#### 6.10.3.4.5.3.2 Physical channel parameters

See clause 6.10.3.4.5.1.2.

# 6.11 Common Radio Bearer configurations for other test purposes

The common radio bearer configurations are used for functional testing of various UE functions. Only common configurations that are used by multiple test cases and are not covered by the reference radio bearer configurations in clause 6.10 are specified in the present clause. Radio bearer configurations only used by a single test case are specified in the actual test case itself.

NOTE If not specifically specified then the mid-value of the RM attribute value range as specified by the actual reference radio bearer configuration shall be applied for testing.

### 6.11.1 Unacknowledged Mode Radio Bearer configuration (7 bit Length Indicator)

This configuration is based on the Interactive or background / UL:8 DL 8 kbps / PS RAB + UL:3.4 DL 3.4 kbps SRBs for DCCH (see TS 34.108 clause 6.10.2.4.1.23a) with the transport channels parameters of the RAB and TFCS defined as follows:

### Transport channel parameters for the Uplink RAB

| Higher<br>layer | RAB/Signalling RB                             | RAB     |
|-----------------|-----------------------------------------------|---------|
| RLC             | Logical channel type                          | DTCH    |
|                 | RLC mode                                      | UM      |
|                 | Payload sizes, bit                            | 328     |
|                 | Max data rate, bps                            | 8200    |
|                 | UMD PDU header, bit                           | 8       |
| MAC             | MAC header, bit                               | 0       |
|                 | MAC multiplexing                              | N/A     |
| Layer 1         | TrCH type                                     | DCH     |
|                 | TB sizes, bit                                 | 336     |
|                 | TFS TF0, bits                                 | 0x336   |
|                 | TF1, bits                                     | 1x336   |
|                 | TTI, ms                                       | 40      |
|                 | Coding type                                   | CC 1/3  |
|                 | CRC, bit                                      | 16      |
|                 | Max number of bits/TTI after channel coding   | 1080    |
|                 | Uplink: Max number of bits/radio frame before | 270     |
|                 | rate matching                                 |         |
|                 | RM attribute                                  | 135-175 |

#### **TFCS**

| TFCS size | 4                                              |
|-----------|------------------------------------------------|
| TFCS      | (8 kbps RAB, DCCH)=                            |
|           | (TF0, TF0), (TF1, TF0), (TF0, TF1), (TF1, TF1) |

#### Transport channel parameters for the Downlink RAB

| Higher<br>layer | RAB/Signalling RB                           | RAB     |
|-----------------|---------------------------------------------|---------|
| RLC             | Logical channel type                        | DTCH    |
|                 | RLC mode                                    | UM      |
|                 | Payload sizes, bit                          | 328     |
|                 | Max data rate, bps                          | 8200    |
|                 | UMD PDU header, bit                         | 8       |
| MAC             | MAC header, bit                             | 0       |

## 6.11.4 Acknowledged Mode Radio Bearer configuration (15 bit Length Indicator)

This configuration is based on the Interactive or background / UL:64 DL 64 kbps / PS RAB + UL:3.4 DL 3.4 kbps SRBs for DCCH (see TS 34.108 clause 6.10.2.4.1.26) with the transport channels parameters of the RAB defined as followed.

#### Transport channel parameters for the Uplink RAB

| Higher<br>layer | RAB/Signalling RB                             | RAB     |
|-----------------|-----------------------------------------------|---------|
| RLC             | Logical channel type                          | DTCH    |
|                 | RLC mode                                      | AM      |
|                 | Payload sizes, bit                            | 1328    |
|                 | Max data rate, bps                            | 66400   |
|                 | AMD PDU header, bit                           | 16      |
| MAC             | MAC header, bit                               | 0       |
|                 | MAC multiplexing                              | N/A     |
| Layer 1         | TrCH type                                     | DCH     |
|                 | TB sizes, bit                                 | 1344    |
|                 | TFS TF0, bits                                 | 0x1344  |
|                 | TF1, bits                                     | 1x1344  |
|                 | TTI, ms                                       | 20      |
|                 | Coding type                                   | TC      |
|                 | CRC, bit                                      | 16      |
|                 | Max number of bits/TTI after channel coding   | 4092    |
|                 | Uplink: Max number of bits/radio frame before | 2046    |
|                 | rate matching                                 |         |
|                 | RM attribute                                  | 130-170 |

#### Transport channel parameters for the Downlink RAB

| Higher<br>layer | RAB/Signalling RB                           | RAB     |
|-----------------|---------------------------------------------|---------|
| RLC             | Logical channel type                        | DTCH    |
|                 | RLC mode                                    | AM      |
|                 | Payload sizes, bit                          | 1328    |
|                 | Max data rate, bps                          | 66400   |
|                 | AMD PDU header, bit                         | 16      |
| MAC             | MAC header, bit                             | 0       |
|                 | MAC multiplexing                            | N/A     |
| Layer 1         | TrCH type                                   | DCH     |
|                 | TB sizes, bit                               | 1344    |
|                 | TFS TF0, bits                               | 0x1344  |
|                 | TF1, bits                                   | 1x1344  |
|                 | TTI, ms                                     | 20      |
|                 | Coding type                                 | TC      |
|                 | CRC, bit                                    | 16      |
|                 | Max number of bits/TTI after channel coding | 4092    |
|                 | RM attribute                                | 130-170 |

## 6.11.5 Reference Radio Bearer configurations used in Radio Bearer testing for 1.28 Mcps TDD

#### 6.11.5.1 RABs and signalling RBs

See clause 6.10.3.1.

#### 6.11.5.2 Combinations of RABs and Signalling RBs

In this document, physical channel parameters for following combinations of RABs and signalling RBs on a CCTrCH are described.

NOTE: It is understood that for speech service the AMR mode may be operated asymmetrically for the uplink and downlink.

#### Combinations on DPCH

- 1) Stand-alone UL:1.7 DL:1.7 kbps SRBs for DCCH.
- 1a) Stand-alone UL:1.7 DL:1.7 kbps SRBs for DCCH (Multiframe)
- 2) Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH.
- 3) Stand-alone UL:13.6 DL:13.6 kbps SRBs for DCCH.
- 4) Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.
- 4a) Conversational / speech / UL:(12.2, 7.95, 5.9, 4.75) DL:(12.2, 7.95, 5.9, 4.75) kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH
- 5) Conversational / speech / UL:10.2 DL:10.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.
- 5a) Conversational / speech / UL:(10.2, 6.7, 5.9, 4.75) DL:(10.2, 6.7, 5.9, 4.75) kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH
- 6) Conversational / speech / UL:7.95 DL:7.95 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.
- 7a) Conversational / speech / UL:(7.4, 6.7, 5.9, 4.75) DL:(7.4, 6.7, 5.9, 4.75)kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH
- 7) Conversational / speech / UL:7.4 DL:7.4 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

# 7 Generic setup procedures

# 7.1 Basic Generic Procedures

# 7.1.1 UE Test States for Basic Generic Procedures

This clause describes a set of procedures for use by test cases in TS 34.123-1. Describing these procedures in a generic manner allows their use in many test cases. By using these procedures, test case descriptions need not detail signalling that is not relevant to its purpose or understanding.

The procedures are based upon default values that are adapted to the most common usage. Test cases that require values different from the default will, when specifying the Basic Generic Procedure, also specify those parameters that are modified.

502

Figure 7.1.1: UE Test States for Basic Generic Procedures

In order that the UE can set up a call in UTRAN, there are a number of procedures to be undertaken in a hierarchical sequence to move between known states. The sequences are shown in figure 7.1.1 and the status of the relevant protocols in the UE in the different states are given in table 7.1.1.

Table 7.1.1: The UE states

|            |                          | RRC       | CC   | MM          | SM       | GMM         |
|------------|--------------------------|-----------|------|-------------|----------|-------------|
| State 1    | Power OFF                |           | null | detached    | inactive | detached    |
| State 2    | CS Registered Idle Mode  | idle      | null | idle        | inactive | detached    |
| State 3    | PS Registered Idle Mode  | idle      | null | detached    | inactive | idle        |
| State BGP4 | RRC Connection           | connected | null | as previous | inactive | as previous |
| State BGP5 | Generic RB Establishment | connected | null | as previous | inactive | as previous |

# 7.1.2 Mobile terminated establishment of Radio Resource Connection

#### 7.1.2.1 Initial conditions

System Simulator:

The system simulator will start from the default idle state. Parameters will the default parameters for a single cell, unless otherwise specified in the test case.

User Equipment:

Unless otherwise specified in the test case, the UE will be in the following state:

- Default test operating conditions.

- The UE shall have followed the generic registration procedure for CS or PS operations, and will be in Idle Mode, Camped-on (State 2 or State 3).

# 7.1.2.2 Definition of system information messages

The default system information messages are used.

## 7.1.2.3 Procedure

- The SS sends a PAGING TYPE 1 message to the UE on the appropriate paging block, and with the IE "Paging record" containing the TMSI or P-TMSI of the UUT.
- The SS receives an RRC CONNECTION REQUEST message from the UE.
- On receipt of the RRC CONNECTION REQUEST the SS shall transmit a RRC CONNECTION SETUP message to the UE. The SS shall wait for the receipt of an RRC CONNECTION SETUP COMPLETE message from the UE.
- On receipt of an RRC CONNECTION SETUP COMPLETE message, the procedure is complete.

| Step | Direction     | Message                              | Comments                  |

# 7.1.2.4.3 RRC CONNECTION SETUP

This message is sent from the SS to the UE using the UM-RLC SAP. The message is sent on the CCCH Logical channel.

The default RRC CONNECTION SETUP message for the transition to connected mode CELL\_DCH is used except for the IE fields specified below.

# 7.1.3 Radio Bearer Setup Procedure

# 7.1.3.1 Initial conditions

The procedure specified in clause 7.1.2 will be run. This procedure starts from the successful completion of clause 7.1.2.

# 7.1.3.2 Definition of system information messages

The default system information messages are used.

# 7.1.3.3 Procedure

- The SS sends a RADIO BEARER SETUP message to the UE on the DCCH established by the RRC Connection Establishment procedure.
- The SS receives a RADIO BEARER SETUP COMPLETE message from the UE in RLC Acknowledged mode on the DCCH.

On receiption of the RADIO BEARER SETUP COMPLETE the procedure is complete.

| Step | Direction     | Message                            | Comments |
|------|---------------|------------------------------------|----------|

# 7.1.3.4 Specific message contents

# 7.1.3.4.1 RADIO BEARER SETUP

The RADIO BEARER SETUP message is sent from the System Simulator to the UE, using AM-RLC on the DCCH logical channel.

The default RRC CONNECTION SETUP message for the setup of a speech radio access bearer is used except for the IE fields specified below.

| Information Element       |                                                                                                                                                                                                                             | Value/Remark       |  |  |

#### 7.1.3.4.2 RADIO BEARER SETUP COMPLETE

The RADIO BEARER SETUP COMPLETE message is sent from the UE to the System Simulator, using AM-RLC on the DCCH logical channel.

The default RADIO BEARER SETUP COMPLETE message is used .

| Information Element | Value/Remark                   |
|---------------------|--------------------------------|
| Message Type        | RADIO BEARER SETUP<br>COMPLETE |
| Use default         |                                |

# 7.2 Generic setup procedures

# 7.2.1 UE Test States for Generic setup procedures

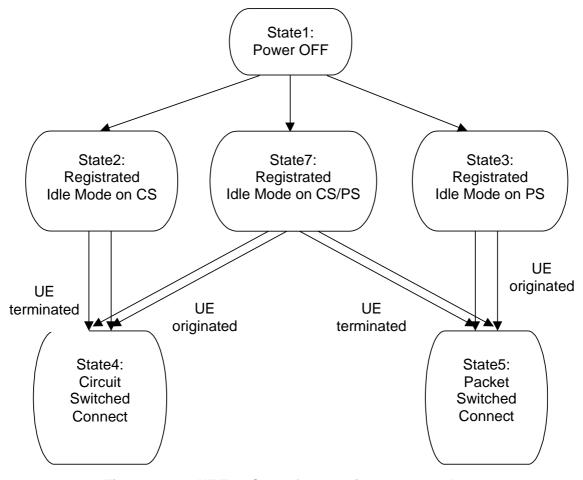

Figure 7.2.1.1: UE Test States for Generic setup procedures

In order that the UE can set up a call in UTRAN, there are a number of procedures to be undertaken in a hierarchical sequence to move between known states. The sequences are shown in figure 7.2.1.1 and the status of the relevant protocols in the UE in the different states are given in table 7.2.1.1.

Table 7.2.1.1: The UE states

|        |                               | RRC       | CC     | MM                     | SM       | GMM                    |
|--------|-------------------------------|-----------|--------|------------------------|----------|------------------------|
| State1 | Power OFF                     |           | null   | detached               | inactive | detached               |
| State2 | Registered Idle Mode on CS    | idle      | null   | idle                   | inactive | detached               |
| State3 | Registered Idle Mode on PS    | idle      | null   | detached               | inactive | idle                   |
| State4 | Circuit Switched Connect      | connected | active | connected              | inactive | same as previous state |
| State5 | Packet Switched Connect       | connected | null   | same as previous state | active   | connected              |
| State7 | Registered Idle Mode on CS/PS | idle      | null   | idle                   | inactive | idle                   |

# 7.2.2 Registration of UE

The default procedures required to achieve the changes of state between State 1, in clause 7.2.1, and States 2, 3 and 7 are illustrated in the following sections.

The choice of which procedure to use given a UE supporting packet services is influenced by the Network Mode of Operation being simulated by the SS and by the Operation Mode of the UE, as described in TS 24.008 [32] clause 1.7.2.2. Table 7.2.2 shows the appropriate clause number for each combination of these two modes of operation.

Table 7.2.2: Registration Procedures for UEs Supporting Packet Services

| Network Mode |       | NMO I   | NMO II  |
|--------------|-------|---------|---------|
|              |       |         |         |
| UE<br>Mode   | PS/CS | 7.2.2.3 | 7.2.2.4 |
| Wiode        | PS    | 7.2.2.2 | 7.2.2.2 |

# 7.2.2.1 Registration on CS

#### 7.2.2.1.1 Initial condition

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

# 7.2.2.1.2 Definition of system information messages

The default system information messages are used.

#### 7.2.2.1.3 Procedure

Registration of UE for SS shall be established under ideal radio conditions as defined in 5. Reference Test Conditions.

| Step | Direction                         | Message                              | Comments     |

| 13   | >         |    | RRC CONNECTION RELEASE COMPLETE       | RRC                           |

# 7.2.2.3.4 Specific message contents

All Specific message contents shall be referred to clause 9 "Default Message Contents of Layer3 Messages for Layer 3 Testing".

# 7.2.2.4 Registration on CS / PS non-combined environment

#### 7.2.2.4.1 Initial condition

System Simulator:

- 1 cell operating in network operation mode II, default parameters.

User Equipment:

- The UE set to Operation mode A

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

# 7.2.2.4.2 Definition of system information messages

The default system information messages are used.

#### 7.2.2.4.3 Procedure

Registration of UE for SS shall be established under ideal radio conditions as defined in 5. Reference Test Conditions.

Registrations in the CS domain and in the PS domain shall execute independently. The separate registration procedures may occur sequentially or in parallel. If the procedures occur sequentially PS domain registration can be started immediately after power on or the UE can initiate PS registration by MMI or by AT command. If MMI or AT commands are used, registrations are done with two separate RRC connections. The procedures for CS and PS registration shall be as defined in clauses 7.2.2.1 and 7.2.2.2.

# 7.2.2.4.4 Specific message contents

All Specific message contents shall be referred to clause 9 "Default Message Contents of Layer3 Messages for Layer3 Testing".

# 7.2.3 Call setup

# 7.2.3.1 Generic call set up procedure for mobile terminating circuit switched calls

#### 7.2.3.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

# 7.2.3.1.2 Definition of system information messages

# 7.2.3.1.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in 5. Reference Test Conditions.

# 7.2.4.1.4 Specific message contents

All Specific message contents shall be referred to clause 9 "Default Message Contents of Layer3 Messages for Layer 3 Testing".

# 7.2.4.2 Generic session set up procedure for mobile originating packet switched sessions

#### 7.2.4.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

# 7.2.4.2.2 Definition of system information messages

#### 7.2.4.2.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in 5. Reference Test Conditions.

| Step | Direction | Message                               | Comments      |
|------|-----------|---------------------------------------|---------------|
|      | UE SS     |                                       |               |
| 1    | <         | SYSTEM INFORMATION (BCCH)             | Broadcast     |
| 2    | >         | RRC CONNECTION REQUEST (CCCH)         | RRC           |
| 3    | <         | RRC CONNECTION SETUP (CCCH)           | RRC           |
| 4    | >         | RRC CONNECTION SETUP COMPLETE (DCCH)  | RRC           |
| 5    | >         | SERVICE REQUEST                       | GMM           |
| 6    | <         | AUTHENTICATION AND CIPHERING REQUEST  | GMM           |
| 7    | >         | AUTHENTICATION AND CIPHERING RESPONSE | GMM           |
| 8    | <         | SECURITY MODE COMMAND                 | RRC           |
| 9    | >         | SECURITY MODE COMPLETE                | RRC           |
| 10   | >         | ACTIVATE PDP CONTEXT REQUEST          | SM            |
| 11   | <         | RADIO BEARER SETUP                    | RRC RAB SETUP |
| 12   | >         | RADIO BEARER SETUP COMPLETE           | RRC           |
| 13   | <         | ACTIVATE PDP CONTEXT ACCEPT           | SM            |

# 7.2.4.2.4 Specific message contents

All Specific message contents shall be referred to clause 9 "Default Message Contents of Layer3 Messages for Layer 3 Testing".

# 7.3 Test procedures for RF test

# 7.3.1 UE Test States for RF testing

In this clause, the states of the UE for the test are defined.

|        |                         | RRC       | CC   | MM       | SM       | GMM      |
|--------|-------------------------|-----------|------|----------|----------|----------|
| State1 | Power OFF               |           | null | detached | inactive | detached |
| State2 | CS Registered Idle Mode | idle      | null | idle     | inactive | detached |
| State3 | PS Registered Idle Mode | idle      | null | detached | inactive | idle     |
| State4 | Test Mode               | connected | null | detached | inactive | detached |

# 7.3.2 Test procedure for TX, RX and Performance Requirement (without handover)

# 7.3.2.1 Initial conditions

System Simulator

- 1cell, default parameters.

User Equipment

The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.

The Test-USIM shall be inserted.

The UE has a valid TMSI (CS) after the execution of the procedure described in 7.2.2.1

The UE has a valid P-TMSI (PS) after the execution of the procedure described in 7.2.2.2

# 7.3.2.2 Definition of system information messages

The default system information messages specified in clause 6.1 are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element                               | Value/remark                    |
|---------------------------------------------------|---------------------------------|
| - CN domain system information                    |                                 |
| - CN domain identity                              | PS                              |
| - CHOICE CN Type                                  | GSM-MAP                         |
| - CN domain specific NAS system information       |                                 |
| - GSM-MAP NAS system information                  | 00 00                           |
| - CN domain specific DRX cycle length coefficient | 7                               |
| - CN domain identity                              | CS                              |
| - CHOICE CN Type                                  | GSM-MAP                         |
| - CN domain specific NAS system information       |                                 |
| - GSM-MAP NAS system information                  | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7                               |
| - UE Timers and constants in connected mode       |                                 |
| - T305                                            | Infinity                        |

# 7.3.2.3 Procedure

# 7.3.2.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

# 7.3.2.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE, used for the UE supporting PS only.

Contents of Attach Accept message: GMM

| Information Element      | Value/remark              |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

#### 7.3.2.4.2 Reference measurement channels

The configurations of the reference measurement channels for RF tests are described in TS 34.121 [2] Annex C for FDD and TS 34.122 [5] Annex C for TDD.

# 7.3.2.4.3 UE test loop mode

The messages in this sub-clause are sent from the SS to the UE, determining the UE test loop mode for the RF tests.

UE test loop mode 1 without DCCH dummy transmission

Default. See clause 9.2.

UE test loop mode 1 with DCCH dummy transmission

Contents of CLOSE UE TEST LOOP: TC

| Information Element | Value/remark                                                            |
|---------------------|-------------------------------------------------------------------------|
| UE test loop mode   | UE test loop mode 1 DCCH dummy transmission set to "enabled". 00000100B |

UE test loop mode 2 without DCCH dummy transmission

Contents of CLOSE UE TEST LOOP: TC

| Information Element | Value/remark                                                             |
|---------------------|--------------------------------------------------------------------------|
| UE test loop mode   | UE test loop mode 2 DCCH dummy transmission set to "disabled". 00000001B |

# 7.3.4 Test procedure for Handover

#### 7.3.4.1 Initial conditions

System Simulator

- Intra-frequency hard handover and soft handover case:
  - 2 cells, default parameters according to Cell 1 and Cell 2 in clause 6.1.4.
- Inter-frequency hard handover case:
  - 2 cells, default parameters according to Cell 1 and Cell 4 in clause 6.1.4.
- Inter-system handover UTRAN FDD to GSM case:
  - 2 cells, default parameters according to Cell 1 and Cell 9 in clause 6.1.4.

#### User Equipment

The UE shall be initially operated under the normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.

The Test-USIM shall be inserted.

The UE has a valid TMSI (CS) after the execution of the procedure described in 7.2.2.1

The UE has a valid P-TMSI (PS) after the execution of the procedure described in 7.2.2.2

# 7.3.4.2 Definition of system information messages

The default system information messages specified in clause 6.1 are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element                               | Value/remark                    |
|---------------------------------------------------|---------------------------------|
| - CN domain system information                    |                                 |
| - CN domain identity                              | PS                              |
| - CHOICE CN Type                                  | GSM-MAP                         |
| - CN domain specific NAS system information       |                                 |
| - GSM-MAP NAS system information                  | 00 00                           |
| - CN domain specific DRX cycle length coefficient | 7                               |
| - CN domain identity                              | CS                              |
| - CHOICE CN Type                                  | GSM-MAP                         |
| - CN domain specific NAS system information       |                                 |
| - GSM-MAP NAS system information                  | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7                               |
| - UE Timers and constants in connected mode       |                                 |
| - T305                                            | Infinity                        |

For the intra-frequency hard handover and soft handover case the default messages for SIB11 and SIB12 as specified for Cell 1 and Cell 2 in clause 6.1.4 are used.

For the inter-frequency hard handover case the default messages for SIB11 and SIB12 as specified for Cell 1 and Cell 4 in clause 6.1.4 are used.

For the inter-system handover from UTRAN FDD to GSM case the default messages for SIB11 and SIB12 as specified for Cell 1 and Cell 9 in clause 6.1.4 are used.

# 7.3.5 Void

# 7.3.6 Test procedure for HSDPA RF Performance Requirement

# 7.3.6.1 Initial conditions

System Simulator

- 1 HS-DSCH cell, default parameters.

User Equipment

The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.

The Test-USIM shall be inserted.

The UE has a valid P-TMSI (PS) after the execution of the procedure described in 7.2.2.2

# 7.3.6.2 Definition of system information messages

The default system information messages specified in clause 6.1 are used with the following exceptions.

# Contents of System information block type 1: RRC

| Information Element                               | Value/remark                    |
|---------------------------------------------------|---------------------------------|
| - CN domain system information                    |                                 |
| - CN domain identity                              | PS                              |
| - CHOICE CN Type                                  | GSM-MAP                         |
| - CN domain specific NAS system information       |                                 |
| - GSM-MAP NAS system information                  | 00 00                           |
| - CN domain specific DRX cycle length coefficient | 7                               |
| - CN domain identity                              | CS                              |
| - CHOICE CN Type                                  | GSM-MAP                         |
| - CN domain specific NAS system information       |                                 |
| - GSM-MAP NAS system information                  | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7                               |
| - UE Timers and constants in connected mode       |                                 |
| - T305                                            | Infinity                        |

# 7.3.6.3 Procedure

| 16   | S <       |    | RRC CONNECTION RELEASE                | RRC                        |
| 17   | 7>        |    | RRC CONNECTION RELEASE COMPLETE       | RRC                        |

# 7.3.6.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

# 7.3.6.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE, used for the UE supporting PS only.

Contents of Attach Accept message: GMM

| Information Element      | Value/remark              |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

#### 7.3.6.4.2 RADIO BEARER SETUP

For step 13, the messages in clause 9.2 titled "Contents of RADIO BEARER SETUP message: AM or UM (HSDPA)" is used.

The configurations of the fixed reference channels for HSDPA RF tests are described in TS 34.121[2] Annex C for FDD and TS 34.122 [5] Annex C for TDD.

# 7.4 Common generic procedures for AS testing

# 7.4.1 UE RRC Test States for common procedures

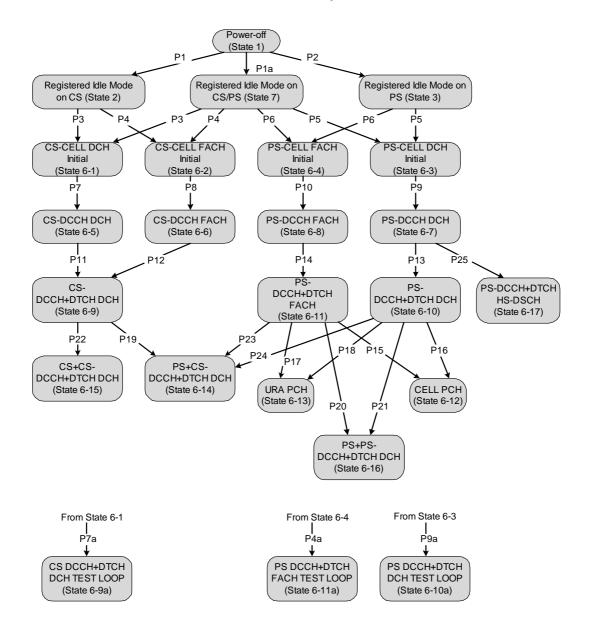

Figure 7.4.1.1: UE RRC test initial states and common procedures

For UE to set up a call in UTRAN, there are a number of procedures to be undertaken in a hierarchical sequence to move between known states. The sequences are shown in figure 7.4.1.1, the operating states for various protocols in the UE are given in table 7.4.1.1.

It is noted that figure 7.4.1.1 should not be construed as a formal state transition diagram, in any manner. The intention here is to define the starting state of UE following the execution of the procedures indicated above.

Table 7.4.1.1: The UE states

|                |                                     | RRC                      | CC        | MM          | SM             | GMM         |
|----------------|-------------------------------------|--------------------------|-----------|-------------|----------------|-------------|
| State 1        | Power OFF                           |                          | Null      | Detached    | Inactive       | Detached    |
| State 2        | Registered Idle Mode on CS          | Idle                     | Null      | ldle        | Inactive       | Detached    |
| State 3        | Registered Idle Mode on PS          | Idle                     | Null      | Detached    | Inactive       | Idle        |
| State 7        | Registered Idle Mode on CS/PS       | Idle                     | Null      | Idle        | Inactive       | Idle        |

State 1, state 2, state 3, P1, P2 and P1a are described in TS34.108 clause 7.2. States 6-X (for X=1 to 17) are described below.

# 7.4.2 Generic Setup Procedure for RRC test cases

# 7.4.2.1 RRC connection establishment procedure for circuit-switched calls (procedure P3 and P4)

# 7.4.2.1.1 Mobile terminating call

#### 7.4.2.1.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters

User Equipment:

- The UE shall be operated under normal test conditions as specified in TS 34.108.
- The Test USIM shall be inserted.

#### 7.4.2.1.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1 of TS 34.108.

#### 7.4.2.1.1.3 Procedure

The Call Set-up procedure shall be performed under ideal radio conditions as defined in clause 5.2 and 6.1 of TS 34.108. Reference Test Conditions.

| Step | Direction |    | Message                              | Comments |
|------|-----------|----|--------------------------------------|----------|
|      | UE SS     |    |                                      |          |
| 1    | <         |    | PAGING TYPE 1 (PCCH)                 | RRC      |
| 2    | >         |    | RRC CONNECTION REQUEST (CCCH)        | RRC      |
| 3    | <         |    | RRC CONNECTION SETUP (CCCH)          | RRC      |
| 4    | >         |    | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC      |
| 5    | -         | -> | PAGING RESPONSE                      | RR       |

# 7.4.2.1.1.4 Specific message contents

To execute procedure P3, all specific message contents shall be referred to clause 9 of TS 34.108.

To execute procedure P4, all specific message contents with the exception of step 3 shall be referred to clause 9 of TS 34.108. For step 3, the message of the same type titled "Transition to CELL\_FACH" in TS 34.108 clause 9 is used.

#### 7.4.2.1.2 Mobile originating calls

# 7.4.2.1.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters

User Equipment:

- The UE shall be operated under normal test conditions as specified in TS 34.108.
- The Test USIM shall be inserted.

#### 7.4.2.1.2.2 Definition of system information messages

The default system information messages specified in clause 6.1 of TS 34.108 are used.

#### 7.4.2.1.2.3 Procedure

The Call Set-up procedure shall be performed under ideal radio conditions as defined in clause 5.2 and 6.1 of TS 34.108. Reference Test Conditions.

| Step | Direction | Message                              | Comments |
|------|-----------|--------------------------------------|----------|
|      | UE SS     | 7                                    |          |
| 1    | >         | RRC CONNECTION REQUEST (CCCH)        | RRC      |
| 2    | <         | RRC CONNECTION SETUP (CCCH)          | RRC      |
| 3    | >         | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC      |
| 4    | >         | CM SERVICE REQUEST                   | MM       |

# 7.4.2.1.2.4 Specific message contents

To execute procedure P3, all specific message contents shall be referred to clause 9 of TS 34.108.

To execute procedure P4, all specific message contents with the exception of step 2 shall be referred to clause 9 of TS 34.108. For step 2, the message of the same type titled "Transition to CELL\_FACH" in TS 34.108 clause 9 is used.

# 7.4.2.2 RRC connection establishment procedure for packet switched sessions (procedure P5 and P6)

## 7.4.2.2.1 Mobile terminating session

#### 7.4.2.2.1.1 Initial conditions

**System Simulator:** 

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions as specified in TS 34.108.
- The Test USIM shall be inserted.

#### 7.4.2.2.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1 of TS 34.108.

#### 7.4.2.2.1.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.2 and 6.1 of TS 34.108. Reference Test Conditions.

| Step | Direction |    | Message                              | Comments |
|------|-----------|----|--------------------------------------|----------|
|      | UE SS     |    |                                      |          |
| 1    | <         |    | PAGING TYPE1 (PCCH)                  | Paging   |

| 5    | <         | ACTIVATE RB TEST MODE (DCCH)          | TC                            |
| 6    | >         | ACTIVATE RB TEST MODE COMPLETE (DCCH) | TC                            |
| 1    | <         | RADIO BEARER SETUP                    | RRC RAB SETUP                 |
| 2    | >         | RADIO BEARER SETUP COMPLETE           | RRC                           |
| 14   | <         | CLOSE UE TEST LOOP (DCCH)             | TC                            |
|      |           |                                       | UE test mode 1                |
|      |           |                                       | RLC SDU size set as specified |
|      |           |                                       | for the actual test case.     |
| 15   | >         | CLOSE UE TEST LOOP COMPLETE (DCCH)    | TC                            |

#### 7.4.2.5a.4 Specific message contents

To execute procedure P7a, use the message titled "CS speech" (defined in clause 9 of TS 34.108) for the message in step 1.

# 7.4.2.6 Radio access bearer establishment procedure for packet switched sessions (procedure P13, P14 and P25)

# 7.4.2.6.1 Mobile terminating session

#### 7.4.2.6.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-7 or state 6-8.
- The Test USIM shall be inserted.

#### 7.4.2.6.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1 of TS 34.108.

#### 7.4.2.6.1.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.2 and 6.1 of TS 34.108. Reference Test Conditions.

| Step | Direction |    | Message                     | Comments      |
|------|-----------|----|-----------------------------|---------------|
|      | UE        | SS |                             |               |
| 1    | ·         | <  | RADIO BEARER SETUP          | RRC RAB SETUP |
| 2    | >         |    | RADIO BEARER SETUP COMPLETE | RRC           |
| 3    | <         |    | ACTIVATE PDP CONTEXT ACCEPT | SM            |

# 7.4.2.6.1.4 Specific message contents

For step 1, the messages in clause 9 of TS 34.108 are used. To execute procedure P13, use the message titled "Packet to CELL\_DCH from CELL\_DCH in PS". To execute procedure P14, use the message titled "Packet to CELL\_FACH from CELL\_FACH in PS". To execute procedure P25, use the message titled "Packet to CELL\_DCH / HS-DSCH from CELL\_DCH in PS".

# 7.4.2.6.2 Mobile originating sessions

#### 7.4.2.6.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-7 or state 6-8.
- The Test USIM shall be inserted.

#### 7.4.2.6.2.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1 of TS 34.108.

#### 7.4.2.6.2.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.2 and 6.1 of TS 34.108. Reference Test Conditions.

| Step | Direction |    | Message                     | Comments      |
|------|-----------|----|-----------------------------|---------------|
|      | UE        | SS |                             |               |
| 1    | ·         | <  | RADIO BEARER SETUP          | RRC RAB SETUP |
| 2    | >         |    | RADIO BEARER SETUP COMPLETE | RRC           |
| 3    | <         |    | ACTIVATE PDP CONTEXT ACCEPT | SM            |

#### 7.4.2.6.2.4 Specific message contents

For step 1, the messages in clause 9 of TS 34.108 are used. To execute procedure P13, use the message titled "Packet to CELL\_DCH from CELL\_DCH in PS". To execute procedure P14, use the message titled "Packet to CELL\_FACH from CELL\_FACH in PS". To execute procedure P25, use the message titled "Packet to CELL\_DCH / HS-DSCH from CELL\_DCH in PS".

# 7.4.2.6a Test loop activation and radio access bearer establishment procedure for packet switched sessions (procedure P13a)

# 7.4.2.6a.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-3 or state 6-4.
- The Test USIM shall be inserted.

#### 7.4.2.6a.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1 of TS 34.108.

#### 7.4.2.6a.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.2 and 6.1 of TS 34.108. Reference Test Conditions.

| Step | Direction | Message                               | Comments                      |
|------|-----------|---------------------------------------|-------------------------------|
|      | UE SS     |                                       |                               |

### 8 Test USIM Parameters

### 8.1 Introduction

This clause defines default parameters for programming the elementary files of the test USIM. The requirements of this clause do not apply to the USIM/ME tests of 3GPP TS 31.120 and 3GPP TS31.121.

#### 8.1.1 Definitions

#### "Test USIM card":

A USIM card supporting the test algorithm for authentication, programmed with the parameters defined in this clause. The electrical, mechanical and environmental requirements of the test USIM card are specified in TS 31.101 and TS 31.102.

### "Test USIM":

Either a test USIM card or the USIM simulator programmed with the parameters defined in this clause.

### 8.1.2 Definition of the test algorithm for authentication

In order to be able to easily test the UMTS authentication and key agreement procedure as specified in TS 33.102 [24] and TS 33.105 [26] along the whole system, the availability of a test algorithm for generation of authentication vector based on quintets is needed (in GSM triplets was used). Additionally, calculation of the parameters for resynchronisation requests is needed. The definition of the test algorithm are the functions f1, f2, f3, f4, f5 and the corresponding functions for re-synchronization are f1\* and f5\*.

For test USIM intended to be used for inter-RAT test cases then the test USIM shall support the conversion function c3 according to TS 33.102 [24] clause 6.8.1.2 to derive the GSM ciphering key Kc from the UMTS cipher/integrity keys CK and IK.

The test algorithm defined in the present clause shall be implemented in test USIM cards as well in test USIM simulators and SS. The test algorithm may also, for test purposes, be implemented in AUC.

The following procedure employs bit wise modulo 2 addition ("XOR").

The following convention applies:

All data variables in the specification of this test algorithm are presented with the most significant substring on the left hand side and the least significant substring on the right hand side. A substring may be a bit, byte or other arbitrary length bitstring. Where a variable is broken down into a number of substrings, the leftmost (most significant) substring is numbered 0, the next most significant is numbered 1, and so on through to the least significant.

### 8.1.2.1 Authentication and key derivation in the test USIM and SS

The following steps describe sequence of operations for the functions f1, f2, f3, f4 and f5 to perform in the test USIM and SS, in order to obtain the XMAC/MAC, RES/XRES, CK, IK, Kc and AK respectively, to be used in the authentication and key agreement procedure.

#### Step 1:

XOR to the challenge **RAND**, a predefined number **K** (in which at least one bit is not zero, see 8.2), having the same bit length (128 bits) as **RAND**.

The result **XDOUT** of this is:

```
XDOUT[bits 0,1, \dots 126,127] = K [bits 0,1, \dots 126,127] XOR RAND[bits 0,1, \dots 126,127]
```

#### Step 2:

**RES** (test USIM), **XRES** (SS), **CK**, **IK** and **AK** are extracted from **XDOUT** this way:

```
RES[bits 0,1, ... n-1, n] = f2(XDOUT,n) = XDOUT[bits 0,1, ... n-1, n] (with 30 < n < 128)
```

NOTE: Suggested length for RES is 128 bits (i.e. n = 127). In SS and AUC, the XRES calculation is identical to RES.

```
CK[bits 0,1,...126,127] = f3(XDOUT) = XDOUT[bits 8,9,...126,127,0,1,...6,7]
```

$$IK[bits 0,1,...126,127] = f4(XDOUT) = XDOUT[bits 16,17,...126,127,0,1,...14,15]$$

```
\mathbf{AK}[\text{bits } 0,1,\ldots 46,47] \hspace{0.5cm} = \hspace{0.5cm} \mathbf{f4}(\mathbf{XDOUT}) \hspace{0.5cm} = \hspace{0.5cm} \mathbf{XDOUT}[\text{bits } 24,25,\ldots 70,71]
```

For test USIM intended for inter-RAT testing the GSM ciphering key Kc shall be derived from the UMTS cipher/integrity keys:

```
Kc[bits 0,1,...62,63] = c3(CK,IK), see TS 33.102 clause 6.8.1.2
```

#### Step 3:

Concatenate **SQN** with **AMF** to obtain **CDOUT** like this:

```
CDOUT[bits 0,1,...62,63] = SQN[bits 0,1,...46,47] || AMF[bits 0,1,...14,15]
```

NOTE: For test USIM the  $\mathbf{SQN} = \mathbf{SQN_{MS}} = \mathbf{SQN_{SS}}$  [bits 0,1,...46,47] =  $\mathbf{AUTN}$  [bits 0,1,...46,47] XOR  $\mathbf{AK}$  [bits 0,1,...46,47] where AUTN is the received authentication token.

#### Step 4:

XMAC (test USIM) and MAC (SS) are calculated from XDOUT and CDOUT this way:

**XMAC**[bits  $0,1,\ldots.62,63$ ] =  $\mathbf{f1}(\mathbf{XDOUT},\mathbf{CDOUT})$  =  $\mathbf{XDOUT}$ [bits  $0,1\ldots.62,63$ ] XOR  $\mathbf{CDOUT}$ [bits  $0,1,\ldots.62,63$ ]

NOTE: In SS and AUC, the MAC calculation is identical to XMAC

#### Step 5:

The SS calculates the authentication token AUTN:

**AUTN**[bits 0,1,..126,127] = **SQN** 
$$\oplus$$
 **AK**[bits 0,1,...46,47] || **AMF**[bits 0,1,...14,15] || **MAC**[bits 0,1,...62, 63] Where **SQN**  $\oplus$  **AK**[bits 0,1,...46,47] = **SQN**[bits 0,1,...46,47] XOR **AK**[bits 0,1,...46,47]

### 8.1.2.2 Generation of re-synchronisation parameters in the USIM

For SS to be able to initiate an authentication re-synchronisation procedure a specific AMF value has been defined.

$$AMF_{RESYNCH} = AMF[bits 0,1,...14,15] = "1111 1111 1111 1111"$$

When the test USIM receives an authentication token (AUTN) having the value of AMF field equal to the AMF<sub>RESYNCH</sub> value then the test USIM shall initiate the re-synchronisation procedure.

When the test USIM starts the re-synchronisation procedure, the MAC-S and AK have to be calculated using the functions f1\* and f5\*, which in the test algorithm are identical to f1 and f5, respectively.

#### Step 1:

XOR to the challenge **RAND**, a predefined number **K** (in which at least one bit is not zero, see 8.2), having the same bit length (128 bits) as **RAND**.

The result **XDOUT** of this is:

### Step 2:

AK is extracted from XDOUT this way:

$$AK[bits 0,1,...46,47] = f5*(XDOUT) = XDOUT[bits 24,25,...70,71]$$

#### Step 3:

Concatenate  $SQN_{MS}$  with  $AMF^*$  to obtain CDOUT like this:

**CDOUT**[bits 0,1,...62,63] = **SQN**<sub>MS</sub>[bits 0,1,...46,47] 
$$\parallel$$
 **AMF**\*[bits 0,1,...14,15]

Where AMF\* assumes a dummy value of all zeros

NOTE: For test USIM the  $\mathbf{SQN_{MS}} = \mathbf{SQN_{SS}}[\text{bits } 0,1,\dots46,47] = \mathbf{AUTN}[\text{bits } 0,1,\dots46,47] \text{ XOR } \mathbf{AK}[\text{bits } 0,1,\dots46,47] \text{ where AUTN is the received authentication token.}$ 

For SS and AUC the  $\mathbf{SQN_{MS}} = \mathbf{AUTS}[\text{bits } 0,1,\dots46,47] \text{ XOR } \mathbf{AK}[\text{bits } 0,1,\dots46,47] \text{ where AUTS is the received re-synchronisation parameter.}$ 

#### Step 4:

MAC-S is calculated from XDOUT and CDOUT this way:

```
MAC-S[bits 0,1, . . .62, 63] = f1*(XDOUT, CDOUT) = XDOUT[bits 0,1. . .62,63] XOR CDOUT[bits 0,1, . . .62,63]
```

NOTE: In SS and AUC, the XMAC-S calculation is identical to MAC-S.

#### Step 5:

The test USIM calculates the re-synchronisation parameter **AUTS**:

**AUTS**[bits 0,1,..110,111] =  $\mathbf{SQN_{MS}} \oplus \mathbf{AK}$ [bits 0,1,...46,47]  $\parallel \mathbf{MAC-S}$ [bits 0,1,...62, 63]

Where  $\mathbf{SQN_{MS}} \oplus \mathbf{AK}[\text{bits } 0,1,\dots46,47] = \mathbf{SQN_{MS}}[\text{bits } 0,1,\dots46,47] \text{ XOR } \mathbf{AK}[\text{bits } 0,1,\dots46,47]$ 

#### 8.1.2.3 Using the authentication test algorithm for UE conformance testing

#### 8.1.2.3.1 Authentication accept case

The authentication accept case is illustrated in figure 8.1.2.3.1 and 8.1.2.3.2.

The SS calculates the authentication token AUTN according to the test algorithm as specified in clause 8.1.2.1 (step 1 to 5) using an AMF value different from the AMF<sub>RESYNCH</sub> value.

The SS sends an authentication request, including RAND and AUTN parameters, to the ME/USIM.

Based on the received RAND parameter the test USIM calculates the RES, CK, IK, Kc and XMAC parameters according to clause 8.1.2.1 (step 1 to 4). The test USIM extracts the  $SQN_{MS} = SQN_{SS}$ , AMF and MAC parameters from the received authentication token AUTN.

The test USIM checks that XMAC = MAC and then return the RES, CK and IK parameters to the ME.

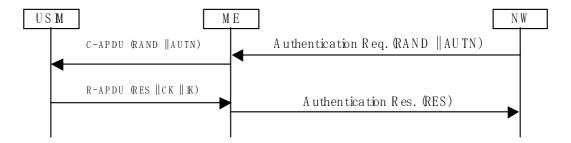

Figure 8.1.2.3.1: Network accepted by UE (USIM not supporting derivation of GSM cipher key Kc)

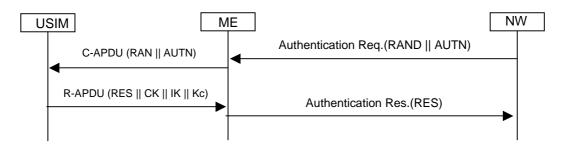

Figure 8.1.2.3.2: Network accepted by UE (USIM supporting derivation of GSM cipher key Kc)

#### 8.1.2.3.2 MAC failure case

The MAC failure case is illustrated in figure 8.1.2.3.2.

The SS calculates the authentication token AUTN according to the test algorithm as specified in clause 8.1.2.1 (step 1 to 5) using an AMF value different from the AMF<sub>RESYNCH</sub> value and a MAC value different from what is calculated in clause 8.1.2.1 step 4.

The SS sends an authentication request, including RAND and AUTN parameters, to the ME/USIM.

Based on the received RAND parameter The test USIM calculates the RES, CK, IK, Kc and XMAC parameters according to clause 8.1.2.1 (step 1 to 4).

The test USIM extracts the  $SQN_{MS} = SQN_{SS}$ , AMF and MAC parameters from the received authentication token AUTN.

When the test USIM identifies that the calculated XMAC value is different from the MAC value received in AUTN then the USIM notifies the ME of the MAC failure and the ME sends an AUTENTICATION FAILURE message to the SS (cause "MAC failure").

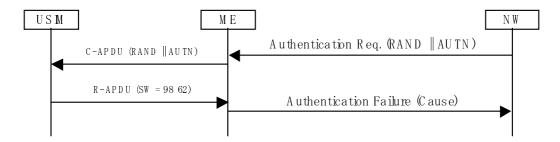

Figure 8.1.2.3.2: MAC failure cases

#### 8.1.2.3.3 SQN failure case

The SQN failure case is illustrated in figure 8.1.2.3.3.

The SS calculates the authentication token AUTN according to the test algorithm as specified in clause 8.1.2.1 (step 1 to 5) using an AMF value equal to AMF<sub>RESYNCH</sub>.

The SS sends an authentication request, including RAND and AUTN parameters, to the UE/USIM.

The test USIM extracts the  $SQN_{MS} = SQN_{SS}$ , AMF and MAC parameters from the received authentication token AUTN.

When the test USIM identifies that the AMF field is equal to the AMF<sub>RESYNCH</sub> value it calculates the re-synchronisation parameter AUTS as specified in clause 8.1.2.2 (step 1 to 5) and forward it to the ME.

The ME sends an AUTHENTICATION FAILURE message to the SS including the AUTS parameter.

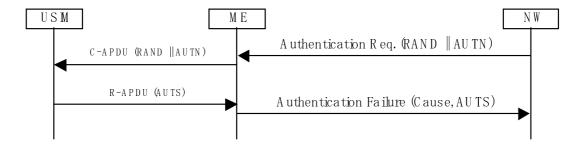

Figure 8.1.2.3.3: SQN failure case

### 8.2 Default Parameters for the test USIM

K:

Size: 16 Bytes

Default values: Bytes 1 (HEX): 00

Bytes 2 (HEX): 01 Bytes 3 (HEX): 02 Bytes 4 (HEX): 03 Bytes 5 (HEX): 04

Bytes 6 (HEX): 05

Bytes 7 (HEX): 06

Bytes 8 (HEX): 07

Bytes 9 (HEX): 08

Bytes 10 (HEX): 09

Bytes 11 (HEX): 0A

Bytes 12 (HEX): 0B

Bytes 13 (HEX): 0C

Bytes 14 (HEX): 0D

Bytes 15 (HEX): 0E

Bytes 16 (HEX): 0F

### PIN Disabling:

The PIN enabled / disabled flag will be set to "PIN Disabled". This ensures that when the Test USIM is inserted into a UE the user will not be prompted for PIN entry.

# 8.3 Default settings for the Elementary Files (EFs)

The format and coding of elementary files of the USIM are defined in TS31.101 and TS31.102. The following clauses define the default parameters to be programmed into each elementary file. Some files may be updated by the UE based on information received from the SS. These are identified in the following clauses.

If EFs have an unassigned value, it may not be clear from the main text what this value should be. This clause suggests values in these cases.

### 8.3.1 Contents of the EFs at the MF level

### 8.3.1.1 EF<sub>DIR</sub>

### 8.3.1.2 EF<sub>ICCID</sub> (ICC Identity)

The programming of this EF is a test house option.

#### 8.3.1.3 EF<sub>PI</sub> (Preferred Languages)

The programming of this EF follows default parameter written in TS31.102 Annex E.

### 8.3.1.4 EF<sub>ARR</sub> (Access rule reference)

The programming of this EF is a test house option.

### 8.3.2 Contents of files at the USIM ADF (Application DF) level

### 8.3.2.1 $EF_{II}$ (Language Indication)

The programming of this EF follows default parameter written in TS31.102 Annex E.

### 8.3.2.2 EF<sub>IMSI</sub> (IMSI)

The IMSI value will be chosen by the test house. The IMSI used by the SS will align this value.

File size: 9 bytes

Default values: Byte 1 (DEC): 8

Bytes 2-9 (HEX):09 10 10 \*\* \*\* \*\* \*\*

"\*" indicates any number between 0 and 9 subject to the restriction that IMSI mod 1000 (i.e. bytes 7, 8 and 9) lies in one of the following ranges:

063-125, 189-251, 315-377, 441-503, 567-629, 693-755, 819-881 or 945-999

NOTE: This ensures that the UE can listen to the second CCCH when more than one basic physical channel is configured for the CCCH. This is necessary for the test of "paging re-organization".

### 8.3.2.3 EF<sub>Keys</sub> (Ciphering and Integrity Keys)

The programming of this EF follows default parameter written in TS31.102 Annex E.

### 8.3.2.4 EF<sub>KevsPS</sub> (Ciphering and Integrity Keys for Packet Switched domain)

The programming of this EF follows default parameter written in TS31.102 Annex E.

### 8.3.2.5 EF<sub>PLMNwAcT</sub> (User controlled PLMN selector with Access Technology)

File size: 5n bytes

Default values (HEX): Bytes 1-3: 32 F4 10 (MCC, MNC) - Translates to 234, 01

Bytes 4-5: 80 00 (Access Technology) – Translates to UTRAN

Bytes 6-8: 32 F4 20 (MCC, MNC)

Bytes 9-10: 80 00 (Access Technology)

Bytes 11-13: 32 F4 30 (MCC, MNC)

••••

••••

Bytes(5n-4) - (5n-2): 32 F4 43 (MCC, MNC)

Bytes (5n-1) - 5n: 80 00 (Access Technology)

PLMNs are shown coded above since this is the largest number required for a test. It is necessary to take this into account since the USIM cards must be dimensioned to cope with this number of records.

### 8.3.2.6 EF<sub>HPI MN</sub> (HPLMN search period)

File size: 1 byte

Default value (HEX): 00 (no HPLMN search attempts)

### 8.3.2.7 EF<sub>ACMmax</sub> (ACM maximum value)

File size: 3 bytes

Default: Byte 1: 00

Byte 2: 00

Byte 3: 00

The above translates to: "Not valid".

# 8.3.2.8 EF<sub>UST</sub> (USIM Service Table)

Services will be allocated and activated as follows:

| Services                                            |                                                          | Activated |
|-----------------------------------------------------|----------------------------------------------------------|-----------|
| Service n°1:                                        | Local Phone Book                                         | Option    |
| Service n°2 :                                       | Fixed Dialling Numbers (FDN) Option                      |           |
| Service n°3 :                                       | Extension 2                                              | Option    |
| Service n°4 :                                       | Service Dialling Numbers (SDN)                           | Option    |
| Service n°5 :                                       | Extension3                                               | Option    |
| Service n°6 :                                       | Barred Dialling Numbers (BDN)                            | Option    |
| Service n°7 :                                       | Extension4                                               | Option    |
| Service n°8 :                                       | Outgoing Call Information (OCI and OCT)                  | Option    |
| Service n°9 :                                       | Incoming Call Information (ICI and ICT)                  | Option    |
| Service n°10:                                       | Short Message Storage (SMS)                              | Yes       |
| Service n°11:                                       | Short Message Status Reports (SMSR)                      | Option    |
| Service n°12:                                       | Short Message Service Parameters (SMSP)                  | Yes       |
| Service n°13:                                       | Advice of Charge (AoC)                                   | Yes       |
| Service n°14:                                       | Capability Configuration Parameters (CCP)                | Yes       |
| Service n°15:                                       | Cell Broadcast Message Identifier                        | Yes       |
| Service n°16:                                       | Cell Broadcast Message Identifier Ranges                 | Yes       |
| Service n°17:                                       | Group Identifier Level 1                                 | Option    |
| Service n°18:                                       | Group Identifier Level 2                                 | Option    |
| Service n°19:                                       | Service Provider Name                                    | Option    |
|                                                     |                                                          | Yes       |
| Service n°21:                                       | 0.                                                       |           |
| Service n°22:                                       | ice n°22: Image (IMG) Option                             |           |
| Service n°23:                                       |                                                          |           |
| Service n°24:                                       |                                                          |           |
| Service n°25:                                       |                                                          |           |
| Service n°26:                                       |                                                          |           |
| Service n°27:                                       |                                                          |           |
| Service n°28: Data download via SMS-PP Option       |                                                          | Option    |
| Service n°29:                                       | Data download via SMS-CB                                 | Option    |
| Service n°30:                                       | Call Control by USIM                                     | Option    |
| Service n°31:                                       | MO-SMS Control by USIM                                   | Option    |
| Service n°32:                                       | RUN AT COMMAND command                                   | Option    |
| Service n°33:                                       | Packet Switched Domain                                   | Yes       |
| Service n°34:                                       | Enabled Services Table                                   | Yes       |
| Service n°35:                                       | APN Control List (ACL)                                   | Option    |
| Service n°36: Depersonalisation Control Keys Option |                                                          |           |
| Service n°37:                                       |                                                          |           |
| Service n°38:                                       | GSM security context                                     | Yes       |

| Service n°43                                        | HPLMN selector with Access Technology                    | Yes       |

# 8.3.2.9 EF<sub>ACM</sub> (Accumulated Call Meter)

File size: 3 bytes

Default: Byte 1: 00

Byte 2: 00

Byte 3: 00

The above translates to: "Not yet implemented".

### 8.3.2.10 EF<sub>GID1</sub> (Group Identifier Level 1)

The programming of this EF is a test house option.

### 8.3.2.11 EF<sub>GID2</sub> (Group Identifier Level 2)

The programming of this EF is a test house option.

### 8.3.2.12 EF<sub>SPN</sub> (Service Provider Name)

The programming of this EF is a test house option.

### 8.3.2.13 EF<sub>PUCT</sub> (Price per Unit and Currency Table)

The programming of this EF follows default parameter written in TS31.102 Annex E.

### 8.3.2.14 EF<sub>CBMI</sub> (Cell Broadcast Message identifier selection)

The programming of this EF is a test house option.

The file size is 2n bytes, where n is the number of Cell broadcast message identifier records - each record defining a type of Cell Broadcast message which may be accessed by the UE. Care should be taken when dimensioning the USIM to take into account the number of Cell Broadcast message identifier records required.

### 8.3.2.15 EF<sub>ACC</sub> (Access Control Class)

The EFACC can be selected by a test house in two types.

Type A;

File size: 2 Bytes

Default values (BIN): Byte 1: 000000\*\*

Byte 2: \*\*\*\*\*\*

The test house may set any single bit shown by "\*" to "1". All remaining bits of byte 2 will be set to "0". This determines the access control class of the USIM.

Type B;

Default values (BIN): Byte 1: 111110\*\*

Byte 2: \*\*\*\*\*\*

The test house may set any single bit shown by "\*" to "1". All remaining bits of byte 2 will be set to "0". This determines the access control class of the USIM.

### 8.3.2.16 EF<sub>FPLMN</sub> (Forbidden PLMNs)

The programming of this EF follows default parameter written in TS31.102 Annex E.

### 8.3.2.17 EF<sub>LOCI</sub> (Location Information)

File size: 11 Bytes

Default values: Bytes 1-4 (HEX): FF FF FF (TMSI)

Bytes 5-9 (HEX): 42 F6 18 FF FE (LAI)

Byte 10 (HEX): FF (RFU)

Byte 11 (BIN): 00000001 (Location Update Status = "not updated")

Bytes 5-9: LAI-MCC = 246 (bytes 5-6) and LAI-MNC = 81 (byte 7) are frequently used. The LAC (bytes 8-9) is set to "FF FE" since this, in conjunction with byte 11 setting of "01", is used to ensure that the UE performs a location update at the beginning of a test.

Bytes in this file (e.g. TMSI in bytes 1-4) may be updated as a result of a location update attempt by the UE.

### 8.3.2.18 EF<sub>AD</sub> (Administrative Data)

File size: 4 bytes

Default values Byte 1: 10000000 - (type approval operations)

Byte 2: 000000000

Byte 3: 000000000

Byte 4: 00000010

### 8.3.2.19 Void

### 8.3.2.20 EF<sub>CBMID</sub> (Cell Broadcast Message Identifier for Data Download)

The programming of this EF follows default parameter written in TS31.102 Annex E.

#### 8.3.2.21 EF<sub>FCC</sub> (Emergency Call Codes)

The programming of this EF is a test house option.

### 8.3.2.22 EF<sub>CBMIR</sub> (Cell Broadcast Message Identifier Range selection)

The programming of this EF follows default parameter written in TS31.102 Annex E.

### 8.3.2.23 EF<sub>PSI OCI</sub> (Packet Switched location information)

File size: 14 Bytes

Default values: Bytes 1-4 (HEX): FF FF FF (P-TMSI)

Bytes 5-7 (HEX): FF FF FF (P-TMSI signature value)

Bytes 8-13 (HEX): 42 F6 18 FF FE FF (RAI)

Byte 14 (BIN): 00000001 (Routing Area update status = "not updated")

Bytes 8-13: RAI-MCC = 246 (bytes 8-9) and RAI-MNC = 81 (byte 10) are frequently used. The LAC (bytes 11-12) is set to "FF FE" since this, in conjunction with byte 14 setting of "01", is used to ensure that the UE performs a location update at the beginning of a test.

Bytes in this file (e.g. P-TMSI in bytes 1-4) may be updated as a result of a location update attempt by the UE.

### 8.3.2.24 EF<sub>FDN</sub> (Fixed Dialling Numbers)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.25 EF<sub>SMS</sub> (Short messages)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.26 EF<sub>MSISDN</sub> (MSISDN)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.27 EF<sub>SMSP</sub> (Short message service parameters)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.28 $EF_{SMSS}$ (SMS status)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.29 EF<sub>SDN</sub> (Service Dialling Numbers)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.30 $EF_{EXT2}$ (Extension2)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.31 $EF_{EXT3}$ (Extension3)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.32 EF<sub>SMSR</sub> (Short message status reports)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.33 EF<sub>ICI</sub> (Incoming Call Information)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.34 EF<sub>OCI</sub> (Outgoing Call Information)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.35 EF<sub>ICT</sub> (Incoming Call Timer)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.36 EF<sub>OCT</sub> (Outgoing Call Timer)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.37 $EF_{EXT5}$ (Extension5)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.38 EF<sub>CCP2</sub> (Capability Configuration Parameters 2)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.39 EF<sub>eMLPP</sub> (enhanced Multi Level Precedence and Pre-emption)

The programming of this EF is a test house option.

### 8.3.2.40 EF<sub>AAeM</sub> (Automatic Answer for eMLPP Service)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.41 EF<sub>GMSI</sub> (Group Identity)

This clause is expected to be defined in the release 2000 version of the present document.

### 8.3.2.42 EF<sub>Hiddenkev</sub> (Key for hidden phone book entries)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.43 Void

### 8.3.2.44 EF<sub>BDN</sub> (Barred dialling numbers)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.45 $EF_{EXT4}$ (Extension 4)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.46 EF<sub>CMI</sub> (Comparison method information)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.47 EF<sub>FST</sub> (Enabled service table)

The programming of this EF is a test house option.

### 8.3.2.48 EF<sub>ACI</sub> (Access point name control list)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.49 EF<sub>DCK</sub> (Depersonalisation control keys)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.50 EF<sub>CNL</sub> (Co-operative network list)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.51 EF<sub>START-HFN</sub> (Initialisation values for Hyperframe number)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.52 EF<sub>THRESHOLD</sub> (Maximum value of START)

The programming of this EF is a test house option.

### 8.3.2.53 EF<sub>OPLMNsel</sub> (OPLMN selector)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.54 EF<sub>PHPI MNAT</sub> (Preferred HPLMN Access Technology)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.2.55 EF<sub>ARR</sub> (Access rule reference)

The programming of this EF is a test house option.

8.3.2.56 Void

### 8.3.2.57 EF<sub>NETPAR</sub> (Network Parameters)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3 Contents of DFs at the USIM ADF (Application DF) level

### 8.3.3.1 Contents of files at the USIM SoLSA level

### 8.3.3.1.1 EF<sub>SAI</sub> (SoLSA Access Indicator)

This clause is expected to be defined in the release 2000 version of the present document.

### 8.3.3.1.2 EF<sub>SLL</sub> (SoLSA LSA List)

This clause is expected to be defined in the release 2000 version of the present document.

#### 8.3.3.1.3 LSA Descriptor files

This clause is expected to be defined in the release 2000 version of the present document.

### 8.3.3.1.4 Contents of files at the MExE level

### 8.3.3.1.4.1 EF<sub>MExE-ST</sub> (MExE Service table)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.1.4.2 EF<sub>ORPK</sub> (Operator Root Public Key)

The programming of this EF follows default parameter written in TS 31.102 annex E.

#### 8.3.3.1.4.3 EF<sub>ARPK</sub> (Administrator Root Public Key)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.1.4.4 EF<sub>TPRPK</sub> (Third Party Root Public Key)

The programming of this EF follows default parameter written in TS 31.102 annex E.

#### 8.3.3.1.4.5 EF<sub>TKCDF</sub> (Trusted Key/Certificates Data Files)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2 Contents of files at the DF PHONEBOOK level

### 8.3.3.2.1 EF<sub>PBR</sub> (Phone Book Reference file)

The programming of this EF is a test house option.

### 8.3.3.2.2 EF<sub>IAP</sub> (Index Administration Phone book)

The programming of this EF follows default parameter written in TS 31.102 annex E.

#### 8.3.3.2.3 EF<sub>ADN</sub> (Abbreviated dialling numbers)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.4 $EF_{EXT1}$ (Extension1)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.5 EF<sub>PBC</sub> (Phone Book Control)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.6 EF<sub>GRP</sub> (Grouping file)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.7 EF<sub>AAS</sub> (Additional number Alpha String)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.8 EF<sub>GAS</sub> (Grouping information Alpha String)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.9 EF<sub>ANR</sub> (Additional Number)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.10 EF<sub>SNE</sub> (Second Name Entry)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.11 EF<sub>CCP1</sub> (Capability Configuration Parameters 1)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.12 Phone Book Synchronisation

#### 8.3.3.2.12.1 EF<sub>UID</sub> (Unique Identifier)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.3.2.12.2 EF<sub>PSC</sub> (Phone book Synchronisation Counter)

The programming of this EF follows default parameter written in TS 31.102 annex E.

8.3.3.2.12.3 EF<sub>CC</sub> (Change Counter)

The programming of this EF follows default parameter written in TS 31.102 annex E.

8.3.3.2.12.4 EF<sub>PUID</sub> (Previous Unique Identifier)

The programming of this EF follows default parameter written in TS 31.102 annex E.

8.3.3.2.13 EF<sub>EMAIL</sub> (e-mail address)

The programming of this EF follows default parameter written in TS 31.102 annex E.

8.3.3.3 Contents of files at the DF GSM level (Files required for GSM Access)

8.3.3.3.1  $EF_{Kc}$  (GSM Ciphering key Kc)

File size: 9 Bytes

Default values (HEX): Bytes 1-8: Align with Kc used by SS

Byte 9: 07

Byte 9 is set to 07 to indicate that there is no key available at the start of a test.

The bytes within this elementary file may be updated by the UE as a result of a successful authentication attempt.

8.3.3.3.2 EF<sub>KcGPRS</sub> (GPRS Ciphering key KcGPRS)

The programming of this EF follows default parameter written in TS 31.102 annex E.

8.3.3.3.3 Void

8.3.3.3.4 EF<sub>CPBCCH</sub> (CPBCCH Information)

The programming of this EF follows default parameter written in TS 31.102 annex E.

8.3.3.5 EF<sub>InvScan</sub> (Investigation Scan)

The programming of this EF follows default parameter.

### 8.3.4 Contents of EFs at the TELECOM level

### 8.3.4.1 EF<sub>ADN</sub> (Abbreviated dialling numbers)

The programming of this EF is a test house option. It should be noted that sufficient space should be provided on the USIM card for 101 records.

8.3.4.2  $EF_{EXT1}$  (Extension1)

The programming of this EF follows default parameter written in TS 31.102 annex E.

8.3.4.3 EF<sub>ECCP</sub> (Extended Capability Configuration Parameter)

The programming of this EF is a test house option.

8.3.4.4 EF<sub>SUME</sub> (SetUpMenu Elements)

The programming of this EF is a test house option.

### 8.3.4.5 EF<sub>ARR</sub> (Access rule reference)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.5 Contents of DFs at the TELECOM level

### 8.3.5.1 Contents of files at the DF<sub>GRAPHICS</sub> level

### 8.3.5.1.1 EF<sub>IMG</sub> (Image)

The programming of this EF follows default parameter written in TS 31.102 annex E.

### 8.3.5.1.2 Image Instance Data Files

### 8.3.5.2 Contents of files at the DF<sub>PHONEBOOK</sub> under the DF<sub>TELECOM</sub>

The programming of this EF is a test house option.

# 9 Default Message Contents

# 9.1 Default Message Contents for Signalling

### 9.1.1 Default RRC Message Contents (FDD)

This clause contains the default values of common messages, which unless indicated otherwise in specific clauses of TS 34.123-1, shall be transmitted and checked by the system simulator.

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

### **Default SYSTEM INFORMATION:**

NOTE:

SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

| - Message authentication code                                                | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| <ul> <li>RRC message sequence number</li> </ul>                              | SS provides the value of this IE, from its internal counter.                                                                                                       |
