| This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |                                                                                                                                                                                                                                                                                                                                                                                        |
| This IE is checked to see if it is present. |                                                                                                                                                                                                      | compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value.  1 Checked that this IE is absent Checked that this IE is absent Checked that this IE is absent Inter-frequency measurement event results |

| Information Element           | Semantics description                                                                                                                                                   |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Message Type                  |                                                                                                                                                                         |
| RRC transaction identifier    | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION RELEASE message.                             |
| Integrity check info          |                                                                                                                                                                         |
| - Message authentication code | Checked to see if it's identical to the value of XMAC-I calculated by the SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | Checked to see if it is present. This number is used by the SS to compute the XMAC-I                                                                                    |
| Error indication              | Not checked                                                                                                                                                             |

# 9.2 Default Message Contents for RF

This clause contains the default values of common messages for RF test. The parameters of the UL/DL reference measurement channel 12.2kbps, the DL reference measurement channel for BTFD, UE test loop mode 1 without Dummy DCCH transmission and UE test loop mode 2 with Dummy DCCH transmission are set to default message contents.

# 9.2.1 Default Message Contents for RF (FDD)

Contents of Activate RB Test Mode message

| Information Element    | Value/remark   |
|------------------------|----------------|
| Protocol discriminator | F (Length 1/2) |
| Skip indicator         | 0 (Length 1/2) |
| Message Type           | 44h            |

Contents of Close UE Test Loop message (UE test loop mode 1 without Dummy DCCH transmission)

| Information Element          | Value/remark    |
|------------------------------|-----------------|
| Protocol discriminator       | F (Length 1/2)  |
| Skip indicator               | 0 (Length 1/2)  |
| Message Type                 | 40h             |
| UE test loop mode            | 00h             |
| UE test loop mode 1 LB setup | 03h 00h F4h 0Ah |

Contents of Close UE Test Loop message (UE test loop mode 2 without Dummy DCCH transmission)

| Information Element    | Value/remark   |
|------------------------|----------------|
| Protocol discriminator | F (Length 1/2) |
| Skip indicator         | 0 (Length 1/2) |
| Message Type           | 40h            |
| UE test loop mode      | 01h            |

#### Contents of Open UE Test Loop message
