*event*’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than to *reportAmount* as defined corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

1> submit the MEASUREMENT REPORT message to lower layers for transmission, upon which the procedure ends.

#### 8.3.1.4.3 Test description

##### 8.3.1.4.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2, Cell 3, Cell 4 and Cell 6
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18] on Cell 1.

##### 8.3.1.4.3.2 Test procedure sequence

Table 8.3.1.4.3.2-1 illustrates the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.4.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 3 (DL only)	Cell 4 (DL only)	Cell 6 (DL only)	Remark
T0	Cell-specific RS EPRE (FDD)	dBm/ 15kHz	-85	-91	-85	Off	Off	
	Cell-specific RS EPRE (TDD)		-85	-89	-85	Off	Off	
T1	Cell-specific RS EPRE (FDD)	dBm/ 15kHz	-85	Off	-85	-91	Off	
	Cell-specific RS EPRE (TDD)		-85	Off	-85	-89	Off	
T2	Cell-specific RS EPRE (FDD)	dBm/ 15kHz	-85	Off	Off	-91	-85	
	Cell-specific RS EPRE (TDD)		-85	Off	Off	-89	-85

### 8.3.1.5 Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous event A3 (intra-frequency measurements)

#### 8.3.1.5.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for two event A3 at the same time}
ensure that {
  when { Entry condition for event A3 is not met }
  then { UE does not send MeasurementReport }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for two event A3 at the same time}
ensure that {
  when { Neighbour becomes offset better than serving }
  then { UE sends MeasurementReport with correct measId for event A3 }
}
```

#### 8.3.1.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRCConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

- 2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:
  - 3> consider any neighbouring cell detected on the associated frequency to be applicable;
- 2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:
  - 3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;
- 2> else:
  - 3> if the corresponding *measObject* concerns E-UTRA:
    - 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
  - 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
    - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
  - 3> else if the corresponding *measObject* concerns GERAN:
    - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
  - 2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to ‘*event*’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
    - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

- 4> initiate the measurement reporting procedure, as specified in 5.5.5;
- 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
  - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.4]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$$

The variables in the formula are defined as follows:

**M<sub>n</sub>** is the measurement result of the neighbouring cell, not taking into account any offsets.

**O<sub>fn</sub>** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**O<sub>cn</sub>** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**M<sub>s</sub>** is the measurement result of the serving cell, not taking into account any offsets.

**O<sub>fs</sub>** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**O<sub>cs</sub>** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**H<sub>y</sub>s** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**M<sub>n</sub>, M<sub>s</sub>** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**O<sub>fn</sub>, O<sub>cn</sub>, O<sub>fs</sub>, O<sub>cs</sub>, H<sub>y</sub>s, Off** are expressed in dB.

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
- 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
  - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
    - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
  - 5> else:
    - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
- 3> else if the *purpose* is set to ‘*reportCGI*’:
  - 4> if the mandatory present fields of the *cellGlobalId* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
    - 5> include the *cgi-Info* containing all the fields that have been successfully acquired;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘*periodical*’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- 1> if the measured results are for CDMA2000 HRPD:
  - 2> set the *preRegistrationStatusHRPD* to the UE’s CDMA2000 upper layer’s HRPD *preRegistrationStatus*;
- 1> if the measured results are for CDMA2000 1xRTT:
  - 2> set the *preRegistrationStatusHRPD* to ‘*FALSE*’;
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.1.5.3 Test description

#### 8.3.1.5.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18]

#### 8.3.1.5.3.2 Test procedure sequence

Table 8.3.1.5.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.5.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/1 5kHz	-85	-110	Power levels are such that entry condition for event A3 ( <i>measId</i> 1 & 2) is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T1	Cell-specific RS EPRE (FDD)	dBm/1 5kHz	-85	-91	Power levels are such that entry condition for event A3 ( <i>measId</i> 1) is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
	Cell-specific RS EPRE (TDD)		-85	-89	
T2	Cell-specific RS EPRE	dBm/1 5kHz	-85	-79	Power levels are such that entry condition for event A3 ( <i>measId</i> 2) is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.1.5.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup intra E-UTRAN measurement and reporting for two event A3 ( <i>measId</i> 1 and <i>measId</i> 2) with different parameters.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RCCConnectionReconfigurationComplete</i> message.	-->	<i>RCCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message within the next 10s?	-->	<i>MeasurementReport</i>	1	F
4	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.5.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A3 ( <i>measId</i> 1) with the measured RSRP value for Cell 2?	-->	<i>MeasurementReport</i>	2	P
6	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.5.3.2-1.	-	-	-	-
7	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A3 ( <i>measId</i> 2) with the measured RSRP value for Cell 2?	-->	<i>MeasurementReport</i>	2	P

### 8.3.1.6 Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (inter-frequency measurements)

#### 8.3.1.6.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
    when { Serving becomes worse than threshold }
        then { UE sends MeasurementReport for event A2 }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
    when { Neighbour becomes offset better than serving }
        then { UE sends MeasurementReport for event A3 }
}
```

#### 8.3.1.6.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.3, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to 'event' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to TRUE for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to 'reportStrongestCells' or to 'reportStrongestCellsForSON' and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to 'reportStrongestCells', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to 'reportStrongestCellsForSON', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to 'reportCGI' and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.3]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

Inequality A2-1 (Entering condition)

$$Ms + Hys < Thresh$$

Inequality A2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigEUTRA* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.5.4.4]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition)

$$Mn + Qfn + Ocn - Hys > Ms + Ofn + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Qfn + Ocn + Hys < Ms + Ofn + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofs** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofc, Ocs, Hys, Off** are expressed in dB.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to 'event':
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to 'event'; or the *purpose* is set to 'reportStrongestCells' or to 'reportStrongestCellsForSON':
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
    - 5> else:

6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 *pilotStrength*, i.e. the best cell is included first;

...

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.1.6.3 Test description

##### 8.3.1.6.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 3
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.6.3.2 Test procedure sequence

Table 8.3.1.6.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 3 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.6.3.2-1 : Power levels**

	Parameter	Unit	Cell 1	Cell 3 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/1 5kHz	-75	-91	Power levels are such that entry condition for event A2 and event A3 is not satisfied: $Ms - Hys > Thresh$ AND $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T1	Cell-specific RS EPRE	dBm/1 5kHz	-93	-105	Power level of Cell 1 is such that entry condition for event A2 is satisfied: $Ms + Hys < Thresh$ AND Power levels of Cell 1 and Cell 3 are such that entry condition for event A3 is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T2	Cell-specific RS EPRE	dBm/1 5kHz	-85	-73	Power levels are such that entry condition for event A3 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.1.6.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra LTE measurement and reporting for event A2 and event A3 (inter frequency measurement)	<--	<i>RRCConnectionReconfiguration</i>	-	-

8.3.1.7 Measurement configuration control and reporting / Intra E-UTRAN measurements / Blacklisting

#### 8.3.1.7.1 Test Purpose (TP)

(1)

```

with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A3 reporting }
ensure that {
    when { Blacklisted neighbour cell satisfies entry condition for event A3 }
        then { It is not considered in event evaluation and UE does not send MeasurementReport message }
}

```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state and measurement reporting triggered by event A3 is ongoing}
ensure that {
    when { Blacklisted neighbour cell satisfies entry condition for event A3 }
        then { It is not considered in measurement reporting }
}

```

### 8.3.1.7.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.5.1, 5.5.4.1, and 5.5.5.

[TS 36.331, clause 5.5.1]

The UE reports measurement information in accordance with the measurement configuration as provided by E-UTRAN. E-UTRAN provides the measurement configuration applicable for a UE in RRC\_CONNECTED state by means of dedicated signalling, i.e. using the *RRConnectionReconfiguration* message.

• • •

- For intra-frequency and inter-frequency measurements a measurement object is a single E-UTRA carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of cell specific offsets and a list of ‘blacklisted’ cells. Blacklisted cells are not considered in event evaluation or measurement reporting.
- ...

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns EUTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* while the *VarMeasReportList* does not include a measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

- 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- ...

[TS 36.331, clause 5.5.5]

...

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the IE *measId* to the measurement identity that triggered the measurement reporting;
  - 1> set the *measResultServCell* to include the quantities of serving cell;
  - 1> if there is at least one applicable neighbouring cell to report:
    - 2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
      - 3> if the *triggerType* is set to ‘event’:
        - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
  - 3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;
  - 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘reportStrongestCells’ or to ‘reportStrongestCellsForSON’:
    - 4> for each included cell include the layer 3 filtered measured results in accordance with the *reportConfigList* for this *measId*, ordered as follows:
      - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
        - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
  - 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
  - 1> stop the periodical reporting timer, if running;
- ...
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

### 8.3.1.7.3 Test description

#### 8.3.1.7.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2 and Cell 4:
  - Cell 1 is the serving cell
  - Cell 2 and Cell 4 are intra-frequency neighbour cells

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

#### 8.3.1.7.3.2 Test procedure sequence

Table 8.3.1.7.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 2 and Cell 4 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.7.3.2-1 : Power level**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 4 (DL only)	Remark
T0			-85	-97	-97	Power levels are such that that exit condition for event A3 is satisfied for all cells ( $M2 + Hys < M1 + Off$ and $M4 + Hys < M1 + Off$ ) with all offset parameters set to 0 dB.
T1	Cell-specific RS EPRE	dBm/ 15kHz	-85	-79	-97	Power level of Cell 2 is set such that measurement results for Cell 1 ( $M1$ ) and Cell 2 ( $M2$ ) satisfy entry condition for event A3 ( $M2 - Hys > M1 + Off$ ).
T2			-85	-79	-79	Power level of Cell 4 is set such that measurement results for Cell 1 ( $M1$ ) and Cell 4 ( $M4$ ) satisfy entry condition for event A3 ( $M4 - Hys > M1 + Off$ ).

**Table 8.3.1.7.3.2-2 : Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intraLTE measurement and reporting for event A3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	SS re-adjusts the cell-specific reference signal levels according to row "T1" in table 8.3.1.7.3.2.-1.	-	-	-	-
4	Check: does the UE transmit a <i>MeasurementReport</i> messages within the next 10s?	-	<i>MeasurementReport</i>	1	F
5	SS re-adjusts the cell-specific reference signal levels according to row "T2" in table 8.3.1.7.3.2.-1.	-	-	-	-
6	Check: does the UE transmit a <i>MeasurementReport</i> message to report event A3 with the measured RSRP values for Cell 1 and Cell 4 without Cell 2 results?	-->	<i>MeasurementReport</i>	2	P
7	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to remove Cell 2 from the blacklisted cell list.	<--	<i>RRCConnectionReconfiguration</i>	-	-
8	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
-	EXCEPTION: Steps 8Aa1 to 8Ab1 describe a transaction that depends on the UE behaviour; the "lower case letter" identifies a step sequence that takes place if a specific behaviour happens.	-	-	-	-
8A a1	IF the UE detects event A3 for Cell 4 before event A3 for Cell 2 THEN the UE may transmit <i>MeasurementReport</i> message to report event A3 with the measured RSRP values for Cell 1 and Cell 4.	-->	<i>MeasurementReport</i>	-	-
8A b1	IF the UE detects event A3 for Cell 2 before event A3 for Cell 4 THEN the UE may transmit <i>MeasurementReport</i> message to report event A3 with the measured RSRP values for Cell 1 and Cell 2.	-->	<i>MeasurementReport</i>	-	-
9	Check: does the UE transmit a <i>MeasurementReport</i> message to report event A3 with the measured RSRP values for Cell 1, Cell 2 and Cell 4?	-->	<i>MeasurementReport</i>	1, 2	P

### 8.3.1.8 Measurement configuration control and reporting / Intra E-UTRAN measurements / Handover / IE measurement configuration present

#### 8.3.1.8.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the intra frequency measurement }
ensure that {
    when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo and a measConfig for removing intra frequency measurement }
    then { UE performs intra frequency handover and stops the intra frequency measurement }
}
```

#### 8.3.1.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.4, 5.5.2.2, 5.5.2.6 and 5.5.4.4.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
  - 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> if the *keyChangeIndicator* received in the *securityConfigHO* is set to *TRUE*:

- 2> update the  $K_{eNB}$  key based on the fresh  $K_{ASME}$  key taken into use with the previous successful NAS SMC procedure, as specified in TS 33.401 [32];
  - 1> else:
    - 2> update the  $K_{eNB}$  key based on the current  $K_{eNB}$  or the NH, using the *nextHopChainingCount* value indicated in the *securityConfigHO*, as specified in TS 33.401 [32];
    - 1> store the *nextHopChainingCount* value;
    - 1> if the *securityAlgorithmConfig* is included in the *securityConfigHO*:
      - 2> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
      - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
    - 1> else:
      - 2> derive the  $K_{RRCint}$  key associated with the current integrity algorithm, as specified in TS 33.401 [32];
      - 2> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
    - 1> configure lower layers to apply the integrity protection algorithm and the  $K_{RRCint}$  key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
    - 1> configure lower layers to apply the ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
    - 1> perform the measurement related actions as specified in 5.5.6.1;
    - 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
      - 2> perform the measurement configuration procedure as specified in 5.5.2;
    - 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
    - 1> if MAC successfully completes the random access procedure:
      - 2> stop timer T304;
      - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
      - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;
- NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> the procedure ends;

...

[TS 36.331, clause 5.5.2.2]

The UE shall:

- 1> for each *measId* included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:
  - 2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;
  - 2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

...

[TS 36.331, clause 5.5.2.6]

The UE shall:

- 1> for each *reportConfigId* included in the received *reportConfigToRemoveList* that is part of the current UE configuration in *varMeasConfig*:
  - 2> remove the entry with the matching *reportConfigId* from the *reportConfigList* within the *VarMeasConfig*;
  - 2> remove all *measId* associated with the *reportConfigId* from the *measIdList* within the *VarMeasConfig*, if any;
  - 2> if a *measId* is removed from the *measIdList*:
    - 3> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
    - 3> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

**NOTE:** The UE does not consider the message as erroneous if the *reportConfigToRemoveList* includes any *reportConfigId* value that is not part of the current UE configuration.

[TS 36.331, clause 5.5.4.4]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Ms + Ofn + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Ms + Ofn + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofs** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofn, Ocs, Hys, Off** are expressed in dB.

8.3.1.8.3            Test description

8.3.1.8.3.1        Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.1.8.3.2        Test procedure sequence

Table 8.3.1.8.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.8.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy exit condition for event A3 ( $M2 < M1$ ).
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 ( $M2 > M1$ ).

**Table 8.3.1.8.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to setup intra frequency measurement.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1 to confirm the setup of intra frequency measurement.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in table 8.3.1.8.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to report event A3.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message with a <i>measConfig</i> on Cell 1 for removing event A3 reporting, to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 2?	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
7	The SS changes Cell 1 and Cell 2 parameters according to the row "T0" in table 8.3.1.8.3.2-1.	-	-	-	-
8	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 2 to perform event A3 reporting during the next 30s?	-->	<i>MeasurementReport</i>	1	F
9	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 2?	-	-	1	-

**8.3.1.9** Measurement configuration control and reporting / Intra E-UTRAN measurements / Intra-frequency handover / IE measurement configuration not present

#### 8.3.1.9.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the intra frequency measurement }
ensure that {
  when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo and not including a measConfig }
  then { UE performs intra frequency handover and continues the intra frequency measurement }
}
```

(2)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter frequency measurement }
ensure that {
  when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo and not including a measConfig }
  then { UE performs intra frequency handover and continues the inter frequency measurement after the activation of the measurement gaps }
}
```

#### 8.3.1.9.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.4 and 5.5.6.1.

[TS 36.331, clause 5.5.4.4]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofs** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofs, Ocs, Hys, Off** are expressed in dB.

[TS 36.331, clause 5.5.6.1]

E-UTRAN applies the handover procedure as follows:

- when performing the handover procedure, as specified in 5.3.5.4, ensure that a *measObjectId* corresponding to the handover target carrier frequency is configured as a result of the procedures described in this sub-clause and in 5.3.5.4;

...

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *triggerType* is set to 'periodical':

3> remove this *measId* from the *measIdList* within *VarMeasConfig*:

1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:

2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectList* within *VarMeasConfig*:

3> for each *measId* value in the *measIdList*:

4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:

5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;

4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:

5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;

2> else:

3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;

1> remove all measurement reporting entries within *VarMeasReportList*;

1> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;

1> release the measurement gaps, if activated;

**NOTE:** If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

8.3.1.9.3                  Test description

8.3.1.9.3.1                Pre-test conditions

System Simulator:

- Cell 1, Cell 2 and Cell 3.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.1.9.3.2                Test procedure sequence

Table 8.3.1.9.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3" and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.9.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Cell 3 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	"Off"	-97	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) do not satisfy entry condition for event A3 (M3 < M1). (NOTE 1)
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	"Off"	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M3 > M1). (NOTE 1)
T2	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1)

including a measConfig }
        then { UE performs intra frequency handover and continues the intra frequency measurement }
    }
}

```

#### **8.3.1.9a.2 Conformance requirements**

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.4 and 5.5.6.1.

[TS 36.331, clause 5.5.4.4]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

### Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys \geq Ms + Ofs + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofs** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofs, Ocs, Hys, Off** are expressed in dB.

[TS 36.331, clause 5.5.6.1]

E-UTRAN applies the handover procedure as follows:

- when performing the handover procedure, as specified in 5.3.5.4, ensure that a *measObjectId* corresponding to the handover target carrier frequency is configured as a result of the procedures described in this sub-clause and in 5.3.5.4;

...

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the *triggerType* is set to 'periodical':
  - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*:
- 1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:
  - 2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectList* within *VarMeasConfig*:
    - 3> for each *measId* value in the *measIdList*:
      - 4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;
      - 4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;
    - 2> else:

3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;

1> remove all measurement reporting entries within *VarMeasReportList*;

1> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;

1> release the measurement gaps, if activated;

**NOTE:** If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

#### 8.3.1.9a.3 Test description

##### 8.3.1.9a.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2.
- System information combination 2 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.1.9a.3.2 Test procedure sequence

Table 8.3.1.9a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while column marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.9a.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	off	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1)
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1)
T2	Cell-specific RS EPRE	dBm/15k Hz	-79	-85	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M1 > M2). (NOTE 1)

NOTE 1: Power level "Off" is defined in TS 36.508 Table 6.2.2.1-1.

### 8.3.1.10.1 Test Purpose (TP)

(1)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the intra frequency and inter frequency measurements }
ensure that {
    when { UE receives an RRCConnectionReconfiguration message including a mobilityControlInfo
indicating a different E-UTRA frequency and not including a measConfig }
        then { UE performs inter frequency handover, continues the intra frequency measurement and
continues inter frequency measurement after the activation of the measurement gaps }
}

```

### 8.3.1.10.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.6.1.

[TS 36.331, clause 5.5.6.1]

E-UTRAN applies the handover procedure as follows:

- when performing the handover procedure, as specified in 5.3.5.4, ensure that a *measObjectId* corresponding to the handover target carrier frequency is configured as a result of the procedures described in this subclause and in 5.3.5.4;

...

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the *triggerType* is set to '*periodical*':
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*
- 1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:
  - 2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectList* within *VarMeasConfig*
    - 3> for each *measId* value in the *measIdList*:
      - 4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the target carrierfrequency;
      - 4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;
  - 2> else:
    - 3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;
- 1> remove all measurement reporting entries within *VarMeasReportList*;
- 1> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;
- 1> release the measurement gaps, if activated;

**NOTE:** If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

### 8.3.1.10.3 Test description

#### 8.3.1.10.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2, Cell 3 and Cell 12.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.3.1.10.3.2 Test procedure sequence

Table 8.3.1.10.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3", and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.10.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 3	Cell 12 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-91	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) do not satisfy entry condition for event A3 (M2 < M1). (NOTE 1).
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1).
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	-73	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M3 > M1). (NOTE 1).
T3	Cell-specific RS EPRE	dBm/15 kHz	-97	"Off"	-85	-79	The power level values are such that measurement results for Cell 3 (M3) and Cell 12 (M12) satisfy entry condition for event A3 (M12 > M3). (NOTE 1).
T4	Cell-specific RS EPRE	dBm/15 kHz	-73	"Off"	-85	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M1 > M3). (NOTE 1).

NOTE 1: Power level "Off" is defined in TS 36.508 Table 6.2.2.1-1.

8.3.1.11 Measurement configuration control and reporting / Intra E-UTRAN measurements / Continuation of the measurements after RRC connection re-establishment

#### **8.3.1.11.1 Test Purpose (TP)**

(1)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the intra frequency measurement and after receiving an RRConnectionReconfiguration
message including a mobilityControlInfo indicating a different E-UTRA cell having attempted intra
frequency handover}
ensure that {
  when { UE detects handover failure and the intra frequency cell is selectable }
  then {UE performs RRC Connection Re-establishment, continues the intra frequency measurement }
}

```

(2)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter frequency measurement and after receiving an RRConnectionReconfiguration
message including a mobilityControlInfo indicating a different E-UTRA cell having attempted intra
frequency handover}
ensure that {
    when { UE detects handover failure and the intra frequency cell is selectable }
        then {UE performs RRC Connection Re-establishment, continues the inter frequency measurement
after the activation of the measurement gaps }
}

```

#### **8.3.1.11.2 Conformance requirements**

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.4, 5.3.5.6, 5.3.7.2 and 5.5.6.1.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

2> perform the radio resource configuration procedure as specified in 5.3.10;

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;

1> if MAC successfully completes the random access procedure:

2> stop timer T304;

2> apply the parts of the configuration that do not require the UE to know the SFN of the target cell;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

2> the procedure ends;

NOTE 3: The UE is not required to determine the SFN of the target cell by acquiring system information from that cell before performing RACH access in the target cell.

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;
- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331,clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

- 1> upon detecting radio link failure, in accordance with 5.3.11; or
- 1> upon handover failure, in accordance with 5.3.5.6; or
- 1> upon mobility from E-UTRA failure, in accordance with 5.4.3.5; or
- 1> upon integrity check failure indication from lower layers; or
- 1> upon an RRC connection reconfiguration failure, in accordance with 5.3.5.5;

Upon initiation of the procedure, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T311;
- 1> suspend all RBs except SRB0;
- 1> reset MAC;
- 1> apply the default physical channel configuration as specified in 9.2.4;
- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331,clause 5.5.6.1]

E-UTRAN applies the re-establishment procedure as follows:

- when performing the connection re-establishment procedure, as specified in 5.3.7, ensure that a *measObjectId* corresponding to the target carrier frequency is configured as a result of the procedure described in this sub-clause and the subsequent connection reconfiguration procedure immediately following the re-establishment procedure;

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the *triggerType* is set to ‘periodical’:
  - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*:
- 1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:
  - 2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectList* within *VarMeasConfig*:

3> for each *measId* value in the *measIdList*:

4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:

5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;

4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:

5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;

2> else:

3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;

1> remove all measurement reporting entries within *VarMeasReportList*;

1> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;

1> release the measurement gaps, if activated;

**NOTE:** If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

#### 8.3.1.11.3 Test description

##### 8.3.1.11.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2 and Cell 3.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.1.11.3.2 Test procedure sequence

Table 8.3.1.11.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3", "T4", "T5" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.11.3.2-1: Time instances of cell power levels**

	Parameter	Unit	Cell 1	Cell 2	Cell 3 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	"off"	"off"	
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	"off"	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 3 (M3) satisfy entry condition for event A3 (M3 - Hys > M1).
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	"off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 - Hys > M1).
T3	Cell-specific RS EPRE	dBm/15 kHz	"off"	-79	"off"	The power level values are assigned values to satisfy SrxlevCell 1 < 0 and SrxlevCell 3 < 0 such that selecting Cell 2 is guaranteed
T4	Cell-specific RS EPRE	dBm/15 kHz	-79	-85	"off"	The power level values are such that measurement results for Cell 2 (M2) and Cell 1 (M1) satisfy entry condition for event A3 (M1 - Hys > M2).
T5	Cell-specific RS EPRE	dBm/15 kHz	"off"	-85	-73	The power level values are such that measurement results for Cell 2 (M2) and Cell 3 (M3) satisfy entry condition for event A3 (M3 - Hys > M2).

Table 8.3.1.11.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup intra resp. intra and inter frequency measurements on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-

8.3.1.11a Measurement configuration control and reporting / Intra Frequency measurements / Continuation of the measurements after RRC connection re-establishment / Single Frequency operation

#### 8.3.1.11a.1 Test Purpose (TP)

(1)

**with** { UE having completed the radio bearer establishment, initial security activation procedure and performed the intra frequency measurement **and** after receiving an *RRCCConnectionReconfiguration*

```

message including a mobilityControlInfo indicating a different E-UTRA cell having attempted intra
frequency handover}
ensure that {
  when { UE detects handover failure and the intra frequency cell is selectable }
    then {UE performs RRC Connection Re-establishment, continues the intra frequency measurement }
}

```

### 8.3.1.11a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.4, 5.3.5.6, 5.3.7.2 and 5.5.6.1.

[TS 36.331,clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> else:
  - 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MAC;
- 1> re-establish PDCP for all RBs that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
- 1> re-establish RLC for all RBs that are established;
- 1> apply the value of the *newUE-Identity* as the C-RNTI;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> if the *RRCConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;

- ...
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;
  - 1> if MAC successfully completes the random access procedure:
    - 2> stop timer T304;
    - 2> apply the parts of the configuration that do not require the UE to know the SFN of the target cell;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

2> the procedure ends;

NOTE 3: The UE is not required to determine the SFN of the target cell by acquiring system information from that cell before performing RACH access in the target cell.

[TS 36.331,clause 5.3.5.6]

The UE shall:

1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;

2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331,clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

1> upon detecting radio link failure, in accordance with 5.3.11; or

1> upon handover failure, in accordance with 5.3.5.6; or

1> upon mobility from E-UTRA failure, in accordance with 5.4.3.5; or

1> upon integrity check failure indication from lower layers; or

1> upon an RRC connection reconfiguration failure, in accordance with 5.3.5.5;

Upon initiation of the procedure, the UE shall:

1> stop timer T310, if running;

1> start timer T311;

1> suspend all RBs except SRB0;

1> reset MAC;

1> apply the default physical channel configuration as specified in 9.2.4;

1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;

1> apply the default MAC main configuration as specified in 9.2.2;

1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331,clause 5.5.6.1]

E-UTRAN applies the re-establishment procedure as follows:

- when performing the connection re-establishment procedure, as specified in 5.3.7, ensure that a *measObjectId* corresponding to the target carrier frequency is configured as a result of the procedure described in this sub-clause and the subsequent connection reconfiguration procedure immediately following the re-establishment procedure;

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the *triggerType* is set to ‘*periodical*’:
- 3> remove this *measId* from the *measIdList* within *VarMeasConfig*:
- 1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:
- 2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectIdList* within *VarMeasConfig*:
- 3> for each *measId* value in the *measIdList*:
- 4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:
- 5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;
- 4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:
- 5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;
- 2> else:
- 3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;
- 1> remove all measurement reporting entries within *VarMeasReportList*;
- 1> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;
- 1> release the measurement gaps, if activated;
- NOTE:** If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

**8.3.1.11a.3**                   Test description

**8.3.1.11a.3.1**               Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.
- System information combination 2 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

**8.3.1.11a.3.2**               Test procedure sequence

Table 8.3.1.11a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", and "T3" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.11a.3.2-1: Time instances of cell power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 2</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	"off"	
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 - Hys > M1).
T2	Cell-specific RS EPRE	dBm/15 kHz	"off"	-79	The power level values are assigned values to satisfy SrxlevCell 1 < 0 such that selecting Cell 2 is guaranteed
T3	Cell-specific RS EPRE	dBm/15 kHz	-79	-85	The power level values are such that measurement results for Cell 2 (M2) and Cell 1 (M1) satisfy entry condition for event A3 (M1 - Hys > M2).

Table 8.3.1.11a.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup intra frequency measurements on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the setup of intra frequency measurements on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS changes Cell 2 power levels according to the row "T1" in Table 8.3.1.11a.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message on Cell 1 to perform event A3 intra frequency reporting for Cell 2.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message including a <i>mobilityControlInfo</i> , to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
-	EXCEPTION: In parallel to the events described in step 6 the steps specified in Table 8.3.1.11a.3.2-3 should take place.	-	-	-	-
6	The SS changes Cell 1 power levels according to the row "T2" in Table 8.3.1.11a.3.2-1.	-	-	-	-
7	Check: Does the UE transmit an <i>RRCConnectionReestablishmentRequest</i> message on Cell 2?	-->	<i>RRCConnectionReestablishmentRequest</i>	1	P
8	The SS transmits an <i>RRCConnectionReestablishment</i> message to resume SRB1 operation and re-activate security on Cell 2.	<--	<i>RRCConnectionReestablishment</i>	-	-
9	The UE transmits an <i>RRCConnectionReestablishmentComplete</i> message on Cell 2.	-->	<i>RRCConnectionReestablishmentComplete</i>	-	-
10	The SS transmits an <i>RRCConnectionReconfiguration</i> message to resume existing radio bearer on Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
11	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 2.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
-	EXCEPTION: Steps 11Aa1 to 11Aa2 describe behaviour that depends on the UE capability; the "lower case letter" identifies a step sequence that takes place if a capability is supported.	-	-	-	-
11Aa 1	IF pc_intraFreq-CE-Need ForGaps THEN the SS transmits an <i>RRCConnectionReconfiguration</i> message to activate the measurement gaps on Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
11Aa 2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the activation of the measurement gaps on Cell 2.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
12	The SS changes Cell 1 and Cell 2 power levels according to the row "T3" in Table 8.3.1.11a.3.2-1.	-	-	-	-
13	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 2 to perform event A3 intra frequency reporting for Cell 1?	-->	<i>MeasurementReport</i>	1	P
14	Check: Does the test result of CALL generic test procedure in 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 2?	-	-	1	-

**Table 8.3.1.11a.3.2-3: Parallel behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
-	EXCEPTION: The steps 1 and 2 below are repeated for the duration of T304.	-	-	-	-
1	The UE attempts to perform the intra frequency handover using MAC Random Access Preamble on Cell 2.	-	-	-	-
2	The SS does not respond.	-	-	-	-

### 8.3.1.12 Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (inter-band measurements)

#### 8.3.1.12.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for two event A3 at the same time}
ensure that {
  when { Neighbour becomes offset better than serving }
  then { UE sends MeasurementReport with correct measId for event A3 }
}
```

#### 8.3.1.12.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:
    - 3> consider any neighbouring cell detected on the associated frequency to be applicable;
  - 2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:
    - 3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;
  - 2> else:
    - 3> if the corresponding *measObject* concerns E-UTRA:
      - 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
    - 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
      - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
    - 3> else if the corresponding *measObject* concerns GERAN:
      - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
    - 2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
      - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
      - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
      - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
      - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
    - 2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
      - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
      - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
      - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
    - 2> if the *triggerType* is set to ‘*event*’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
      -

- 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
  - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
- 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
  - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.4]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofs** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofs, Ocs, Hys, Off** are expressed in dB.

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 4: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
- 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
  - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
    - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
  - 5> else:
    - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
- 3> else if the *purpose* is set to ‘*reportCGI*’:
  - 4> if the mandatory present fields of the *cellGlobalId* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
    - 5> include the *cgi-Info* containing all the fields that have been successfully acquired;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘*periodical*’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- 1> if the measured results are for CDMA2000 HRPD:
  - 2> set the *preRegistrationStatusHRPD* to the UE’s CDMA2000 upper layer’s HRPD *preRegistrationStatus*;
- 1> if the measured results are for CDMA2000 1xRTT:
  - 2> set the *preRegistrationStatusHRPD* to ‘*FALSE*’;
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.1.12.3 Test description

##### 8.3.1.12.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2 and Cell 10
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.12.3.2 Test procedure sequence

Table 8.3.1.12.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 2 and Cell 10 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.12.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 10 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-91	Off	Power levels are such that entry condition for event A3 (measId 1 & 2) is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79	Off	Power levels are such that entry condition for event A3 (measId 1) is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
T2	Cell-specific RS EPRE	dBm/15kHz	-85	Off	-73	Power levels are such that entry condition for event A3 (measId 2) is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.1.12.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup intra E-UTRAN measurement and reporting for two event A3 ( <i>measId</i> 1 and <i>measId</i> 2) (intra and inter frequency measurement).	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RCCConnectionReconfigurationComplete</i> message.	-->	<i>RCCConnectionReconfigurationC omplete</i>	-	-
3	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.12.3.2-1.	-	-	-	-
4	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A3 ( <i>measId</i> 1) with the measured RSRP value for Cell 2?	-->	<i>MeasurementReport</i>	1	P
5	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.12.3.2-1.	-	-	-	-
6	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A3 ( <i>measId</i> 2) with the measured RSRP value for Cell 10?	-->	<i>MeasurementReport</i>	1	P

### 8.3.1.12a Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (inter-band measurements) / Between FDD and TDD

#### 8.3.1.12a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and measurements configured for two event A3 at the same time for E-UTRA TDD cell }
ensure that {
  when { Entry condition for event A3 is not met }
    then { UE does not send MeasurementReport }
}
```

(2)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and measurements configured for two event A3 at the same time for E-UTRA TDD cell }
ensure that {
  when { Neighbour E-UTRA TDD cell becomes offset better than serving E-UTRA FDD cell }
    then { UE sends MeasurementReport with correct measId for event A3 }
}
```

(3)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and measurements configured for two event A3 at the same time for E-UTRA FDD cell }
ensure that {
  when { Entry condition for event A3 is not met }
    then { UE does not send MeasurementReport }
}
```

(4)

```

with { UE in E-UTRA TDD RRC_CONNECTED state and measurements configured for two event A3 at the same
time for E-UTRA FDD cell }
ensure that {
when { Neighbour E-UTRA FDD cell becomes offset better than serving E-UTRA TDD cell }
then { UE sends MeasurementReport with correct measId for event A3 }
}

```

### 8.3.1.12a.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:

3> consider any neighbouring cell detected on the associated frequency to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

3> else if the corresponding *measObject* concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;

2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘event’ or to ‘periodical’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.4]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition):

$$Mn + Qfn + Ocn - Hys > Ms + Ofn + Ocs + Off$$

Inequality A3-2 (Leaving condition):

$$Mn + Qfn + Ocn + Hys < Ms + Ofn + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Qfn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Qfn, Ocn, Ofn, Ocs, Hys, Off** are expressed in dB.

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
  - 1> set the *measResultServCell* to include the quantities of serving cell;
  - 1> if there is at least one applicable neighbouring cell to report:
    - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
      - 3> if the *triggerType* is set to ‘event’:
        - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
      - 3> else:
        - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
- NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].
- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
  - 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘reportStrongestCells’ or to ‘reportStrongestCellsForSON’:
    - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
      - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
        - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
      - 5> else:
        - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
    - 3> else if the *purpose* is set to ‘reportCGI’:
      - 4> if the mandatory present fields of the *cellGlobalId* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
        - 5> include the *cgi-Info* containing all the fields that have been successfully acquired;

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
- 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘*periodical*’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- 1> if the measured results are for CDMA2000 HRPD:
  - 2> set the *preRegistrationStatusHRPD* to the UE’s CDMA2000 upper layer’s HRPD *preRegistrationStatus*;
- 1> if the measured results are for CDMA2000 1xRTT:
  - 2> set the *preRegistrationStatusHRPD* to ‘*FALSE*’;
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

8.3.1.12a.3           Test description

8.3.1.12a.3.1       Pre-test conditions

System Simulator:

- Cell 1 is LTE FDD cell, Cell 28 is LTE TDD cell.
- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.3.1.12a.3.1-1.

**Table 8.3.1.12a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
28	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.3.1.12a.3.3-15.
- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18]

8.3.1.12a.3.2       Test procedure sequence

Table 8.3.1.12a.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1", "T2", "T3", "T4" and "T5" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.12a.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 28</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-110	The power levels are such that that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy exit condition for event A3 ( <i>measId 1 &amp; 2</i> ) (M28 < M1): $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-85	The power levels are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 ( <i>measId 1</i> ) (M28 > M1): $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	-73	The power levels are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 ( <i>measId 2</i> ) (M28 > M1): $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
T3	Cell-specific RS EPRE	dBm/15 kHz	-110	-73	The power levels are such that that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy exit condition for event A3 ( <i>measId 1 &amp; 2</i> ) (M1 < M28): $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T4	Cell-specific RS EPRE	dBm/15 kHz	-85	-85	The power levels are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 ( <i>measId 1</i> ) (M1 > M28): $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
T5	Cell-specific RS EPRE	dBm/15 kHz	-73	-85	The power levels are such that measurement results for Cell 1 (M1) and Cell 28 (M28) satisfy entry condition for event A3 ( <i>measId 2</i> ) (M1 > M28): $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

Table 8.3.1.12a.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup inter-band measurement and reporting for two event A3 ( <i>measId</i> 1 and <i>measId</i> 2) with different parameters for E-UTRA TDD Cell 28.	<--	<i>RRCConnectionReconfiguration</i>	-	-

### 8.3.1.13 Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra-frequency and inter-band measurements)

#### 8.3.1.13.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for periodic reporting of intra-frequency cells and inter-band cells }
ensure that {
    when { The UE receives reference signal power for cells on the serving frequency and cells on the frequency where measurements are configured }
        then { UE sends MeasurementReport message at regular intervals for these cells }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and a MeasurementReport message for a configured periodic measurement reporting of intra-frequency and inter-band cells was sent }
ensure that {
    when { A previously reported cell become unavailable or the UE receives reference signal power on a reported frequency for a cell which was previously not reported }
        then { UE sends MeasurementReport message at regular intervals for the available intra-frequency and inter-band cells }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting ongoing}
ensure that {
    when { The UE receives a RRCCconnectionReconfiguration message removing measIds for periodic reporting }
        then { UE stops sending MeasurementReport messages for these measIds }
}
```

#### 8.3.1.13.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCCconnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRCCconnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* value included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:

2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

...

[TS 36.331, clause 5.5.5]

...

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measuredResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to ‘*event*’:

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 3: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
- 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
  - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
    - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
- ...
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than to *reportAmount* as defined corresponding *reportConfig* for this *measId*:
- 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- ...
- 1> submit the MEASUREMENT REPORT message to lower layers for transmission, upon which the procedure ends.

#### 8.3.1.13.3 Test description

##### 8.3.1.13.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2, and Cell 10
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18] on Cell 1.

##### 8.3.1.13.3.2 Test procedure sequence

Table 8.3.1.13.3.2-1 illustrates the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.13.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 10 (DL only)	Remark
T0	Cell-specific RS EPRE (FDD)	dBm/ 15kHz	-85	-91	Off	
	Cell-specific RS EPRE (TDD)	dBm/ 15kHz	-85	-89	Off	
T1	Cell-specific RS EPRE (FDD)	dBm/ 15kHz	-85	-91	-85	
	Cell-specific RS EPRE (TDD)	dBm/ 15kHz	-85	-89	-85	
T2	Cell-specific RS EPRE	dBm/ 15kHz	-85	Off	-85	

Table 8.3.1.13.3.2-2: Main behaviour

### 8.3.1.13a Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra-frequency and inter-band measurements) / Between FDD and TDD

#### 8.3.1.13a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and measurement configured for periodic reporting of intra frequency cells and inter-band E-UTRA TDD cells on specified frequency }
ensure that {
  when { The UE receives reference signal power for cells on the serving frequency and cells on the frequency where measurements are configured }
  then { UE sends MeasurementReport message at regular intervals for these cells }
}
```

(2)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and a MeasurementReport message for a configured periodic measurement reporting of intra frequency and inter-band E-UTRA TDD cells was sent }
ensure that {
  when { A previously reported cell becomes unavailable or the UE receives reference signal power on a reported frequency for a cell which was previously not reported }
  then { UE sends MeasurementReport message at regular intervals for the available intra frequency and inter-band E-UTRA TDD cells }
}
```

(3)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and periodic measurement reporting ongoing }
ensure that {
  when { The UE receives a RRConnectionReconfiguration message removing measIds for periodic reporting }
  then { UE stops sending MeasurementReport messages for these measIds }
}
```

(4)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and measurement configured for periodic reporting of intra frequency cells and inter-band E-UTRA FDD cells on specified frequency }
ensure that {
  when { The UE receives reference signal power for cells on the serving frequency and cells on the frequency where measurements are configured }
  then { UE sends MeasurementReport message at regular intervals for these cells }
}
```

(5)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and a MeasurementReport message for a configured
periodic measurement reporting of intra frequency and inter-band E-UTRA FDD cells was sent }
ensure that {
    when { A previously reported cell becomes unavailable or the UE receives reference signal power on
a reported frequency for a cell which was previously not reported }
    then { UE sends MeasurementReport message at regular intervals for the available intra frequency
and inter-band E-UTRA FDD cells }
}
```

(6)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and periodic measurement reporting ongoing }
ensure that {
    when { The UE receives a RRCCofiguration message removing measIds for periodic
reporting }
    then { UE stops sending MeasurementReport messages for these measIds }
}
```

### 8.3.1.13a.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCCofiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRCCofiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* value included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:

2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

...

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measuredResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to ‘*event*’:

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 3: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to ‘*event*’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than to *reportAmount* as defined corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

1> submit the MEASUREMENT REPORT message to lower layers for transmission, upon which the procedure ends.

#### 8.3.1.13a.3 Test description

##### 8.3.1.13a.3.1 Pre-test conditions

###### System Simulator:

- Cell 1, Cell 2 and Cell 4 are E-UTRA FDD cells, Cell 10 and Cell 30 are E-UTRA TDD cells.
- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.3.1.13 a.3.1-1.

**Table 8.3.1.13a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
2	PLMN1
4	PLMN1
10	PLMN1
30	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

###### UE:

None.

###### Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.3.1.13a.3.3-17.
- The UE is in state Generic RB Established (state 3) according to [18] on Cell 1.

#### 8.3.1.13a.3.2 Test procedure sequence

Table 8.3.1.13a.3.2-1 illustrates the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1", "T2", "T3" and "T4", are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.13a.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 2(DL only)</b>	<b>Cell 4(DL only)</b>	<b>Cell 10(DL only)</b>	<b>Cell 30</b>	<b>Remark</b>

Table 8.3.1.13a.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra LTE measurements and periodical reporting for intra frequency and inter-band cells.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
2A	Wait and ignore <i>MeasurementReport</i> messages for 8 s to allow for the switching of the cells and UE to measure the neighbouring cells.	-	-	-	-
-	EXCEPTION: In parallel to events described in step 3 the steps specified in table 8.3.1.13a.3.2-3 and table 8.3.1.13a.3.2-5 shall take place				
3	Wait for 30 s to ensure that the UE performs a periodical intra frequency reporting for Cell 2 and a periodical inter-band reporting for Cell 10.	-	-	1	-
4	SS re-adjusts the cell-specific reference signal levels according to row "T1" in table 8.3.1.13a.3.2-1.	-	-	-	-
5	Wait and ignore <i>MeasurementReport</i> messages for 8 s to allow for the switching of Cell 2 and UE to measure the neighbouring cells.	-	-	-	-
-	EXCEPTION: In parallel to events described in step 6 the steps specified in table 8.3.1.13a.3.2-4 and table 8.3.1.13a.3.2-5 shall take place.				
6	Wait for 30 s to ensure that the UE performs a periodical intra frequency reporting for Cell 4 and a periodical inter-band reporting for Cell 10.	-	-	1, 2	-
7	SS re-adjusts the cell-specific reference signal levels according to row "T2" in table 8.3.1.13a.3.2-1.	-	-	-	-
8	Wait and ignore <i>MeasurementReport</i> messages for 8 s to allow for the switching of Cell 10 and UE to measure the neighbouring cells.	-	-	-	-
-	EXCEPTION: In parallel to events described in steps 9 to 11 the steps specified in table 8.3.1.13a.3.2-4 and table 8.3.1.13a.3.2-9 shall take place	-	-	-	-
9	Wait for 30 s to ensure that the UE performs a periodical intra frequency reporting for Cell 4 and a periodical inter-band reporting for Cell 30.	-	-	1, 2	-
10	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to remove measIds for periodical reporting.	<--	<i>RRCConnectionReconfiguration</i>	-	-
11	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
12	Check: Does the UE attempt to transmit an uplink message for the next 10s?	-	-	3	F
-	EXCEPTION: Steps 13a1 to 13b3 describe behaviour that depends on the UE capability that if UE has set FGI bit 30 to 1; the "lower case letter" identifies a step sequence that takes place if a capability is supported.	-	-	-	-

13a 1	IF pc_FeatrGrp_30 THEN the SS transmits an <i>RRCConnectionReconfiguration</i> message on Cell 1 to order the UE to perform inter band handover to Cell 30.	<--	<i>RRCConnectionReconfiguration</i>	-	-
13a 2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 30 to confirm the handover	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
13a 3	The UE transmits a TRACKING AREA UPDATE REQUEST message on Cell 30.	-	-	-	-
13a 4	SS responds with a TRACKING AREA UPDATE ACCEPT message. NOTE: The TAU is accepted with PLMN1 listed as an Equivalent PLMN	-	-	-	-
13a 5	The UE transmits a TRACKING AREA UPDATE COMPLETE message.	-	-	-	-
13b 1	ELSE IF NOT pc_FeatrGrp_30 THEN the SS transmits an <i>RRCConnectionRelease</i> message (IE <i>redirectedCarrierInfo</i> including EUTRA CarrierFreq of Cell 30) on Cell 1	<--	<i>RRCConnectionRelease</i>	-	-
13b 2	The generic test procedure described in TS 36.508 subclause 6.4.2.7 is performed on Cell 30 NOTE: The TAU is accepted with PLMN1 listed as an Equivalent PLMN	-	-	-	-
13b 3	Generic test procedure described in TS 36.508 subclause 4.5.3.3.is executed	-	-	-	-
14	SS re-adjusts the cell-specific reference signal levels according to row "T3" in table 8.3.1.13a.3.2-1.	-	-	-	-
15	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra LTE measurements and periodical reporting for intra frequency and inter-band cells.	<--	<i>RRCConnectionReconfiguration</i>	-	-
16	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
16 A	Wait and ignore <i>MeasurementReport</i> messages for 8 s to allow for the switching of Cell 4 and UE to measure the neighbouring cells.	-	-	-	-

**8.3.1.14** Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (inter-band measurements)

**8.3.1.14.1** Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
  when { Serving becomes worse than threshold }
    then { UE sends MeasurementReport for event A2 }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
  when { Neighbour becomes offset better than serving }
    then { UE sends MeasurementReport for event A3 }
}
```

**8.3.1.14.2** Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.3, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

- 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
  - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
- 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
  - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.
- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.3]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

Inequality A2-1 (Entering condition)

$Ms + Hys < Thresh$

Inequality A2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigEUTRA* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.5.4.4]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Ms + Ofn + Ocs + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Ms + Ofn + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

Ofn, Ocn, Ofn, Ocs, Hys, Off are expressed in dB.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

- 1> set the *measResultServCell* to include the quantities of serving cell;
  - 1> if there is at least one applicable neighbouring cell to report:
    - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
      - 3> if the *triggerType* is set to '*event*':
        - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
      - 3> else:
        - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
- NOTE 4: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].
- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
  - 3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':
    - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
      - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
        - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
      - 5> else:
        - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 *pilotStrength*, i.e. the best cell is included first;
- ...
- ...

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
  - 1> stop the periodical reporting timer, if running;
  - 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
    - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- ...

- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.1.14.3 Test description

##### 8.3.1.14.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 10
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.14.3.2 Test procedure sequence

Table 8.3.1.14.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 10 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.14.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 10 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/1 5kHz	-75	-91	Power levels are such that entry condition for event A2 and event A3 is not satisfied: $Ms - Hys > Thresh$ AND $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T1	Cell-specific RS EPRE	dBm/1 5kHz	-93	-105	Power level of Cell 1 is such that entry condition for event A2 is satisfied: $Ms + Hys < Thresh$ AND Power levels of Cell 1 and Cell 10 are such that entry condition for event A3 is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
T2	Cell-specific RS EPRE	dBm/1 5kHz	-85	-73	Power levels are such that entry condition for event A3 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.1.14.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra LTE measurement and reporting for event A2 and event A3 (inter-band measurement)	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message within the next 10s?	-->	<i>MeasurementReport</i>	1	F
4	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.14.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A2 with the measured RSRP value for Cell 1?	-->	<i>MeasurementReport</i>	1	P
6	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.14.3.2-1.	-	-	-	-
7	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A3 with the measured RSRP value for Cell 10?	-->	<i>MeasurementReport</i>	2	P

### 8.3.1.14a Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (inter-band measurements) / Between FDD and TDD

#### 8.3.1.14a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
  when { Serving E-UTRA FDD cell becomes worse than threshold }
    then { UE sends MeasurementReport for event A2 }
}
```

(2)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
  when { Neighbour E-UTRA TDD cell becomes offset better than serving E-UTRA FDD cell }
    then { UE sends MeasurementReport for event A3 }
}
```

(3)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
  when { Serving E-UTRA TDD cell becomes worse than threshold }
    then { UE sends MeasurementReport for event A2 }
}
```

(4)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and measurements configured for event A2 and event A3 }
ensure that {
  when { Neighbour E-UTRA FDD cell becomes offset better than serving E-UTRA TDD cell }
```

```

    then { UE sends MeasurementReport for event A3 }
}

```

### 8.3.1.14a.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.3, 5.5.4.4 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to '*event*' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
  - 2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> stop timer T321;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> upon expiry of the T321 for this *measId*:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

Inequality A2-1 (Entering condition):

$$Ms + Hys < Thresh$$

Inequality A2-2 (Leaving condition):

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigEUTRA* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.5.4.4]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

Inequality A3-1 (Entering condition):

$$Mn + Ofn + Ocn - Hys > Ms + Ofn + Ocs + Off$$

Inequality A3-2 (Leaving condition):

$$Mn + Ofn + Ocn + Hys < Ms + Ofn + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the serving frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the serving frequency).

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn**, **Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

Ofn, Ocn, OfS, Ocs, Hys, Off are expressed in dB.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to '*event*':
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

**NOTE:** The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
    - 5> else:
      - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 *pilotStrength*, i.e. the best cell is included first;

...

- ...
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
  - 1> stop the periodical reporting timer, if running;
  - 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
    - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- ...
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

8.3.1.14a.3            Test description

8.3.1.14a.3.1        Pre-test conditions

System Simulator:

- Cell 1 is E-UTRA FDD cell and Cell 28 is E-UTRA TDD cell.
- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.3.1.14a.3.1-1.

**Table 8.3.1.14a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
28	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.3.1.14a.3.3-15.
- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.1.14a.3.2        Test procedure sequence

Table 8.3.1.14a.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 28 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.14a.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 28</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/1 5kHz	-75	-91	Power levels are such that entry condition for event A2 and event A3 is not satisfied: $Ms - Hys > Thresh$ AND $Mn + Ofn + Ocn + Hys < Ms + Ofn + Ocs + Off$
T1	Cell-specific RS EPRE	dBm/1 5kHz	-93	-105	Power level of Cell 1 is such that entry condition for event A2 is satisfied: $Ms + Hys < Thresh$ AND Power levels of Cell 1 and Cell 28 are such that entry condition for event A3 is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofn + Ocs + Off$
T2	Cell-specific RS EPRE	dBm/1 5kHz	-85	-73	Power levels are such that entry condition for event A3 is satisfied for Cell 1, and the entry condition for event A2 and event A3 are not satisfied for Cell 28 after the handover: $Mn + Ofn + Ocn - Hys > Ms + Ofn + Ocs + Off$
T3	Cell-specific RS EPRE	dBm/1 5kHz	-105	-93	Power level of Cell 28 is such that entry condition for event A2 is satisfied: $Ms + Hys < Thresh$ AND Power levels of Cell 1 and Cell 28 are such that entry condition for event A3 is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofn + Ocs + Off$
T4	Cell-specific RS EPRE	dBm/1 5kHz	-73	-85	Power levels are such that entry condition for event A3 is satisfied for Cell 28: $Mn + Ofn + Ocn - Hys > Ms + Ofn + Ocs + Off$

### 8.3.1.15 Measurement configuration control and reporting / Intra E-UTRAN measurements / Inter-band handover / IE measurement configuration not present

#### 8.3.1.15.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the intra-frequency and inter-band measurements }
ensure that {
  when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo indicating a different E-UTRA frequency band and not including a measConfig }
  then { UE performs inter-band handover, continues the intra-frequency measurement and continues inter-band measurement after the activation of the measurement gaps }
}
```

### 8.3.1.15.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.6.1.

[TS 36.331, clause 5.5.6.1]

E-UTRAN applies the handover procedure as follows:

- when performing the handover procedure, as specified in 5.3.5.4, ensure that a *measObjectId* corresponding to the handover target carrier frequency is configured as a result of the procedures described in this sub-clause and in 5.3.5.4;

...

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the *triggerType* is set to '*periodical*':
  - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*:
- 1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:
  - 2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectList* within *VarMeasConfig*:
    - 3> for each *measId* value in the *measIdList*:
      - 4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;
      - 4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;
  - 2> else:
    - 3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;
  - 1> remove all measurement reporting entries within *VarMeasReportList*;
  - 1> stop the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;
  - 1> release the measurement gaps, if activated;

NOTE: If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

### 8.3.1.15.3 Test description

#### 8.3.1.15.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2, Cell 10 and Cell 30
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.3.1.15.3.2 Test procedure sequence

Table 8.3.1.15.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3", and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.15.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 10	Cell 30 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-91	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) do not satisfy entry condition for event A3 (M2 < M1). (NOTE 1).
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1).
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	-73	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M1). (NOTE 1).
T3	Cell-specific RS EPRE	dBm/15 kHz	-97	"Off"	-85	-79	The power level values are such that measurement results for Cell 10 (M10) and Cell 30 (M30) satisfy entry condition for event A3 (M30 > M10). (NOTE 1).
T4	Cell-specific RS EPRE	dBm/15 kHz	-73	"Off"	-85	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M1 > M10). (NOTE 1).

NOTE 1: Power level "Off" is defined in TS 36.508 Table 6.2.2.1-1.

### 8.3.1.15a Measurement configuration control and reporting / Intra E-UTRAN measurements / Inter-band handover / IE measurement configuration not present / Between FDD and TDD

#### 8.3.1.15a.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA FDD RRC_CONNECTED state and having completed the radio bearer establishment,
initial security activation procedure and performed the intra frequency and inter-band E-UTRA TDD
frequency measurements }
ensure that {
  when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo
indicating a different E-UTRA TDD frequency in different band and not including a measConfig }
    then { UE performs inter-band handover, continues the intra frequency measurement and continues
inter-band measurement after the activation of the measurement gaps }
}
```

(2)

```
with { UE in E-UTRA TDD RRC_CONNECTED state and having completed the radio bearer establishment,
initial security activation procedure and performed the intra frequency and inter-band E-UTRA FDD
frequency measurements }
ensure that {
  when { UE receives an RRConnectionReconfiguration message including a mobilityControlInfo
indicating a different E-UTRA FDD frequency in different band and not including a measConfig }
    then { UE performs inter-band handover, continues the intra frequency measurement and continues
inter-band measurement after the activation of the measurement gaps }
}
```

#### 8.3.1.15a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.6.1.

[TS 36.331, clause 5.5.6.1]

E-UTRAN applies the handover procedure as follows:

- when performing the handover procedure, as specified in 5.3.5.4, ensure that a *measObjectId* corresponding to the handover target carrier frequency is configured as a result of the procedures described in this subclause and in 5.3.5.4;

...

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the *triggerType* is set to '*periodical*':
  - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*:
- 1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:
  - 2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectIdList* within *VarMeasConfig*
  - 3> for each *measId* value in the *measIdList*:
    - 4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:
      - 5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;
    - 4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:
      - 5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;
  - 2> else:
    - 3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;
  - 1> remove all measurement reporting entries within *VarMeasReportList*;
  - 1> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;
  - 1> release the measurement gaps, if activated;

**NOTE:** If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

#### 8.3.1.15a.3 Test description

#### 8.3.1.15a.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2 are E-UTRA FDD cells, Cell 10 and Cell 30 are E-UTRA TDD cell
- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.3.1.15a.3.1-1.

**Table 8.3.1.15a.3.1-1: PLMN identifiers**

<b>Cell</b>	<b>PLMN name</b>
1	PLMN1
2	PLMN1
10	PLMN1
30	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

**UE:**

None.

**Preamble:**

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.3.1.15a.3.3-12.
- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.3.1.15a.3.2            Test procedure sequence

Table 8.3.1.15a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3", and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.15a.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 10	Cell 30 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-91	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) do not satisfy entry condition for event A3 (M2 < M1). (NOTE 1).
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1).
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	-73	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M1). (NOTE 1).
T3	Cell-specific RS EPRE	dBm/15 kHz	-97	"Off"	-85	-79	The power level values are such that measurement results for Cell 10 (M10) and Cell 30 (M30) satisfy entry condition for event A3 (M30 > M10). (NOTE 1).
T4	Cell-specific RS EPRE	dBm/15 kHz	-73	"Off"	-85	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M1 > M10). (NOTE 1).
T5	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	-97	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1).
T6	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	-73	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M1). (NOTE 1).

NOTE 1: Power level "Off" is defined in TS 36.508 Table 6.2.2.1-1.

**8.3.1.16 Measurement configuration control and reporting / Intra E-UTRAN measurements / Continuation of the measurements after RRC connection re-establishment / Inter-band**

**8.3.1.16.1 Test Purpose (TP)**

**(1)**

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter-band measurement and after receiving an RRConnectionReconfiguration message including a mobilityControlInfo indicating a different E-UTRA cell having attempted intra-frequency handover }
ensure that {
    when { UE detects handover failure and the intra-frequency cell is selectable }
        then { UE performs RRC Connection Re-establishment and continues the inter-band measurement after the activation of the measurement gaps }
}
```

**8.3.1.16.2 Conformance requirements**

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.4, 5.3.5.6, 5.3.7.2 and 5.5.6.1.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;

1> else:

- 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> if the *RRConnectionReconfiguration* message includes the *fullConfig*:

- 2> perform the radio configuration procedure as specified in section 5.3.5.8;
- 1> configure lower layers in accordance with the received *radioResourceConfigCommon*;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received *mobilityControlInfo*;
- 1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
  - ...
  - 1> perform the measurement related actions as specified in 5.5.6.1;
  - 1> if the *RRConnectionReconfiguration* message includes the *measConfig*:
    - 2> perform the measurement configuration procedure as specified in 5.5.2;
  - 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
  - 1> if the *RRConnectionReconfiguration* message includes the *reportProximityConfig*:
    - 2> perform the proximity indication in accordance with the received *reportProximityConfig*;
  - 1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;
  - 1> if MAC successfully completes the random access procedure:
    - 2> stop timer T304;
    - 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target cell, if any;
    - 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

- 2> the procedure ends;

[TS 36.331, clause 5.3.5.6]

The UE shall:

- 1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

- 2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;
- 2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

- 1> upon detecting radio link failure, in accordance with 5.3.11; or
- 1> upon handover failure, in accordance with 5.3.5.6; or
- 1> upon mobility from E-UTRA failure, in accordance with 5.4.3.5; or

- 1> upon integrity check failure indication from lower layers; or
- 1> upon an RRC connection reconfiguration failure, in accordance with 5.3.5.5;

Upon initiation of the procedure, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T311;
- 1> suspend all RBs except SRB0;
- 1> reset MAC;
- 1> apply the default physical channel configuration as specified in 9.2.4;
- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> release *reportProximityConfig* and clear any associated proximity status reporting timer;
- 1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331, clause 5.5.6.1]

E-UTRAN applies the re-establishment procedure as follows:

- when performing the connection re-establishment procedure, as specified in 5.3.7, ensure that a *measObjectId* corresponding to the target carrier frequency is configured as a result of the procedure described in this sub-clause and the subsequent connection reconfiguration procedure immediately following the re-establishment procedure;

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the *triggerType* is set to '*periodical*':
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*:
- 1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:
  - 2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectList* within *VarMeasConfig*:
    - 3> for each *measId* value in the *measIdList*:
      - 4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;
      - 4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:
        - 5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;
    - 2> else:
      - 3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;
  - 1> remove all measurement reporting entries within *VarMeasReportList*;
  - 1> stop the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;

1> release the measurement gaps, if activated;

**NOTE:** If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

### 8.3.1.16.3 Test description

#### 8.3.1.16.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2 and Cell 10.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.16.3.2 Test procedure sequence

Table 8.3.1.16.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3", and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.16.3.2-1: Time instances of cell power levels**

	Parameter	Unit	Cell 1	Cell 2	Cell 10 (DL only)	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	"Off"	(NOTE 1)
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	-73	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M1). (NOTE 1)
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	"Off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 > M1). (NOTE 1)
T3	Cell-specific RS EPRE	dBm/15 kHz	"Off"	-79	"Off"	The power level values are such that SrxlevCell 1 < 0 and SrxlevCell 10 < 0 are satisfied. (NOTE 1)
T4	Cell-specific RS EPRE	dBm/15 kHz	"Off"	-85	-73	The power level values are such that measurement results for Cell 2 (M2) and Cell 10 (M10) satisfy entry condition for event A3 (M10 > M2). (NOTE 1)

NOTE 1: Power level "Off" is defined in TS 36.508 Table 6.2.2.1-1.

    then {UE performs RRC Connection Re-establishment, continues the inter-band measurement after the
activation of the measurement gaps }
}
```

**8.3.1.16a.2 Conformance requirements**

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.4, 5.3.5.6, 5.3.7.2 and 5.5.6.1.

[TS 36.331, clause 5.3.5.4]

If the *RRConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> if the *carrierFreq* is included:
  - 2> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;

1> else:

- 2> consider the target cell to be one on the current frequency with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target cell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish RLC for all RBs that are established;

1> apply the value of the *newUE-Identity* as the C-RNTI;

1> configure lower layers in accordance with the received *radioResourceConfigCommon*;

1> if the *RRConnectionReconfiguration* message includes the *radioResourceConfigDedicated*:

- 2> perform the radio resource configuration procedure as specified in 5.3.10;

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

- 2> perform the measurement configuration procedure as specified in 5.5.2;

1> submit the *RRConnectionReconfigurationComplete* message to lower layers for transmission;

1> if MAC successfully completes the random access procedure:

- 2> stop timer T304;

- 2> apply the parts of the configuration that do not require the UE to know the SFN of the target cell;

- 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target cell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target cell;

- 2> the procedure ends;

NOTE 3: The UE is not required to determine the SFN of the target cell by acquiring system information from that cell before performing RACH access in the target cell.

[TS 36.331, clause 5.3.5.6]

The UE shall:

1> if T304 expires (handover failure):

NOTE: Following T304 expiry any dedicated preamble, if provided within the *rach-ConfigDedicated*, is not available for use by the UE anymore.

2> revert back to the configuration used in the source cell, excluding the configuration configured by the *physicalConfigDedicated*, the *mac-MainConfig* and the *sps-Config*;

2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

[TS 36.331, clause 5.3.7.2]

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

1> upon detecting radio link failure, in accordance with 5.3.11; or

1> upon handover failure, in accordance with 5.3.5.6; or

1> upon mobility from E-UTRA failure, in accordance with 5.4.3.5; or

1> upon integrity check failure indication from lower layers; or

1> upon an RRC connection reconfiguration failure, in accordance with 5.3.5.5;

Upon initiation of the procedure, the UE shall:

1> stop timer T310, if running;

1> start timer T311;

1> suspend all RBs except SRB0;

1> reset MAC;

1> apply the default physical channel configuration as specified in 9.2.4;

1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;

1> apply the default MAC main configuration as specified in 9.2.2;

1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

[TS 36.331, clause 5.5.6.1]

E-UTRAN applies the re-establishment procedure as follows:

- when performing the connection re-establishment procedure, as specified in 5.3.7, ensure that a *measObjectId* corresponding to the target carrier frequency is configured as a result of the procedure described in this sub-clause and the subsequent connection reconfiguration procedure immediately following the re-establishment procedure;

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *triggerType* is set to ‘*periodical*’:

3> remove this *measId* from the *measIdList* within *VarMeasConfig*:

1> if the procedure was triggered due to inter-frequency handover or successful re-establishment to an inter-frequency cell, update the *measId* values in the *measIdList* within *VarMeasConfig* as follows:

2> if a *measObjectId* value corresponding to the target carrier frequency exists in the *measObjectList* within *VarMeasConfig*:

3> for each *measId* value in the *measIdList*:

- 4> if the *measId* value is linked to the *measObjectId* value corresponding to the source carrier frequency:
  - 5> link this *measId* value to the *measObjectId* value corresponding to the target carrier frequency;
- 4> else if the *measId* value is linked to the *measObjectId* value corresponding to the target carrier frequency:
  - 5> link this *measId* value to the *measObjectId* value corresponding to the source carrier frequency;
- 2> else:
  - 3> remove all *measId* values that are linked to the *measObjectId* value corresponding to the source carrier frequency;
- 1> remove all measurement reporting entries within *VarMeasReportList*;
- 1> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for all *measId*;
- 1> release the measurement gaps, if activated;

NOTE: If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

#### 8.3.1.16a.3 Test description

##### 8.3.1.16a.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2 are E-UTRA FDD cells, Cell 10 and Cell 30 are E-UTRA TDD cells.
- Each cell has only a single PLMN identity. The PLMNs are identified in the test by the identifiers in Table 8.3.1.16 a.3.1-1.

**Table 8.3.1.16 a.3.1-1: PLMN identifiers**

Cell	PLMN name
1	PLMN1
2	PLMN1
10	PLMN1
30	PLMN2

- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 and Table 6.3.1.2-2 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is registered on PLMN1 (Cell 1) using the procedure described in TS 36.508[18] clause 4.5.2.3 except that the ATTACH ACCEPT message indicates PLMN2 in the Equivalent PLMN list as described in Table 8.3.1.16a.3.3-19.
- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.1.16a.3.2 Test procedure sequence

Table 8.3.1.16a.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3", "T4", "T5" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.16a.3.2-1: Time instances of cell power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 2</b>	<b>Cell 10</b>	<b>Cell 30</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	"off"	"off"	"off"	
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	"off"	"off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 - Hys > M1).
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	"off"	-73	"off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 - Hys > M1).
T3	Cell-specific RS EPRE	dBm/15 kHz	"off"	"off"	-73	"off"	The power level values are assigned values to satisfy SrxlevCell 1 < 0 and SrxlevCell 2 < 0 such that selecting Cell 10 is guaranteed
T4	Cell-specific RS EPRE	dBm/15 kHz	"off"	"off"	-85	-79	The power level values are such that measurement results for Cell 10 (M10) and Cell 30 (M30) satisfy entry condition for event A3 (M30 - Hys > M10).
T5	Cell-specific RS EPRE	dBm/15 kHz	-73	"off"	-85	"off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M1 - Hys > M10).
T6	Cell-specific RS EPRE	dBm/15 kHz	-73	"off"	"off"	"off"	The power level values are assigned values to satisfy SrxlevCell 1 < 0 and SrxlevCell 2 < 0 such that selecting Cell 1 is guaranteed
T7	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	"off"	"off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 2 (M2) satisfy entry condition for event A3 (M2 - Hys > M1).
T8	Cell-specific RS EPRE	dBm/15 kHz	-85	"off"	-73	"off"	The power level values are such that measurement results for Cell 1 (M1) and Cell 10 (M10) satisfy entry condition for event A3 (M10 - Hys > M1).

Table 8.3.1.16a.3.2-2: Main behaviour

8.3.1.17 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A6

8.3.1.17.1 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A6 / Intra-band Contiguous CA

8.3.1.17.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A6 }
ensure that {
  when { Entry condition for event A6 is not met }
  then { UE does not send MeasurementReport }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A6 }
ensure that {
  when { Intra-frequency neighbour becomes offset better than SCell }
  then { UE sends MeasurementReport with correct measId for event A6 }
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A6 }
ensure that {
  when { UE receives a RRCCconnectionReconfiguration message containing sCellToReleaseList with a
        sCellIndex equal to one of the current UE SCell configuration }
  then { UE remove measId associated with event A6 and stops sending MeasurementReport message }
```

8.3.1.17.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3 5.5.2.2a, 5.5.4.1, 5.5.4.6a and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCCconnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRCCconnectionReconfiguration* includes the *sCellToReleaseList*:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received *RRCCconnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> If the *RRCCconnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;

...

[TS 36.331, clause 5.5.2.2a]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the associated *reportConfig* concerns an event involving a serving cell while the concerned serving cell is not configured:
  - 3> remove the *measId* from the *measIdList* within the *VarMeasConfig*;
  - 3> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;
  - 3> stop the periodical reporting timer if running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

NOTE 1: The above UE autonomous removal of *measId*'s applies only for measurement events A1, A2 and A6.

NOTE 2: When performed during re-establishment, the UE is only configured with a primary frequency (i.e. the SCell(s) are released, if configured).

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a purpose set to '*reportStrongestCellsForSON*':
  - 3> consider any neighbouring cell detected on the associated frequency to be applicable;
- 2> else if the corresponding *reportConfig* includes a purpose set to '*reportCGI*':
  - 3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;
- 2> else:
  - 3> if the corresponding *measObject* concerns E-UTRA:
    - 4> if the *ue-RxTxTimeDiffPeriodical* is configured in the corresponding *reportConfig*:
      - 5> consider only the PCell to be applicable;
    - 4> else if the *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:
      - 5> consider only the serving cell to be applicable;
  - 4> else:
    - 5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
    - 5> for events involving a serving cell on one frequency and neighbours on another frequency, consider the serving cell on the other frequency as a neighbouring cell;
- 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
  - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the *csg-allowedReportingCells* within the *VarMeasConfig* for this *measId*, if configured in the corresponding *measObjectUTRA* (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).

- 3> else if the corresponding *measObject* concerns GERAN:
  - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.6a]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A6-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A6-2, as specified below, is fulfilled;
- 1> for this measurement, consider the (secondary) cell that is configured on the frequency indicated in the associated *measObjectEUTRA* to be the serving cell;

NOTE: The neighbour(s) is on the same frequency as the SCell i.e. both are on the frequency indicated in the associated *measObject*.

Inequality A6-1 (Entering condition):

$$Mn + Ocn - Hys > Ms + Ocs + Off$$

Inequality A6-2 (Leaving condition):

$$Mn + Ocn + Hys < Ms + Ocs + Off$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ocs** is the cell specific offset of the serving cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Off** is the offset parameter for this event (i.e. *a6-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

*Ocn*, *Ocs*, *Hys*, *Off* are expressed in dB.

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultPCell* to include the quantities of the PCell;
- 1> set the *measResultServFreqList* to include for each SCell that is configured, if any, within *measResultSCell* the quantities of the concerned SCell;
- 1> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:
  - 2> for each serving frequency for which *measObjectId* is referenced in the *measIdList*, other than the frequency corresponding with the *measId* that triggered the measurement reporting:
    - 3> set the *measResultServFreqList* to include within *measResultBestNeighCell* the *physCellId* and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
- NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].
- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:

- 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
- 5> if the *measObject* associated with this *measId* concerns UTRA FDD and if *ReportConfigInterRAT* includes the *reportQuantityUTRA-FDD*:
  - 6> set the *measResult* to include the quantities indicated by the *reportQuantityUTRA-FDD* in order of decreasing *measQuantityUTRA-FDD* within the *quantityConfig*, i.e. the best cell is included first;
  - 5> if the *measObject* associated with this *measId* concerns UTRA FDD and if *ReportConfigInterRAT* does not include the *reportQuantityUTRA-FDD*; or
  - 5> if the *measObject* associated with this *measId* concerns UTRA TDD, GERAN or CDMA2000:
    - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 *pilotStrength*, i.e. the best cell is included first;
- 3> else if the *purpose* is set to ‘*reportCGI*’:
  - 4> if the mandatory present fields of the *cgi-info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
    - 5> if the cell broadcasts a CSG identity:
      - 6> include the *csg-Identity*;
      - 6> include the *csg-MemberStatus* and set it to *member* if the cell is a CSG member cell;
    - 5> if the *si-RequestForHO* is configured within the *reportConfig* associated with this *measId*:
      - 6> include the *cgi-Info* containing all the fields that have been successfully acquired, except for the *plmn-IdentityList*;
  - 5> else:
    - 6> include the *cgi-Info* containing all the fields that have been successfully acquired;
- 1> if the *ue-RxTxTimeDiffPeriodical* is configured within the corresponding *reportConfig* for this *measId*;
  - 2> set the *ue-RxTxTimeDiffResult* to the measurement result provided by lower layers;
  - 2> set the *currentSFN*;
- 1> if the *includeLocationInfo* is configured in the corresponding *reportConfig* for this *measId* and detailed location information that has not been reported is available, set the content of the *locationInfo* as follows:
  - 2> include the *locationCoordinates*;
  - 2> if available, include the *gnss-TOD-msec*;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘*periodical*’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

1> if the measured results are for CDMA2000 HRPD:

2> set the *preRegistrationStatusHRPD* to the UE's CDMA2000 upper layer's HRPD *preRegistrationStatus*;

1> if the measured results are for CDMA2000 1xRTT:

2> set the *preRegistrationStatusHRPD* to 'FALSE';

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.1.17.1.3 Test description

##### 8.3.1.17.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 3 is the SCell to be added, and Cell 12 is the intra-frequency neighbour cell of Cell 3
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.1.17.1.3.2 Test procedure sequence

Table 8.3.1.17.1.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 3 and Cell 12 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" is applied at the point indicated in the Main behaviour description in Table 8.3.1.17.1.3.2-2.

**Table 8.3.1.17.1.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 3	Cell 12	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-79	-85	-91	Power levels are such that entry condition for event A6 (measId 1) is not satisfied: $Mn + Ocn + Hys < Ms + Ocs + Off$
T1	Cell-specific RS EPRE	dBm/15k Hz	-79	-85	-73	Power levels are such that entry condition for event A6 (measId 1) is satisfied: $Mn + Ocn - Hys > Ms + Ocs + Off$

**Table 8.3.1.17.1.3.2-2: Main behaviour**

### 8.3.1.18 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting

#### 8.3.1.18.1 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting / Intra-band Contiguous CA

##### 8.3.1.18.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A2 reporting include reportAddNeighMeas }
ensure that {
    when { Entry condition for event A2 of the concerned frequency that triggered measurement reporting is met }
    then { UE sends MeasurementReport that does not include the best non-serving cell of the concerned frequency in the measResultBestNeighCell }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for event A2 reporting include reportAddNeighMeas }
ensure that {
    when { Entry condition for event A2 of other than the concerned frequency that triggered measurement reporting is met }
    then { UE sends MeasurementReport that includes the best non-serving cell of the concerned frequency in the measResultBestNeighCell }
}
```

##### 8.3.1.18.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1 and 5.5.5. Unless otherwise stated these are Rel-10 requirements.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received *RRCConnectionReconfiguration* includes the *sCellToAddModList*:

2> perform SCell addition or modification as specified in 5.3.10.3b;

...

1> If the *RRCConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:

3> consider any neighbouring cell detected on the associated frequency to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;

- 2> else:
- 3> if the corresponding *measObject* concerns E-UTRA:
- 4> if the *ue-RxTxTimeDiffPeriodical* is configured in the corresponding *reportConfig*:
- 5> consider only the PCell to be applicable;
- 4> else if the *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:
- 5> consider only the serving cell to be applicable;
- 4> else:
- 5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
- 5> for events involving a serving cell on one frequency and neighbours on another frequency, consider the serving cell on the other frequency as a neighbouring cell;
- 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
- 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
- NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the *csg-allowedReportingCells* within the *VarMeasConfig* for this *measId*, if configured in the corresponding *measObjectUTRA* (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).
- 3> else if the corresponding *measObject* concerns GERAN:
- 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for

all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> stop timer T321;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the T321 for this *measId*:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultPCell* to include the quantities of the PCell;
- 1> set the *measResultServFreqList* to include for each SCell that is configured, if any, within *measResultSCell* the quantities of the concerned SCell;
- 1> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:
  - 2> for each serving frequency for which *measObjectId* is referenced in the *measIdList*, other than the frequency corresponding with the *measId* that triggered the measurement reporting:
    - 3> set the *measResultServFreqList* to include within *measResultBestNeighCell* the *physCellId* and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
  - 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
  - 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
    - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
      - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
        - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

- 5> if the *measObject* associated with this *measId* concerns UTRA FDD and if *ReportConfigInterRAT* includes the *reportQuantityUTRA-FDD*:
  - 6> set the *measResult* to include the quantities indicated by the *reportQuantityUTRA-FDD* in order of decreasing *measQuantityUTRA-FDD* within the *quantityConfig*, i.e. the best cell is included first;
  - 5> if the *measObject* associated with this *measId* concerns UTRA FDD and if *ReportConfigInterRAT* does not include the *reportQuantityUTRA-FDD*; or
  - 5> if the *measObject* associated with this *measId* concerns UTRA TDD, GERAN or CDMA2000:
    - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 *pilotStrength*, i.e. the best cell is included first;
- 3> else if the *purpose* is set to ‘*reportCGI*’:
  - 4> if the mandatory present fields of the *cgi-info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
    - 5> if the cell broadcasts a CSG identity:
      - 6> include the *csg-Identity*;
      - 6> include the *csg-MemberStatus* and set it to *member* if the cell is a CSG member cell;
    - 5> if the *si-RequestForHO* is configured within the *reportConfig* associated with this *measId*:
      - 6> include the *cgi-Info* containing all the fields that have been successfully acquired, except for the *plmn-IdentityList*;
    - 5> else:
      - 6> include the *cgi-Info* containing all the fields that have been successfully acquired;
  - 1> if the *ue-RxTxTimeDiffPeriodical* is configured within the corresponding *reportConfig* for this *measId*;
    - 2> set the *ue-RxTxTimeDiffResult* to the measurement result provided by lower layers;
    - 2> set the *currentSFN*;
  - 1> if the *includeLocationInfo* is configured in the corresponding *reportConfig* for this *measId* and detailed location information that has not been reported is available, set the content of the *locationInfo* as follows:
    - 2> include the *locationCoordinates*;
    - 2> if available, include the *gnss-TOD-msec*;
  - 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
  - 1> stop the periodical reporting timer, if running;
  - 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
    - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
  - 1> else:
    - 2> if the *triggerType* is set to ‘*periodical*’:
      - 3> remove the entry within the *VarMeasReportList* for this *measId*;
      - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
    - 1> if the measured results are for CDMA2000 HRPD:

2> set the *preRegistrationStatusHRPD* to the UE's CDMA2000 upper layer's HRPD *preRegistrationStatus*;

1> if the measured results are for CDMA2000 1xRTT:

2> set the *preRegistrationStatusHRPD* to 'FALSE';

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

##### 8.3.1.18.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell. Cell 3 is the SCell to be added, Cell 12 (broadcast only cell) and Cell 23 (broadcast only cell) is the intra-frequency neighbour cells of Cell 3.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.
- Relative SS signal level uncertainty between Intra-freq cells is +/- 1 dB.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.1.18.1.3.2 Test procedure sequence

Table 8.3.1.18.1.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 3, Cell 12 and Cell 23 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" and "T2" are applied at the point indicated in the Main behaviour description in Table 8.3.1.18.1.3.2-2.

**Table 8.3.1.18.1.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 3	Cell 12	Cell 23	Remark
T0	Cellspecific RS EPRE	dBm/15 kHz	-72	-72	-91	Off	Power levels are such that entry condition for event A2 is not satisfied $Ms + Hys > Thresh$ for Cell 1 and Cell 3
T1	Cell-specific RS EPRE	dBm/15 kHz	-72	-90	-91	Off	Power levels are such that entry condition for event A2 in Cell 3 is satisfied: $Ms + Hys < Thresh$
T2	Cell-specific RS EPRE	dBm/15 kHz	-90	-72	-69	-73	Power levels are such that entry condition for event A2 in Cell 1 is satisfied: $Ms + Hys < Thresh$

Table 8.3.1.18.1.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>sCellToAddModList</i> with Cell 3 as SCell addition.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the SCell addition	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra E-UTRAN measurement and for event A2 reporting configuration and include <i>reportAddNeighMeas</i>	<--	<i>RRCConnectionReconfiguration</i>	-	-
4	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
5	The SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.18.1.3.2-1.				
6	Check: Does the UE transmit a <i>MeasurementReport</i> message that does not include the RSRP and RSRQ value of the best non-serving cell on the concerned serving frequency in <i>measResultBestNeighCell</i> ?	-->	<i>MeasurementReport</i>	1	P
7	The SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.18.1.3.2-1.	-	-	-	-
8	Check: Does the UE transmit a <i>MeasurementReport</i> message included the RSRP and RSRQ value of the best non-serving cell (Cell 12) on the concerned serving frequency in <i>measResultBestNeighCell</i> ?	-->	<i>MeasurementReport</i>	2	P

### 8.3.1.18.2 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting / Inter-band CA

#### 8.3.1.18.2.1 Test Purpose (TP)

Same as TC 8.3.1.18.1 but applied to Inter-band CA case.

#### 8.3.1.18.2.2 Conformance requirements

Same as TC 8.3.1.18.1 but applied to Inter-band CA case.

#### 8.3.1.18.2.3 Test description

##### 8.3.1.18.2.3.1 Pre-test conditions

Same as test case 8.3.1.18.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA.
- Cells configuration: Cell 10 replaces Cell 3, Cell 30 replaces Cell 12 and Cell 31 replaces Cell 23.
- Cell 10 is an Inactive SCell according to [18] cl. 6.3.4.

##### 8.3.1.18.2.3.2 Test procedure sequence

Same as test case 8.3.1.18.1 with the following differences:

- CA configuration: Inter-band CA replaces Inter-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3, Cell 30 replaces Cell 12 and Cell 31 replaces Cell 23.

## 8.3.1.18.2.3.3 Specific message contents

Same as test case 8.3.1.18.1 with the following differences.

NOTE: For simplicity the steps referred below are steps in test case 8.3.1.18.1.

**Table 8.3.1.18.2.3.3-0: Conditions for specific message contents  
in Tables 8.3.1.18.2.3.3-1.**

Condition	Explanation
Band > 64	If band > 64 is selected

**Table 8.3.1.18.2.3.3-1: MeasConfig (Table 8.3.1.18.1.3.3-5)**

}			

### 8.3.1.18.3 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.3.1.18.1 with the following differences:

- CA configuration: Intra-band non-Contiguous CA replaces Intra-band Contiguous CA

### 8.3.1.19 eICIC/ Measurement configuration control and reporting / CSI change

#### 8.3.1.19.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and two csi-MeasSubframeSets configured }
ensure that {
    when { The periodic CQI/PMI reporting criteria is met }
    then { UE reports CQI as configured in cqi-pmi-ConfigIndexes }
}
```

#### 8.3.1.19.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3 and 6.3.2; TS 36.213, clause 7.2.2.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.213, clause 7.2.2]

...

For each serving cell, the periodicity  $N_{pd}$  (in subframes) and offset  $N_{OFFSET,CQI}$  (in subframes) for CQI/PMI reporting are determined based on the parameter *cqi-pmi-ConfigIndex* ( $I_{CQI/PMI}$ ) given in Table 7.2.2-1A for FDD and Table 7.2.2-1C for TDD. The periodicity  $M_{RI}$  and relative offset  $N_{OFFSET,RI}$  for RI reporting are determined based on the parameter *ri-ConfigIndex* ( $I_{RI}$ ) given in Table 7.2.2-1B. Both *cqi-pmi-ConfigIndex* and *ri-ConfigIndex* are configured by higher layer signalling. The relative reporting offset for RI  $N_{OFFSET,RI}$  takes values from the set  $\{0, -1, \dots, -(N_{pd} - 1)\}$ . If a UE is configured to report for more than one CSI subframe set then parameter *cqi-pmi-ConfigIndex* and *ri-ConfigIndex* respectively correspond to the CQI/PMI and RI periodicity and relative reporting offset for subframe set 1 and *cqi-pmi-ConfigIndex2* and *ri-ConfigIndex2* respectively correspond to the CQI/PMI and RI periodicity and relative reporting offset for subframe set 2.

In the case where wideband CQI/PMI reporting is configured:

- The reporting instances for wideband CQI/PMI are subframes satisfying  $(10 \times n_f + \lfloor n_s / 2 \rfloor - N_{OFFSET,CQI}) \bmod (N_{pd}) = 0$ .
- In case RI reporting is configured, the reporting interval of the RI reporting is an integer multiple  $M_{RI}$  of period  $N_{pd}$  (in subframes).
  - The reporting instances for RI are subframes satisfying  $(10 \times n_f + \lfloor n_s / 2 \rfloor - N_{OFFSET,CQI} - N_{OFFSET,RI}) \bmod (N_{pd} \cdot M_{RI}) = 0$ .

...

[TS 36.331, clause 6.3.2]

#### - CQI-ReportConfig

The IE *CQI-ReportConfig* is used to specify the CQI reporting configuration.

**CQI-ReportConfig information elements**

```

<b>CQI-ReportConfig field descriptions</b>	
<b>aperiodicCSI-Trigger</b>	indicates for which serving cell(s) the aperiodic CSI report is triggered when one or more SCells are configured. <i>trigger1</i> corresponds to the CSI request field 10 and <i>trigger2</i> corresponds to the CSI request field 11, see TS 36.213 [23, table 7.2.1-1A]. The leftmost bit, bit 0 in the bit string corresponds to the cell with <i>ServCellIndex</i> =0 and bit 1 in the bit string corresponds to the cell with <i>ServCellIndex</i> =1 etc. Each bit has either value 0 (means no aperiodic CSI report is triggered) or value 1 (means the aperiodic CSI report is triggered). At most 5 bits can be set to value 1 in the bit string. One value applies for all serving cells (the associated functionality is common i.e. not performed independently for each cell).
<b>cqi-Mask</b>	Limits CQI/PMI/PTI/RI reports to the on-duration period of the DRX cycle, see TS 36.321 [6]. One value applies for all serving cells (the associated functionality is common i.e. not performed independently for each cell).
<b>cqi-FormatIndicatorPeriodic</b>	Parameter: <i>PUCCH CQI Feedback Type</i> , see TS 36.213 [23, table 7.2.2-1]. Depending on <i>transmissionMode</i> , reporting mode is implicitly given from the table.
<b>cqi-pmi-ConfigIndex</b>	Parameter: <i>CQI/PMI Periodicity and Offset Configuration Index</i> $I_{CQI/PMI}$ , see TS 36.213 [23, tables 7.2.2-1A and 7.2.2-1C]. If subframe patterns for CSI (CQI/PMI/PTI/RI) reporting are configured (i.e. <i>csi-SubframePatternConfig</i> is configured), the parameter applies to the subframe pattern corresponding to <i>csi-MeasSubframeSet1</i> .
<b>cqi-pmi-ConfigIndex2</b>	Parameter: <i>CQI/PMI Periodicity and Offset Configuration Index</i> $I_{CQI/PMI}$ , see TS 36.213 [23, tables 7.2.2-1A and 7.2.2-1C]. The parameter applies to the subframe pattern corresponding to <i>csi-MeasSubframeSet2</i> .
<b>cqi-PUCCH-ResourceIndex, cqi-PUCCH-ResourceIndexP1</b>	Parameter $n_{\text{PUCCH}}^{(2,p)}$ for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 7.2]. E-UTRAN does not apply value 1185.
<b>cqi-ReportModeAperiodic</b>	Parameter: <i>reporting mode</i> . Value rm12 corresponds to Mode 1-2, rm20 corresponds to Mode 2-0, rm22 corresponds to Mode 2-2 etc. PUSCH reporting modes are described in TS 36.213 [23, 7.2.1].
<b>csi-ConfigIndex</b>	E-UTRAN configures <i>csi-ConfigIndex</i> only for PCell and only if <i>csi-SubframePatternConfig</i> is configured. The UE shall release <i>csi-ConfigIndex</i> if <i>csi-SubframePatternConfig</i> is released.
<b>csi-ReportMode</b>	Parameter: <i>PUCCH_format1-1_CSI_reporting_mode</i> , see TS 36.213 [23, 7.2.2].
<b>K</b>	Parameter: K, see TS 36.213 [23, 7.2.2].
<b>nomPDSCH-RS-EPRE-Offset</b>	Parameter: $\Delta_{\text{offset}}$ see TS 36.213 [23, 7.2.3]. Actual value = IE value * 2 [dB].
<b>periodicityFactor</b>	Parameter: $H'$ , see TS 36.213 [23, 7.2.2].
<b>pmi-RI-Report</b>	See TS 36.213 [23, 7.2]. The presence of this field means PMI/RI reporting is configured; otherwise the PMI/RI reporting is not configured. EUTRAN configures this field only when <i>transmissionMode</i> is set to <i>tm8</i> or <i>tm9</i> .
<b>ri-ConfigIndex</b>	Parameter: <i>RI Config Index</i> $I_{RI}$ , see TS 36.213 [23, 7.2.2-1B]. If subframe patterns for CSI (CQI/PMI/PTI/RI) reporting are configured (i.e. <i>csi-SubframePatternConfig</i> is configured), the parameter applies to the subframe pattern corresponding to <i>csi-MeasSubframeSet1</i> .
<b>ri-ConfigIndex2</b>	Parameter: <i>RI Config Index</i> $I_{RI}$ , see TS 36.213 [23, 7.2.2-1B]. The parameter applies to the subframe pattern corresponding to <i>csi-MeasSubframeSet2</i> . E-UTRAN configures <i>ri-ConfigIndex2</i> only if <i>ri-ConfigIndex</i> is configured.
<b>simultaneousAckNackAndCQI</b>	Parameter: <i>Simultaneous-AN-and-CQI</i> . see TS 36.213 [23, 10.1] TRUE indicates that simultaneous transmission of ACK/NACK and CQI is allowed. For SCells this field is not applicable and the UE shall ignore the value.

## 8.3.1.19.3 Test description

## 8.3.1.19.3.1 Pre-test conditions

System Simulator:

- Cell 1
- Cell 2 is the intra-frequency neighbour cell of Cell 1
- System information combination 1 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.3.1.19.3.2 Test procedure sequence

Table 8.3.1.19.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while row marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.19.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	Off	
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	

**Table 8.3.1.19.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup CSI measurement patterns on Cell1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.19.3.2-1.	-	-	-	-
4	Wait for 1s to allow measurement restriction patterns to be configured and cell power levels to settle on correct level.				
5	CHECK: Does the UE perform periodical CQI reporting on subframes configured in CQI-ReportPeriodic-r10 (csi-MeasSubframeSet1 and csi-MeasSubframeSet2) during the next 5 s? (NOTE)	-->	(CQI)	1	P
6	Check: Does the test result of CALL generic procedure in TS 36.508 subclause 6.4.2.3 indicate that UE is in E-UTRA RRC_CONNECTED state?	-	-	1	-

Note: In this test case, wideband CQI/PMI reporting is configured for transmission mode tm3 and tm4. For the csi-MeasSubframeSet1 the reporting instances for wideband CQI/PMI are subframes satisfying

$$(10 \times n_f + \lfloor n_s / 2 \rfloor - N_{OFFSET,CQI}) \bmod (N_{pd}) = 0 \quad \text{The cqi-pmi-ConfigIndex}(I_{CQI/PMI}) =$$

25(FDD)/24(TDD), as per the Table 7.2.2-1A and 7.2.2-1C in TS 36.213, the periodicity  $N_p$  (in subframes) = 20ms(FDD) / 20ms(TDD),  $N_{OFFSET,CQI}$  (in subframes) = 8ms(FDD) / 8ms(TDD),

For the csi-MeasSubframeSet2 the reporting instances for wideband CQI/PMI are subframes satisfying

$$(10 \times n_f + \lfloor n_s / 2 \rfloor - N_{OFFSET,CQI}) \bmod (N_{pd}) = 0 \quad \text{The cqi-pmi-ConfigIndex}(I_{CQI/PMI}) =$$

40(FDD)/39(TDD), as per the Table 7.2.2-1A and 7.2.2-1C in TS 36.213, the periodicity  $N_p$  (in subframes) = 40ms(FDD) / 40ms(TDD),  $N_{OFFSET,CQI}$  (in subframes) = 3ms (FDD) / 3ms(TDD),

ms(TDD),

then { UE transmits an RRConnectionReconfigurationComplete message }
}
```

### 8.3.1.21.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.10.0, 5.3.10.8, 5.5.3.1 and 5.5.2.5. Unless otherwise stated these are Rel-10 requirements.

[TS 36.331, clause 5.3.10.0]

The UE shall:

- 1> if the received radioResourceConfigDedicated includes the srb-ToAddModList:
  - 2> perform the SRB addition or reconfiguration as specified in 5.3.10.1;
- 1> if the received radioResourceConfigDedicated includes the drb-ToReleaseList:
  - 2> perform DRB release as specified in 5.3.10.2;
- 1> if the received radioResourceConfigDedicated includes the drb-ToAddModList:
  - 2> perform DRB addition or reconfiguration as specified in 5.3.10.3;
- 1> if the received radioResourceConfigDedicated includes the mac-MainConfig:
  - 2> perform MAC main reconfiguration as specified in 5.3.10.4;
- 1> if the received radioResourceConfigDedicated includes sps-Config:
  - 2> perform SPS reconfiguration according to 5.3.10.5;
- 1> if the received radioResourceConfigDedicated includes the physicalConfigDedicated:
  - 2> reconfigure the physical channel configuration as specified in 5.3.10.6.
- 1> if the received radioResourceConfigDedicated includes the rlf-TimersAndConstants:
  - 2> reconfigure the values of timers and constants as specified in 5.3.10.7;
- 1> if the received radioResourceConfigDedicated includes the measSubframePatternPCell:
  - 2> reconfigure the time domain measurement resource restriction for the serving cell as specified in 5.3.10.8;

[TS 36.331, clause 5.3.10.8]

The UE shall:

- 1> if the received measSubframePatternPCell is set to *release*:
  - 2> release the time domain measurement resource restriction for the PCell, if previously configured

1> else:

2> apply the time domain measurement resource restriction for the PCell in accordance with the received *measSubframePatternPCell*;

[TS 36.331, clause 5.5.2.5]

The UE shall:

1> for each *measObjectId* included in the received *measObjectToAddModList*:

2> if an entry with the matching *measObjectId* exists in the *measObjectList* within the *VarMeasConfig*, for this entry:

3> replace the entry with the value received for this *measObject*, except for the fields *cellsToAddModList*, *blackCellsToAddModList*, *cellsToRemoveList*, *blackCellsToRemoveList* and *measSubframePatternConfigNeigh*;

3> if the received *measObject* includes the *cellsToRemoveList*:

4> for each *cellIndex* included in the *cellsToRemoveList*:

5> remove the entry with the matching *cellIndex* from the *cellsToAddModList*;

3> if the received *measObject* includes the *cellsToAddModList*:

4> for each *cellIndex* value included in the *cellsToAddModList*:

5> if an entry with the matching *cellIndex* exists in the *cellsToAddModList*:

6> replace the entry with the value received for this *cellIndex*;

5> else:

6> add a new entry for the received *cellIndex* to the *cellsToAddModList*;

3> if the received *measObject* includes the *blackCellsToRemoveList*:

4> for each *cellIndex* included in the *blackCellsToRemoveList*:

5> remove the entry with the matching *cellIndex* from the *blackCellsToAddModList*;

3> if the received *measObject* includes the *blackCellsToAddModList*:

4> for each *cellIndex* included in the *blackCellsToAddModList*:

5> if an entry with the matching *cellIndex* is included in the *blackCellsToAddModList*:

6> replace the entry with the value received for this *cellIndex*;

5> else:

6> add a new entry for the received *cellIndex* to the *blackCellsToAddModList*;

3> if the received *measObject* includes *measSubframePatternConfigNeigh*:

4> set *measSubframePatternConfigNeigh* within the *VarMeasConfig* to the value of the received field

3> for each *measId* associated with this *measObjectId* in the *measIdList* within the *VarMeasConfig*, if any:

4> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

4> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

2> else:

3> add a new entry for the received *measObject* to the *measObjectList* within *VarMeasConfig*;

[TS 36.331, clause 5.5.3.1]

For all measurements the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

- 1> whenever the UE has a *measConfig*, perform RSRP and RSRQ measurements for each serving cell, applying for the PCell the time domain measurement resource restriction in accordance with *measSubframePatternPCell*, if configured;
- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the *purpose* for the associated *reportConfig* is set to *reportCGI*:
    - 3> if *si-RequestForHO* is configured for the associated *reportConfig*:
      - 4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using autonomous gaps as necessary;
    - 3> else:
      - 4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using available idle periods or using autonomous gaps as necessary;

NOTE 1: If autonomous gaps are used to perform measurements, the UE is allowed to temporarily abort communication with all serving cell(s), i.e. create autonomous gaps to perform the corresponding measurements within the limits specified in TS 36.133 [16]. Otherwise, the UE only supports the measurements with the purpose set to *reportCGI* only if E-UTRAN has provided sufficient idle periods.

- 3> try to acquire the global cell identity of the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* by acquiring the relevant system information from the concerned cell;
- 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell:
  - 4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;
  - 4> try to acquire the *trackingAreaCode* in the concerned cell;
  - 4> try to acquire the list of additional PLMN Identities, as included in the *plmn-IdentityList*, if multiple PLMN identities are broadcast in the concerned cell;

NOTE 2: The 'primary' PLMN is part of the global cell identity.

- 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a UTRAN cell:
  - 4> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;
  - 4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;
- 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a GERAN cell:
  - 4> try to acquire the RAC in the concerned cell;
- 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a CDMA2000 cell and the *cdma2000-Type* included in the *measObject* is *typeHRPD*:
  - 4> try to acquire the Sector ID in the concerned cell;
- 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a CDMA2000 cell and the *cdma2000-Type* included in the *measObject* is *type1XRTT*:
  - 4> try to acquire the BASE ID, SID and NID in the concerned cell;

2> else:

3> if a measurement gap configuration is setup; or

3> if the UE does not require measurement gaps to perform the concerned measurements:

4> if *s-Measure* is not configured; or

4> if *s-Measure* is configured and the PCell RSRP, after layer 3 filtering, is lower than this value:

5> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject*, applying for neighbouring cells on the primary frequency the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;

4> if the *ue-RxTxTimeDiffPeriodical* is configured in the associated *reportConfig*:

5> perform the UE Rx-Tx time difference measurements on the PCell;

2> perform the evaluation of reporting criteria as specified in 5.5.4;

NOTE 3: The *s-Measure* defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds *s-Measure*, e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].

### 8.3.1.21.3 Test description

#### 8.3.1.21.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2 are time & SFN synchronous cells., with
- Cell 2 being the intra-frequency neighbour cell of Cell 1.
- OFDMA Channel Noise Generator (OCNG) is required to populate Cell 2. The Cell will be populated in all sub-frames specified in *measSubframePatternNeigh* as '0' and will be removed where defined as '1'.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.21.3.2 Test procedure sequence

Table 8.3.1.21.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.21.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	OFF	
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	

**Table 8.3.1.21.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including measConfig and neighbour cell measurement restriction pattern on Cell 1 to setup intra frequency measurement reporting for event A4.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1 to confirm the setup of intra frequency measurement.	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
3	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in Table 8.3.1.21.3.2-1.	-	-	-	-
4	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 1 to report event A4 with the measured RSRP and RSRQ values for Cell 2?	-->	<i>MeasurementReport</i>	2	P
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message to order the UE to perform intra frequency handover to Cell 2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message on Cell 2 using common preamble to confirm the successful completion of the intra frequency handover?	-->	<i>RRCConnectionReconfigurationComplete</i>	3	P

### 8.3.1.22 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1 / Event A2

#### 8.3.1.22.1 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1 / Event A2 / Intra-band Contiguous CA

##### 8.3.1.22.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A1 with event based periodical reporting }
ensure that {
  when { Serving cell becomes better than absolute threshold plus hysteresis }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for event A1 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A1 ongoing}
ensure that {
  when { Serving cell becomes worse than absolute threshold minus hysteresis }
  then { UE stops sending MeasurementReport message }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A2 with event based periodical reporting }
ensure that {
  when { Serving cell becomes worse than absolute threshold minus hysteresis }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for event A2 are satisfied }
}
```

(4)

```

with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A2
ongoing}
ensure that {
  when { Serving cell becomes better than absolute threshold plus hysteresis }
  then { UE stops sending MeasurementReport message }
}

```

### 8.3.1.22.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.5.4.2 and 5.5.5. Unless otherwise stated these are Rel-10 requirements.

[TS 36.331, clause 5.5.4.2]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A1-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A1-2, as specified below, is fulfilled;
- 1> for this measurement, consider the primary or secondary cell that is configured on the frequency indicated in the associated *measObjectEUTRA* to be the serving cell;

Inequality A1-1 (Entering condition)

$$Ms - Hys > Thresh$$

Inequality A1-2 (Leaving condition)

$$Ms + Hys < Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a1-Threshold* as defined within *reportConfigEUTRA* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.5.4.3]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;
- 1> for this measurement, consider the primary or secondary cell that is configured on the frequency indicated in the associated *measObjectEUTRA* to be the serving cell;

Inequality A2-1 (Entering condition)

$$Ms + Hys < Thresh$$

Inequality A2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

***Ms*** is the measurement result of the serving cell, not taking into account any offsets.

***Hys*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

***Thresh*** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigEUTRA* for this event).

***Ms*** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

***Hys*** is expressed in dB.

***Thresh*** is expressed in the same unit as ***Ms***.

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultPCell* to include the quantities of the PCell;
- 1> set the *measResultServFreqList* to include for each SCell that is configured, if any, within *measResultSCell* the quantities of the concerned SCell;

#### 8.3.1.22.1.3 Test description

##### 8.3.1.22.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell and Cell 3 is the SCell to be added.
- Cell 3 is an Inactive SCell according to [18] cl. 6.3.4
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.1.22.1.3.2 Test procedure sequence

Table 8.3.1.22.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" - "T5" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.22.1.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 3</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	Power level of Scell (Cell 3) is such that $Ms + Hys < Thresh$
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-65	Power level of Scell (Cell 3) is such that entry condition for event A1 is satisfied $Ms - Hys > Thresh$
T2	Void				
T3	Cell-specific RS EPRE	dBm/15k Hz	-85	-91	Power level of Scell (Cell 3) is such that exit condition for event A1 is satisfied $Ms + Hys < Thresh$
T4	Cell-specific RS EPRE	dBm/15k Hz	-85	-70	Power level of Scell (Cell 3) is such that $Ms - Hys > Thresh$
T5	Cell-specific RS EPRE	dBm/15k Hz	-85	-96	Power level of Scell (Cell 3) is such that entry condition for event A2 is satisfied $Ms + Hys < Thresh$
T6	Cell-specific RS EPRE	dBm/15k Hz	-85	-70	Power level of Scell (Cell 3) is such that exit condition for event A2 is satisfied $Ms - Hys > Thresh$

Table 8.3.1.22.1.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message to configure SCell (Cell 3).	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup intra LTE measurement and reporting for event A1 (measurements considered for the Scell (Cell 3)).	<--	<i>RRCConnectionReconfiguration</i>	-	-
4	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
5	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.22.1.3.2-1.	-	-	-	-
6	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A1 with the measured RSRP and RSRQ value (measurements considered for the Scell (Cell 3))?	-->	<i>MeasurementReport</i>	1	P
-	EXCEPTION: Step 7 below is repeated until 3 <i>MeasurementReport</i> messages are received from the UE	-	-	-	-
7	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A1 with the measured RSRP and RSRQ value (measurements considered for the Pcell (Cell 1))?	-->	<i>MeasurementReport</i>	1	P
8	SS re-adjusts the cell-specific reference signal level according to row "T3" in table 8.3.1.22.1.3.2-1.	-	-	-	-
9	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cell 3 and UE measurement.	-	-	-	-
10	Check: Does the UE attempt to transmit an uplink message within the next 10s?	-	-	2	F
10A	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to remove intra LTE measurement and reporting for event A1 (measurements considered for the Scell (Cell 3)).	<--	<i>RRCConnectionReconfiguration</i>	-	-
10B	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
11	The SS changes power level according to row "T4" in Table 8.3.1.22.1.3.2-1.				
12	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra LTE measurement and reporting for event A2 (measurements considered for the Scell (Cell 3)).	<--	<i>RRCConnectionReconfiguration</i>	-	-
13	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
14	SS re-adjusts the cell-specific reference signal level according to row "T5" in table 8.3.1.22.1.3.2-1.	-	-	-	-
15	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event	-->	<i>MeasurementReport</i>	3	P

	A2 with the measured RSRP and RSRQ value (measurements considered for the Scell (Cell 3))?				
-	EXCEPTION: Step 5 below is repeated until 3 <i>MeasurementReport</i> messages are received from the UE	-	-	-	-
16	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A2 with the measured RSRP and RSRQ value (measurements considered for the Scell (Cell 3))?	-->	<i>MeasurementReport</i>	3	P
17	SS re-adjusts the cell-specific reference signal level according to row "T6" in table 8.3.1.22.1.3.2-1.	-	-	-	-
18	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cell 3 and UE measurement.	-	-	-	-
19	Check: Does the UE attempt to transmit an uplink message within the next 10s?	-		4	F

### 8.3.1.22.2 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1 / Event A2 / Inter-band CA

#### 8.3.1.22.2.1 Test Purpose (TP)

Same as TC 8.3.1.22.1 but applied to Inter-band CA case.

#### 8.3.1.22.2.2 Conformance requirements

Same as TC 8.3.1.22.1 but applied to Inter-band CA case.

#### 8.3.1.22.2.3 Test description

##### 8.3.1.22.2.3.1 Pre-test conditions

Same as test case 8.3.1.22.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3
- Cell 10 is an Inactive SCell according to [18] cl. 6.3.4

## 8.3.1.22.2.3.2 Test procedure sequence

Same as test case 8.3.1.22.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: Cell 10 replaces Cell 3

## 8.3.1.22.2.3.3 Specific message contents

Same as test case 8.3.1.22.1 with the following differences.

NOTE: For simplicity the tables and the steps referred below are tables and steps in test case 8.3.1.22.1.

**Table 8.3.1.22.2.3.3-0: Conditions for specific message contents  
in Tables 8.3.1.22.2.3.3-1.**

Condition	Explanation
Band > 64	If band > 64 is selected

**Table 8.3.1.22.2.3.3-1: MeasConfig (step 3, Table 8.3.1.22.1.3.2-2)**

Derivation path: 36.508 clause 4.6.6 table 4.6.6-1			
Information Element	Value/Remark	Comment	Condition
measConfig ::= SEQUENCE {			
measObjectToAddModList SEQUENCE (SIZE (1..maxObjectId)) OF SEQUENCE {	2 Entries		
measObjectId[1]	IdMeasObject-f1		
measObject[1]	MeasObjectEUTRA-GENERIC(f1)	Cell1	
measObject[1]	MeasObjectEUTRA-GENERIC(maxEARFCN)		Band > 64
measObjectId[2]	IdMeasObject-f5		
measObject[2]	MeasObjectEUTRA-GENERIC(f5)	Cell 10 Apply conditions "DS_Meas and LAA SCell" to work out the value of this IE	
measObject[2]	MeasObjectEUTRA-GENERIC(maxEARFCN)		Band > 64
}			
reportConfigToAddModList SEQUENCE (SIZE (1..maxReportConfigId)) OF SEQUENCE {	1 entry		
reportConfigId[1]	IdReportConfig-A1		
reportConfig[1]	ReportConfig-A1-H		
}			
measIdToAddModList SEQUENCE (SIZE (1..maxMeasId)) OF SEQUENCE {	1 entry		
measId[1]	1		
measObjectId[1]	IdMeasObject-f5		
reportConfigId[1]	IdReportConfig-A1		
}			
measObjectToAddModList-v9e0 ::= SEQUENCE (SIZE (1..maxObjectId)) OF SEQUENCE {			Band > 64
measObjectEUTRA-v9e0[1] SEQUENCE {

}			
measObjectEUTRA-v9e0[2] SEQUENCE {			
carrierFreq-v9e0	Same downlink EARFCN as used for f2		
}			
}			
}			

**Table 8.3.1.22.2.3.3-2: MeasConfig (step 12, Table 8.3.1.22.1.3.2-2)**

Derivation path: 36.508 clause 4.6.6 table 4.6.6-1			
Information Element	Value/Remark	Comment	Condition
measConfig ::= SEQUENCE { reportConfigToAddModList SEQUENCE (SIZE (1..maxReportConfigId)) OF SEQUENCE { reportConfigId[1] reportConfig[1] } measIdToAddModList SEQUENCE (SIZE (1..maxMeasId)) OF SEQUENCE { measId[1] measObjectId[1] reportConfigId[1] } }	1 entry IdReportConfig-A2 ReportConfig-A2-H 1 entry 1 IdMeasObject-f5 IdReportConfig-A2		

### 8.3.1.22.3 CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1/Event A2 / Intra-band non-contiguous CA

The scope and description of the present TC is the same as test case 8.3.1.22 with the following differences:

- CA configuration Intra-band non-contiguous CA replaces Intra-band Contiguous CA

### 8.3.1.23 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A4

#### 8.3.1.23.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A4 with event based periodical reporting }
ensure that {
  when { Neighbour cell becomes better than absolute threshold }
    then { UE sends MeasurementReport message at regular intervals while entering condition for event A4 is satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A4 ongoing }
ensure that {
  when { Neighbour cell becomes worse than absolute threshold }
    then { UE stops sending MeasurementReport message }
}
```

#### 8.3.1.23.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.5 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to TRUE for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.5]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A4-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A4-2, as specified below, is fulfilled;

Inequality A4-1 (Entering condition)

$$Mn + Qfn + Ocn - Hys > Thresh$$

Inequality A4-2 (Leaving condition)

$$Mn + Qfn + Ocn + Hys < Thresh$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a4-Threshold* as defined within *reportConfigEUTRA* for this event).

**Mn** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Hys** are expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to '*event*':

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

8.3.1.23.3            Test description

8.3.1.23.3.1        Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.1.23.3.2        Test procedure sequence

Table 8.3.1.23.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 2 at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.23.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 2</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-97	Power levels are such that entry condition for event A4 is not satisfied: $Mn + Ofn + Ocn - Hys < Thresh$
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	Power levels are such that entry condition for event A4 is satisfied: $Mn + Ofn + Ocn - Hys > Thresh$
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	-97	Power levels are such that entry condition for event A4 is not satisfied: $Mn + Ofn + Ocn - Hys < Thresh$

**Table 8.3.1.23.3.2-2: Main behaviour**

<b>St</b>	<b>Procedure</b>	<b>Message Sequence</b>		<b>TP</b>	<b>Verdict</b>
		<b>U - S</b>	<b>Message</b>		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including measConfig to setup intra LTE measurement and reporting for event A4 on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE attempt to transmit an uplink message within the next 30s?	-	-	2	F
4	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.23.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 1 to report event A4 with the measured RSRP and RSRQ value for Cell 2?	-->	<i>MeasurementReport</i>	1	P
-	EXCEPTION: Step 6 below is repeated until 3 <i>MeasurementReport</i> messages are received from the UE	-	-	-	-
6	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 1, with the measured RSRP and RSRQ value for Cell 2?	-->	<i>MeasurementReport</i>	1	P
7	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.23.3.2-1.	-	-	-	-
8	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cell 2 and UE measurement.	-	-	-	-
9	Check: Does the UE attempt to transmit an uplink message within the next 10s?	-	-	2	F

### 8.3.1.24 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5

#### 8.3.1.24.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A5 with event based
periodical reporting }
ensure that {
  when { Serving cell becomes worse than absolute threshold1 and neighbour cell becomes better than
absolute threshold2 }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for
event A5 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A5
ongoing }
ensure that {
  when { Serving cell becomes better than absolute threshold1 or neighbour cell becomes worse than
absolute threshold2 }
  then { UE stops sending MeasurementReport message }
}
```

#### 8.3.1.24.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.6 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.6]

The UE shall:

1> consider the entering condition for this event to be satisfied when both conditions A5-1 and condition A5-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality A5-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality A5-2 (Entering condition 2)

$$Mn + Ofn + Ocn - Hys > Thresh2$$

Inequality A5-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality A5-4 (Leaving condition 2)

$$Mn + Ofn + Ocn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *a5-Threshold1* as defined within *reportConfigEUTRA* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *a5-Threshold2* as defined within *reportConfigEUTRA* for this event).

**Mn**, **Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn**, **Ocn**, **Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Ms**.

**Thresh2** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
  - 1> set the *measResultServCell* to include the quantities of serving cell;
  - 1> if there is at least one applicable neighbouring cell to report:
    - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
      - 3> if the *triggerType* is set to 'event':
        - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
      - 3> else:
        - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
- NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].
- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
  - 3> if the *triggerType* is set to 'event'; or the *purpose* is set to 'reportStrongestCells' or to 'reportStrongestCellsForSON':
    - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
      - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
        - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

...

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

8.3.1.24.3 Test description

8.3.1.24.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.1.24.3.2 Test procedure sequence

Table 8.3.1.24.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 2 at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.24.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-97	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	Power levels are such that entry condition for event A5 is satisfied: $Ms + Hys < Thresh1$ and $Mn + Ofn + Ocn - Hys > Thresh2$
T2	Cell-specific RS EPRE	dBm/15 kHz	-65	-79	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$

**Table 8.3.1.24.3.2-2: Main behaviour**

### 8.3.1.25 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5 / RSRQ based measurements

#### 8.3.1.25.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A5 with event based
periodical reporting and triggerQuantity set to rsrq }
ensure that {
  when { Serving cell becomes worse than absolute threshold1 and neighbour cell becomes better than
absolute threshold2 }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for
event A5 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A5
ongoing and triggerQuantity set to rsrq }
ensure that {
  when { Serving cell becomes better than absolute threshold1 or neighbour cell becomes worse than
absolute threshold2 }
  then { UE stops sending MeasurementReport message }
}
```

#### 8.3.1.25.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.6 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.6]

The UE shall:

1> consider the entering condition for this event to be satisfied when both conditions A5-1 and condition A5-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality A5-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality A5-2 (Entering condition 2)

$$Mn + Ofn + Ocn - Hys > Thresh2$$

Inequality A5-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality A5-4 (Leaving condition 2)

$$Mn + Ofn + Ocn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *a5-Threshold1* as defined within *reportConfigEUTRA* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *a5-Threshold2* as defined within *reportConfigEUTRA* for this event).

**Mn**, **Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn**, **Ocn**, **Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Ms**.

**Thresh2** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
  - 1> set the *measResultServCell* to include the quantities of serving cell;
  - 1> if there is at least one applicable neighbouring cell to report:
    - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
      - 3> if the *triggerType* is set to 'event':
        - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
      - 3> else:
        - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
- NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].
- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
  - 3> if the *triggerType* is set to 'event'; or the *purpose* is set to 'reportStrongestCells' or to 'reportStrongestCellsForSON':
    - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
      - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
        - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

...

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

8.3.1.25.3 Test description

8.3.1.25.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.1.25.3.2 Test procedure sequence

Table 8.3.1.25.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 2 at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.25.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-98	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$
	RSRQ	dB	-7.7	-20.7	
	Noc	dBm/15 kHz	-90	-90	
T1	Cell-specific RS EPRE	dBm/15 kHz	-91	-85	Power levels are such that entry condition for event A5 is satisfied: $Ms + Hys < Thresh1$ and $Mn + Ofn + Ocn - Hys > Thresh2$
	RSRQ	dB	-14	-8	
T2	Cell-specific RS EPRE	dBm/15 kHz	-65	-85	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$
	RSRQ	dB	-3.13	-23.13	

**Table 8.3.1.25.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including measConfig to setup intra LTE measurement and reporting for event A5 on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE attempt to transmit an uplink message within the next 30s?	-	-	2	F
4	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.25.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 1 to report event A5 with the measured RSRP and RSRQ value for Cell 2?	-->	<i>MeasurementReport</i>	1	P

### 8.3.1.26 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5 (Inter-frequency measurements)

#### 8.3.1.26.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A5 with event based
periodical reporting }
ensure that {
  when { Serving cell becomes worse than absolute threshold1 and inter-frequency neighbour cell
becomes better than absolute threshold2 }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for
event A5 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A5
ongoing }
ensure that {
  when { Serving cell becomes better than absolute threshold1 or inter-frequency neighbour cell
becomes worse than absolute threshold2 }
  then { UE stops sending MeasurementReport message }
}
```

#### 8.3.1.26.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.6 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.6]

The UE shall:

1> consider the entering condition for this event to be satisfied when both conditions A5-1 and condition A5-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality A5-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality A5-2 (Entering condition 2)

$$Mn + Ofn + Ocn - Hys > Thresh2$$

Inequality A5-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality A5-4 (Leaving condition 2)

$$Mn + Ofn + Ocn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *a5-Threshold1* as defined within *reportConfigEUTRA* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *a5-Threshold2* as defined within *reportConfigEUTRA* for this event).

**Mn**, **Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn**, **Ocn**, **Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Ms**.

**Thresh2** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
  - 1> set the *measResultServCell* to include the quantities of serving cell;
  - 1> if there is at least one applicable neighbouring cell to report:
    - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
      - 3> if the *triggerType* is set to 'event':
        - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
      - 3> else:
        - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
- NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].
- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
  - 3> if the *triggerType* is set to 'event'; or the *purpose* is set to 'reportStrongestCells' or to 'reportStrongestCellsForSON':
    - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
      - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
        - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

...

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

8.3.1.26.3 Test description

8.3.1.26.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 3.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.1.26.3.2 Test procedure sequence

Table 8.3.1.26.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 3 at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.26.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 3	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-97	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-73	Power levels are such that entry condition for event A5 is satisfied: $Ms + Hys < Thresh1$ and $Mn + Ofn + Ocn - Hys > Thresh2$
T2	Cell-specific RS EPRE	dBm/15 kHz	-65	-73	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$

### 8.3.1.27 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5 (Inter-frequency measurements) / RSRQ based measurements

#### 8.3.1.27.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event A5 with event based
periodical reporting and triggerQuantity set to rsrq }
ensure that {
  when { Serving cell becomes worse than absolute threshold1 and inter-frequency neighbour cell
becomes better than absolute threshold2 }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for
event A5 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event A5
ongoing and triggerQuantity set to rsrq }
ensure that {
  when { Serving cell becomes better than absolute threshold1 or inter-frequency neighbour cell
becomes worse than absolute threshold2 }
  then { UE stops sending MeasurementReport message }
}
```

#### 8.3.1.27.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.6 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to 'event' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for

all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.6]

The UE shall:

1> consider the entering condition for this event to be satisfied when both conditions A5-1 and condition A5-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality A5-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality A5-2 (Entering condition 2)

$$Mn + Qfn + Ocn - Hys > Thresh2$$

Inequality A5-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality A5-4 (Leaving condition 2)

$$Mn + Qfn + Ocn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Qfn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).

**Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *a5-Threshold1* as defined within *reportConfigEUTRA* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *a5-Threshold2* as defined within *reportConfigEUTRA* for this event).

**Mn**, **Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn**, **Ocn**, **Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Ms**.

**Thresh2** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to 'event':
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to 'event'; or the *purpose* is set to 'reportStrongestCells' or to 'reportStrongestCellsForSON':
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

...

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

### 8.3.1.27.3 Test description

#### 8.3.1.27.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 3.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.27.3.2 Test procedure sequence

Table 8.3.1.27.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 3 at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.27.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 3	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-80	-100	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$
	RSRQ	dB	-5.05	-11.46	
	Noc	dBm/15 kHz	-90	-100	
T1	Cell-specific RS EPRE	dBm/15 kHz	-91	-85	Power levels are such that entry condition for event A5 is satisfied: $Ms + Hys < Thresh1$ and $Mn + Ofn + Ocn - Hys > Thresh2$
	RSRQ	dB	-12.33	-3.76	
T2	Cell-specific RS EPRE	dBm/15 kHz	-65	-85	Power levels are such that entry condition for event A5 is not satisfied: $Ms - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$
	RSRQ	dB	-3.09	-3.76	

**Table 8.3.1.27.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including measConfig to setup intra LTE measurement and reporting for event A5 on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE attempt to transmit an uplink message within the next 30s?	-	-	2	F
4	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.27.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 1 to report event A5 with the measured RSRP and RSRQ value for Cell 3?	-->	<i>MeasurementReport</i>	1	P
-	EXCEPTION: Step 6 below is repeated until 3 <i>MeasurementReport</i> messages are received from the UE	-	-	-	-
6	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 1, with the measured RSRP and RSRQ value for Cell 3?	-->	<i>MeasurementReport</i>	1	P
7	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.27.3.2-1.	-	-	-	-
8	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cell 3 and UE measurement.	-	-	-	-
9	Check: Does the UE attempt to transmit an uplink message within the next 10s?	-	-	2	F

8.3.1.28 eICIC / Measurement configuration control and reporting / Event A1 / RSRP and RSRQ measurement / Serving ABS

#### **8.3.1.28.1 Test Purpose (TP)**

(1)

```

with { UE having completed the radio bearer establishment and initial security activation procedure
}
ensure that {
    when { UE receives an RRCCofigurationReconfiguration message including a MeasObject provided with
all parameters including the serving cell measurement restriction pattern measSubframePatternPCell
corresponding to serving cell ABS pattern }
        then { UE transmits an RRCCofigurationReconfigurationComplete message }
    }
}

```

(2)

```

with { UE having transmitted an RRCCofigurationComplete message and applied serving
cell measurement restriction pattern measSubframePatternPCell, corresponding to serving cell ABS
pattern }
ensure that {
  when { UE transmits MeasurementReport after A1 event }
    then { UE transmits RSRP and RSRQ measurements done in measSubframePatternPCell }
}

```

### 8.3.1.28.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.10.0, 5.3.10.8 and 5.5.3.1.

[TS 36.331, clause 5.3.10.0]

The UE shall:

...

1> if the received *radioResourceConfigDedicated* includes the *measSubframePatternPCell*:

2> reconfigure the time domain measurement resource restriction for the serving cell as specified in 5.3.10.8;

[TS 36.331, clause 5.3.10.8]

The UE shall:

1> if the received *measSubframePatternPCell* is set to *release*:

2> release the time domain measurement resource restriction for the PCell, if previously configured

1> else:

2> apply the time domain measurement resource restriction for the PCell in accordance with the received *measSubframePatternPCell*;

[TS 36.331, clause 5.5.3.1]

For all measurements the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> whenever the UE has a *measConfig*, perform RSRP and RSRQ measurements for each serving cell, applying for the PCell the time domain measurement resource restriction in accordance with *measSubframePatternPCell*, if configured;

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *purpose* for the associated *reportConfig* is set to *reportCGI*:

3> if *si-RequestForHO* is configured for the associated *reportConfig*:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using autonomous gaps as necessary;

3> else:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using available idle periods or using autonomous gaps as necessary;

NOTE 1: If autonomous gaps are used to perform measurements, the UE is allowed to temporarily abort communication with all serving cell(s), i.e. create autonomous gaps to perform the corresponding measurements within the limits specified in TS 36.133 [16]. Otherwise, the UE only supports the measurements with the purpose set to *reportCGI* only if E-UTRAN has provided sufficient idle periods.

3> try to acquire the global cell identity of the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* by acquiring the relevant system information from the concerned cell;

3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell:

4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

4> try to acquire the *trackingAreaCode* in the concerned cell;

4> try to acquire the list of additional PLMN Identities, as included in the *plmn-IdentityList*, if multiple PLMN identities are broadcast in the concerned cell;

NOTE 2: The 'primary' PLMN is part of the global cell identity.

3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a UTRAN cell:

- 4> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;
- 4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;
- 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a GERAN cell:
  - 4> try to acquire the RAC in the concerned cell;
  - 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a CDMA2000 cell and the *cdma2000-Type* included in the *measObject* is *typeHRPD*:
    - 4> try to acquire the Sector ID in the concerned cell;
    - 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a CDMA2000 cell and the *cdma2000-Type* included in the *measObject* is *type1XRTT*:
      - 4> try to acquire the BASE ID, SID and NID in the concerned cell;
  - 2> else:
    - 3> if a measurement gap configuration is setup; or
    - 3> if the UE does not require measurement gaps to perform the concerned measurements:
      - 4> if *s-Measure* is not configured; or
      - 4> if *s-Measure* is configured and the PCell RSRP, after layer 3 filtering, is lower than this value:
        - 5> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject*, applying for neighbouring cells on the primary frequency the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;
      - 4> if the *ue-RxTxTimeDiffPeriodical* is configured in the associated *reportConfig*:
        - 5> perform the UE Rx-Tx time difference measurements on the PCell;
    - 2> perform the evaluation of reporting criteria as specified in 5.5.4;

NOTE 3: The *s-Measure* defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds *s-Measure*, e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].

### 8.3.1.28.3 Test description

#### 8.3.1.28.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2 are time & SFN synchronous cells.
- OFDMA Channel Noise Generator (OCNG) is required to populate Cell 2. The Cell will be populated in all sub-frames specified in *measSubframePatternPCell* as '0' and will be removed where defined as '1'.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.1.28.3.2 Test procedure sequence

Table 8.3.1.28.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while

columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.28.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	OFF	-85	
T1	Cell-specific RS EPRE	dBm/15k Hz	-87	-91	

**Table 8.3.1.28.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
0	The SS changes Cell 1 and Cell 2 parameters according to the row "T1" in table 8.3.1.28.3.2-1.	-	-	-	-
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including measConfig and serving cell measurement restriction pattern on Cell 2 to setup intra frequency measurement reporting for event A1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message on Cell 2 to confirm the setup of intra frequency measurement.	-->	<i>RRCConnectionReconfigurationComplete</i>	1	P
3	Void				
4	Check: Does the UE transmit a <i>MeasurementReport</i> message on Cell 2 to report event A1 with the measured RSRP and RSRQ values for Cell 2?	-->	<i>MeasurementReport</i>	2	P

Note: *MeasurementReport* messages may be received also during the postamble sequence following step 4.

### 8.3.1.28.3.3 Specific message contents

**Table 8.3.1.28.3.3-0: Conditions for specific message contents in Tables 8.3.1.28.3.3-2.**

Condition	Explanation

### 8.3.1.29 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event C1

#### 8.3.1.29.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event C1 with event based
periodical reporting }
ensure that {
  when { Serving cell becomes better than absolute threshold plus hysteresis }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for
event C1 are satisfied }
}
```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event C1
ongoing}
ensure that {
  when { Serving cell becomes worse than absolute threshold minus hysteresis }
  then { UE stops sending MeasurementReport message }
}

```

### 8.3.1.29.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.3.1, 5.5.4.1, 5.5.4.9 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.3.1]

For all measurements the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> whenever the UE has a *measConfig*, perform RSRP and RSRQ measurements for each serving cell as follows:

2> for the PCell, apply the time domain measurement resource restriction in accordance with *measSubframePatternPCell*, if configured;

2> if the UE supports CRS based discovery signals measurement:

3> for each SCell in deactivated state, apply the discovery signals measurement timing configuration in accordance with *measDS-Config*, if configured within the *measObject* corresponding to the frequency of the SCell;

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *purpose* for the associated *reportConfig* is set to *reportCGI*:

...

2> else:

3> if a measurement gap configuration is setup; or

3> if the UE does not require measurement gaps to perform the concerned measurements:

4> if *s-Measure* is not configured; or

4> if *s-Measure* is configured and the PCell RSRP, after layer 3 filtering, is lower than this value; or

4> if *measDS-Config* is configured in the associated *measObject*:

5> if the UE supports CSI-RS based discovery signals measurement; and

5> if the *eventId* in the associated *reportConfig* is set to *eventC1* or *eventC2*, or if *reportStrongestCSIRSSs* is included in the associated *reportConfig*:

- 6> perform the corresponding measurements of CSI-RS resources on the frequency indicated in the concerned *measObject*, applying the discovery signals measurement timing configuration in accordance with *measDS-Config* in the concerned *measObject*;
  - 6> if *reportCRS-Meas* is included in the associated *reportConfig*, perform the corresponding measurements of neighbouring cells on the frequencies indicated in the concerned *measObject* as follows:
    - 7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;
    - 7> apply the discovery signals measurement timing configuration in accordance with *measDS-Config* in the concerned *measObject*;
  - 5> else:
    - 6> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject* as follows:
      - 7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;
      - 7> if the UE supports CRS based discovery signals measurement, apply the discovery signals measurement timing configuration in accordance with *measDS-Config*, if configured in the concerned *measObject*;
    - 4> if the *ue-RxTxTimeDiffPeriodical* is configured in the associated *reportConfig*:
      - 5> perform the UE Rx–Tx time difference measurements on the PCell;
      - 2> perform the evaluation of reporting criteria as specified in 5.5.4;
- NOTE 3: The *s-Measure* defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds *s-Measure*, e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].
- [TS 36.331, clause 5.5.4.1]
- The UE shall:
- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
    - ...
  - 2> else:
    - ...
  - 3> if the corresponding *measObject* concerns EUTRA:
    - ...
  - 4> else if *eventC1* or *eventC2* is configured in the corresponding *reportConfig*; or if *reportStrongestCSI-RSs* is included in the corresponding *reportConfig*:
    - 5> consider a CSI-RS resource on the associated frequency to be applicable when the concerned CSI-RS resource is included in the *measCSI-RS-ToAddModList* defined within the *VarMeasConfig* for this *measId*;
    - ...
  - 2> if the *trigger Type* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering

taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> if the UE supports T312 and if *useT312* is included for this event and if T310 is running:
  - 4> if T312 is not running:
    - 5> start timer T312 with the value configured in the corresponding *measObject*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to *event* and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if the UE supports T312 and if *useT312* is included for this event and if T310 is running:
    - 4> if T312 is not running:
      - 5> start timer T312 with the value configured in the corresponding *measObject*;
    - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration or if *a6-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
      - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
    - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
      - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
      - 4> stop the periodical reporting timer for this *measId*, if running;
  - 2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable CSI-RS resources for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (i.e. a first CSI-RS resource triggers the event):
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> include the concerned CSI-RS resource(s) in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable CSI-RS resources not included in the *csi-RS-TriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (i.e. a subsequent CSI-RS resource triggers the event):
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> include the concerned CSI-RS resource(s) in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId*;

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to *event* and if the leaving condition applicable for this event is fulfilled for one or more of the CSI-RS resources included in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned CSI-RS resource(s) in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *c1-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration or if *c2-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to *reportStrongestCells* or to *reportStrongestCellsForSON* and if a (first) measurement result is available:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to *reportStrongestCells* and *reportStrongestCSI-RSS* is not included and *reportAmount* > 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell. If the *purpose* is set to *reportStrongestCells* and *reportStrongestCSI-RSS* is not included and *reportAmount* = 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells. If the purpose is set to *reportStrongestCellsForSON*, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.9]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition C1-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition C1-2, as specified below, is fulfilled;

Inequality C1-1 (Entering condition)

$$Mcr + Ocr - Hys > Thresh$$

Inequality C1-2 (Leaving condition)

$$Mcr + Ocr + Hys < Thresh$$

The variables in the formula are defined as follows:

**Mcr** is the measurement result of the CSI-RS resource, not taking into account any offsets.

**Ocr** is the CSI-RS specific offset (i.e. *csi-RS-IndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the CSI-RS resource), and set to zero if not configured for the CSI-RS resource.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *c1-Threshold* as defined within *reportConfigEUTRA* for this event).

**Mcr, Thresh** are expressed in dBm.

**Ocr, Hys** are expressed in dB.

[TS 36.331, clause 5.5.5]

...

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*;

2> start the periodical reporting timer with the value of *reportInterval* as defined within the *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

#### 8.3.1.29.3 Test description

##### 8.3.1.29.3.1 Pre-test conditions

System Simulator:

- Cell 1.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

##### 8.3.1.29.3.2 Test procedure sequence

Table 8.3.1.29.3.2-1 illustrates the downlink power levels to be applied for Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.29.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Remark</b>
<b>T0</b>	Cell-specific RS EPRE	dBm/15 kHz	-85	Power level is such that entry condition for event C1 is not satisfied: $Mcr + Ocr + Hys < Thresh$
<b>T1</b>	Cell-specific RS EPRE	dBm/15 kHz	-59	Power level is such that entry condition for event C1 is satisfied: $Mcr + Ocr - Hys > Thresh$
<b>T2</b>	Cell-specific RS EPRE	dBm/15 kHz	-85	Power level is such that exit condition for event C1 is satisfied: $Mcr + Ocr + Hys < Thresh$
Note: The total test tolerance used is the sum of downlink signal level uncertainty (TS 36.508 clause 6.2.2.1) and absolute UE measurement accuracy (TS 36.133 clause 9).				

**Table 8.3.1.29.3.2-2: Main behaviour**

<b>St</b>	<b>Procedure</b>	<b>Message Sequence</b>		<b>TP</b>	<b>Verdict</b>
		<b>U - S</b>	<b>Message</b>		
1	SS transmits a <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup intra E-UTRAN measurement and reporting for event C1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits a <i>RCCConnectionReconfigurationComplete</i> message.	-->	<i>RCCConnectionReconfigurationC omplete</i>	-	-
3	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.29.3.2-1.	-	-	-	-
4	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event C1 with the measured CSI-RS value for Cell 1?	-->	<i>MeasurementReport</i>	1	P
-	EXCEPTION: Step 5 below is repeated until 3 <i>MeasurementReport</i> messages are received from the UE.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event C1 with the measured CSI-RS value for Cell 1?	-->	<i>MeasurementReport</i>	1	P
6	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.29.3.2-1.	-	-	-	-
7	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cell 1 and UE measurement.	-	-	-	-
8	Check: Does the UE attempt to transmit an uplink message within the next 10s?	-	-	2	F

### 8.3.1.30 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event C2

#### 8.3.1.30.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for event C2 with event based
periodical reporting }
ensure that {
  when { Serving cell becomes better than absolute threshold plus hysteresis }
  then { UE sends MeasurementReport message at regular intervals while entering conditions for
event C2 are satisfied }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and periodical measurement reporting triggered by event C2
ongoing}
ensure that {
  when { Serving cell becomes worse than absolute threshold minus hysteresis }
  then { UE stops sending MeasurementReport message }
}
```

#### 8.3.1.30.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.3.1, 5.5.4.1, 5.5.4.10 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.3.1]

For all measurements the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> whenever the UE has a *measConfig*, perform RSRP and RSRQ measurements for each serving cell as follows:

2> for the PCell, apply the time domain measurement resource restriction in accordance with *measSubframePatternPCell*, if configured;

2> if the UE supports CRS based discovery signals measurement:

3> for each SCell in deactivated state, apply the discovery signals measurement timing configuration in accordance with *measDS-Config*, if configured within the *measObject* corresponding to the frequency of the SCell;

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *purpose* for the associated *reportConfig* is set to *reportCGI*:

...

2> else:

3> if a measurement gap configuration is setup; or

3> if the UE does not require measurement gaps to perform the concerned measurements:

4> if *s-Measure* is not configured; or

4> if *s-Measure* is configured and the PCell RSRP, after layer 3 filtering, is lower than this value; or

4> if *measDS-Config* is configured in the associated *measObject*:

5> if the UE supports CSI-RS based discovery signals measurement; and

5> if the *eventId* in the associated *reportConfig* is set to *eventC1* or *eventC2*, or if *reportStrongestCSIRSSs* is included in the associated *reportConfig*:

6> perform the corresponding measurements of CSI-RS resources on the frequency indicated in the concerned *measObject*, applying the discovery signals measurement timing configuration in accordance with *measDS-Config* in the concerned *measObject*;

6> if *reportCRS-Meas* is included in the associated *reportConfig*, perform the corresponding measurements of neighbouring cells on the frequencies indicated in the concerned *measObject* as follows:

7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;

7> apply the discovery signals measurement timing configuration in accordance with *measDS-Config* in the concerned *measObject*;

5> else:

6> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject* as follows:

- 7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;
- 7> if the UE supports CRS based discovery signals measurement, apply the discovery signals measurement timing configuration in accordance with *measDS-Config*, if configured in the concerned *measObject*;
- 4> if the *ue-RxTxTimeDiffPeriodical* is configured in the associated *reportConfig*:
- 5> perform the UE Rx-Tx time difference measurements on the PCell;
- 2> perform the evaluation of reporting criteria as specified in 5.5.4;

NOTE 3: The *s-Measure* defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds *s-Measure*, e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - ...
- 2> else:
  - ...
- 3> if the corresponding *measObject* concerns EUTRA:
  - ...
- 4> else if *eventC1* or *eventC2* is configured in the corresponding *reportConfig*; or if *reportStrongestCSI-RSs* is included in the corresponding *reportConfig*:
  - 5> consider a CSI-RS resource on the associated frequency to be applicable when the concerned CSI-RS resource is included in the *measCSI-RS-ToAddModList* defined within the *VarMeasConfig* for this *measId*;
  - ...
- 2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if the UE supports T312 and if *useT312* is included for this event and if T310 is running:
    - 4> if T312 is not running:
      - 5> start timer T312 with the value configured in the corresponding *measObject*;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to *event* and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

- 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> if the UE supports T312 and if *useT312* is included for this event and if T310 is running:
  - 4> if T312 is not running:
    - 5> start timer T312 with the value configured in the corresponding *measObject*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration or if *a6-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable CSI-RS resources for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (i.e. a first CSI-RS resource triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned CSI-RS resource(s) in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable CSI-RS resources not included in the *csi-RS-TriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (i.e. a subsequent CSI-RS resource triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned CSI-RS resource(s) in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to *event* and if the leaving condition applicable for this event is fulfilled for one or more of the CSI-RS resources included in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned CSI-RS resource(s) in the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *c1-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration or if *c2-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *csi-RS-TriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;

2> if the *purpose* is included and set to *reportStrongestCells* or to *reportStrongestCellsForSON* and if a (first) measurement result is available:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to *reportStrongestCells* and *reportStrongestCSI-RSs* is not included and *reportAmount* > 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell. If the *purpose* is set to *reportStrongestCells* and *reportStrongestCSI-RSs* is not included and *reportAmount* = 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells. If the purpose is set to *reportStrongestCellsForSON*, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘event’ or to ‘periodical’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

...

[TS 36.331, clause 5.5.4.10]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition C2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition C2-2, as specified below, is fulfilled;

NOTE: The CSI-RS resource(s) that triggers the event is on the same frequency as the reference CSI-RS resource, i.e. both are on the frequency indicated in the associated *measObject*.

Inequality C2-1 (Entering condition)

$$M_{cr} + O_{cr} - H_{ys} > M_{ref} + O_{ref} + O_{ff}$$

Inequality C2-2 (Leaving condition)

$$M_{cr} + O_{cr} + H_{ys} < M_{ref} + O_{ref} + O_{ff}$$

The variables in the formula are defined as follows:

***M<sub>cr</sub>*** is the measurement result of the CSI-RS resource, not taking into account any offsets.

***O<sub>cr</sub>*** is the CSI-RS specific offset of the CSI-RS resource (i.e. *csi-RS-IndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the CSI-RS resource), and set to zero if not configured for the CSI-RS resource.

***M<sub>ref</sub>*** is the measurement result of the reference CSI-RS resource (i.e. *c2-RefCSI-RS* as defined within *reportConfigEUTRA* for this event), not taking into account any offsets.

***O<sub>ref</sub>*** is the CSI-RS specific offset of the reference CSI-RS resource (i.e. *csi-RS-IndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the reference CSI-RS resource), and is set to zero if not configured for the reference CSI-RS resource.

***H<sub>ys</sub>*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

***O<sub>ff</sub>*** is the offset parameter for this event (i.e. *c2-Offset* as defined within *reportConfigEUTRA* for this event).

*Mcr, Mref* are expressed in dBm.

*Ocr, Oref, Hys, Off* are expressed in dB.

[TS 36.331, clause 5.5.5]

...

For the measId for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*;

2> start the periodical reporting timer with the value of *reportInterval* as defined within the *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

#### 8.3.1.30.3 Test description

##### 8.3.1.30.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

##### 8.3.1.30.3.2 Test procedure sequence

Table 8.3.1.30.3.2-1 illustrates the downlink power levels to be applied for Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.1.30.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 2</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-72	Power level is such that entry condition for event C2 is not satisfied: $Mcr + Ocr + Hys < Mref + Oref + Off$
T1	Cell-specific RS EPRE	dBm/15k Hz	-59	-85	Power level is such that entry condition for event C2 is satisfied: $Mcr + Ocr - Hys > Mref + Oref + Off$
T2	Cell-specific RS EPRE	dBm/15k Hz	-85	-72	Power level is such that exit condition for event C2 is satisfied: $Mcr + Ocr + Hys < Mref + Oref + Off$
Note: The total test tolerance used is the sum of downlink signal level uncertainty (TS 36.508 clause 6.2.2.1) and absolute UE measurement accuracy (TS 36.133 clause 9).					

**Table 8.3.1.30.3.2-2: Main behaviour**

<b>St</b>	<b>Procedure</b>	<b>Message Sequence</b>		<b>TP</b>	<b>Verdict</b>
		<b>U - S</b>	<b>Message</b>		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup intra E-UTRAN measurement and reporting for event C2.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RCConnectionReconfigurationComplete</i> message.	-->	<i>RCConnectionReconfigurationComplete</i>	-	-
3	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.1.30.3.2-1.	-	-	-	-
4	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event C2 with the measured CSI-RS value for Cell 1?	-->	<i>MeasurementReport</i>	1	P
-	EXCEPTION: Step 5 below is repeated until 3 <i>MeasurementReport</i> messages are received from the UE.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event C2 with the measured CSI-RS value for Cell 1?	-->	<i>MeasurementReport</i>	1	P
6	SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.3.1.30.3.2-1.	-	-	-	-
7	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cell 1&2 and UE measurement.	-	-	-	-
8	Check: Does the UE attempt to transmit an uplink message within the next 10s?	-	-	2	F

### 8.3.1.31 Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting / CSI-RSRP

#### 8.3.1.31.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for CSI-RSRP periodic reporting
of intra frequency cells on specified frequency }
ensure that {
  when { The UE receives reference signal power for cells on the serving frequency }
  then { UE sends MeasurementReport message at regular intervals for these cells }
}
```

#### 8.3.1.31.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.3.1, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.3.1]

For all measurements the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

- 1> whenever the UE has a *measConfig*, perform RSRP and RSRQ measurements for each serving cell as follows:
  - 2> for the PCell, apply the time domain measurement resource restriction in accordance with *measSubframePatternPCell*, if configured;
  - 2> if the UE supports CRS based discovery signals measurement:
    - 3> for each SCell in deactivated state, apply the discovery signals measurement timing configuration in accordance with *measDS-Config*, if configured within the *measObject* corresponding to the frequency of the SCell;
- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the *purpose* for the associated *reportConfig* is set to *reportCGI*:
    - ...
  - 2> else:
    - 3> if a measurement gap configuration is setup; or
    - 3> if the UE does not require measurement gaps to perform the concerned measurements:
      - 4> if *s-Measure* is not configured; or
      - 4> if *s-Measure* is configured and the PCell RSRP, after layer 3 filtering, is lower than this value; or
      - 4> if *measDS-Config* is configured in the associated *measObject*:
        - 5> if the UE supports CSI-RS based discovery signals measurement; and
        - 5> if the *eventId* in the associated *reportConfig* is set to *eventC1* or *eventC2*, or if *reportStrongestCSIRSSs* is included in the associated *reportConfig*:
          - 6> perform the corresponding measurements of CSI-RS resources on the frequency indicated in the concerned *measObject*, applying the discovery signals measurement timing configuration in accordance with *measDS-Config* in the concerned *measObject*;
          - 6> if *reportCRS-Meas* is included in the associated *reportConfig*, perform the corresponding measurements of neighbouring cells on the frequencies indicated in the concerned *measObject* as follows:
            - 7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;
            - 7> apply the discovery signals measurement timing configuration in accordance with *measDS-Config* in the concerned *measObject*;
        - 5> else:
          - 6> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject* as follows:
            - 7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with *measSubframePatternConfigNeigh*, if configured in the concerned *measObject*;
            - 7> if the UE supports CRS based discovery signals measurement, apply the discovery signals measurement timing configuration in accordance with *measDS-Config*, if configured in the concerned *measObject*;
        - 4> if the *ue-RxTxTimeDiffPeriodical* is configured in the associated *reportConfig*:
          - 5> perform the UE Rx-Tx time difference measurements on the PCell;

2> perform the evaluation of reporting criteria as specified in 5.5.4;

NOTE 3: The *s-Measure* defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds *s-Measure*, e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

2> upon expiry of the T321 for this *measId*:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to *event* or to *periodical* while the corresponding measurement is not performed due to the PCell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*;

2> start the periodical reporting timer with the value of *reportInterval* as defined within the *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

8.3.1.31.3 Test description

8.3.1.31.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18].

8.3.1.31.3.2 Test procedure sequence

Table 8.3.1.31.3.2-1 illustrates the downlink power levels to be applied for Cell 1 during the test execution.

**Table 8.3.1.31.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2	Remark
<b>T0</b>	Cell-specific RS EPRE	dBm/15kHz	-65	-85	

Note: The total test tolerance used is the sum of downlink signal level uncertainty (TS 36.508 clause 6.2.2.1) and absolute UE measurement accuracy (TS 36.133 clause 9).

**Table 8.3.1.31.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>MeasConfig</i> to setup periodical intra E-UTRAN measurement and reporting for PERIODICAL CSI-RS.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message with the measured CSI-RSRP value periodically for 32 s?	-->	<i>MeasurementReport</i>	1	P

### 8.3.1.32 LAA / Measurement configuration control and reporting / Intra E-UTRAN measurements / RSSI Measurement

#### 8.3.1.32.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for RSSI reporting of intra frequency carriers on specified frequency }
ensure that {
    when { The UE receives signal power for carriers on the serving frequency where measurements are configured }
    then { UE sends MeasurementReport message at regular intervals for these carriers }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and RSSI measurement reporting ongoing}
ensure that {
    when { The UE receives a RRCCConnectionReconfiguration message removing measIds for RSSI reporting }
    then { UE stops sending MeasurementReport messages for these measIds }
}
```

#### 8.3.1.32.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.4.1, 5.5.4.2 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRCCConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.2.11]

The UE shall setup the RSSI measurement timing configuration (RMTC) in accordance with the received *rmtc-Period*, *rmtc-SubframeOffset* if configured otherwise determined by the UE randomly, i.e. the first symbol of each RMTC occasion occurs at first symbol of an SFN and subframe of the PCell meeting the following condition:

SFN mod  $T = \text{FLOOR}(rmtc\text{-}SubframeOffset}/10);$

subframe =  $rmtc\text{-}SubframeOffset \bmod 10;$

with  $T = rmtc\text{-}Period}/10;$

On the concerned frequency, the UE shall not consider RSSI measurements outside the configured RMTC occasion which lasts for *measDuration* for RSSI and channel occupancy measurements.

[TS 36.331, clause 5.5.3.1]

For all measurements, except for UE Rx-Tx time difference measurements, RSSI, UL PDCP Packet Delay per QCI measurement, channel occupancy measurements, and except for WLAN measurements of Band, Carrier Info, Available Admission Capacity, Backhaul Bandwidth, Channel Utilization, and Station Count, the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

...

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

- ...
- 2> if the *ul-DelayConfig* is configured for the associated *reportConfig*:
- ...
- 2> else:
- 3> if a measurement gap configuration is setup; or
- 3> if the UE does not require measurement gaps to perform the concerned measurements:
- ...
- 4> if the *measRSSI-ReportConfig* is configured in the associated *reportConfig*:
- 5> perform the RSSI and channel occupancy measurements on the frequency indicated in the associated *measObject*;
- ...

[TS 36.331, clause 5.5.4.1]

If security has been activated successfully, the UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a purpose set to *reportStrongestCellsForSON*:
- ...
- 2> else if the corresponding *reportConfig* includes a purpose set to *reportCGI*:
- ...
- 2> else:
- 3> if the corresponding *measObject* concerns E-UTRA:
- ...
- 4> else if *measRSSI-ReportConfig* is configured in the corresponding *reportConfig*:
- 5> consider the resource indicated by the *rmtc-Config* on the associated frequency to be applicable;
- ...
- 2> if *measRSSI-ReportConfig* is included and if a (first) measurement result is available:
- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> initiate the measurement reporting procedure as specified in 5.5.5 immediately when RSSI sample values are reported by the physical layer after the first L1 measurement duration;
- ...

[TS 36.331, clause 5.5.5]

- ...
- 1> if the *measRSSI-ReportConfig* is configured within the corresponding *reportConfig* for this *measId*:
- 2> set the *rssi-Result* to the average of sample value(s) provided by lower layers in the *reportInterval*;
- 2> set the *channelOccupancy* to the rounded percentage of sample values which are beyond to the *channelOccupancyThreshold* within all the sample values in the *reportInterval*;

...

8.3.1.32.3 Test description

8.3.1.32.3.1 Pre-test conditions

System Simulator:

- Cell 1 is the PCell, Cell 10 is the SCell under Operation with Frame Structure 3.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18] on Cell 1.

8.3.1.32.3.2 Test procedure sequence

Table 8.3.1.32.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 10 during the test execution.

**Table 8.3.1.32.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 10	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-65	-85	
Note: The total test tolerance used is the sum of downlink signal level uncertainty (TS 36.508 clause 6.2.2.1) and absolute UE measurement accuracy (TS 36.133 clause 9).

## 8.3.2 Inter-RAT measurements

### 8.3.2.1 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of GERAN cells

#### 8.3.2.1.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for GERAN cell and not detected entering condition for the event
B2 is met }
ensure that {
    when { UE detects entering condition for the event B2 is not met }
    then { UE does not transmit any MeasurementReport }
}
```

(2)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for GERAN cell and not detected entering condition for the event
B2 is met }
ensure that {
    when { UE detects entering condition for the event B2 is met }
    then { UE transmits a MeasurementReport }
}
```

(3)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for GERAN cell and detected entering condition for the event B2
is met }
ensure that {
  when { UE detects leaving condition for the event B2 is met }
  then { UE does not transmit any MeasurementReport }
}

```

### 8.3.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.1, 5.5.4.8 and 5.5.5.

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

...

3> else if the corresponding *measObject* concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

- 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
- 4> initiate the measurement reporting procedure, as specified in 5.5.5;
- 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
  - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.4.8]

The UE shall:

- 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
- 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality B2-2 (Entering condition 2)

$$Mn + Qfn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Qfn + Hys < Thresh2$$

The variables in the formula are defined as follows:

***Ms*** is the measurement result of the serving cell, not taking into account any offsets.

**Mn** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell).

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *b2-Threshold2* as defined within *reportConfigInterRAT* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

**Ofn, Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Ms**.

**Thresh2** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
- 5> else:

6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

### 8.3.2.1.3 Test description

#### 8.3.2.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 24.
- System information combination 5 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.2.1.3.2 Test procedure sequence

Table 8.3.2.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 24	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-60	-	The power level values are such that entering conditions for event B2 are not satisfied.
	RSSI	dBm	-	-85	
T1	Cell-specific RS EPRE	dBm/15k Hz	-80	-	The power level values are such that entering conditions for event B2 are satisfied.
	RSSI	dBm	-	-65	
T2	Cell-specific RS EPRE	dBm/15k Hz	-60	-	The power level values are such that leaving conditions for event B2 are satisfied.
	RSSI	dBm	-	-85	

**Table 8.3.2.1.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCCoNnectionReconfiguration</i> message to setup inter RAT measurement on Cell 1.	<--	<i>RRCCoNnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCCoNnectionReconfigurationComplete</i> message to confirm the setup of inter RAT measurement on Cell 1.	-->	<i>RRCCoNnectionReconfigurationC ommplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 during the next 10s?	-->	<i>MeasurementReport</i>	1	F
4	The SS changes Cell 1 and Cell 24 parameters according to the row "T1" in table 8.3.2.1.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 for Cell 24?	-->	<i>MeasurementReport</i>	2	P
6	The SS changes Cell 1 and Cell 24 parameters according to the row "T2" in table 8.3.2.1.3.2-1.	-	-	-	-
7	Wait and ignore <i>MeasurementReport</i> messages for 15 s to allow change of power levels for Cells 1 and Cell 24.	-	-	-	-
8	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 during the next 10s?	-->	<i>MeasurementReport</i>	3	F
9	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 1?	-	-	1, 2, 3	-

## 8.3.2.2 Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of GERAN cells

### 8.3.2.2.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for GERAN cell }
ensure that {
  when { The UE receives reference signal power for cells on the GERAN frequencies where measurements are configured }
  then { UE sends MeasurementReport message at regular intervals for these GERAN cells }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and a MeasurementReport message for a configured periodic measurement reporting of GERAN cells on a configured frequency were sent }
ensure that {
  when { A previously reported cell become unavailable and the UE receives reference signal power on a reported GERAN frequency for a cell which was previously not reported }
  then { UE sends MeasurementReport message at regular intervals for the available GERAN cells }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting of GERAN cells ongoing }
ensure that {
  when { The UE receives a RRConnectionReconfiguration message removing the measId of periodic reporting of GERAN cells }
  then { UE stops sending MeasurementReport message for GERAN cells }
```

}

### 8.3.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:

2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

NOTE: The UE does not consider the message as erroneous if the *measIdToRemoveList* includes any *measId* value that is not part of the current UE configuration.

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

...

3> else if the corresponding *measObject* concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘event’ or to ‘periodical’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.5]

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

...

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘reportStrongestCells’ or to ‘reportStrongestCellsForSON’:

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

5> else:

6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

1> else:

2> if the *triggerType* is set to '*periodical*':

3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

...

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

### 8.3.2.2.3 Test description

#### 8.3.2.2.3.1 Pre-test conditions

System Simulator:

- Cell 3, Cell 25 and Cell 26.
- System information combination 5 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 3 according to [18].

#### 8.3.2.2.3.2 Test procedure sequence

Table 8.3.2.2.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.2.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 3	Cell 25	Cell 26	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	The power level values are such that camping on Cell 3 is guaranteed.
	RSSI	dBm	-	Off	Off	
T1	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	The power level values are such that Cell 25 is satisfied for periodic reporting.
	RSSI	dBm	-	-70	Off	
T2	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	The power level values are such that Cell 26 is satisfied for periodic reporting and Cell 25 become unavailable.
	RSSI	dBm	-	Off	-70	

**Table 8.3.2.2.3.2-2: Main behaviour**

### 8.3.2.3 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of UTRAN cells

#### 8.3.2.3.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for UTRA cell and not detected entering condition for the event B2 is met }
ensure that {
  when { UE detects entering condition for the event B2 is not met }
    then { UE does not transmit any MeasurementReport }
  }
```

(2)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for UTRA cell and not detected entering condition for the event B2 is met }
ensure that {
  when { UE detects entering condition for the event B2 is met }
    then { UE transmits a MeasurementReport }
  }
```

(3)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for UTRA cell and detected entering condition for the event B2 is met }
ensure that {
  when { UE detects leaving condition for the event B2 is met }
    then { UE does not transmit any MeasurementReport }
  }
```

### 8.3.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.1, 5.5.4.8 and 5.5.5.

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a purpose set to '*reportStrongestCellsForSON*':  
...
- 2> else:  
3> if the corresponding *measObject* concerns E-UTRA:  
...  
3> else if the corresponding *measObject* concerns UTRA or CDMA2000:  
4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);  
3> else if the corresponding *measObject* concerns GERAN:  
4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
- 2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId*: (a first cell triggers the event)
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering

taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

...

- 2> if the *triggerType* is set to '*event*' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

...

[TS 36.331, clause 5.5.4.8]

The UE shall:

- 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
- 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)

$Ms + Hys < Thresh1$  Inequality B2-2 (Entering condition 2)

$$Mn + Ofn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Ofn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Mn** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell)

**Hys** is the hysteresis parameter for this event (i.e. hysteresis as defined within *reportConfigInterRAT* for this event)

**Thresh1** is the threshold parameter for this event (i.e. b2-Threshold1 as defined within *reportConfigInterRAT* for this event)

**Thresh2** is the threshold parameter for this event (i.e. b2-Threshold2 as defined within *reportConfigInterRAT* for this event)

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell

**Ofn, Hys** are expressed in dB

**Thresh1** is expressed in the same unit as **Ms**

**Thresh2** is expressed in the same unit as **Mn**

[TS 36.331, clause 5.5.5]

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
- 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to '*event*':

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*

3> else:

4> include the applicable calls for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

**NOTE:** The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultNeighCells* include the *physCellId*;

3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':

4> for each included cell include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

...

5> else:

6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

1> else:

2> if the *triggerType* is set to '*periodical*':

3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

1> if the measured results are for CDMA2000 HRPD:

2> set the *preRegistrationStatusHRPD* to the UE's CDMA2000 upper layer's HRPD *preRegistrationStatus*;

1> if the measured results are for CDMA2000 1xRTT:

2> set the *preRegistrationStatusHRPD* to '*FALSE*';

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

### 8.3.2.3.3 Test description

#### 8.3.2.3.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 7.

- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

### 8.3.2.3.3.2 Test procedure sequence

Table 8.3.2.3.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.3.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 7	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-60	-	The power level values are such that entering conditions for event B2 are not satisfied.
	CPICH Ec= (UTRA FDD)	dBm/3.8 4MHz	-	-88	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-88	
T1	Cell-specific RS EPRE	dBm/15k Hz	-84	-	The power level values are such that entering conditions for event B2 are satisfied.
	CPICH Ec= (UTRA FDD)	dBm/3.8 4MHz	-	-64	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-64	
T2	Cell-specific RS EPRE	dBm/15k Hz	-60	-	The power level values are such that leaving conditions for event B2 are satisfied.
	CPICH Ec= (UTRA FDD)	dBm/3.8 4MHz	-	-88	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-88

8.3.2.3a Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of UTRAN cells / RSRQ based measurements

#### 8.3.2.3a.1 Test Purpose (TP)

(1)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for UTRA cell, configured b2-Threshold1 set to threshold-RSRQ
and not detected entering condition for the event B2 is met }
ensure that {
when { UE detects entering condition for the event B2 is not met }
then { UE does not transmit any MeasurementReport }
}

```

(2)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for UTRA cell, configured b2-Threshold1 set to threshold-RSRQ
and not detected entering condition for the event B2 is met }
ensure that {
  when { UE detects entering condition for the event B2 is met }
  then { UE transmits a MeasurementReport }
}

```

(3)

**with** { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for UTRA cell, configured *b2-Threshold1* set to *threshold-RSRQ* and detected entering condition for the event B2 is met }  
**ensure that** {

```

when { UE detects leaving condition for the event B2 is met }
  then { UE does not transmit any MeasurementReport }
}

```

### 8.3.2.3a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.1, 5.5.4.8 and 5.5.5.

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a purpose set to '*reportStrongestCellsForSON*':  
...
- 2> else:
  - 3> if the corresponding *measObject* concerns E-UTRA:
    - 4> if the *ue-RxTxTimeDiffPeriodical*, *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:
    - 5> consider only the serving cell to be applicable;
  - 4> else:
    - 5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
- 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
  - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
- NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the *csg-allowedReportingCells* within the *VarMeasConfig* for this *measId*, if configured in the corresponding *measObjectUTRA* (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).
- 3> else if the corresponding *measObject* concerns GERAN:
  - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
- 2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):  
...
- 2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):  
3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to '*event*' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
  - 2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> stop timer T321;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> upon expiry of the T321 for this *measId*:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.8]

The UE shall:

- 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
- 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1):

$$Ms + Hys < Thresh1$$

Inequality B2-2 (Entering condition 2):

$$Mn + Ofn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1):

$$Ms - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2):

$$Mn + Ofn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Mn** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA2000 measurement result, *pilotStrength* is divided by -2.

**Ofn** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell).

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *b2-Threshold2* as defined within *reportConfigInterRAT* for this event). For CDMA2000, *b2-Threshold2* is divided by -2.

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

**Ofn, Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Ms**.

**Thresh2** is expressed in the same unit as **Mn**.

[TS 36.331, clause 5.5.5]

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to '*event*':

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

...

5> else:

6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 *pilotStrength*, i.e. the best cell is included first;

...

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

1> else:

2> if the *triggerType* is set to '*periodical*':

3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

1> if the measured results are for CDMA2000 HRPD:

2> set the *preRegistrationStatusHRPD* to the UE's CDMA2000 upper layer's HRPD *preRegistrationStatus*;

1> if the measured results are for CDMA2000 1xRTT:

2> set the *preRegistrationStatusHRPD* to '*FALSE*';

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

8.3.2.3a.3 Test description

8.3.2.3a.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 7
- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cell.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.2.3a.3.2 Test procedure sequence

Table 8.3.2.3a.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 7 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.3a.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 7	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values are assigned such that entering conditions for event B2 are not satisfied.
	RSRQ	dB	-4.15	-	
	CPICH Ec	dBm/3.84MHz	-	-93	
	CPICH_Ec/Io (Note 1)	dB	-	-18.13	
	Noc	dBm/15kHz	-73	-	
T1	Ioc	dBm/3.84MHz	-	-75	The power level values are assigned such that entering conditions for event B2 are satisfied.
	Cell-specific RS EPRE	dBm/15kHz	-75	-	
	RSRQ	dB	-13.23	-	
	CPICH Ec	dBm/3.84MHz	-	-65

### 8.3.2.4 Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of UTRAN cells

#### 8.3.2.4.1 Test Purpose (TP)

(1)

```

with { UE in E-UTRA RRC_CONNECTED state and measurement configured for periodic reporting of UTRA cells }
ensure that {
    when { The UE receives reference signal power for cells on the UTRA frequency where measurements are configured }
        then { UE sends MeasurementReport message at regular intervals for these UTRA cells }
}

```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state and a Measurement Report message for a configured periodic
measurement reporting of UTRA cells on a configured frequency were sent }
ensure that {
    when { A previously reported cell become unavailable or the UE receives reference signal power on
a reported UTRA frequency for a cell which was previously not reported }
        then { UE sends MeasurementReport message at regular intervals for the available UTRA cells }
}

```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting of UTRA cells ongoing}  
ensure that {
```

```

when { The UE receives a RRConnectionReconfiguration message removing the measId of periodic
reporting of UTRA cells }
then { UE stops sending MeasurementReport message for UTRA cells }
}

```

### 8.3.2.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* value included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:

2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measuredResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to ‘*event*’:

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to ‘*event*’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

5> else:

6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than to *reportAmount* as defined corresponding *reportConfig* for this *measId*:
- 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- ...

- 1> submit the MEASUREMENT REPORT message to lower layers for transmission, upon which the procedure ends.

#### 8.3.2.4.3 Test description

##### 8.3.2.4.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 5 and Cell 7
- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18] on Cell 1.

##### 8.3.2.4.3.2 Test procedure sequence

Table 8.3.2.4.3.2-1 illustrates the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.4.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Parameter	Unit	Cell 5	Cell 7	Remark
	E-UTRA Cell			UTRA Cells				
T0	Cell-specific RS EPRE	dBm/ 15kHz	-75	CPICH_Ec (UTRA FDD)	dBm/ 3.84 MHz	-85	Off	Power levels shall be such that camping on Cell 1 is guaranteed
				PCCPCH_Ec (UTRA LCR TDD)	dBm/ 1.28 MHz	-85	Off	
T1			-75	CPICH_Ec (UTRA FDD)	dBm/ 3.84 MHz	-85	-85	
				PCCPCH_Ec (UTRA LCR TDD)	dBm/ 1.28 MHz	-85	-85	
T2			-75	CPICH_Ec (UTRA FDD)	dBm/ 3.84 MHz	Off	-85	
				PCCPCH_Ec (UTRA LCR TDD)	dBm/ 1.28 MHz	Off	-85	

**Table 8.3.2.4.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup measurements and periodical reporting for UTRA cells.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
2A	Wait and ignore <i>MeasurementReport</i> messages for 8 s to allow for the switching of cells and UE measurement.	-	-	-	-
-	EXCEPTION: In parallel to events described in steps 3 to 4 the steps specified in table 8.3.2.4.3.2-3 shall take place				
3	Wait for 30 s to ensure that the UE performs a periodical reporting of UTRA cells.	-	-	1	-
4	The SS sets the cell-specific reference signal levels and switches Cell 7 on according to row "T1" in table 8.3.2.4.3.2-1.	-	-	-	-
5	Wait and ignore <i>MeasurementReport</i> messages for 8 s to allow for the switching of cells and UE measurement.	-	-	-	-
-	EXCEPTION: In parallel to events described in steps 6 to 7 the steps specified in table 8.3.2.4.3.2-4 shall take place				
6	Wait for 30 s to ensure that the UE performs a periodical reporting of UTRA cells.	-	-	1, 2	-
7	The SS sets the cell-specific reference signal levels and switches Cell 5 "Off" according to row "T2" in table 8.3.2.4.3.2-1.	-	-	-	-
8	Wait and ignore <i>MeasurementReport</i> messages for 8 s to allow for the switching of cells and UE measurement	-	-	-	-
-	EXCEPTION: In parallel to events described in steps 9 to 10 the steps specified in table 8.3.2.4.3.2-5 shall take place				
9	Wait for 30 s to ensure that the UE performs a periodical reporting of UTRA cells.	-	-	1, 2	-
10	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to remove <i>measId</i> for periodic reporting.	<--	<i>RRCConnectionReconfiguration</i>	-	-
11	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
12	Check: Does the UE attempt to transmit an uplink message for the next 10s?	-	-	3	F

8.3.2.5 Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurements of E-UTRAN, UTRAN and GERAN cells

#### 8.3.2.5.1 Test Purpose (TP)

(1)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for UTRAN and GERAN cells }
ensure that {
  when { The UE receives reference signal power for cells on either UTRAN or GERAN frequency where
measurements are configured }
  then { UE sends MeasurementReport message at regular intervals for UTRAN or GERAN cell }
}

```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state and a MeasurementReport message for a configured periodic measurement reporting of UTRAN or GERAN cell on a configured frequency was sent }
ensure that {
    when { A previously reported cell become unavailable and the UE receives reference signal power on a reported UTRAN or GERAN frequency for a cell which was previously not reported }
        then { UE sends MeasurementReport message at regular intervals for the available UTRAN or GERAN cell }
    }
}

```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting of UTRAN or GERAN cells ongoing }
ensure that {
when { The UE receives reference signal power on a reported UTRAN or GERAN frequency for a cell which was previously not reported }
then { UE sends MeasurementReport messages at regular intervals for the available UTRAN and GERAN cells }
}
```

(4)

```
with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting of UTRAN and GERAN cells ongoing }
ensure that {
when { The UE receives a RRConnectionReconfiguration message removing the measId of periodic reporting of UTRAN and GERAN cells }
then { UE stops sending MeasurementReport message for UTRAN and GERAN cells }
}
```

### 8.3.2.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

3> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:

2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

**NOTE:** The UE does not consider the message as erroneous if the *measIdToRemoveList* includes any *measId* value that is not part of the current UE configuration.

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

...

2> else:

...

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

3> else if the corresponding *measObject* concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;

...

2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.5]

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultServCell* to include the quantities of serving cell;

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

...

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;

- 3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':
- 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
- 5> if the *measObject* associated with this *measId* concerns E-UTRA:
- 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
- 5> else:
- 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
- ...
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
- 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
- 2> if the *triggerType* is set to '*periodical*':
- 3> remove the entry within the *VarMeasReportList* for this *measId*;
- 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- ...
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

### 8.3.2.5.3 Test description

#### 8.3.2.5.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 5 and Cell 24.
- System information combination 10 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.2.5.3.2 Test procedure sequence

Table 8.3.2.5.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.5.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 5</b>	<b>Cell 24</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	The power level values are such that camping on Cell 1 is guaranteed.
	CPICH_Ec (UTRA FDD)	dB	-	Off	-	
	PCCPCH_Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	Off	-	
	RSSI	dBm	-	-	Off	
T1	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	The power level values are such that Cell 5 is satisfied for periodic reporting.
	CPICH_Ec (UTRA FDD)	dB	-	-85	-	
	PCCPCH_Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-85	-	
	RSSI	dBm	-	-	Off	
T2	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	The power level values are such that Cell 24 is satisfied for periodic reporting and Cell 5 become unavailable.
	CPICH_Ec (UTRA FDD)	dB	-	Off	-	
	PCCPCH_Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	Off	-	
	RSSI	dBm	-	-	-70	
T3	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	The power level values are such that Cell 5 and Cell 24 are satisfied for periodic reporting.
	CPICH_Ec (UTRA FDD)	dB	-	-85	-	
	PCCPCH_Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-85	-	
	RSSI	dBm	-	-	-70

### 8.3.2.6 Measurement configuration control and reporting / Inter-RAT measurements / Simultaneous A2 and two B2 / Measurements of E-UTRAN, UTRAN and GERAN cells

#### 8.3.2.6.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for A2 on E-UTRAN, B2 on UTRAN
and B2 on GERAN at the same time }
ensure that {
  when { UE detects entering condition for the events A2 and B2 are not met }
  then { UE does not transmit any MeasurementReport messages}
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for A2 on E-UTRAN, B2 on UTRAN
and B2 on GERAN at the same time }
ensure that {
  when { UE detects entering condition for the event A2 is met }
  then { UE transmits a MeasurementReport message}
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for A2 on E-UTRAN, B2 on UTRAN
and B2 on GERAN at the same time }
ensure that {
  when { UE detects entering condition for the event B2 for UTRAN is met }
  then { UE transmits a MeasurementReport message }
}
```

(4)

```
with { UE in E-UTRA RRC_CONNECTED state and measurements configured for A2 on E-UTRAN, B2 on UTRAN
and B2 on GERAN at the same time }
ensure that {
  when { UE detects entering condition for the event B2 for GERAN is met }
  then { UE transmits a MeasurementReport message }
}
```

#### 8.3.2.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.1, 5.5.4.3, 5.5.4.8 and 5.5.5.

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:
- ...
- 2> else:
- 3> if the corresponding *measObject* concerns E-UTRA:
  - 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
- 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
  - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
- 3> else if the corresponding *measObject* concerns GERAN:
  - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
- 2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

[TS 36.331, clause 5.5.4.3]

The UE shall:

- 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

Inequality A2-1 (Entering condition)

$$Ms + Hys < Thresh$$

Inequality A2-2 (Leaving condition)

$$Ms - Hys > Thresh$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigEUTRA* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

$Hys$  is expressed in dB.

$Thresh$  is expressed in the same unit as  $Ms$ .

[TS 36.331, clause 5.5.4.8]

The UE shall:

- 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
- 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality B2-2 (Entering condition 2)

$$Mn + Ofn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Ofn + Hys < Thresh2$$

The variables in the formula are defined as follows:

$Ms$  is the measurement result of the serving cell, not taking into account any offsets.

$Mn$  is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

$Ofn$  is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e.  $offsetFreq$  as defined within the  $measObject$  corresponding to the frequency of the inter-RAT neighbour cell).

$Hys$  is the hysteresis parameter for this event (i.e.  $hysteresis$  as defined within  $reportConfigInterRAT$  for this event).

$Thresh1$  is the threshold parameter for this event (i.e.  $b2-Threshold1$  as defined within  $reportConfigInterRAT$  for this event).

$Thresh2$  is the threshold parameter for this event (i.e.  $b2-Threshold2$  as defined within  $reportConfigInterRAT$  for this event).

$Ms$  is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

$Mn$  is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

$Ofn$ ,  $Hys$  are expressed in dB.

$Thresh1$  is expressed in the same unit as  $Ms$ .

$Thresh2$  is expressed in the same unit as  $Mn$ .

[TS 36.331, clause 5.5.5]

For the  $measId$  for which the measurement reporting procedure was triggered, the UE shall set the  $measResults$  within the  $MeasurementReport$  message as follows:

- 1> set the  $measId$  to the measurement identity that triggered the measurement reporting;
- 1> set the  $measResultServCell$  to include the quantities of serving cell;

- 1> if there is at least one applicable neighbouring cell to report:
- 2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
- 3> if the *triggerType* is set to ‘*event*’:
- 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
- 3> else:
- ...
- 3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘*event*’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
- 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
- 5> if the *measObject* associated with this *measId* concerns E-UTRA:
- 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
- 5> else:
- 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
- ...
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.2.6.3 Test description

##### 8.3.2.6.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 5 and Cell 24.
- System information combination 10 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.2.6.3.2 Test procedure sequence

Table 8.3.2.6.3.2-1 illustrates the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.6.3.2-1: Power levels**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 5</b>	<b>Cell 24</b>	<b>Remark</b>
T0	RS EPRE	dBm/15kHz	-85	-	-	Entry conditions for A2 and B2 events are not fulfilled.
	CPICH_Ec (UTRA FDD)	dBm/3.84 MHz	-	-80	-	
	PCCPCH_Ec (UTRA LCR TDD)	dBm/1.28 MHz	-	-80	-	
	GERAN Cell Power	dBm	-	-	-85	
T1	RS EPRE	dBm/15kHz	-105	-	-	Entry conditions for A2 and B2 events are fulfilled.
	CPICH_Ec (UTRA FDD)	dBm/3.84 MHz	-	-60	-	
	PCCPCH_Ec (UTRA LCR TDD)	dBm/1.28 MHz	-	-60	-	
	GERAN Cell Power	dBm	-	-	-65

### 8.3.2.7 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 (measurement HRPD cells)

#### 8.3.2.7.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for HRPD cell and not detected entering condition for the event B2 is met }
ensure that {
    when { UE detects entering condition for the event B2 is not met }
    then { UE does not transmit any MeasurementReport }
}
```

(2)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for HRPD cell and not detected entering condition for the event B2 is met }
ensure that {
    when { UE detects entering condition for the event B2 is met }
    then { UE transmits a MeasurementReport }
}
```

(3)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for HRPD cell and detected entering condition for the event B2 is met }
ensure that {
    when { UE detects leaving condition for the event B2 is met }
    then { UE does not transmit any MeasurementReport }
}
```

#### 8.3.2.7.2 Conformance Requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.5.4.1, 5.5.4.8, and 5.5.5.

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:...

2>else:

...

3> if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModifyList* defined within the *VarMeasurementConfiguration* for this *measId* (i.e. the cell is included in the white-list);

...

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasurementConfiguration*, is fulfilled for one or more applicable cells for a duration exceeding the value of *timeToTrigger* defined for this event within the *VarMeasurementConfiguration* while the *VarMeasurementReports* does not include an entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
    - ...

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘event’ or to ‘periodical’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.8]

The UE shall:

- 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
- 1> apply inequality B2-1 and inequality B2-2 i.e. both have to be fulfilled, as specified below, as the entry condition for this event;
- 1> apply inequality B2-3 and inequality B2-4 i.e. at least one of the two has to be fulfilled, as specified below, as the leaving condition for this event;

Inequality B2-1 (Entering condition 1)

$$Ms + Hys < Threshl$$

Inequality B2-2 (Entering condition 2)

$$Mn + Qfn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Ms - Hys > Threshl$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Ofn + Hys < Thresh2$$

The variables in the formula are defined as follows:

***Ms*** is the measurement result of the serving cell, not taking into account any offset.

***Mn*** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

***Ofn*** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell).

***Hys*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

***Thresh1*** is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT* for this event).

***Thresh2*** is the threshold parameter for this event (i.e. *b2-Threshold2* as defined within *reportConfigInterRAT* for this event).

***Ms*** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

***Mn*** is expressed in dBm or dB, depending on the measurement quantity of the inter RAT neighbour cell.

***Ofn, Hys*** are expressed in dB.

***Thresh1*** is expressed in the same unit as ***Ms***.

***Thresh2*** is expressed in the same unit as ***Mn***.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasurementReports* for this *measId*;
      - ...>
      - > for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
      - 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
        - 4> for each included cell include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
          - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
            - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
          - 5> else:
            - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

- ...
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
  - 1> stop the periodical reporting timer, if running;
  - 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId* :
    - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- ...
- 1> if the measured results are for CDMA2000 1xRTT:
    - 2> set the *preRegistrationStatusHRPD* to ` FALSE`;
  - 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

#### 8.3.2.7.3 Test description

##### 8.3.2.7.3.1 Pre-test conditions

System Simulator:

- Cell 1 is high quality cell on E-UTRA
- Cell 15 and Cell 16 are high quality cell on HRPD.
- System information combination 6 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.2.7.3.2 Test procedure sequence

Table 8.3.2.7.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.7.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 15	Cell 16	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	The power level values are such that entering conditions for event B2 are not satisfied.
	Îor/loc	dB	-	-20	-20	
	loc	dBm/1.23 MHz	-	-55	-55	
	Pilot_Ec/Io (Note 1)	dB	-	-20	-20	
T1	Cell-specific RS EPRE	dBm/15 kHz	-80	-	-	The power level values are such that entering conditions for event B2 are satisfied.
	Îor/loc	dB	-	-5	-20	
	loc	dBm/1.23 MHz	-	-55	-55	
	Pilot_Ec/Io (Note 1)	dB	-	-6	-20	
T2	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	The power level values are such that leaving conditions for event B2 are satisfied.
	Îor/loc	dB	-	-20	-20	
	loc	dBm/1.23 MHz	-	-55	-55	
	Pilot_Ec/Io (Note 1)	dB	-	-20	-20	

Note 1: This parameter is not directly settable, but is derived by calculation from the other parameters set by the SS.

**Table 8.3.2.7.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup inter RAT measurement on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the setup of inter RAT measurement on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 during the next 10s?	-->	<i>MeasurementReport</i>	1	F
4	The SS changes Cell 1, Cell 15 and Cell 16 parameters according to row "T1" in table 8.3.2.7.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 for Cell 15, not including Cell 16?	-->	<i>MeasurementReport</i>	2	P
6	Void	-	-	-	-

### 8.3.2.8 Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of HRPD cells)

#### 8.3.2.8.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for periodic reporting of HRPD cells }
ensure that {
    when { The UE receives reference signal power for cells on the HRPD frequency where measurements are configured }
    then { UE sends MeasurementReport message at regular intervals for these HRPD cells }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and a Measurement Report message for a configured periodic measurement reporting of HRPD cells on a configured frequency were sent }
ensure that {
    when { A previously reported cell become unavailable or the UE receives reference signal power on a reported HRPD frequency for a cell which was previously not reported }
    then { UE sends MeasurementReport message at regular intervals for the available HRPD cells }
}
```

}

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting of HRPD cells ongoing }
ensure that {
    when { The UE receives a RRCCconnectionReconfiguration message removing the measID of periodic reporting of HRPD cells }
    then { UE stops sending MeasurementReport message for HRPD cells }
}
```

#### 8.3.2.8.2 Conformance Requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 36.331 clauses 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRCCconnectionReconfiguration* message does not include the *mobilityControlInformation* and the UE is able to comply with the configuration included in this message, the UE shall:

.....

1> if the *RRCCconnectionReconfiguration* message includes the *measurementConfiguration*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* value included in the *measIdToRemoveList*:

2> remove the entry, from the parameter *measIdList* within *VarMeasurementConfiguration*, with the corresponding *measId* value;

2> remove the entry within the *VarMeasurementReports* for this *measId*, if included;

2> reset the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. *timeToTrigger*) for this *measId*.

[TS 36.331, clause 5.5.4.1]

[Rel-8]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasurementConfiguration*:
- 2> if the *triggerType* is set to ‘event’:
  - 3> if the corresponding *measObject* concerns UTRA or CDMA2000:
    - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModifyList* defined within the *VarMeasurementConfiguration* for this *measId* (i.e. the cell is included in the white-list);
  - 3> else if the corresponding *measObject* concerns GERAN:
    - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasurementConfiguration* for this *measId*;
  - 3> else if the corresponding *measObject* concerns EUTRA:
    - 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackListedCellsToAddModifyList* defined within the *VarMeasurementConfiguration* for this *measId*;
- 2> else consider a neighbouring cell on the associated frequency/ set of frequencies (GERAN) to be applicable as follows:
  - 3> if the corresponding *reportingConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:
    - 4> consider any neighbouring cell detected on the associated frequency to be applicable
  - 3> if the corresponding *reportingConfig* includes a purpose set to ‘*reportCGI*’:
    - 4> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a *physicalCellIdentity* matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasurementConfiguration* to be applicable
  - 3> else:
    - 4> if the corresponding *measObject* concerns UTRA or CDMA2000:
      - 5> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModifyList* defined within the *VarMeasurementConfiguration* for this *measId* (i.e. the cell is included in the white-list);
- 2> if the *triggerType* is set to ‘periodical’ and a (first) measurement result is available for one or more applicable cells:
  - 3> include an entry within the *VarMeasurementReports* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasurementReports* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> Upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report immediately after the requested *reportQuantity* becomes available for at least either serving cell or one of the applicable cells

2> Upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the T321 for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

[Rel-11]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a purpose set to *reportStrongestCellsForSON*:
  - 3> consider any neighbouring cell detected on the associated frequency to be applicable;
- 2> else if the corresponding *reportConfig* includes a purpose set to *reportCGI*:
  - 3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;
- 2> else:
  - 3> if the corresponding *measObject* concerns E-UTRA:
    - 4> if the *ue-RxTxTimeDiffPeriodical* is configured in the corresponding *reportConfig*:
      - 5> consider only the PCell to be applicable;
    - 4> else if the *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:
      - 5> consider only the serving cell to be applicable;
    - 4> else:
      - 5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
      - 5> for events involving a serving cell on one frequency and neighbours on another frequency, consider the serving cell on the other frequency as a neighbouring cell;
  - 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
    - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the *csg-allowedReportingCells* within the *VarMeasConfig* for this *measId*, if configured in the corresponding *measObjectUTRA* (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).

- 3> else if the corresponding *measObject* concerns GERAN:
  - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
- 2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to *event* and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
    - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration or if *a6-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
      - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
    - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
      - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
      - 4> stop the periodical reporting timer for this *measId*, if running;
    - 2> if the *purpose* is included and set to *reportStrongestCells* or to *reportStrongestCellsForSON* and if a (first) measurement result is available:
      - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
      - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
      - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to *reportStrongestCells* and *reportAmount* > 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell. If the *purpose* is set to *reportStrongestCells* and *reportAmount* = 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells. If the purpose is set to *reportStrongestCellsForSON*, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measuredResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *neighbouringMeasResults* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
  - 2> if the *triggerType* is set to ‘*event*’:

- 3> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasurementReports* for this *measId*;
- 2> else:
- 3> set the *neighbouringMeasResults* to include the applicable cells for which the requested *reportQuantity* has been available since the last periodical reporting or since the measurement was initiated or reset;
- 2> for each cell that is included in the *neighbouringMeasResults*, include the *physicalCellIdentity*;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasurementReports* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasurementReports* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportingConfiguration* as defined in the *VarMeasurementConfiguration*:
- 2> stop the periodical reporting timer, if running;
- 2> start the periodical reporting timer with the value of *reportInterval* as defined within the *VarMeasurementConfiguration* for this *measId*;
- 1> else if the *numberOfReportsSent* as defined within the *VarMeasurementReports* for this *measId* is equal to the *reportAmount* as defined within the corresponding *reportingConfiguration* as defined in the *VarMeasurementConfiguration*:
- 2> if the *triggerType* is set to ‘*periodical*’:
- 3> remove the entry within the *VarMeasurementReports* for this *measId*;
- 1> if the measured results are for CDMA HRPD:
- 2> set the *hrpdPreRegistrationStatus* to the UE’s CDMA upper layer’s HRPD *preRegistrationStatus*;
- 1> if the measured results are for CDMA 1xRTT:
- 2> set the *hrpdPreRegistrationStatus* to ‘0’;
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

#### 8.3.2.8.3 Test description

##### 8.3.2.8.3.1 Pre-test conditions

System Simulator:

- Cell 1 is high quality cell on E-UTRA
- Cell 15 and Cell 16 are high quality cell on HRPD
- System information combination 6 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is brought to state Generic RB Established (state 3) according to [18] on Cell 1

##### 8.3.2.8.3.2 Test procedure sequence

Table 8.3.2.8.3.2-1 illustrates the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.8.3.2-1: Time instances of cell power level and parameter changes**

	<b>Parameter</b>	<b>Unit</b>	<b>Cell 1</b>	<b>Cell 15</b>	<b>Cell 16</b>	<b>Remark</b>
T0	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	Power levels shall be such that camping on Cell 1 is guaranteed.
	$\hat{I}_{\text{or/loc}}$	dB	-	-5	-20	
	loc	dBm/1.23 MHz	-	-55	-55	
	CPICH_Ec/Io (Note 1)	dB	-	-6	-20	
T1	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	
	$\hat{I}_{\text{or/loc}}$	dB	-	-5	-5	
	loc	dBm/1.23 MHz	-	-55	-55	
	CPICH_Ec/Io (Note 1)	dB	-	-6	-6	
T2	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	
	$\hat{I}_{\text{or/loc}}$	dB	-	-20	-5	
	loc	dBm/1.23 MHz	-	-55	-55	
	CPICH_Ec/Io (Note 1)	dB	-	-20	-6	
Note 1: This parameter is not directly settable, but is derived by calculation from the other parameters set by the SS.						

**Table 8.3.2.8.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including measConfig to setup measurements and periodical reporting for HRPD cells.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-

### 8.3.2.9 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of 1xRTT cells)

### 8.3.2.9.1 Test Purpose (TP)

(1)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for 1xRTT cell and not detected entering condition for the event
B2 is met }
ensure that {
  when { UE detects entering condition for the event B2 is not met }
  then { UE does not transmit any MeasurementReport }
}

```

(2)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for 1xRTT cell and not detected entering condition for the event B2 is met }
ensure that {
    when { UE detects entering condition for the event B2 is met }
    then { UE transmits a MeasurementReport }
}
```

(3)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and performed the inter RAT measurement for 1xRTT cell and detected entering condition for the event B2 is met }
ensure that {
    when { UE detects leaving condition for the event B2 is met }
    then { UE does not transmit any MeasurementReport }
}
```

### 8.3.2.9.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.1, 5.5.4.8 and 5.5.5.

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*

...

2>else :

...

3> if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

...

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
  - 2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

[TS 36.331, clause 5.5.4.8]

The UE shall:

- 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
- 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;
- 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality B2-2 (Entering condition 2)

$$Mn + Ofn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Ofn + Hys < Thresh2$$

The variables in the formula are defined as follows:

***M<sub>s</sub>*** is the measurement result of the serving cell, not taking into account any offsets.

***M<sub>n</sub>*** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

***O<sub>f</sub>n*** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell).

***H<sub>y</sub>s*** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

***T<sub>h</sub>resh1*** is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT* for this event).

***T<sub>h</sub>resh2*** is the threshold parameter for this event (i.e. *b2-Threshold2* as defined within *reportConfigInterRAT* for this event).

***M<sub>s</sub>*** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

***M<sub>n</sub>*** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

***O<sub>f</sub>n, H<sub>y</sub>s*** are expressed in dB.

***T<sub>h</sub>resh1*** is expressed in the same unit as ***M<sub>n</sub>***.

***T<sub>h</sub>resh2*** is expressed in the same unit as ***M<sub>n</sub>***.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measuredResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
    - 5> else:

- 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
- 3> else if the *purpose* is set to ‘*reportCGI*’:
- 4> if the mandatory present fields of the *globalCellIdentity* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
- 5> include the *cgi-Info* containing all the fields that have been successfully acquired;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
- 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
- 2> if the *triggerType* is set to ‘*periodical*’:
- 3> remove the entry within the *VarMeasReportList* for this *measId*;
- 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- 1> if the measured results are for CDMA2000 HRPD:
- 2> set the *preRegistrationStatusHRPD* to the UE’s CDMA2000 upper layer’s HRPD *preRegistrationStatus*;
- 1> if the measured results are for CDMA2000 1xRTT:
- 2> set the *preRegistrationStatusHRPD* to ‘*FALSE*’;
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.2.9.3 Test description

#### 8.3.2.9.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 19 and Cell 20.
- System information combination 6 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.2.9.3.2 Test procedure sequence

Table 8.3.2.9.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked “T0” denotes the initial conditions, while rows marked “T1”, “T2”, “T3” and “T4” are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.9.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 19	Cell 20	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	The power level values are such that entering conditions for event B2 are not satisfied.
	Ior/loc	dB	-	-15	-15	
	Pilot Ec/Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-22	-22	
T1	Cell-specific RS EPRE	dBm/15 kHz	-80	-	-	The power level values are such that entering conditions for event B2 are satisfied.
	Ior/loc	dB	-	0	-15	
	Pilot Ec/Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-10	-22	
T2	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	The power level values are such that leaving conditions for event B2 are satisfied.
	Ior/loc	dB	-	-15	-15	
	Pilot Ec/Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-22	-22	
T3	Cell-specific RS EPRE	dBm/15 kHz	-80	-	-	The power level values are such that entering conditions for event B2 are satisfied.
	Ior/loc	dB	-	0	-15	
	Pilot Ec/Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-10	-22	
T4	Cell-specific RS EPRE	dBm/15 kHz	-60	-	-	The power level values are such that leaving conditions for event B2 are satisfied.
	Ior/loc	dB	-	-15	-15	
	Pilot Ec/Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-22	-22	
Note 1: This parameter is not directly settable, but is derived by calculation from the other parameters set by the SS.						

**Table 8.3.2.9.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message to setup inter RAT measurement on Cell 1.	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the setup of inter RAT measurement on Cell 1.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 during the next 10s?	-->	<i>MeasurementReport</i>	1	F
4	The SS changes Cell 1, Cell 19 and Cell 20 parameters according to row "T1" in table 8.3.2.9.3.2-1.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 for Cell 19, not including Cell 20?	-->	<i>MeasurementReport</i>	2	P
6	Void	-	-	-	-
7	The SS changes Cell 1, Cell 19 and Cell 20 parameters according to row "T2" in table 8.3.2.9.3.2-1.	-	-	-	-
8	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 during the next 10s?	-->	<i>MeasurementReport</i>	3	F
9	The SS changes Cell 1, Cell 19 and Cell 20 parameters according to row "T3" in table 8.3.2.9.3.2-1.	-	-	-	-
10	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 for Cell 19, not including Cell 20?	-->	<i>MeasurementReport</i>	2	P
11	Void	-	-	-	-
12	The SS changes Cell 1, Cell 19 and Cell 20 parameters according to row "T4" in table 8.3.2.9.3.2-1.	-	-	-	-
13	Check: Does the UE transmit a <i>MeasurementReport</i> message to report the event B2 during the next 10s?	-->	<i>MeasurementReport</i>	3	F
14	Check: Does the test result of generic test procedure in TS 36.508 subclause 6.4.2.3 indicate that the UE is in E-UTRA RRC_CONNECTED state on Cell 1?	-	-	-	-

8.3.2.10 Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of 1xRTT cells

#### 8.3.2.10.1 Test Purpose (TP)

(1)

```

with { UE in E-UTRA RRC_CONNECTED state and measurement configured for periodic reporting of 1xRTT
cells }
ensure that {
    when { The UE receives reference signal power for cells on the 1xRTT frequency where measurements
are configured }
        then { UE sends MeasurementReport message at regular intervals for these 1xRTT cells }
}

```

}

(2)

```
with { UE in E-UTRA RRC_CONNECTED state and a Measurement Report message for a configured periodic measurement reporting of 1xRTT cells on a configured frequency was sent }
ensure that {
    when { A previously reported cell become unavailable or the UE receives reference signal power on a reported 1xRTT frequency for a cell which was previously not reported }
    then { UE sends MeasurementReport message at regular intervals for the available 1xRTT cells }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state and periodic measurement reporting of 1xRTT cells ongoing}
ensure that {
    when { The UE receives an RRConnectionReconfiguration message removing the measID of periodic reporting of 1xRTT cells }
    then { UE stops sending MeasurementReport message for 1xRTT cells }
}
```

### 8.3.2.10.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.2, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.2.2]

The UE shall:

1> for each *measId* included in the received *measIdToRemoveList* that is part of the current UE configuration in *varMeasConfig*:

2> remove the entry with the matching *measId* from the *measIdList* within the *VarMeasConfig*;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

NOTE: The UE does not consider the message as erroneous if the *measIdToRemoveList* includes any *measId* value that is not part of the current UE configuration.

[TS 36.331, clause 5.5.4.1]

[Rel-8]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:

...

2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:

...

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

...

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

...

2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

...

2> upon expiry of the T321 for this *measId*:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[Rel-11]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to *reportStrongestCellsForSON*:

3> consider any neighbouring cell detected on the associated frequency to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to *reportCGI*:

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> if the *ue-RxTxTimeDiffPeriodical* is configured in the corresponding *reportConfig*:

5> consider only the PCell to be applicable;

4> else if the *eventA1* or *eventA2* is configured in the corresponding *reportConfig*:

5> consider only the serving cell to be applicable;

4> else:

5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

5> for events involving a serving cell on one frequency and neighbours on another frequency, consider the serving cell on the other frequency as a neighbouring cell;

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the *csg-allowedReportingCells* within the *VarMeasConfig* for this *measId*, if configured in the corresponding *measObjectUTRA* (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).

3> else if the corresponding *measObject* concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;

2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to *event* and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration or if *a6-ReportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to *reportStrongestCells* or to *reportStrongestCellsForSON* and if a (first) measurement result is available:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to *reportStrongestCells* and *reportAmount* > 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell. If the *purpose* is set to *reportStrongestCells* and *reportAmount* = 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells. If the purpose is set to *reportStrongestCellsForSON*, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

- 2> upon expiry of the periodical reporting timer for this *measId*:

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultsNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘*event*’:
      - ...
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultsNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘reportStrongestCells’ or to ‘reportStrongestCellsForSON’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - ...
    - 5> else:
      - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
  - 3> else if the *purpose* is set to ‘reportCGI’:
    - ...
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘periodical’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
  - 1> if the measured results are for CDMA2000 HRPD:
    - ...
  - 1> if the measured results are for CDMA2000 1xRTT:
    - 2> set the *preRegistrationStatusHRPD* to ‘FALSE’;
  - 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

### 8.3.2.10.3 Test description

#### 8.3.2.10.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 19 and Cell 20.
- System information combination 6 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) according to [18] on Cell 1.

### 8.3.2.10.3.2 Test procedure sequence

Table 8.3.2.10.3.2-1 illustrates the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.10.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 19	Cell 20	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	Power levels shall be such that camping on Cell 1 is guaranteed.
	Ior/loc	dB	-	0	-15	
	Pilot Ec/ Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-10	-22	
T1	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	
	Ior/loc	dB	-	0	0	
	Pilot Ec/ Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-10	-10	
T2	Cell-specific RS EPRE	dBm/15k Hz	-60	-	-	
	Ior/loc	dB	-	-15	-0	
	Pilot Ec/ Ior	dB	-	-7	-7	
	loc	dBm/1.2 3 MHz	-	-75	-75	
	Pilot Ec/Io (Note 1)	dB	-	-22	-10	
Note 1: This parameter is not directly settable, but is derived by calculation from the other parameters set by the SS.

### 8.3.2.11 Measurement configuration control and reporting / Inter-RAT Measurements / Event B1 / Measurement of UTRAN cells

### 8.3.2.11.1 Test Purpose (TP)

(1)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for UTRA cell and not detected entering condition for the event
B1 is met }
ensure that {
  when { UE detects entering condition for the event B1 is not met }
    then { UE does not transmit any MeasurementReport }
}

```

(2)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for UTRA cell and not detected entering condition for the event
B1 is met }
ensure that {
  when { UE detects entering condition for the event B1 is met }
    then { UE transmits a MeasurementReport }
}

```

(3)

```

with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for UTRA cell and detected entering condition for the event B1
is met }
ensure that {
when { UE detects leaving condition for the event B1 is met }
then { UE does not transmit any MeasurementReport }
}

```

### 8.3.2.11.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.5.4.1, 5.5.4.8 and 5.5.5.

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
- 2> if the corresponding *reportConfig* includes a purpose set to '*reportStrongestCellsForSON*':  
...
- 2> else:
  - 3> if the corresponding *measObject* concerns E-UTRA:  
...
  - 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:
    - 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
  - 3> else if the corresponding *measObject* concerns GERAN:
    - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
  - 2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId*: (a first cell triggers the event)
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *triggerType* is set to '*event*' and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
    - ...
    - 2> if the *triggerType* is set to '*event*' and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
      - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
      - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
        - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
      - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
        - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
        - 4> stop the periodical reporting timer for this *measId*, if running;

2> if the *purpose* is included and set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*' and if a (first) measurement result is available for one or more applicable cells:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to '*reportStrongestCells*', the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to '*reportStrongestCellsForSON*', the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *purpose* is included and set to '*reportCGI*' and if the UE acquired the information needed to set all fields of *cellGlobalId* for the requested cell:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> stop timer T321;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the T321 for this *measId*:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to '*event*' or to '*periodical*' while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.7]

The UE shall:

1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;

1> consider the entering condition for this event to be satisfied when condition B1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition B1-2, as specified below, is fulfilled;

Inequality B1-1 (Entering condition)

$$Mn + Ofn - Hys > Thresh$$

Inequality B1-2 (Leaving condition)

$$Mn + Ofn + Hys < Thresh$$

The variables in the formula are defined as follows:

**Mn** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

**Ofn** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell)

**Hys** is the hysteresis parameter for this event (i.e. hysteresis as defined within *reportConfigInterRAT* for this event)

**Thresh** is the threshold parameter for this event (i.e. b1-Threshold as defined within *reportConfigInterRAT* for this event)

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell

**Ofn, Hys** are expressed in dB

**Thresh** is expressed in the same unit as **Mn**

[TS 36.331, clause 5.5.5]

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to '*event*':
    - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells* include the *physCellId*;
- 3> if the *triggerType* is set to '*event*'; or the *purpose* is set to '*reportStrongestCells*' or to '*reportStrongestCellsForSON*':
  - 4> for each included cell include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:

...

5> else:

- 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;

...

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

1> else:

2> if the *triggerType* is set to '*periodical*':

3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

1> if the measured results are for CDMA2000 HRPD:

2> set the *preRegistrationStatusHRPD* to the UE's CDMA2000 upper layer's HRPD *preRegistrationStatus*;

1> if the measured results are for CDMA2000 1xRTT:

2> set the *preRegistrationStatusHRPD* to '*FALSE*';

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

### 8.3.2.11.3 Test description

#### 8.3.2.11.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 7.
- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.2.11.3.2 Test procedure sequence

Table 8.3.2.3.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.2.11.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 7	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-60	-	The power level values are such that entering conditions for event B1 are not satisfied.
	CPICH Ec= (UTRA FDD)	dBm/3.8 4MHz	-	-88	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-88	
T1	Cell-specific RS EPRE	dBm/15k Hz	-84	-	The power level values are such that entering conditions for event B1 are satisfied.
	CPICH Ec= (UTRA FDD)	dBm/3.8 4MHz	-	-64	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-64	
T2	Cell-specific RS EPRE	dBm/15k Hz	-60	-	The power level values are such that leaving conditions for event B1 are satisfied.
	CPICH Ec= (UTRA FDD)	dBm/3.8 4MHz	-	-88	
	PCCPCH Ec (UTRA LCR TDD)	dBm/1.2 8 MHz	-	-88

### 8.3.3 Measurements for self optimized networks

8.3.3.1 Measurement configuration control and reporting / SON / ANR / CGI reporting of E-UTRAN cell

#### 8.3.3.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { Neighbour becomes offset better than serving }
        then { UE sends MeasurementReport for event A3 }
}
```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE is commanded to report the global cell identity of the neighbour cell }
        then { UE determines the global cell identity of the cell included in the associated measurement
object by acquiring the relevant system information from the concerned cell and reports the global
cell identity in the MeasurementReport }
}

```

#### **8.3.3.1.2 Conformance requirements**

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.3, 5.5.3.1, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> If the RRConnectionReconfiguration message includes the *measConfig*:

2> perform the Measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.2.3]

The UE shall:

...

The UE shall:

1> for each *measId* included in the received *measIdToAddModList*:

2> if an entry with the matching *measId* exists in the *measIdList* within the *VarMeasConfig*:

3> replace the entry with the value received for this *measId*;

2> else:

3> add a new entry for this *measId* within the *VarMeasConfig* ;

2> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

2> if the *triggerType* is set to ‘*periodical*’ and the *purpose* is set to ‘*reportCGI*’ in the *reportConfig* associated with this *measId*:

3> if the *measObject* associated with this *measId* concerns E-UTRA:

4> start timer T321 with the timer value set to 1 second for this *measId*;

3> else:

4> start timer T321 with the timer value set to 8 seconds for this *measId*;

[TS 36.331, clause 5.5.3.1]

The UE supports measurements using a reporting configuration with the *purpose* set to ‘*reportCGI*’, if the network provides sufficient idle periods.

The UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if a measurement gap configuration is setup; or

2> the UE does not require measurement gaps to perform the concerned measurement:

3> if *s-Measure* is not configured; or

3> if *s-Measure* is configured and the serving cell RSRP, after layer 3 filtering, is lower than this value; or

3> if the *purpose* for the associated *reportConfig* is set to ‘*reportCGI*’:

- 4> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject*;
  - 2> perform the evaluation of reporting criteria as specified in section 5.5.4;
  - 1> if a *measId* is configured for which the *purpose* within the associated *reportConfig* is set to ‘*reportCGI*’:
    - 2> try to acquire the global cell identity of the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* by acquiring the relevant system information from the concerned cell;
    - 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell:
      - 3> try to acquire the list of additional PLMN Identities, as included in the *plmn-IdentityList*, if multiple PLMN identities are broadcast in the concerned cell;
- NOTE: The ‘primary’ PLMN is part of the global cell identity.
- 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a UTRAN cell:
    - 3> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;
  - 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a GERAN cell:
    - 3> try to acquire the RAC in the concerned cell;
  - 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a CDMA2000 cell and the *cdma2000-Type* included in the *measObject* is ‘*typeHRPD*’:
    - 3> try to acquire the Sector ID in the concerned cell;
  - 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a CDMA2000 cell and the *cdma2000-Type* included in the *measObject* is ‘*type1XRTT*’:
    - 3> try to acquire the BASE ID, SID and NID in the concerned cell;
- ...

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:
    - 3> consider any neighbouring cell detected on the associated frequency to be applicable;
  - 2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:
    - 3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;
- 2> else:
  - 3> if the corresponding *measObject* concerns E-UTRA:
    - 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;
  - 3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

- 4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);
- 3> else if the corresponding *measObject* concerns GERAN:
  - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this *measId*:

- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> stop timer T321;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> upon expiry of the T321 for this *measId*:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.5]

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘*event*’:

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 4: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

5> else:

6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;

3> else if the *purpose* is set to ‘*reportCGI*’:

4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:

5> include the *cgi-Info* containing all the fields that have been successfully acquired;

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

1> else:

2> if the *triggerType* is set to ‘*periodical*’:

3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

1> if the measured results are for CDMA2000 HRPD:

2> set the *preRegistrationStatusHRPD* to the UE’s CDMA2000 upper layer’s HRPD *preRegistrationStatus*;

1> if the measured results are for CDMA2000 1xRTT:

2> set the *preRegistrationStatusHRPD* to ‘*FALSE*’;

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

...

8.3.3.1.3 Test description

8.3.3.1.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.3.1.3.2 Test procedure sequence

Table 8.3.3.1.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while row marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.3.1.3.2-1: Power levels**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Remark
<b>T0</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	-91	Power levels shall be such that entry condition for event A3 is not satisfied: $Mn + Ofn + Ocn + Hys < Ms + Ofs + Ocs + Off$
<b>T1</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	-79	Power levels shall be such that entry condition for event A3 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.3.1.3.2-2: Main behaviour**

### 8.3.3.2 Measurement configuration control and reporting / SON / ANR / CGI reporting of UTRAN cell

#### 8.3.3.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and measurement configured for periodic reporting of UTRA cells with the purpose of SON }
ensure that {
  when { The UE receives reference signal power for cells on the UTRA frequency where measurements are configured }
  then { UE sends MeasurementReport message at regular intervals for these UTRA cells }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE is commanded to report the global cell identity of the inter-RAT(UTRAN) neighbour cell }
  then { UE determines the global cell identity of the inter-RAT(UTRAN) cell included in the associated measurement object by acquiring the relevant system information from the concerned cell and reports the global cell identity in the MeasurementReport message}
}
```

### 8.3.3.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.3, 5.5.3, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the RRConnectionReconfiguration message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 36.331, clause 5.5.2.3]

The UE shall:

...

2> if the *triggerType* is set to ‘*periodical*’ and the *purpose* is set to ‘*reportCGI*’ in the *reportConfig* associated with this *measId*:

3> if the *measObject* associated with this *measId* concerns E-UTRA:

4> start timer T321 with the timer value set to 1 second for this *measId*;

3> else:

4> start timer T321 with the timer value set to 8 seconds for this *measId*;

[TS 36.331, clause 5.5.3]

The UE supports measurements using a reporting configuration with the *purpose* set to ‘*reportCGI*’, if the network provides sufficient idle periods.

The UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if a measurement gap configuration is setup; or

2> the UE does not require measurement gaps to perform the concerned measurement:

3> if *s-Measure* is not configured; or

3> if *s-Measure* is configured and the serving cell RSRP, after layer 3 filtering, is lower than this value; or

3> if the *purpose* for the associated *reportConfig* is set to ‘*reportCGI*’:

4> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject*;

2> perform the evaluation of reporting criteria as specified in section 5.5.4;

1> if a *measId* is configured for which the *purpose* within the associated *reportConfig* is set to ‘*reportCGI*’:

...

2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a UTRAN cell:

3> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;

...

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:

3> consider any neighbouring cell detected on the associated frequency to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

...

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

3> else if the corresponding *measObject* concerns GERAN:

...

2> upon expiry of the periodical reporting timer for this *measId*:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> stop timer T321;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the T321 for this *measId*:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘*event*’ or to ‘*periodical*’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 4: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘reportStrongestCells’ or to ‘reportStrongestCellsForSON’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
    - 5> else:
      - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
  - 3> else if the *purpose* is set to ‘reportCGI’:
    - 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
      - 5> include the *cgi-Info* containing all the fields that have been successfully acquired;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘periodical’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

...

8.3.3.2.3                  Test description

8.3.3.2.3.1                Pre-test conditions

System Simulator:

- Cell 1 and Cell 5.
- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.3.2.3.2                Test procedure sequence

Table 8.3.3.2.3.2-1 illustrates the downlink power levels to be applied for cells at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while row marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.3.2.3.2-1: Time instance of cell power levels**

	Parameter	Unit	Cell 1	Cell 5	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-80	-	
	CPICH_Ec	dBm/3.8 4MHz	-	Off	For Cell 5 is a UTRA FDD Cell
	P-CCPCH	dBm/1.2 8 MHz		Off	For Cell 5 is a UTRA TDD Cell
T1	Cell-specific RS EPRE	dBm/15k Hz	-60	-	
	CPICH_Ec	dBm/3.8 4MHz	-	-75	For Cell 5 is a UTRA FDD Cell
	P-CCPCH	dBm/1.2 8 MHz		-78	For Cell 5 is a UTRA TDD Cell

**Table 8.3.3.2.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict

### 8.3.3.3 Measurement configuration control and reporting / SON / ANR / CGI reporting of GERAN cell

#### 8.3.3.3.1 Test Purpose (TP)

(1)

```
with { UE having completed the radio bearer establishment, initial security activation procedure and
performed the inter RAT measurement for GERAN cell and not detected entering condition for the event
B2 is met }
ensure that {
  when { UE detects entering condition for the event B2 is met }
  then { UE transmits a MeasurementReport }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE is commanded to report the global cell identity of the inter-RAT(GERAN) neighbour cell }
```

```
then { UE determines the global cell identity of the inter-RAT(GERAN) cell included in the
associated measurement object by acquiring the relevant system information from the concerned cell
and reports the global cell identity in the MeasurementReport }
```

### 8.3.3.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.3, 5.5.3, 5.5.4.1 and 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.2.3]

The UE shall:

...

2> if the *triggerType* is set to ‘*periodical*’ and the *purpose* is set to ‘*reportCGI*’ in the *reportConfig* associated with this *measId*:

3> if the *measObject* associated with this *measId* concerns E-UTRA:

4> start timer T321 with the timer value set to 1 second for this *measId*;

3> else:

4> start timer T321 with the timer value set to 8 seconds for this *measId*;

[TS 36.331, clause 5.5.3]

The UE supports measurements using a reporting configuration with the *purpose* set to ‘*reportCGI*’, if the network provides sufficient idle periods.

The UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if a measurement gap configuration is setup; or

2> the UE does not require measurement gaps to perform the concerned measurement:

3> if *s-Measure* is not configured; or

3> if *s-Measure* is configured and the serving cell RSRP, after layer 3 filtering, is lower than this value; or

3> if the *purpose* for the associated *reportConfig* is set to ‘*reportCGI*’:

4> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject*;

2> perform the evaluation of reporting criteria as specified in section 5.5.4;

1> if a *measId* is configured for which the *purpose* within the associated *reportConfig* is set to ‘*reportCGI*’:

- 2> try to acquire the global cell identity of the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* by acquiring the relevant system information from the concerned cell;
- 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell:
  - 3> try to acquire the list of additional PLMN Identities, as included in the *plmn-IdentityList*, if multiple PLMN identities are broadcast in the concerned cell;

NOTE: The ‘primary’ PLMN is part of the global cell identity.

- 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a UTRAN cell:
  - 3> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;
- 2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a GERAN cell:
  - 3> try to acquire the RAC in the concerned cell;

[TS 36.331, clause 5.5.4.1]

The UE shall:

- 1> for each *measId* included in the *measIdList* within *VarMeasConfig*:
  - 2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:
    - 3> consider any neighbouring cell detected on the associated frequency to be applicable;
  - 2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:
    - 3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;
  - 2> else:
    - 3> if the corresponding *measObject* concerns E-UTRA:
      - ...;
    - 3> else if the corresponding *measObject* concerns GERAN:
      - 4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;
      - ...;
  - 2> upon expiry of the periodical reporting timer for this *measId*:
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> stop timer T321;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> upon expiry of the T321 for this *measId*:

- 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘event’ or to ‘periodical’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
    - 5> else:
      - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
  - 3> else if the *purpose* is set to ‘*reportCGI*’:
    - 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
      - 5> include the *cgi-Info* containing all the fields that have been successfully acquired;

- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
  - 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
- 1> else:
  - 2> if the *triggerType* is set to ‘*periodical*’:
    - 3> remove the entry within the *VarMeasReportList* for this *measId*;
    - 3> remove this *measId* from the *measIdList* within *VarMeasConfig*;
- 1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.3.3.3 Test description

##### 8.3.3.3.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 24.
- System information combination 5 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

##### 8.3.3.3.3.2 Test procedure sequence

Table 8.3.3.3.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 24 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while row marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.3.3.3.2-1: Time instances of cell power levels**

	Parameter	Unit	Cell 1	Cell 24	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-60	-	Power levels are shall be such that entry condition for event B2 is not satisfied:
	RSSI	dBm	-	-85	
T1	Cell-specific RS EPRE	dBm/15k Hz	[-80]	-	Power levels are shall be such that entry condition for event B2 is satisfied:
	RSSI	dBm	-	-65	

**Table 8.3.3.3.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup inter-RAT measurements and reporting for event B2 and set <i>timeAlignmentTimerDedicated</i> to <i>infinity</i> .	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-

### 8.3.3.4 Measurement configuration control and reporting / SON / ANR / CGI reporting of HRPD cell

#### 8.3.3.4.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE detects that entering conditions for event B2 are met }
    then { UE sends MeasurementReport for event B2 }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE is commanded to report the global cell identity of the
        neighbour cell }
    then { UE determines the global cell identity of the cell included }
```

```

    in the associated measurement object by acquiring the
    relevant system information from the concerned cell and
    reports the global cell identity in the MeasurementReport}
}

```

### 8.3.3.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3, 5.5.2.3, 5.5.3.1, 5.5.4.1, 5.5.4.8, 5.5.5.

[TS 36.331, clause 5.3.5.3]

If the *RRConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> if the *RRConnectionReconfiguration* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 36.331, clause 5.5.2.3]

The UE shall:

1> for each *measId* included in the received *measIdToAddModList*:

2> if the *triggerType* is set to ‘*periodical*’ and the *purpose* is set to ‘*reportCGI*’ in the *reportConfig* associated with this *measId*:

3> if the *measObject* associated with this *measId* concerns E-UTRA:

4> start timer T321 with the timer value set to 1 second for this *measId*;

3> else:

4> start timer T321 with the timer value set to 8 seconds for this *measId*;

[TS 36.331, clause 5.5.3.1]

The UE supports measurements using a reporting configuration with the *purpose* set to ‘*reportCGI*’, if the network provides sufficient idle periods.

The UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if a measurement gap configuration is setup; or

2> the UE does not require measurement gaps to perform the concerned measurement:

3> if *s-Measure* is not configured; or

3> if *s-Measure* is configured and the serving cell RSRP, after layer 3 filtering, is lower than this value; or

3> if the *purpose* for the associated *reportConfig* is set to ‘*reportCGI*’:

4> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned *measObject*;

2> perform the evaluation of reporting criteria as specified in section 5.5.4;

1> if a *measId* is configured for which the *purpose* within the associated *reportConfig* is set to ‘*reportCGI*’:

2> try to acquire the global cell identity of the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* by acquiring the relevant system information from the concerned cell;

2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell;

3> try to acquire the list of additional PLMN Identities, as included in the *plmn-IdentityList*, if multiple PLMN identities are broadcast in the concerned cell;

NOTE: The ‘primary’ PLMN is part of the global cell identity.

2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a UTRAN cell;

3> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;

2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a GERAN cell;

3> try to acquire the RAC in the concerned cell;

2> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a CDMA2000 cell and the *cdma2000-Type* included in the *measObject* is ‘*typeHRPD*’;

3> try to acquire the Sector ID in the concerned cell;

[TS 36.331, clause 5.5.4.1]

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to ‘*reportStrongestCellsForSON*’:

3> consider any neighbouring cell detected on the associated frequency to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to ‘*reportCGI*’:

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the *blackCellsToAddModList* defined within the *VarMeasConfig* for this *measId*;

3> else if the corresponding *measObject* concerns UTRA or CDMA2000:

4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the *cellsToAddModList* defined within the *VarMeasConfig* for this *measId* (i.e. the cell is included in the white-list);

3> else if the corresponding *measObject* concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the *ncc-Permitted* defined within the *VarMeasConfig* for this *measId*;

2> if the *triggerType* is set to ‘*event*’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig*, while the *VarMeasReportList* does not include an measurement reporting entry for this *measId* (a first cell triggers the event):

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

- 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
- 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
- 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable cells not included in the *cellsTriggeredList* for all measurements after layer 3 filtering taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent cell triggers the event):
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> include the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- 2> if the *triggerType* is set to ‘event’ and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements after layer 3 filtering taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:
  - 3> remove the concerned cell(s) in the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId*;
  - 3> if *reportOnLeave* is set to *TRUE* for the corresponding reporting configuration:
    - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 3> if the *cellsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:
    - 4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 4> stop the periodical reporting timer for this *measId*, if running;
- 2> if the *purpose* is included and set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’ and if a (first) measurement result is available for one or more applicable cells:
  - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
  - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
- NOTE 1: If the *purpose* is set to ‘*reportStrongestCells*’, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for at least either serving cell or one of the applicable cells. If the purpose is set to ‘*reportStrongestCellsForSON*’, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.
- 2> upon expiry of the periodical reporting timer for this *measId*:
  - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the *purpose* is included and set to ‘*reportCGI*’ and if the UE acquired the information needed to set all fields of *cgi-Info* for the requested cell:
    - 3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;
    - 3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;
    - 3> stop timer T321;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the T321 for this *measId*:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with *triggerType* set to ‘event’ or to ‘periodical’ while the corresponding measurement is not performed due to the serving cell RSRP being equal to or better than *s-Measure* or due to the measurement gap not being setup.

[TS 36.331, clause 5.5.4.8]

The UE shall:

1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;

1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled apply inequality B2-1 and inequality B2-2 i.e. both have to be fulfilled, as specified below, as the entry condition for this event;

1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled apply inequality B3-3 and inequality B2-4 i.e. at least one of the two has to be fulfilled, as specified below, as the leaving condition for this event;

Inequality B2-1 (Entering condition 1)

$$Ms + Hys < Thresh1$$

Inequality B2-2 (Entering condition 2)

$$Mn + Ofn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Ms - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Ofn + Hys < Thresh2$$

The variables in the formula are defined as follows:

**Ms** is the measurement result of the serving cell, not taking into account any cell individual offsets.

**Mn** is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets neighbouring inter RAT cell.

**Ofn** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell)neighbour cell.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* the *VarMeasurementConfiguration* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT*the *VarMeasurementConfiguration* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *b2-Threshold2* as defined within *reportConfigInterRAT* the *VarMeasurementConfiguration* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbouring inter RAT cell.

**Ofn, Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **MndBm** in case **Ms** is expressed in dBm; otherwise it is expressed in dB.

**Thresh2** is expressed in the same unit as **MndBm** in case **Mn** is expressed in dBm; otherwise it is expressed in dB.

[TS 36.331, clause 5.5.5]

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

- 1> set the *measId* to the measurement identity that triggered the measurement reporting;
- 1> set the *measResultServCell* to include the quantities of serving cell;
- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> if the *triggerType* is set to ‘event’:
      - 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
    - 3> else:
      - 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

- 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
- 3> if the *triggerType* is set to ‘event’; or the *purpose* is set to ‘*reportStrongestCells*’ or to ‘*reportStrongestCellsForSON*’:
  - 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
    - 5> if the *measObject* associated with this *measId* concerns E-UTRA:
      - 6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;
    - 5> else:
      - 6> set the *measResult* to the quantity as configured for the concerned RAT within the *quantityConfig* in order of decreasing quantity, i.e. the best cell is included first;
  - 3> else if the *purpose* is set to ‘*reportCGI*’:
    - 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
      - 5> include the *cgi-Info* containing all the fields that have been successfully acquired;
- 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
- 1> stop the periodical reporting timer, if running;
- 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

1> else:

2> if the *triggerType* is set to ‘*periodical*’:

3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

1> if the measured results are for CDMA2000 HRPD:

2> set the *preRegistrationStatusHRPD* to the UE’s CDMA2000 upper layer’s HRPD *preRegistrationStatus*;

1> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends;

#### 8.3.3.4.3 Test description

##### 8.3.3.4.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 15
- System information combination 6 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

UE:

None.

##### 8.3.3.4.3.2 Test procedure sequence

Table 8.3.3.4.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 15 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while row marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.3.4.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 15	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-60	-	The power level values are such that entering conditions for event B2 are not satisfied: Inequality B2-1 (Entering condition 1) $M_s + H_{ys} > Thresh_1$ Inequality B2-2 (Entering condition 2) $M_n + O_{fn} - H_{ys} < Thresh_2$
	1or/loc	dB	-	-20	
	loc	dBm/1.23MHz	-	-55	
	Pilot_Ec/Io (Note 1)	dB	-	-20	
T1	Cell-specific RS EPRE	dBm/15kHz	-80	-	The power level values are such that entering conditions for event B2 are satisfied: Inequality B2-1 (Entering condition 1) $M_s + H_{ys} < Thresh_1$ Inequality B2-2 (Entering condition 2) $M_n + O_{fn} - H_{ys} > Thresh_2$
	1or/loc	dB	-	-5	
	loc	dBm/1.23MHz	-	-55	
	Pilot_Ec/Io (Note 1)	dB	-	-6	

Note 1: This parameter is not directly settable, but is derived by calculation from the other parameters set by the SS

**Table 8.3.3.4.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup inter RAT measurement and reporting for event B2 and set <i>timeAlignmentTimerDedicated</i> to <i>infinity</i> .	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.3.3.4.3.2-1.	-	-	-	-
4	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event B2 on Cell 15?	-->	<i>MeasurementReport</i>	1	P
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> including <i>reportCGI</i> for Cell 15 and sufficient idle periods for UE to acquire the relevant system information from Cell 15.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
7	Check: Does the UE transmit a <i>MeasurementReport</i> message with <i>cellGlobalId</i> of Cell 15 within 8 sec?	-->	<i>MeasurementReport</i>	2	P

### 8.3.3.5 Void

### 8.3.4 Measurement for CSG, Hybrid and Open cells

#### 8.3.4.1 Intra-frequency SI acquisition / CSG cell and non-CSG cell

#### 8.3.4.1.1 Test Purpose (TP)

(1)

```

with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE is configured to acquire the System Information of a neighbour member CSG cell }
        then { UE acquires the System Information of the cell included in the associated measurement
object and reports the global cell identity, the TAI, the CSG ID, its membership status and for Rel-
12 onwards, primaryPLMNSuitable in the MeasurementReport }
}

```

(2)

```

with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE is configured to acquire the System Information of a neighbour non-member CSG cell }
    then { UE acquires the System Information of the cell included in the associated measurement
object and reports the global cell identity, the TAI and the CSG ID in the MeasurementReport }
}

```

(3)

**with { UE in E-UTRA RRC CONNECTED state }**

```

ensure that {
    when { UE is configured to acquire the System Information of a neighbour non-CSG cell }
        then { UE acquires the System Information of the cell included in the associated measurement
object and reports the global cell identity and the TAI in the MeasurementReport }
}

```

### 8.3.4.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.5.2.3, 5.5.3.1 and 5.5.5, and TS 36.133, clause 8.1.2.2.3.1. Unless otherwise stated these are Rel-9 requirements.

[TS 36.331, clause 5.5.2.3]

...

The UE shall:

...

2> if the *triggerType* is set to '*periodical*' and the *purpose* is set to '*reportCGI*' in the *reportConfig* associated with this *measId*:

3> if the *measObject* associated with this *measId* concerns E-UTRA:

4> if the *si-RequestForHO* is included in the *reportConfig* associated with this *measId*:

5> start timer T321 with the timer value set to 150 ms for this *measId*;

...

3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell:

4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

...

[TS 36.331, clause 5.5.3.1]

...

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *purpose* for the associated *reportConfig* is set to '*reportCGI*':

3> if *si-RequestForHO* is configured for the associated *reportConfig*:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using autonomous gaps as necessary;

...

[TS 36.331, clause 5.5.5]

[Rel-9]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

...

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

...

3> else if the *purpose* is set to '*reportCGI*:

4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:

5> if the cell broadcasts a CSG identity:

6> include the *csg-Identity*;

6> include the *csg-MemberStatus* and set it to '*member*' if the CSG identity is included in the UE's CSG whitelist;

5> if the *si-RequestForHO* is configured within the *reportConfig* associated with this *measId*:

6> include the *cgi-Info* containing all the fields that have been successfully acquired, except for the *plmn-IdentityList*;

5> else:

6> include the *cgi-Info* containing all the fields that have been successfully acquired;

...

[Rel-12]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

...

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

...

3> else if the *purpose* is set to '*reportCGI*:

4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:

5> if the cell broadcasts a CSG identity:

6> include the *csg-Identity*;

6> include the *csg-MemberStatus* and set it to *member* if the cell is a CSG member cell;

5> if the *si-RequestForHO* is configured within the *reportConfig* associated with this *measId*:

6> include the *cgi-Info* containing all the fields that have been successfully acquired and in accordance with the following:

7> if the cell is a CSG member cell, determine the subset of the PLMN identities, starting from the second entry of PLMN identities in the broadcast information, that meet the following conditions:

a) equal to the RPLMN or an EPLMN; and

b) the CSG whitelist of the UE includes an entry comprising of the concerned PLMN identity and the CSG identity broadcast by the cell;

7> if the subset of PLMN identities determined according to the previous includes at least one PLMN identity, include the *plmn-IdentityList* and set it to include this subset of the PLMN identities;

7> if the cell is a CSG member cell, include the *primaryPLMN-Suitable* if the primary PLMN meets conditions a) and b) specified above;

...

[TS 36.133, clause 8.1.2.2.3.1]

No explicit neighbour list is provided to the UE for identifying a new CGI of E-UTRA cell. The UE shall identify and report the CGI when requested by the network for the purpose ‘reportCGI’. The UE may make autonomous gaps in downlink reception and uplink transmission for receiving MIB and SIB1 message according to section 5.5.3.1 of 36.331 [2]. Note that a UE is not required to use autonomous gap if si-RequestForHO is set to false. If autonomous gaps are used for measurement with the purpose of ‘reportCGI’, the UE shall be able to identify a new CGI of E-UTRA cell within:

$$T_{\text{identify\_CGI,intra}} = T_{\text{basic\_identify\_CGI,intra}} \quad ms$$

Where

$T_{\text{basic\_identify\_CGI,intra}} = 150$  ms. This is the time period used in the above equation where the maximum allowed time for the UE to identify a new CGI of an E-UTRA cell is defined.

A cell shall be considered identifiable following conditions are fulfilled:

- RSRP related side conditions given in Section 9.1 are fulfilled for a corresponding Band,
- $SCH_{RP}|dBm \geq -127$  dBm for Bands 1, 4, 6, 10, 11, 18, 19, 21 and  $SCH_{Es/Iot} \geq -6$  dB,
- $SCH_{RP}|dBm \geq -126$  dBm for Band 9 and  $SCH_{Es/Iot} \geq -6$  dB,
- $SCH_{RP}|dBm \geq -125$  dBm for Bands 2, 5, 7 and  $SCH_{Es/Iot} \geq -6$  dB,
- $SCH_{RP}|dBm \geq -124$  dBm for Bands 3, 8, 12, 13, 14, 17, 20 and  $SCH_{Es/Iot} \geq -6$  dB.

The requirement for identifying a new CGI of an E-UTRA cell within  $T_{\text{basic\_identify\_CGI,intra}}$  is applicable when no DRX is used as well as when all the DRX cycles specified in 3GPP TS 36.331 [2] are used.

...

8.3.4.1.3                  Test description

8.3.4.1.3.1                Pre-test conditions

System Simulator:

- Cell 1, Cell 2, Cell 4 and Cell 11.
- Cell 1 and Cell 11 are not CSG cells.
- Cell 2 and Cell 4 are CSG cells.
- System information combination 7 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 2 and Cell 4.

UE:

- The UE’s Allowed CSG list contains the CSG ID of Cell 2. This is realized by using either manual CSG selection in preamble procedure or a USIM with field EFACSGL preconfigured at beginning of testcase.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.4.1.3.2                Test procedure sequence

Table 8.3.4.1.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 2, Cell 4 and Cell 11 at various time instants of the test execution. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.4.1.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2 (DL only)	Cell 4 (DL only)	Cell 11 (DL only)	Remark
<b>T1</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	-79	Off	Off	Power levels are such that entry condition for event A3 on Cell 2 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
<b>T2</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	Off	-79	Off	Power levels are such that entry condition for event A3 on Cell 4 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
<b>T3</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	Off	Off	-79	Power levels are such that entry condition for event A3 on Cell 11 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

### 8.3.4.2 Inter-frequency SI acquisition / Non-member hybrid cell

#### 8.3.4.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE is configured to acquire the System Information of a neighbour non-member hybrid cell }
    then { UE acquires the System Information of the cell included in the associated measurement object and reports the global cell identity, the TAI and the CSG ID in the MeasurementReport }
```

#### 8.3.4.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.5.2.3, 5.5.3.1 and 5.5.5, and TS 36.133, clause 8.1.2.2.3.1.

[TS 36.331, clause 5.5.2.3]

...

The UE shall:

...  
 2> if the *triggerType* is set to '*periodical*' and the *purpose* is set to '*reportCGI*' in the *reportConfig* associated with this *measId*:

3> if the *measObject* associated with this *measId* concerns E-UTRA:

4> if the *si-RequestForHO* is included in the *reportConfig* associated with this *measId*:

5> start timer T321 with the timer value set to 150 ms for this *measId*;

...

[TS 36.331, clause 5.5.3.1]

...

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *purpose* for the associated *reportConfig* is set to '*reportCGI*':

3> if *si-RequestForHO* is configured for the associated *reportConfig*:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using autonomous gaps as necessary;

...  
 3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell:

4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

4> if *si-RequestForHO* is not configured for the associated *reportConfig*:

5> try to acquire the list of additional PLMN Identities, as included in the *plmn-IdentityList*, if multiple PLMN identities are broadcast in the concerned cell;

[TS 36.331, clause 5.5.5]

...  
 For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

...  
 1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

...

3> else if the *purpose* is set to '*reportCGI*':

4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:

5> if the cell broadcasts a CSG identity:

6> include the *csg-Identity*;

- 6> include the *csg-MemberStatus* and set it to '*member*' if the CSG identity is included in the UE's CSG whitelist;
- 5> if the '*si-RequestForHO*' is configured within the *reportConfig* associated with this *measId*:
  - 6> include the *cgi-Info* containing all the fields that have been successfully acquired, except for the *plmn-IdentityList*;
  - 5> else:
    - 6> include the *cgi-Info* containing all the fields that have been successfully acquired;
- ...

[TS 36.133, clause 8.1.2.2.3.1]

No explicit neighbour list is provided to the UE for identifying a new CGI of E-UTRA cell. The UE shall identify and report the CGI when requested by the network for the purpose 'reportCGI'. The UE may make autonomous gaps in downlink reception and uplink transmission for receiving MIB and SIB1 message according to section 5.5.3.1 of 36.331 [2]. Note that a UE is not required to use autonomous gap if si-RequestForHO is set to false. If autonomous gaps are used for measurement with the purpose of 'reportCGI', the UE shall be able to identify a new CGI of E-UTRA cell within:

$$T_{\text{identify\_CGI,intra}} = T_{\text{basic\_identify\_CGI,intra}} \quad ms$$

Where

$T_{\text{basic\_identify\_CGI,intra}} = 150$  ms. This is the time period used in the above equation where the maximum allowed time for the UE to identify a new CGI of an E-UTRA cell is defined.

A cell shall be considered identifiable following conditions are fulfilled:

- RSRP related side conditions given in Section 9.1 are fulfilled for a corresponding Band,
- $SCH_{RP}|dBm \geq -127$  dBm for Bands 1, 4, 6, 10, 11, 18, 19, 21 and  $SCH \hat{E}s/Iot \geq -6$  dB,
- $SCH_{RP}|dBm \geq -126$  dBm for Band 9 and  $SCH \hat{E}s/Iot \geq -6$  dB,
- $SCH_{RP}|dBm \geq -125$  dBm for Bands 2, 5, 7 and  $SCH \hat{E}s/Iot \geq -6$  dB,
- $SCH_{RP}|dBm \geq -124$  dBm for Bands 3, 8, 12, 13, 14, 17, 20 and  $SCH \hat{E}s/Iot \geq -6$  dB.

The requirement for identifying a new CGI of an E-UTRA cell within  $T_{\text{basic\_identify\_CGI,intra}}$  is applicable when no DRX is used as well as when all the DRX cycles specified in 3GPP TS 36.331 [2] are used.

...

8.3.4.2.3            Test description

8.3.4.2.3.1        Pre-test conditions

System Simulator:

- Cell 1 and Cell 3 are E-UTRA cells.
- Cell 1 is a non CSG cell.
- Cell 3 is a hybrid cell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1.
- System information combination 13 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 3.

UE:

- The UE's allowed CSG list shall not contain CSG ID 2

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.4.2.3.2 Test procedure sequence

Table 8.3.4.2.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 3 at various time instants of the test execution. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.4.2.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3 (DL only)	Remark
<b>T1</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	-73	Power levels are such that entry condition for event A3 on Cell 3 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.4.2.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra LTE measurement and reporting for event A3 (inter frequency measurement) and set <i>timeAlignmentTimerDedicated</i> to <i>infinity</i> .	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS re-adjusts the cell-specific reference signal levels according to row "T1" in table 8.3.4.2.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message to report event A3 with the measured RSRP value for Cell 3.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> including <i>reportCGI</i> and <i>si-RequestForHO</i> for Cell 3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
7	Check: Does the UE transmit a <i>MeasurementReport</i> message with the System Information acquired on Cell 3 within 150 + 15 ms of transmits an <i>RRCConnectionReconfiguration</i> message? (Note 1)	-->	<i>MeasurementReport</i>	1	P

Note 1: 15ms is the RRC processing delay

### 8.3.4.3 Inter-frequency SI acquisition / Member hybrid cell

#### 8.3.4.3.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state}
ensure that {
  when { UE is configured to acquire the System Information of a neighbour member hybrid cell }
    then { UE acquires the System Information of the cell included in the associated measurement object and reports the global cell identity, the TAI, the MemberStatus, the CSG ID and for Rel-12 onwards, primaryPLMNSuitable in the MeasurementReport}
}
```

#### 8.3.4.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.5.2.3, 5.5.3.1, 5.5.5 and TS 36.133, clause 8.1.2.3.5.1. Unless otherwise stated these are Rel-9 requirements.

[TS 36.331, clause 5.5.2.3]

...

The UE shall:

...

2> if the *triggerType* is set to '*periodical*' and the *purpose* is set to '*reportCGI*' in the *reportConfig* associated with this *measId*:

3> if the *measObject* associated with this *measId* concerns E-UTRA:

4> if the *si-RequestForHO* is included in the *reportConfig* associated with this *measId*:

5> start timer T321 with the timer value set to 150 ms for this *measId*;

...

[TS 36.331, clause 5.5.3.1]

...

The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *purpose* for the associated *reportConfig* is set to '*reportCGI*':

3> if *si-RequestForHO* is configured for the associated *reportConfig*:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using autonomous gaps as necessary;

...

3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is an E-UTRAN cell:

4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

4> if *si-RequestForHO* is not configured for the associated *reportConfig*:

5> try to acquire the list of additional PLMN Identities, as included in the *plmn-IdentityList*, if multiple PLMN identities are broadcast in the concerned cell;

...

[TS 36.331, clause 5.5.5]

[Rel-9]

...

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

...

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

...

3> else if the *purpose* is set to '*reportCGI*:

4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:

5> if the cell broadcasts a CSG identity:

- 6> include the *csg-Identity*;
  - 6> include the *csg-MemberStatus* and set it to '*member*' if the CSG identity is included in the UE's CSG whitelist;
  - 5> if the '*si-RequestForHO*' is configured within the *reportConfig* associated with this *measId*:
    - 6> include the *cgi-Info* containing all the fields that have been successfully acquired, except for the *plmn-IdentityList*;
  - 5> else:
    - 6> include the *cgi-Info* containing all the fields that have been successfully acquired;
- ...

[Rel-12]

...

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

...

- 1> if there is at least one applicable neighbouring cell to report:
  - 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
    - 3> else if the *purpose* is set to '*reportCGI*':
      - 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
        - 5> if the cell broadcasts a CSG identity:
          - 6> include the *csg-Identity*;
          - 6> include the *csg-MemberStatus* and set it to *member* if the cell is a CSG member cell;
        - 5> if the '*si-RequestForHO*' is configured within the *reportConfig* associated with this *measId*:
          - 6> include the *cgi-Info* containing all the fields that have been successfully acquired and in accordance with the following:
            - 7> if the cell is a CSG member cell, determine the subset of the PLMN identities, starting from the second entry of PLMN identities in the broadcast information, that meet the following conditions:
              - a) equal to the RPLMN or an EPLMN; and
              - b) the CSG whitelist of the UE includes an entry comprising of the concerned PLMN identity and the CSG identity broadcast by the cell;
            - 7> if the subset of PLMN identities determined according to the previous includes at least one PLMN identity, include the *plmn-IdentityList* and set it to include this subset of the PLMN identities;
            - 7> if the cell is a CSG member cell, include the *primaryPLMN-Suitable* if the primary PLMN meets conditions a) and b) specified above;

... [TS 36.133, clause 8.1.2.3.5.1]

No explicit neighbour list is provided to the UE for identifying a new CGI of E-UTRA cell. The UE shall identify and report the CGI when requested by the network for the purpose of 'reportCGI'. The UE may make autonomous gaps in

both downlink reception and uplink transmission for receiving MIB and SIB1 message according to section 5.5.3.1 of 36.331 [2]. Note that a UE is not required to use autonomous gap if si-RequestForHO is set to false. If autonomous gaps are used for measurement with the purpose of ‘reportCGI’, regardless of whether DRX is used or not, the UE shall be able to identify a new CGI of E-UTRA cell within:

$$T_{\text{identify\_CGI,inter}} = T_{\text{basic\_identify\_CGI,inter}} \quad ms$$

Where

$T_{\text{basic\_identify\_CGI,inter}} = 150$  ms. This is the time period used in the above equation where the maximum allowed time for the UE to identify a new CGI of E-UTRA cell is defined.

A cell shall be considered identifiable following conditions are fulfilled:

- RSRP related side conditions given in Section 9.1 are fulfilled for a corresponding Band,
- $SCH_{RP}|dBm \geq -125$  dBm for Bands 1, 4, 6, 10, 11, 18, 19, 21 and  $SCH_{Es/Iot} \geq -4$  dB,
- $SCH_{RP}|dBm \geq -124$  dBm for Band 9 and  $SCH_{Es/Iot} \geq -4$  dB,
- $SCH_{RP}|dBm \geq -123$  dBm for Bands 2, 5, 7 and  $SCH_{Es/Iot} \geq -4$  dB,
- $SCH_{RP}|dBm \geq -122$  dBm for Bands 3, 8, 12, 13, 14, 17, 20 and  $SCH_{Es/Iot} \geq -4$  dB.

The requirement for identifying a new CGI of an E-UTRA cell within  $T_{\text{basic\_identify\_CGI,inter}}$  is applicable when no DRX is used as well as when all the DRX cycles specified in 3GPP TS 36.331 [2] are used.

Given that continuous DL data allocation and no DRX is used, and no measurement gaps are configured, the UE shall have more than [60] ACK/NACK transmitted during identification of a new CGI of E-UTRA cell.

#### 8.3.4.3.3 Test description

##### 8.3.4.3.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 3 are E-UTRA cells.
- Cell 1 is a non CSG cell.
- Cell 3 is a hybrid cell.
- System information combination 3 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1.
- System information combination 13 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 3.

UE:

- The UE’s Allowed CSG list contains the CSG ID of the Cell 3. This is realized by using either manual CSG selection in preamble procedure or a USIM with field EFACSGL preconfigured at beginning of testcase.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

#### 8.3.4.3.3.2 Test procedure sequence

Table 8.3.4.3.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 3 at various time instants of the test execution. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.4.3.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 3 (DL only)	Remark
<b>T1</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	-73	Power levels are such that entry condition for event A3 on Cell 3 is satisfied: $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$

**Table 8.3.4.3.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra LTE measurement and reporting for event A3 (inter frequency measurement) and set <i>timeAlignmentTimerDedicated</i> to <i>infinity</i> .	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS re-adjusts the cell-specific reference signal levels according to row "T1" in table 8.3.4.3.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message to report event A3 with the measured RSRP value for Cell 3.	-->	<i>MeasurementReport</i>	-	-
5	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> including <i>reportCGI</i> and <i>si-RequestForHO</i> for Cell 3.	<--	<i>RRCConnectionReconfiguration</i>	-	-
6	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
7	Check: Does the UE transmit a <i>MeasurementReport</i> message with the System Information acquired on Cell 3 within 150 + 15 ms of <i>RRCConnectionReconfiguration</i> message? (Note 1)	-->	<i>MeasurementReport</i>	1	P

Note 1: 15ms is the RRC processing delay

### 8.3.4.4 Inter-RAT SI acquisition / RRC\_CONNECTED / UMTS member CSG cell

#### 8.3.4.4.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE is configured to acquire the System Information of a neighbour UTRA member CSG cell }
    then { UE acquires the System Information of the cell included in the associated measurement object and reports the global cell identity, the LAC, the RAC, the CSG ID, its membership status and for Rel-12 onwards, primaryPLMNsuitable in the MeasurementReport }
```

#### 8.3.4.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.5.2.3, 5.5.3.1 and 5.5.5. Unless otherwise stated these are Rel-9 requirements.

[TS 36.331, clause 5.5.2.3]

...  
The UE shall:

...  
2> if the *triggerType* is set to '*periodical*' and the *purpose* is set to '*reportCGI*' in the *reportConfig* associated with this *measId*:

...  
3> else if the *measObject* associated with this *measId* concerns UTRA:

4> if the *si-RequestForHO* is included in the *reportConfig* associated with this *measId*:

5> for UTRA FDD, start timer T321 with the timer value set to 2 seconds for this *measId*;

5> for UTRA TDD, start timer T321 with the timer value set to [1 second] for this *measId*;

[TS 36.331, clause 5.5.3.1]

...  
The UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the *purpose* for the associated *reportConfig* is set to '*reportCGI*':

3> if *si-RequestForHO* is configured for the associated *reportConfig*:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated *measObject* using autonomous gaps as necessary;

...  
3> if the cell indicated by the *cellForWhichToReportCGI* included in the associated *measObject* is a UTRAN cell:

4> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;

4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

[TS 36.331, clause 5.5.5]

[Rel-9]

...  
For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

...  
1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

...  
3> else if the *purpose* is set to '*reportCGI*:

- 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
  - 5> if the cell broadcasts a CSG identity:
    - 6> include the *csg-Identity*;
    - 6> include the *csg-MemberStatus* and set it to '*member*' if the CSG identity is included in the UE's CSG whitelist;
    - 5> if the '*si-RequestForHO*' is configured within the *reportConfig* associated with this *measId*:
      - 6> include the *cgi-Info* containing all the fields that have been successfully acquired, except for the *plmn-IdentityList*;
    - 5> else:
      - 6> include the *cgi-Info* containing all the fields that have been successfully acquired;
- ...

[Rel-12]

...

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

...

- 1> if there is at least one applicable neighbouring cell to report:
- 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
  - ...
  - 3> else if the *purpose* is set to '*reportCGI*':
    - 4> if the mandatory present fields of the *cgi-Info* for the cell indicated by the *cellForWhichToReportCGI* in the associated *measObject* have been obtained:
    - 5> if the cell broadcasts a CSG identity:
      - 6> include the *csg-Identity*;
      - 6> include the *csg-MemberStatus* and set it to *member* if the cell is a CSG member cell;
      - 5> if the *si-RequestForHO* is configured within the *reportConfig* associated with this *measId*:
        - 6> include the *cgi-Info* containing all the fields that have been successfully acquired and in accordance with the following:
          - 7> if the cell is a CSG member cell, determine the subset of the PLMN identities, starting from the second entry of PLMN identities in the broadcast information, that meet the following conditions:
            - a) equal to the RPLMN or an EPLMN; and
            - b) the CSG whitelist of the UE includes an entry comprising of the concerned PLMN identity and the CSG identity broadcast by the cell;
          - 7> if the subset of PLMN identities determined according to the previous includes at least one PLMN identity, include the *plmn-IdentityList* and set it to include this subset of the PLMN identities;
          - 7> if the cell is a CSG member cell, include the *primaryPLMN-Suitable* if the primary PLMN meets conditions a) and b) specified above;

...

8.3.4.4.3 Test description

8.3.4.4.3.1 Pre-test conditions

System Simulator:

- Cell 1 is E-UTRA cell.
- Cell 5 is UTRA cell.
- Cell 1 is a non CSG cell.
- Cell 5 is a CSG cell.
- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell.

UE:

- The UE's Allowed CSG list contains the CSG ID of Cell 5. This is realized by using either manual CSG selection in preamble procedure or a USIM with field EFACSGL preconfigured at beginning of testcase.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

8.3.4.4.3.2 Test procedure sequence

Table 8.3.4.4.3.2-1 illustrates the downlink power levels to be applied for Cell 1 and Cell 5 at various time instants of the test execution. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.4.4.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 5 (DL only)	Remark
<b>T1</b>	Cell-specific RS EPRE	dBm/ 15kHz	-85	-12.5	Power levels are such that entry condition for event B2 on Cell 5 is satisfied.

**Table 8.3.4.4.3.2-2: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup inter RAT measurement and reporting for event B2 and set <i>timeAlignmentTimerDedicated</i> to <i>infinity</i> .	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-
3	The SS re-adjusts the cell-specific reference signal levels according to row "T1" in table 8.3.4.4.3.2-1.	-	-	-	-
4	The UE transmits a <i>MeasurementReport</i> message to report event B2 for Cell 5.	-->	<i>MeasurementReport</i>	-	-

### 8.3.4.5 Inter-frequency E-UTRAN FDD – FDD / CSG Proximity Indication

#### 8.3.4.5.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE is configured with the proximity indicator control by sending the
RRConnectionReconfiguration message with reportProximityConfig and the UE is not in the vicinity of
the CSG cell}
    then { UE is not expected to send any ProximityIndication message set to "entering" proximity }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
```

```

when { UE is configured with the proximity indicator control by sending the
RRConnectionReconfiguration message with reportProximityConfig and the UE is in the vicinity of the
CSG cell}
then { The UE is expected to send a ProximityIndication message set to "entering" proximity }
}

```

### 8.3.4.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.14.1, 5.3.14.2 and 5.3.14.3, and TS 36.133, clause 6.4.1, 6.4.2, A.8.21.1, and A.8.21.2.

[TS 36.331, clause 5.3.14.1]

**Figure 5.3.14.1-1: Proximity indication**

The purpose of this procedure is to indicate that the UE is entering or leaving the proximity of one or more CSG member cells. The detection of proximity is based on an autonomous search function as defined in TS 36.304 [4].

[TS 36.331, clause 5.3.14.2]

A UE in RRC\_CONNECTED shall:

- 1> if the UE enters the proximity of one or more CSG member cell(s) on an E-UTRA frequency while proximity indication is enabled for such E-UTRA cells; or
- 1> if the UE enters the proximity of one or more CSG member cell(s) on an UTRA frequency while proximity indication is enabled for such UTRA cells; or
- 1> if the UE leaves the proximity of all CSG member cell(s) on an E-UTRA frequency while proximity indication is enabled for such E-UTRA cells; or
- 1> if the UE leaves the proximity of all CSG member cell(s) on an UTRA frequency while proximity indication is enabled for such UTRA cells;
- 2> if the UE has previously not transmitted a *ProximityIndication* for the RAT and frequency during the current RRC connection, or if more than 5 s has elapsed since the UE has last transmitted a *ProximityIndication* (either entering or leaving) for the RAT and frequency;
- 3> initiate transmission of the *ProximityIndication* message in accordance with 5.3.14.3;

NOTE 1: In the conditions above, "if the UE enters the proximity of one or more CSG member cell(s)" includes the case of already being in the proximity of such cell(s) at the time proximity indication for the corresponding RAT is enabled.

[TS 36.331, clause 5.3.14.3]

The UE shall set the contents of *ProximityIndication* message as follows:

- 1> if the UE applies the procedure to report entering the proximity of CSG member cell(s):
  - 2> set *type* to *entering*;
- 1> else if the UE applies the procedure to report leaving the proximity of CSG member cell(s):

2> set *type* to *leaving*;

1> if the proximity indication was triggered for one or more CSG member cell(s) on an E-UTRA frequency:

2> set the *carrierFreq* to *eutra* with the value set to the E-ARFCN value of the E-UTRA cell(s) for which proximity indication was triggered;

1> else if the proximity indication was triggered for one or more CSG member cell(s) on a UTRA frequency:

2> set the *carrierFreq* to *utra* with the value set to the ARFCN value of the UTRA cell(s) for which proximity indication was triggered;

The UE shall submit the *ProximityIndication* message to lower layers for transmission.

[TS 36.133, clause 6.4.1]

The requirements defined in this section are applicable to a UE supporting and configured with CSG proximity indication and are valid when a UE is entering the proximity of one or more CSG member cell(s) or leaving the proximity of all CSG member cell(s) on a UTRA or E-UTRA frequency as specified in [2].

The detection of CSG proximity is based on a UE autonomous search function.

[TS 36.133, clause 6.4.2]

The UE shall initiate transmission of the *ProximityIndication* message with “entering” according to [2] within [6] minutes after entering the proximity of one or more CSG member cell(s) on a UTRA or E-UTRA frequency.

The UE shall initiate transmission of the *ProximityIndication* message with “leaving” according to [2] within [6] minutes after leaving the proximity of all CSG member cell(s) on a UTRA or E-UTRA frequency.

There is no need for statistical testing of this requirement.

NOTE 2: Entering the proximity of one or more CSG member cell(s) means that the UE is near a cell whose CSG ID is in the UE’s CSG whitelist (as determined based on autonomous search procedures). Leaving the proximity of one or more CSG member cell(s) means that the UE is no longer near any cell whose CSG ID is in the UE’s CSG whitelist.

[TS 36.133, clause A.8.21.1]

The purpose of this test is to verify the UE has implemented properly the feature for indicating that the UE is entering or leaving the proximity of one or more CSG member cells based on proximity detection with an autonomous search function, as defined by the requirements in Section 6.4.

The test case consists of three successive segments: Test Preparation, Negative Test, and Positive Test. The test scenario comprises of two E-UTRAN FDD cells on different carriers. Cell 1 represents the serving cell and Cell 2 the CSG cell. Cell 1 is active during the whole test, while Cell 2 is only active in time duration T1 in the Test Preparation. The description of the test procedure is shown in Table A.8.21-1. The general test parameters and cell specific test parameters for the handover from serving cell to CSG cell in Test Preparation and the proximity detection are presented in Table A.8.21-2 and Table A.8.21-3 respectively.

**Table A.8.21-1: Description of the test procedures**

Parameter	Cell Status	Comment
<b>Test Preparation</b>		
Initial Condition	Cell 1 is active	Clean up the UE memory to be free from previously stored cell information for proximity detection. Configure the UE to include Cell 2's CSG Identity in its whitelist. Turn on the UE and set up connection between the UE and Cell 1.
Time duration T1	Cell 1 and Cell 2	Turn on Cell 2 at the start of T1. Perform manual CSG selection towards Cell 2. The UE is expected to store necessary information experienced during handover for later proximity detection.
End condition	Cell 1 is active	Turn off the UE. Turn off Cell 2.
<b>Negative Test</b>		
Initial Condition	Cell 1 is active	Re-Configure Cell 1 to a different global cell identity to simulate the UE is not in the vicinity of the CSG cell. Turn on the UE and set up connection between the UE and Cell 1.
Time duration T2	Cell 1 is active	Configure the UE with proximity indication control by sending the Reconfiguration message with ReportProximityConfig at the start of T2. The UE is not expected to report "entering" proximity in the negative test.
End condition	Cell 1 is active	Turn off the UE.
<b>Positive Test</b>		
Initial Condition	Cell 1 is active	Re-Configure Cell 1 to the same global cell identity as in the Test Preparation, under which the UE was manually selected towards the CSG cell. Turn on the UE and set up connection between the UE and Cell 1.
Time duration T3	Cell 1 and Cell 2 are active	Configure the UE with proximity indication control by sending the Reconfiguration message with reportProximityConfig at the start of T3. The UE is expected to report "entering" proximity before end of T3.
End condition	Cell 1 is active	Turn off the UE.

**Table A.8.21-2: General test parameters for E-UTRAN FDD-FDD inter frequency cell proximity detection test case**

Parameter	Unit	Value	Comment
PDSCH parameters		DL Reference Measurement Channel R.0 FDD	As specified in section A.3.1.1.1
PDSCH allocation	$n_{PRB}$	2—3	13—36
PCFICH/PDCCH/PHICH parameters		DL Reference Measurement Channel R.6 FDD	As specified in section A.3.1.2.1
A3-Offset	dB	-4	
Hysteresis	dB	0	
TimeToTrigger	s	0	
Filter coefficient		0	L3 filtering is not used
DRX		off	As specified in section A.3.3
PRACH configuration		4	As specified in table 5.7.1-2 in 3GPP TS 36.211
Access Barring Information	-	Not sent	No additional delays in random access procedure
Time offset between cells		3 ms	Asynchronous cells
Gap pattern configuration Id		0	As specified in Table 8.1.2.1-1 started before T1 starts
Time duration T1	s	[10]	Defined to give enough time for completing the handover from serving cell to the CSG cell successfully.
Time duration T2	s	[360]	Defined to be longer enough to see whether the UE will report enter “proximity” indication.
Time duration T3 <sup>Note 1</sup>	s	[<=360]	The time duration for a UE to report enters “proximity” when the UE is near a CSG cell.

**Note 1:** The maximum allowed time duration for the UE to decide either entering or leaving “proximity” is 360s.  
To reduce test time, T3 may end once UE reports entering “proximity” and

**Note 2:** The test case assumes an environment where CSG proximity detection results not being impact by non-3GPP signals, such as GPS and WiFi. When the test case is being executed, the UE may ignore any radio signals which are not provided by the test setup which it would otherwise use in proximity estimation.

**Table A.8.21-3: Cell specific test parameters for E-UTRAN FDD-FDD inter frequency cell proximity detection test case**

Parameter	Unit	Cell 1			Cell 2								
		T1	T2	T3	T1	T2	T3						
E-UARFCN		Channel 1			Channel 2								
CSG indicator		False			True	N/A	True						
Physical cell global identity		1	1	1	2	N/A	2						
CSG identity		Not sent			Sent	N/A	Sent						
BW <sub>channel</sub>	MHz	10			10								
OCNG Patterns defined in A.3.2.1.1 (OP.1 FDD) and in A.3.2.1.2 (OP.2 FDD)		OP.1 FDD	N/A	OP.2 FDD	OP.2 FDD	N/A	OP.2 FDD						
PBCH_RA	dB	0	0	0	0	0	0						
PBCH_RB	dB												
PSS_RA	dB												
SSS_RA	dB												
PCFICH_RB	dB												
PHICH_RA	dB												
PHICH_RB	dB												
PDCCH_RA	dB												
PDCCH_RB	dB												
PDSCH_RA	dB												
PDSCH_RB	dB												
OCNG_RA <sup>Note 1</sup>	dB												
OCNG_RB <sup>Note 1</sup>	dB												
$\hat{E}_s / I_{ot}$	dB	0	-inf	4	7	-inf	7						
$N_{oc}$ <sup>Note 2</sup>	dBm/15 kHz	-98			-98								
$\hat{E}_s / N_{oc}$	dB	0	-inf	4	7	-inf	7						
RSRP Note 3	dBm/15 kHz	-98	-inf	-94	-91	-inf	-91						
Propagation Condition		AWGN			AWGN								
Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.													
Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.													
Note 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.													

[TS 36.133, A.8.21.2]

The UE shall not send an “entering” proximity indication in T2 during Negative Test.

The UE shall send an “entering” proximity indication in T3 during Positive Test.

## 8.3.4.5.3 Test description

## 8.3.4.5.3.1 Pre-test conditions

System Simulator:

- Cell 1, Cell 2 and Cell 23 are used.
- Cell 1 and Cell 2 are not CSG cells.
- Cell 23 is a CSG cell.
- System information combination 7 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 23.

UE:

- The UE's Allowed CSG list contains the CSG ID of Cell 23. This is realized by using either manual CSG selection in preamble procedure or a USIM with field EFACSGL preconfigured at beginning of testcase.
- The UE memory should be clear from historical CSG proximity data (method how to achieve this is left to UE implementation).
- The UE non-3GPP radio receivers shall be switched off ( method how to achieve this is left to UE implementation and test houses).

Preamble:

- The UE is in state Switched OFF (state 1) according to [18].

#### 8.3.4.5.3.2 Test procedure sequence

Table 8.3.4.5.3.2-1 illustrates the downlink power levels to be applied for Cell 1, Cell 2 and Cell 23 at various time instants of the test execution. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.3.4.5.3.2-1: Time instances of cell power level and parameter changes**

	Parameter	Unit	Cell 1	Cell 2	Cell 23	Remark
<b>T0</b>	Cell-specific RS EPRE	dBm/1 5kHz	-85	Off	Off	The power level values are assigned to such that camping on Cell 1 is guaranteed. Cell 2 and Cell 23 are "Off".
<b>T1</b>	Cell-specific RS EPRE	dBm/1 5kHz	-85	Off	-79	
<b>T2</b>	Cell-specific RS EPRE	dBm/1 5kHz	- Off	-85	Off	The power level values are assigned to such that camping on Cell 2 is guaranteed. Cell 1 and Cell 23 are "Off".
<b>T3</b>	Cell-specific RS EPRE	dBm/1 5kHz	-85	Off	Off	The power level values are assigned to such that camping on Cell 1 is guaranteed. Cell 2 and Cell 23 are "Off".
<b>T4</b>	Cell-specific RS EPRE	dBm/1 5kHz	-85	Off	-79

## 8.3.5 Application layer measurement reporting

### 8.3.5.1 RRC connection reconfiguration/ QoE Measurement Collection /QoE measurement setup and report and release

#### 8.3.5.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state without SRB4 setup and it is not configured to provide
measurement report for QoE}
ensure that {
  when { UE is caused to send MeasReportAppLayer message }
  then { the UE does not transmit a MeasReportQoE message }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state without SRB4 setup and it is configured to provide
measurement report for QoE}
ensure that {
```

```

when { UE is caused to send MeasReportAppLayer message }
then { the UE does not transmit a MeasReportAppLayer message }
}

```

(3)

```

with { UE in E-UTRA RRC_CONNECTED state with SRB4 setup and it is configured to provide measurement
report for QoE }
ensure that {
    when { UE is caused to send MeasReportAppLayer message }
    then { the UE does transmit a MeasReportAppLayer message with measReportAppLayerContainer set to
the value of the measurement report information of QoE from the upper layer}
}

```

(4)

```

with { UE in E-UTRA RRC_CONNECTED state and it is configured to provide measurement report for QoE }
ensure that {
    when { UE receives an RRConnectionReconfiguration message containing a otherConfig that includes
the MeasReportAppLayer set to Release }
    then { the UE does not transmit any more MeasReportQoE message }
}

```

### 8.3.5.1.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.10.9, 5.6.19, and 6.3.6. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.10.9]

The UE shall:

...

1> if the received *otherConfig* includes the *measConfigAppLayer*:

2> if *measConfigAppLayer* is set to setup:

3> forward *measConfigAppLayerContainer* to upper layers considering the *serviceType*;

3> consider itself to be configured to send application layer measurement report in accordance with 5.6.19;

2> else:

3> inform upper layers to clear the stored application layer measurement configuration;

3> discard received application layer measurement report information from upper layers;

3> consider itself not to be configured to send application layer measurement report.

TS 36.331, clause 5.6.19

#### 5.6.19.1 General

**Figure 5.6.19.1-1: Application layer measurement reporting**

The purpose of this procedure is to inform E-UTRAN about application layer measurement report.

#### 5.6.19.2 Initiation

A UE capable of application layer measurement reporting in RRC\_CONNECTED may initiate the procedure when configured with application layer measurement, i.e. when *measConfigAppLayer* has been configured by E-UTRAN.

Upon initiating the procedure, the UE shall:

- 1> if configured with application layer measurement, and SRB4 is configured, and the UE has received application layer measurement report information from upper layers:
- 2> set the *measReportAppLayerContainer* in the *MeasReportAppLayer* message to the value of the application layer measurement report information;
- 2> submit the *MeasReportAppLayer* message to lower layers for transmission via SRB4.

[TS 36.331, clause 6.3.2]

<b><i>MeasReportAppLayer</i> field descriptions</b>	
<b><i>measReportAppLayerContainer</i></b>	The field contains container of application layer measurements, see Annex L (normative) in TS 26.247 [90] and 16.5 in TS 26.114 [x].
<b><i>serviceType</i></b>	Indicates the type of application layer measurement. Value qoe indicates Quality of Experience Measurement Collection for streaming services, value qoemtsi indicates Quality of Experience Measurement Collection for MTSI.

8.3.5.1.3 Test Description

8.3.5.1.3.1 Pre-test conditions

System Simulator:

- Cell 1

UE:

None.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.3.5.1.3.2 Test procedure sequence

**Table 8.3.5.1.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict

### 8.3.5.2 RRC connection reconfiguration/ Qoemtsi Measurement Collection /QoE measurement setup and report and release

#### 8.3.5.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state without SRB4 setup or it is not configured to provide measurement report for Qoemtsi }
ensure that {
    when { UE is caused to send MeasReportAppLayer message }
    then { the UE does not transmit a MeasReportAppLayer message }
}
```

(2)

```
with { UE in E-UTRA RRC_CONNECTED state without SRB4 setup and it is configured to provide measurement report for Qoemtsi }
ensure that {
    when { UE is caused to send MeasReportAppLayer message }
    then { the UE does not transmit a MeasReportAppLayer message }
}
```

(3)

```
with { UE in E-UTRA RRC_CONNECTED state with SRB4 setup and it is configured to provide measurement report for Qoemtsi }
ensure that {
    when { UE is caused to send MeasReportAppLayer message }
    then { the UE does transmit a MeasReportAppLayer message with measReportAppLayerContainer set to the value of the measurement report information for the service type Qoemtsi from the upper layer}
}
```

(4)

```
with { UE in E-UTRA RRC_CONNECTED state and it is configured to provide measurement report for Qoemtsi }
ensure that {
    when { UE receives an RRCConnectionReconfiguration message containing a otherConfig that includes the measConfigAppLayer set to Release }
    then { the UE does not transmit any more MeasReportAppLayer message }
```

#### 8.3.5.2.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 36.331, clauses 5.3.10.9, 5.6.19, and 6.3.6. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.10.9]

The UE shall:

...

1> if the received *otherConfig* includes the *measConfigAppLayer*:

2> if *measConfigAppLayer* is set to setup:

3> forward *measConfigAppLayerContainer* to upper layers considering the *serviceType*;

3> consider itself to be configured to send application layer measurement report in accordance with 5.6.19;

2> else:

3> inform upper layers to clear the stored application layer measurement configuration;

- 3> discard received application layer measurement report information from upper layers;
- 3> consider itself not to be configured to send application layer measurement report.

TS 36.331, clause 5.6.19

#### 5.6.19.1 General

**Figure 5.6.19.1-1: Application layer measurement reporting**

The purpose of this procedure is to inform E-UTRAN about application layer measurement report.

#### 5.6.19.2 Initiation

A UE capable of application layer measurement reporting in RRC\_CONNECTED may initiate the procedure when configured with application layer measurement, i.e. when *measConfigAppLayer* has been configured by E-UTRAN.

Upon initiating the procedure, the UE shall:

- 1> if configured with application layer measurement, and SRB4 is configured, and the UE has received application layer measurement report information from upper layers:
- 2> set the *measReportAppLayerContainer* in the *MeasReportAppLayer* message to the value of the application layer measurement report information;
- 2> submit the *MeasReportAppLayer* message to lower layers for transmission via SRB4.

[TS 36.331, clause 6.3.2]

<b>MeasReportAppLayer field descriptions</b>	
<b>measReportAppLayerContainer</b>	The field contains container of application layer measurements, see Annex L (normative) in TS 26.247 [90] and 16.5 in TS 26.114 [x].
<b>serviceType</b>	Indicates the type of application layer measurement. Value qoe indicates Quality of Experience Measurement Collection for streaming services, value qoemtsi indicates Quality of Experience Measurement Collection for MTSI.

#### 8.3.5.2.3 Test Description

##### 8.3.5.2.3.1 Pre-test conditions

Same Pre-test conditions as specified in clause 8.3.5.1.3.1

##### 8.3.5.2.3.2 Test procedure sequence

The same test procedure as specified in clause 8.3.5.1.3.2 with the exception in steps 1, 3, 5, 9, 11, 13, and 17:

The service type is qoemtsi instead of qoe.

##### 8.3.5.2.3.3 Specific message contents

The same message contents as specified in clause 8.3.5.1.3.2, with the following exception:

Table 8.3.5.1.3.3-4 is replaced by Table 8.3.5.2.3.3-1

## 8.4 Inter-RAT handover

### 8.4.1 Inter-RAT handover E-UTRA to UTRA

8.4.1.1 Void

8.4.1.2 Inter-RAT handover / From E-UTRA to UTRA PS / Data

8.4.1.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
    when { UE receives a MobilityFromEUTRACmd message and a DPCH PS RAB combination is configured
for an UTRA cell}
    then { UE transmits a HANOVER TO UTRAN COMPLETE message on the utra cell}
}
```

8.4.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.4.3.3.

[TS 36.331, clause 5.4.3.3]

The UE shall be able to receive a *MobilityFromEUTRACmd* message and perform a cell change order to GERAN, even if no prior UE measurements have been performed on the target cell.

The UE shall:

1> stop timer T310, if running;

1> if the *MobilityFromEUTRACmd* message includes the *purpose* set to ‘*handover*’:

2> if the *targetRAT-Type* is set to ‘*utra*’ or ‘*geran*’:

3> consider inter-RAT mobility as initiated towards the RAT indicated by the *targetRAT-Type* included in the *MobilityFromEUTRACmd* message;

3> forward the *nas-SecurityParamFromEUTRA* to the upper layers;

3> access the target cell indicated in the inter-RAT message in accordance with the specifications of the target RAT;

8.4.1.2.3 Test description

8.4.1.2.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 5.
- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

- The UE is previously registered on cell 5.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.4.1.5 Inter-RAT Handover / from E-UTRA to UTRA(HSUPA/HSDPA) / Data

### 8.4.1.5.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state }
ensure that {
  when { UE receives a MobilityFromEUTRACmd message and a E-DCH and HS-DSCH PS RAB combination
is configured for an UTRA cell}
    then { UE transmits a HANOVER TO UTRAN COMPLETE message on the utra cell}
  }
```

### 8.4.1.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.4.3.3.

[TS 36.331, clause 5.4.3.3]

The UE shall be able to receive a *MobilityFromEUTRACmd* message and perform a cell change order to GERAN, even if no prior UE measurements have been performed on the target cell.

The UE shall:

- 1> stop timer T310, if running;
- 1> if the *MobilityFromEUTRACmd* message includes the *purpose* set to '*handover*':
- 2> if the *targetRAT-Type* is set to '*utra*' or '*geran*':
- 3> consider inter-RAT mobility as initiated towards the RAT indicated by the *targetRAT-Type* included in the *MobilityFromEUTRACmd* message;
- 3> forward the *nas-SecurityParamFromEUTRA* to the upper layers;
- 3> access the target cell indicated in the inter-RAT message in accordance with the specifications of the target RAT;

8.4.1.5.3            Test description

8.4.1.5.3.1        Pre-test conditions

System Simulator:

- Cell 1 and Cell 5.
- System information combination 4 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA cells.

UE:

- The UE is previously registered on cell 5.

Preamble:

- The UE is in state Generic RB Established (state 3) on Cell 1 according to [18].

## 8.4.1.5.3.2 Test procedure sequence

**Table 8.4.1.5.3.2-1: Main behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS configures UTRA cell 5 to reference configuration according 36.508 table 4.8.3-1, condition UTRA HSUPA/HSDPA RB.	-	-	-	-
1A	The SS transmits a <i>UECapabilityEnquiry</i> message to request UE radio access capability information for E-UTRA and UTRA.	<--	<i>UECapabilityEnquiry</i>	-	-
1B	The UE transmit a <i>UECapabilityInformation</i> message on Cell 1. NOTE: The start-PS values received, should be used to configure ciphering on cell 5.	-->	<i>UECapabilityInformation</i>	-	-
2	The SS transmits a <i>MobilityFromEUTRACommand</i> message on Cell 1.	<--	<i>MobilityFromEUTRACommand</i>	-	-
3	Check: Does the UE transmit a HANOVER TO UTRAN COMPLETE message on cell 5?	-->	HANOVER TO UTRAN COMPLETE	1	P
-	EXCEPTION: Step 3Aa1 depend on UE implementation	-	-	-	-
3Aa1	The UE sends a ROUTING AREA UPDATE REQUEST message within [2] seconds.	-->	ROUTING AREA UPDATE REQUEST	-	-
4	The SS transmits a SECURITY MODE COMMAND message on Cell 5 in order to activate integrity protection.	<--	SECURITY MODE COMMAND	-	-
5	The UE transmits a SECURITY MODE COMPLETE message on Cell 5.	-->	SECURITY MODE COMPLETE	-	-
-	EXCEPTION: Steps 5Aa1 to 5Aa2 depend on UE implementation; the second "lower case letter" identifies a step sequence that takes place if the UE sent a ROUTING AREA UPDATE REQUEST message at step 3a	-	-	-	-
5Aa1	The SS transmits a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT	-	-
5Aa2	The UE transmits a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE	-	-
6	The SS transmits an UTRAN MOBILITY INFORMATION message to notify CN information on Cell 5.	<--	UTRAN MOBILITY INFORMATION	-	-
7	The UE transmits an UTRAN MOBILITY INFORMATION CONFIRM message on Cell 5.	-->	UTRAN MOBILITY INFORMATION CONFIRM	-	-
-	EXCEPTION: In parallel to the events described in steps 7A to 9 and depending on the UE implementation the steps defined in Table 8.4.1.5.3.2-2 may take place.	-	-	-	-
-	EXCEPTION: Steps 8a1 to 8a3 depend on UE implementation; the second "lower case letter" identifies a step sequence that takes place if the UE did not send a ROUTING AREA UPDATE REQUEST message at step 3a	-	-	-	-
7A	IF pc_IMS = TRUE THEN SS starts 6s timer				
8a1	The UE sends a ROUTING AREA UPDATE REQUEST message.	-->	ROUTING AREA UPDATE REQUEST	-	-
8a2	The SS transmits a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT	-	-
8a3	The UE transmits a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE	-	-
9	IF pc_IMS = TRUE THEN SS waits until the 6s timer expires				
-	Note : At the end of the test procedure sequence, the UE is in end state UTRA connected (U2) according to 36.508	-	-	-	-

**Table 8.4.1.5.3.2-2: Parallel behaviour**

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Generic test procedure for mobile initiated IMS SIP de-registration defined in Annex C.30 of TS 34.229-1 [35] takes place.	-	-	-	-

## 8.4.2 Inter-RAT handover UTRA to E-UTRA

8.4.2.1 Void

8.4.2.2 Inter-RAT handover / From UTRA PS to E-UTRA / Data

8.4.2.2.1 Test Purpose (TP)

(1)

```
with { UE in UTRA CELL_DCH(PS-DCCH+DTCH_DCH) state }
ensure that {
  when { UE receives a HANOVER FROM UTRAN COMMAND message including the eutra-Message }
    then { UE transmits an RRCCconnectionReconfigurationComplete message and enters E-UTRA
          RRC_CONNECTED state }
}
```

8.4.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.4.2.3.

[TS 36.331, clause 5.4.2.3]

If the UE is able to comply with the configuration included in the *RRCCconnectionReconfiguration* message, the UE shall:

- 1> apply the default physical channel configuration as specified in 9.2.4;
- 1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
- 1> apply the default MAC main configuration as specified in 9.2.2;
- 1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;
- 1> consider the target cell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;
- 1> start synchronising to the DL of the target cell;
- 1> set the C-RNTI to the value of the *newUE-Identity*;

- 1> for the target cell, apply the downlink bandwidth indicated by the *dl-Bandwidth*;
- 1> for the target cell, apply the uplink bandwidth indicated by (the absence or presence of) the *ul-Bandwidth*;
- 1> perform the radio resource configuration procedure as specified in 5.3.10;
- 1> forward the *nas-SecurityParamToEUTRA* to the upper layers;
- 1> derive the  $K_{eNB}$  key, as specified in TS 33.401 [32];
- 1> store the *nextHopChainingCount* value;
- 1> derive the  $K_{RRCint}$  key associated with the *integrityProtAlgorithm*, as specified in TS 33.401 [32];
- 1> derive the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key associated with the *cipheringAlgorithm*, as specified in TS 33.401 [32];
- 1> configure lower layers to apply the indicated integrity protection algorithm and the  $K_{RRCint}$  key immediately, i.e. the indicated integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> configure lower layers to apply the indicated ciphering algorithm, the  $K_{RRCenc}$  key and the  $K_{UPenc}$  key immediately, i.e. the indicated ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
- 1> if the *RRCConnectionReconfiguration* message includes the *measConfig*:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission using the new configuration;
- 1> use the default values specified in 9.2.5 for timer T310, T311 and constant N310, N311;
